COMMENTS: I am requesting a public meeting concerning the permit request number PSDTX1418 concerning the gas powered power plant proposed for Ballard Rd in Van Alstyne, TX. I live approx. 1 mile, as the crow flies, from the proposed site. I am 80 years old and have many medical conditions... heart stint, high blood pressure, and oxygen therapy. I am concerned that the Nitrox Oxides, Sulfuric Acid, Lead, and fine particulates will worsen these conditions and cause further harm to my health. Please honor this request for a

MW

public meeting to help me and other concerned residents learn more about this plant, the emissions that will be released, and how the short and long term exposure to these pollutants may increase the severity of our medical conditions. Sincerely, Rita Batchelor PO Box 745 Van Alstyne, TX 75495

COMMENTS: I am in the process of purchasing an adjacent property to power plant for a future home site and possibly locating our fabrication shop on a nearby property, seeing how my bedroom window would literally be located 600 ft from the power plant we will have to cancel that contract if the plant gets a go ahead to build (I worked for TU electric in my twenties, Power plants aren't very quiet). It also seems a waste to me to leave a 174 yr old home site without value. Beautiful area though, or was. Side note, I think we would create just as

many local jobs, if not more, without disrupting the environment or our neighbors lifestyle. I hope my opinion counts, even if my family and I are not yet residents in the area...

COMMENTS: I wish to express my reservations and objections on the construction of the proposed Peaking Power Plant called the Van Alstyne Energy Center by Navasota North Country Peakers Operating Company I LLC which has filed application on Project No.: 212820 & 212823 on Permit No.: 121051 & PSDTX1418. I have been diagnosed with COPD and am concerned about the effects of the levels of emissions of carbon

MW

dioxide, nitrous oxide and particulate matter from this proposed plant on my health and well being due to the close proximity of the emission stacks to my permanent residence. The distance from the front door of my residence to the east boundary fence of the proposed location is approximately 950 feet due east. I do not know the exact location of the of the emission stacks from that boundary fence and can not speculate on the exact distance. I feel like there is a strong possibility that the construction of this facility will have a detrimental effect on my health condition. I need additional information from TCEQ modeling to determine what those effects may be and how serious they are. In summary, I am requesting a public hearing to obtain more detailed information on these emissions. I further reserve my right to request a contested case hearing based upon the information provided. I will be protesting the construction of this facility until such time as I and my doctors have been convinced that there will be no detrimental effect upon my health. COMMENTS: My name is Melissa Cuthbertson. My husband, Mark and I would like to file a complaint against NAVASOTA North Country Peakers Operating Company I LLC, who has applied for an application for permit # PSDTX1418. NAVASOTA is planning to build a facility a 1/2 mile from our home. My husband and I have 4 children ages 13, 11, 7, and 10 months old. We recently built and settled into this home, where we planned to watch our four children grow up and strong and healthy. Just a little over 2 years after settling in here, we are now faced with the possibility of a power plant as a neighbor. This WILL most certainly affect the property value of our brand new home and the homes of our neighbors. We worked VERY hard to build this home for our family and if a power plant moves in, we will surely suffer financially. We moved here because of the beautiful view, the peace and quiet away from the noisy subdivision and the traffic from the highway. Not only will the power plant change all of that with its noise, lights, and construction, but it will also emit the following air contaminants: sulfuric acid, hazardous air pollutants like lead, organic compounds,carbon monoxide, sulfur dioxide, nitrogen oxides, and particulate matter with diameters of 10 microns or less and 2.5 microns or less. This could be dangerous to our family now and in the future. I am extremely upset about the possibility of this power plant being built so near to my family and the town of Van Alstyne. Ballard Rd is very close to the center of town, near churches, offices, and businesses. To all of those who are in favor of this idea, ask yourselves, "Would I want my own family to live next door to a power plant?" If you were in our position, would you stop this from happening here or would you let it happen to your family and your neighbors? I know there are less populated areas that would be more ideal. Our road also is home to the main cemetery in our town. Who wants to lay a loved one to rest in view of a power plant? It is a beautiful cemetery with trees and flowers and rolling hills as is most of Ballard Rd. PLEASE, PLEASE, PLEASE help us preserve the beauty of this country setting and the health of the children and families who live here!! We need you to stand up for us!!! I would also like to request a public meeting to inform members of the community and let our voices be heard!

