CYPRESS TX 77429-2644

PHONE: 2818904029

FAX:

COMMENTS: I am writing to you out of concern for the request by Nantucket Housing LLC to build their own waste water treatment plant in order to support a proposed 370 unit apartment complex they have planned to construct. If this permit is approved, there would be at least 55,000 gallons of treated waste water going into Cypress Creek every day. Cypress Creek would also receive additional runoff from this development every time there is significant rainfall. We have had a longstanding problem with the creek rising out of its banks and

causing rising water and flood damage in my neighborhood, Ravensway, and surrounding neighborhoods and roads during heavy rains. Along with increased pollution which will endanger fish and other wildlife, there is a health risk to all of the people living in the impacted area. At the very least, there should be a public meeting where residents can present factual information to back up their concerns about this permit request. Please consider the impact this decision could have on the health and safety of thousands of families in our area. Thank you for your consideration. Sincerely, Susan Ahlhorn

CYPRESS TX 77429-1879

PHONE: 8322164243

FAX:

COMMENTS: I would like to formally request that you PLEASE DENY PERMIT WQ0015381001 (Nantucket Housing, LLC). My reasons are as follow: a. Flooding – Cypress Creek is already overly burdened and prone to flooding – this permit request would allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not

MW

limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Please hold a PUBLIC MEETING to allow an opportunity for the community to submit comments and ask questions regarding this permit. Thank you for your consideration. Jason Ailor

COMMENTS: They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains have caused severe flooding issues this past month. We dont want chemical water backing up into our streets and yards where our children and animals roam. This will destroy our natural environment by the chemicals - killing off the creek inhabitants and the wildlife that depend on the

creek water. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: I don't want this purported developer to be dumping into my local waters. It is only because of their ineptitude in properly planning this project that they're in this position to be asking for the permit, which is a sign of things to come. If they can't adequately plan for wastewater on the property, why on earth would anyone expect them to be able to maintain the treatment system itself? Given what's been unearthed about this "developer," there is every reason to expect unscrupulous behavior, including dumping untreated water into the

MW

storm sewer. The local waters are part of our treasured Cypress Creek Greenway and support the local ecosystem and local recreation. It is beyond the pale that someone would dump into these waters. Moreover, as the recent rains demonstrated, we cannot afford more volume into the storm sewer system, especially the kind of volume this development would impose year to year. These people aren't part of and don't care about the local community.

COMMENTS: I am making a request that you deny the permit for a waste treatment plant named Meadows at Cypress Creek due to the fact that the discharge point from the proposed location will be discharged into an already over-taxed stream in a residential location . this location frequently floods during heavy rains and the resulting flooding is dangerous for those of us living in the area. There are no current proposals to rectify this frequent flooding and with further building on this watershed flooding in the future is more dangerous to those

of us already living here. The land in question for this development should be used as a retention area for flood water and not developed for any sort of residential use. Please consider that the passing of this permit will be detrimental for those of us living in an already stressed community. Thank you.

COMMENTS: I am opposed to this project in this location due to the fact that the current schools in the area are already over-populated and there is no form of public transportation and no sidewalks. The area is almost totally all single family homes and there is very little in the way of work opportunities. A project of the sort proposed should be placed in an urban setting where residents could take public transportation to some form of employment. Housing projects like the one proposed should be able to assist the residents with improving their

MW

lives through available schooling for the children as well as job opportunities for the adults. Houston Independent School District can provide this , whereas Cy-Fair Independent School District cannot. When making decisions such as these think of the people being housed and how you will benefit them.

COMMENTS: I request that this permit be denied. Cypress Creek flows through many dense communities and is used for agricilture, fishing, kayaking, and swimming, as well as providing space for walking and biking trails. Effluent added to the creek from a waste treatment plant can harm the aquatic life and change the water quality. A waste water plant greatly increases the possibility of waterborne viruses, bacteria, salmonella, and

MW

protozoa. If Cypress changes from well water to surface water in the near future, as it appears they will, this will be an even bigger issue. Therefore, I respectfully ask that you reject this permit application.

COMMENTS: Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains have caused severe

MW

flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

This meeting was not helpful in making my family and I feel secure + safe w/ having this waste water treatment built. It seems like so many questions, concerns, problems were unable to be answered. How ~~can~~ can TDEQ even consider this application with so many unknowns as to the health + safety of the community it will affect??? There is nothing more important ~~in~~ this world than health + safety. I am very concerned + do not feel this application should be approved!