COMMENTS: We do not need another power plant in this area. We just had one built in Sherman and started operation in 2014. The energy produced will most likely be transported to areas outside Grayson county and will cause the environmental impact on Grayson County. If they need more power someplace else, build in there back yard not ours. We have enough RFI in our area produced by power lines in our area already, not to

MW

mention the smog that is now coming from the plant in Sherman - We do not need or want any more. Thank you.

I hope this hearing isn't a formality but I would like to state for the record that the people who will be most affected by this plant do not want this plant to be built used or given permits for now or anytime in the future.

Is there any way to prevent this power plant from being [redacted] built & used?

Van Alstyne Power Plant Protest Letter

2015 APR 27 AM 10:35
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
RECEIVED APR 27 2015 BY

I am a resident of South Grayson County and I live within 1 mile of the proposed plant. My family bought 115 acres here in 1996 and invested our life savings hoping one day to sell our land to support us and our kid's life-long endeavors. Now all of a sudden a power company wants to steal all our hopes and dreams to build something that does not belong here. They want to build an industrial complex within the heart of a small growing community. It is not outside the community, it is within one to two miles of downtown. The actual city limits may skirt the proposed site but it is way too close to neighborhoods, in fact only one mile down the road is a brand new residential neighborhood and elementary school. I cannot think of a more invasive location to build an industrial plant.

Why are you exposing all of us and our young children to a plant spewing out smoke, vapors, toxins, fluorocarbons, etc. in such a close proximity? Just because this corporation happens to find a location where gas lines and electrical lines meet doesn't mean they should have the right to build there. Everyone for this project, does not live near it or under it, they won't have to breathe the air or stare at the three 100 foot towers billowing pollution, greenhouse gasses or toxic steam. The steady winds here will spread that stuff for miles. Are my organic vegetables still considered organic if they are constantly dusted with pollutants?

If you allow them to build this monstrosity here you will be condemning the entire surrounding area. No one will want to buy land, build homes, raise families and live in view of this industrial power plant. This company, for the price of 52 acres has ruined the livability of a thousand acres. Why an industrial utility company isn't required to purchase at fair market value all the adjacent land to the plant is barbaric. They may as well have slashed, looted and burned everything around there because that is what, is about to happen.

To all those critics who are for the plant, come buy my land, live here, sit outside take a deep breath and enjoy the view, then come talk to me.

To the City and County fathers who cheer the tax revenue how many taxes are you going to lose from all the people who will avoid this area. They will probably avoid the town, because that's the town with the smoke stacks which are so inviting. The school district wants the tax revenue for whom, the school or the kids who will from now on have to breathe polluted air. The long term effects of all the toxic emissions from natural gas plants have not been proven safe but they have been proven to be harmful to the ozone layer.

Global warming, why should we do our part?

If it won't affect me in my lifetime, who cares.. I hope somebody cares!

Jobs, we need the jobs this plant will create. The most jobs will be during the construction of the plant but after that the maintenance of the plant will employ how many, a half a dozen? Wow, that's worth it then.

Air Pollution

Air pollution is the addition of gases, chemicals, and particulate matter into the atmosphere

Air pollution primarily comes from burning fossil fuels such as natural gas, petroleum, and coal

Globally, an estimated 200,000 and 570,000 people die each year from air pollution

COMMENTS: Our family lives across the street from the proposed site and don't want them here. We have calm quiet evenings and nights in this neighborhood. We would like to keep it this way. If the plant operates 60 days a year that's over 16 percent of the time it can run. That's a lot of noise and air pollution.