Thank you!

COMMENTS: I do not think the permit application should be granted for the simple fact that you cannot dump treated sewage into a place that people use for recreation. When it rains heavily in this area, the water will rise and flow onto personal property. I for one do not want sewage treated or not flowing on my property. Ravensway has horse stables so people ride along the creek, we take our 4 wheelers there with our children,

MW

kids skim board there. Would you want to do those thing in "treated" sewer water? Please consider all the negative effects to so many if this is granted.

COMMENTS: Request to deny permit and request a public meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request. My objections to this permit are specifically related to the fact that this permit will allow the addition of 55,000 gallons of effluent water to Cypress Creek on a daily basis. The areas - as seen with the recent rains - cannot handle this additional amount of water. It is my

mw

understanding as well that treatment of effluent waste water is problematic from the standpoint of the chemical necessary to treat additional pathogens. Please hear our request for a public meeting regarding this permit.

Please give this form to the person at the information table. Thank you.

001 5381
001

1. Developer stated during this hearing, that the land will slope towards the drainage pipe & that in case of flooding + catastrophic failure, raw sewage would enter Cypress Creek through drainage pipe. This is poor planning. Developer has some redundancy of equipment but a berm should be built around the facility to prevent accidental discharge. This is a low-cost preventative measure.

2. Developer should locate plant on the highest part of the property as hurricanes & flooding are common.

3. TCEQ needs to ~~publicat~~ test & make public the results of Cypress Creek water testing and dates of test & prior to granting this or any other new permit, given the acknowledged issues with bacteria in the creek and the existing several plants already overloading the capacity of the creek. Is this a 3rd world sewage ditch or a creek?

4. TCEQ should publicly define an upper limit to bacteria & water quality & use the testing results from comment 3 to govern/inform the permitting process.

5. TCEQ has accountability to the citizens of the community not to the businesses and should protect us.

6. During times of low flow in the creek, are acceptable bacteria limits reduced?

7. The Creek backs up to several subdivisions and supplies water to park lakes. Increased bacteria discharge potential raises the risks to citizens of Cypress.

8. Developers with compliance issues should be identified in hearings. Waste water plant operators with compliance issues should be identified in the hearing process.

COMMENTS: our area is already overbuilt for the water - and runoff capability of the region. adding this apt. complex with its own wastewater treatment plant so close to Cypress Creek (which has flooded often in the last 10 years) is poor planning and bad for the home values of the surrounding area. the entire area benefits from having cypress creek return to a natural and unspoiled state, something the parks department has been progressing with the addition of biking & walking trails. these trails do add to the value of our homes,

especially as they are along the creek. Adding the possibility of polluting that resource benefits only the developer at the expense of the community.

Formal comment on back

I do not want to see the permit granted for the following reasons:

1) bacteria levels in the creek are not monitored enough to gaurantee levels will not be harmful

2) The estimated output, I believe, is below logical expectations & a plant designed for low input the recieves high input could malfunction.

3) standing water from the plant in the ditches will increase mosquitoes & mosquito born illness.

4) creek flooding has substantially incresed & although the facility isn't in the flood plain today, it may be in the flood plain in coming years

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

MW

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

MW

(1) It was mentioned that other facilities are already dumping waste into Cypress Creek & this facility will dump less than the others; However, how much is too much? All of these will be compounded.

(2) If Cypress Creek is already "labeled "impaired" due to bacterium labels, why is the TCEQ even considering adding more bacteria to the creek?

COMMENTS: I am opposed to this developers proposed private water treatment plant and plan to build more apartments along Huffmeister Rd. Cypress Creek already has flooding issues and drainage ditches should not be contaminated with chemicals that will further upset the ecological balance of the creek thus affecting the wildlife that lives in and around the creek. The schools, roads and increased traffic in the proposed area would place further burden on existing home owners. We are tired of both local and out if state developers turning

what little green space we have left in the area to a concrete jungle. Please listen to those if us who have chosen to live in the suburbs for a reason. No more apartments low income or otherwise and no smoke screen treatment plant to cover for plans to attach another apartment complex.

COMMENTS: I request that this permit be DENIED-- for several reasons: Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The

chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Please schedule a Public Meeting allowing submission of comments and questions regarding this permit request.

TCEQ Public Meeting Form

  If yes, which one? _____

☑ **Please add me to the mailing list.**

☐ **I wish to provide formal *ORAL COMMENTS* at tonight's public meeting.**

☑ **I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.**

(Written comments may be submitted at any time during the meeting)

Please give this form to the person at the information table. Thank you.

I am very concerned about the lack of any recent study of Cypress Creek in light of the massive development in Northwest Harris County since 2012. How can you accurately guarantee that this plant will not negatively affect the area environment, health, and quality of life?

I'm also concerned about the possibility of the proposed plant processing groundwater and subsequent waste so close to the Jones Road Groundwater Plume Superfund site. What will be done to mitigate these risks to the environment?

Lastly, I have deep concerns about this developer's ability to effectively manage a waste water facility. This project lies directly across the street from Millsap Elementary School. and I think it is imperative that TCEQ safeguards our children's health. How often will TCEQ be conducting reviews and monitoring this facility to ensure that our children are safe?

Gray W. Cooley

FAX: 8325736886

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

MW

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: As a resident that lives near the cypress creek is opposed to the water plant. I get nervous every time it rains but more importantly, added the additional water in the creek would make any little rain fall rise the creek. Encourage the builder to seek land in Waller, Texas where land is bountiful. Thank you for your time.

COMMENTS: Please DENY this permit! This area cannot sufficiently handle water treatment plant. Number one, it would be a flooding hazard. Cypress Creek is already overly burdened and prone to flooding - which it has, many times! The addition of 55,000 gallons of effluent to the creek on a daily basis would be a disaster waiting to happen. In addition, effluent being released is of huge concern. This will certainly increase the possibility of numerous waterborne pathogens, including but not limited to viruses, bacteria, salmonella &

MW

protozoa. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. COMMENTS: To Whom It May Concern: I am writing to request that this application be Denied. I am vehemently opposed to a project that would increase the potential for flooding in an already-vulnerable area. Additionally, the green belt along Cypress Creek is being developed as a continuous park. The creek is a valued resource for the community. The area is already used for recreation; this role will increase with more kayaking, fishing, and other outdoor activities centered around the creek when the park is complete. However, if the

MW

ecosystem is altered due to treated sewage/water, this could have an enormous and negative impact to the area from Cypress and all throughout the planned park. I believe it is irresponsible to consider approving such a project that would so adversely affect the community.

COMMENTS: Deny permit: Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. I grew up along Cypress Creek and still reside nearby. It has been and continues to be a source of enjoyment and recreation. This development could put the ecosystem

in serious jeopardy. I request that a Public Meeting by held so that residents can ask questions and submit comments on this matter.

COMMENTS: Big Cypress Creek and Little Cypress Creek run through the heart of Cypress, Texas. These creeks have a long and sordid history of flooding the area, roads and homes. Continued over-development in these areas would further strain the creeks in Cypress would create flooding at critical and more destructive levels. I beseech the TCEQ to please deny this permit request and spare the creeks, bayous and residents in our area from more dangerous and destructive flooding.

COMMENTS: Please deny the permit requested by Nantucket Housing, LLC a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern.

The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. We suggest that you hold a public meeting for all to have the opportunity of open discussion of the reasons to deny this request for permit.

COMMENTS: I request the permit be denied by TCEQ. Cypress Creek is already burdened and flood prone, and this permit would allow an additional 55,000 gallons into the creek on a daily basis, not including storm water from the developed property. Also concerning, is the treated waste water which increases the possibility of numerous waterborne pathogens being released into the creek. Chemically treating for these waterborne pathogens can change the water quality and ecosystem of the creek which is used for agriculture, fishing,

MW

swimming, and kayaking, and runs along walking and biking trails. I request a Public Meeting be held to allow the community the opportunity to submit comments and ask questions about this proposed project.

COMMENTS: Request that permit be denied. Cypress Creek is prone to flooding, which has impacted the people and homes in my subdivision. This project would add 55,000 gallons of wastewater daily into the creek, and in addition to the runoff from the project would negatively impact the people in the creek watershed. It is simply not able to handle the additional stress on the system. Please convene a meeting for the homeowners in this area so our concerns can be addressed.