COMMENTS: The Lone Star Chapter of the Sierra Club is the Texas chapter of the Sierra Club, a national conservation organization. As a membership organization with multiple members throughout Texas, we frequently receive requests for technical support and information related to proposed plants. Recently, several of our members living in Grayson County expressed concern about the location and potential emissions of the proposed Navasota Energy Plant in Grayson County. A 543 MW single-cycle peaking unit, the plant has the

potential to impact local emissions of NOx, SOX, particulate matter and other pollutants. Several of our members live in close proximity to the plant. While the Sierra Club has not performed a careful review of the proposed limits and technical specifications of the proposed GE technology or other aspects, we do believe it would be in the interests of the TCEQ, the applicant and the nearby residents who might be impacted by the plant to hold a public meeting. Therefore, we would like to request that a public meeting be held in the vicinity of the plant, either in Van Alstyne or a nearby location within easy driving access of the area. While we are not as an organization at this time asking for a contested case hearing on the proposed application, we want to make it clear that several of our members may either now or after the technical review has been conducted. At this time, we simply believe it would be best to hold a public meeting, where concerns about location, emissions, traffic and other related issues could be addressed. Thank you for addressing our request, Cyrus Reed Chapter Conservation Director

RE: Navasota North Country Peakers Operating Company I LLC, Van Alstyne Energy Center – Prevention of Significant Deterioration (PSD) Permit No. PSDTX1418 and 121051

To Whom It May Concern:

We have reviewed the above reference draft permit for the Van Alstyne Energy Center transmitted by the Texas Commission on Environmental Quality (TCEQ) and received in our office on December 30, 2014. The permit was evaluated to ensure consistency with the Federal Clean Air Act requirements. Our comments on the permit is enclosed.

We look forward to working with the TCEQ to resolve the issues identified in our comments and to ensure that the final permit is consistent with the requirements of the Texas PSD State Implementation Plan (SIP). This letter is not a final position by the U.S. Environmental Protection Agency (EPA) concerning the disposition of the application and draft permit. This concludes our review of the permit as received. If you have any questions, please contact Stephanie Kordzi of my staff at (214) 665-7520.

Sincerely,

Jeff Robinson

CHIEF CLERKS OFFICE

ENCLOSURE

Operating Limitations, Performance Standards, and Fuel Specifications

1. The annual operations table, Special Condition No. 7A, included on page 3 of the draft permit notes that the annual limits provided in the table are combined limits for EPNs CTG-1, CTG-2 and CTG-3. When comparing the draft permit annual operations table with the applicant's permit application, the following items are unclear and additional information to clarify the permit limitation is requested:

   a. The combined fuel use limit is noted in the draft permit to be 14,136,600 MMBtu, LHV. However, Table H-6 and H-7 have noted a range of heat input values. If the heat input value used in Table H-6, (1,613MMBtu/hr per turbine, LHV) is multiplied by 3 combustion turbines under 2,500 operational hours, the resulting value is calculated to be 12,097,500 MMBtu/yr. Please provide additional technical information to clarify the derivation of the permit limits.
   b. The combined fuel use limit table includes a limit for <u>450 hours of startup</u> and <u>450 hours of shutdown</u> on an annual basis. Table H-3 of the permit application contains the parameters used for the calculation of the annual emission rates. Included in Table H-3 are the parameters for startup and shutdown operations. The annual operations per combustion turbine that are used in the calculations are 450 events/yr, 10 minutes/event, and 75 hours/yr per turbine for startup. The permit application also provides that the number of shutdown hours are 75 hours/yr. If the permit application limitations are converted to a combined limit (75 hours/yr/turbine x 3 turbines) the result is calculated to be: <u>150 hours of startup</u> and <u>150 hours of shutdown</u> on an annual basis. Please provide additional technical information to clarify the derivation of the permit limits.
   c. The combined operating hours limit is 2,500 hours multiplied by the number of turbines actually installed at the site. If the permitee is planning to install a reduced number of combustion turbines, how will the operating limitations be adjusted to demonstrate compliance with the annual emission limits? Is phased construction considered for this proposed project?

Routine Maintenance, Startup and Shutdown

1. Special Conditions No. 9C and 9D define the duration of startup and shutdown events as being 120 minutes per event and 60 minutes per event, respectively. The permit application (Table H-3) appears to have relied on an estimate of 10 minutes per event for a single startup or shutdown event. Recently issued PSD permits for peak power facilities have required a maximum of 10 minutes per startup and shutdown event. Please provide additional technical information to support the additional time provided in the draft permit for each startup and shutdown event.
2. A limitation for the combustion tuning/optimization and rotor burn-in is provided in Special Condition No. 9E(2). It is unclear if this limitation is intended to address shakedown periods. A shakedown period is defined as the period beginning with initial startup and ending no later than initial performance testing, during which the Permittee conducts operational and contractual testing and tuning to ensure the safe, efficient and reliable operation of the plant. The time period allowed for shakedowns are specified in 40 CFR § 60.8. However, on-going maintenance

activities are completed in accordance with the specific provisions provided by the manufacturer. Please verify the intent of this special condition and how this condition may relate the provision provided in 40 CFR § 60.8 for shakedown periods. For on-going maintenance please provide technical information from the company to support the need for 20 hours of maintenance per event.

Initial Determination of Compliance

1. Initial and subsequent performance testing is useful to establish the actual quantities of air contaminants being emitted into the atmosphere from an emission unit. Special Condition No. 11 establishes that the permittee "...shall perform stack sampling and other testing as required to establish the actual quantities of air contaminants being emitted into the atmosphere from EPNs CGT-1, CGT-2, and CGT-3 to determine initial compliance with all emission limits established in this permit." However, Special Condition No. 11C requires air contaminants and diluents to be sampled and does not mention $PM/PM_{10}/PM_{2.5}$. The applicability analysis contained in the Preliminary Determination Summary notes that the proposed project triggers PSD review for $PM/PM_{10}/PM_{2.5}$. Please clarify how the actual initial quantities of $PM/PM_{10}/PM_{2.5}$ emissions will be verified to determine compliance with the emission limits.

Recordkeeping Requirements

1. Special Condition No. 17E requires records to be kept of the NOx, CO and O_2 emission data to demonstrate compliance with the emission rates listed in the MAERT. EPA recommends that the calculation for PM and VOC emission rates required in Special Condition No. 15 are included in Special Condition No. 17E to require the PM and VOC calculations and results to be kept available on-site for inspection.

Emission Point FP-1, Fire Water Pump Engine

1. The Federal Applicability section of the draft permit states that EPN FP-1 is subject to 40 CFR Part 60, Subpart IIII and 40 CFR Part 63, Subpart ZZZZ. However, the draft permit does not appear to contain special conditions to support the applicable requirements contained the regulations. Specific consideration should be given to the inclusion of requirements for the following: non-emergency hour limitation; EPN operation monitoring, annual emission rate calculation and recordkeeping.

COMMENTS: I object to the power plant being built in Van Alstyne, TX (Grayson County) because of the possible/probable reduction in air quality due to the lack of external monitoring. This plant location was chosen because of this very lack of outside monitoring and lack of restrictions such as those in Collin County. This plant will affect the quality of air in the adjoining town of Anna, TX in Collin County where I live. Not only does this plant potentially damage the quality of life in an area where most people have chosen to live to get

mw

away from pollution, but it does not even offer us the benefit of additional electricity and reduced costs while damaging our quality of life. The lack of oversight from some outside entity is like allowing the fox to guard the hen house. This plant is NOT in the middle of nowhere. It is in our yards. Even with the best of air quality controls and supervision, I believe it would be a detriment of our quality of life.

Subject: Air Quality Permit Numbers 121051 & PSDTX1418

I object to the power plant being built in Van Alstyne, TX (Grayson County) because of the possible/probable reduction in air quality due to the lack of external monitoring. This plant location was chosen because of this very lack of outside monitoring and lack of restrictions of Collin County. This plant will affect the quality of air in the adjoining town of Anna, TX in Collin County where I live. Not only does this plant potentially damage the quality of life in an area where most people have chosen to live to get away from pollution, but it does not even offer us the benefit of additional electricity and reduced costs while damaging our quality of life.

The lack of oversight from some outside entity is like allowing the fox to guard the hen house.

This plant is NOT in the middle of nowhere. It is in our yards. Even with the best of air quality controls and supervision, I believe it would be a detriment of our quality of life.

Sincerely,
Judith Waldrop

COMMENTS: Although I do not live close to the proposed location of the Van Alstyne Energy Center I am very concerned about the harmful emissions these types of plants produce. These plants produce sulfuric acid,carbon monoxide and many other toxic agents. All of these things will have a negative impact on the health and well being of the people who live near by this proposed site.

COMMENTS: I am the County Commissioner for Grayson County representing the area of the proposed project. I have received numerous calls and emails requesting a public meeting regarding this permit application. I understand that I do not have statutorial authority to make that decision. In the interest of governmental transparancy and full disclosure, I support their request for a public meeting.