COMMENTS: This permit needs to be denied. Municipal Utility District should not be bypassed on water water treatment and/or water supply. Water treatment management needs to be maintained by 3rd party entity to ensure process, quality, maintenance, safety and not by for profit private corporation. That is primary reason we have MUD districts. There are not adequate checks and balances in arrangement being proposed since the owner of for-profit apartments also owns waste treatment. There is too much potential for polluted releases,

MW

flooding, odors in close proximity to schools and homes. This will cause damage to people in the area as well as downstream on cypress creek. Land should be purchased and turned into a green zone instead of adding to flooding issues. Public meetings need to occur to further assess impact and give people who live in the area and downstream of waste water processing plant a chance to submit concerns.

COMMENTS: I respectfully ask that you deny this permit application. We have lived in Cypress since 1988 and know of the flooding issues with Cypress Creek. This project is not supported by the community on several different levels. Nantucket continues to look for ways to push this project forward for their financial gain without any consideration of the people who are affected by the flooding of Cypress Creek. I ask that you please side with the good of the community in this case!

COMMENTS: Flooding is already an issue in our neighborhood and other neighborhoods along Grant Road near Louetta. Additionally, the Cypress Creek Trails Master Plan (CCTMP) Coordinating Board is working hard to preserve our green spaces for the residents of Cypress now and the eventual growth of Houston westward. This applicant has already been denied access into our MUD and now seeks to build their own wastewater plant which would worsen flooding and increase risk of chemical damage to Cypress Creek and our

beautiful green spaces. Please deny this application and help keep Cypress the beautiful, wooded, and green heart of Cypress.

COMMENTS: We beg you to listen to Cypress residents in opposition of this treatment plant. To us that live in Ravensway it is bizzare that this made it this far knowing how restricted in flow Cypress Creek is during dry months and how easily it overflows when it rains. Doesn't anyone care about the environment anymore; not to mention people's health. Totally incomprehensible!

COMMENTS: I am opposed to the permit request. Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is

MW

prone to flooding. In fact, recent rains have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: this request should be denied. Reasons are: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The

mw

chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I would like to request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

☑ **I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.**

(Written comments may be submitted at any time during the meeting)

Please give this form to the person at the information table. Thank you.

I don't want this project(s) in my Cypress area, because:

RECEIVED
NOV 12 2015
AT PUBLIC MEETING

→ Could cause
- Cypress creek flooding.

→ Would the treatment plant be properly maintain? - Who is going to handle it?

→ It would affect the species (wildlife) - (animals) living in the area.

- Our water already comes out yellow, w/ metals? so ~~now wh~~ with this project will make it worse!

- Who we should contact if we have fresh water - "contamination problems" or flow reduce?
- Why don't you have a cutt off water waste plants, if you already know that Cypress creek has "coli" contamination.

- We don't want that plant here in Cypress area.

* Besides odor problems, ~~more~~ contamination, possible flood, environmental impact, etc. will you still approve this plant? ? ?

COMMENTS: Please deny the permit to build water treatment plant in order to build low income housing on Huffmeister. There is great concern it will add to the flooding problems. Also, the treated waste water increases possibility of numerous waterborne pathogens. The creek is used for fishing, kayaking, biking, etc. and this will harm the ecosystem of Cy Creek.

COMMENTS: It is my understanding that the developers for this complex are to drain thousands of gallons of contaminants into Cypress creek on a periodic basis. Cypress Creek has a historic place in our area and is also used by residents to canoe and kayak the area. I don't see the benefit that it would bring to our neighborhood and if the plans are to contaminate the creek. I have also seen kids fishing in the area and would hate to see kids

fall ill just because some one wants to make a dollar. I am strongly against this and would hate for this to get approved. Thanks you..

COMMENTS: This is our home and a wonderful area to live and raise children. Our family regularly uses the creek as an "adventure" for the kids: watching the water, looking for wildlife, and just stretching their creativity and letting them "be kids". My husband and son use the ATV trails regularly as well, this safe and natural environment is part of what makes Cypress such a wonderful place to live. I respectfully request that this permit be denied due to many reasons, including: Flooding – Cypress Creek already overly burdened and prone to

mu

flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I'd like to request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request. This area is filled with passionate home owners who take pride in where we live. Most are here because it's the best place to raise children (room to play, excellent schools, relatively safe environment, etc.). To mess with this and allow a permit of this nature to go through will have many negative impacts on this extraordinary community. I implore you to please, please rethink it and deny this request.

COMMENTS: I'm requesting that this permit be denied. I am very concerned about more frequent flooding and higher than normal flood levels in this already flood-prone area. This permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. I am also very concerned about the quality of the water discharged. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens, including but not limited

to viruses, bacteria, salmonella & protozoa, being released. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, and biking trails. I request that a Public Meeting be held to allow an opportunity to submit comments and ask questions regarding this permit request. At the end of your comment – specifically request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: Please do not grant this permit application. I live close to this area and have deep seated concerns about the effect that the treated waste will have on the local ecosystem, which will also effect the recreational use of cypress creek. I am also concerned about the volume of treated waste water that will be dumped consistently into the storm drain could potentially overwhelm my communities' drainage system.

COMMENTS: I am requesting that this permit be DENIED. Many reasons including, 1. Flooding - Cypress Creek already has a tendency to flood. This permit will cause 55,000 Gallons of effluent water to our creek on a DAILY basis, not including the storm water that is added by the developed property. 2. Effluent water is treated waste water. How will this effect the delicate balance of our creek? I just bought my house in this neighborhood and am appalled to think that one of the largest reasons I PURCHASED a home, as a single parent, in this

neighborhood is due to the ecosystem. This creek is used agriculturally, for fishing, kayaking and swimming as well as the trails that would be affected, the wildlife that would die out and create such an unbalanced concrete ugly depressing sad atmosphere. That I would definitely not continue to live in for the rest of my life or my sons life. My 10 year old son needs the nature in his life. We have finally found a home, please don't let this "developer" ruin what I have worked so hard to give to my family. I ask that a PUBLIC MEETING be held regarding this issue. Thank you Miranda Hall

COMMENTS: Nantucket Housing, LLC is attempting to construct an apartment complex that has already been denied by local water districts, State Representatives, and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains have caused severe flooding issues in my neighborhood this past month. When this area

MW

floods again, the possibility of numerous waterborne pathogens being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential exists for these chemicals to change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking, and swimming, as well as walking, biking, and ATV trails. Please do NOT permit Nantucket to build this facility in an area already prone to flooding.

COMMENTS: I am against adding this water treatment plant that will empty into the Cypress Creek. I am just a layperson - not familiar with all the steps that go into treating the water. I do know that it is not unusual to treat the water and then expel it into the waterway. I, however, live in the 100 year floodplain and I am very close to Cypress Creek. We have to park our cars away from our homes with the water begins to rise. It is not unusual for it to flood to the point where people on the next street need canoes to come in and out of their

homes. We have had to walk around the cup-de-sac, in the wet yards, to be able to get out of our homes. I live in the very bottom of Ravensway and we do deal with flooding issues. That is an ongoing issue with Cypress Creek. We do not need another treatment plant dumping even more water into the creek. This developer is trying every which way to get their apartments built with no regard to the community that is already here. That is very disappointing.

COMMENTS: I request at public meeting regarding this application be held, and further request rejection of the applicants request for extension. Our area has an extremely fragile ecosystem, both in terms of flooding and in terms of animal life. Adding a water treatment plant will impact the entire dynamic, threaten the environment, and adding treated waste water to the creek which cannot even handle the water it takes now is an unsound and irresponsible request..

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

have caused severe flooding issues in area neighborhoods this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: Note on the attached Harris County Flood map that the project in question is located very close to a "finger" of flooding that extends from heavy flood areas and will increase with additional building projects. We are joint owners of property that is surrounded by that finger and very concerned about the impact of this proposed project on the delicate balance that has been achieved with regard to flooding in our area. Our local

elected MUD officials are tasked with balancing community water needs with community risk and capacity, and this application is an attempt to bypass the system of checks and balances put in place to alleviate extensive flooding of the past and prevent it in the future.

FAX: 8326897477

COMMENTS: I request that this permit be "DENIED". Due to the following A. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property B. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern.

The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I also request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: As residents of Ravensway, we are strongly opposed to this request. Chemically treated waste water may have an unknown effect on our environment and Cypress Creek is used for recreational purposes as well. Further, the additional 55,000 + gallons would be an added burden to our already strained water district and contribute to flooding. Cypress Creek frequently exceeds its banks in heavy rain. We respectfully request this request be denied. Thank you.

COMMENTS: Should this permit be granted, it will increase the severity of issues already faced by mine and surrounding communities. For the reasons below, this permit should be DENIED. We are already in dire need of improvements to combat the continual flooding that occurs in this area with normal amounts of rainfall. Many communities already drain stormwater to Cypress Creek, which is at or near capacity often during and after standard rainfall amounts. Adding 55k more gallons/per day of wastewater will cause undue issues for an

MW

already strained drainage environment. In addition to drainage issues, the excess wastewater addition will add unwanted, eco-straining effluent to an otherwise untampered natural habitat for many birds, fish and other species. This creek is attached to several area ponds and streams that provide places for our families to enjoy recreational fishing, walking, and biking activities. This creek deserves to remain unpolluted with chemicals and pathogens that cause issues for plants, animals, and neighbors alike. Please allow a Public Meeting for those of us with concerns and questions to be heard and offered responses.

COMMENTS: Subject: Please deny permit WQ0015381001 I write to request/beseech/pray that all permits associated with and referenced to TCEQ proposed permit number WQ0015381001; Principal Name stylized as "Nantucket Housing LLC"; Regulated Entity Name stylized as "Meadows At Cypress Creek"; be Denied. Further to my denial request, please enter in to the record as support the following: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of

MW

effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens, including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and ATV trails. Thus, I respectfully request all permit denial of proposed permit number WQ0015381001. Thank you.

COMMENTS: Please respect and follow the written intent/request/beseech/prayer of property owners: do not approve, either in form or substance, and thus absolutely deny Waste Water Treatment System Permit #WQ0015381001. Since the property type, stylized among other things as "The Lodge", remains an issue subject to a vote for at least two years and the administration - state, county, city, multiple-purpose district, etc. - has resubmitted the development for approval, the matter devolves to one of economic incentives to the

MW

developer from the people at-large. I do not approve. Deny Waste Water Treatment System Permit #WQ0015381001

FAX: 2817583106

COMMENTS: First of all I believe this permit should be DENIED, because of the flooding of Cypress Creek. Cypress Creek already has enough water to carry without over taxing it and adding 55,000 gallons of effluent not to mention storm water. With all the waste water that will be added it will increase the disease concerns. Please, please, please give this matter your upmost attention and if at all possible please have a Public Meeting

so people will have the opportunity to ask questions and make comments. Thank you for your attention to this matter and trying to keep our neighborhood safe and clean without flood or backup waste water.

COMMENTS: Hello, I would like to request for this permit be DENIED. Here are the reasons: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a

MW

substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I also like to have a public meeting to be held so residents can voice their comments or concerns regarding this permit request. Best Regards, Diep

COMMENTS: I protest the use of Cypress Creek in our immediate area for the disposal of treated waste water. My children would be exposed to unknown contamination. Furthermore, flooding is another serious concern that I have for our area due the addition of a 370 unit development pouring its dump water into Cypress Creek. The flood controls that we have are barely containing the flooding that we have experienced in recent months. I strongly urge you to deny use of Cypress Creek for waste water disposal.

COMMENTS: I am writing to request this permit be DENIED. Cypress Creek is already prone to flooding and adding the water from this on site water treatment plant will only add to that problem when we have periods of heavy rain not to mention the storm water from the developed property. In addition, I'm concerned about the environmental impact to the ecosystem when this chemically treated waste water is added to our creek. This

creek is used for many recreation activities and the community should not be forced to stop those activities due to dangers of the water. Thank you for taking the time to read my comments. Shella Jensen

COMMENTS: Our building is adjacent to the proposed permit. earlier this year we were nearly flooded by heavy rains, another inch and we would have had serious damage to the building. We also experience near flooding three years ago. As it was cypress creek and rains flooded the rest of our 3 acre property. Installing a water treatment plant that adds 50,000 gallons a day is a sure recipe for flooding disaster. We have to prtest as this for sure sometime in the future destroy our property.

COMMENTS: The developer of this project has received extensive public protest to not add up to 400 units of low income housing along Huffmeister. Harris County Freshwater Services District #61 voted 10-0 to not annex the site to provide sanitary sewer service and fresh water. A low income housing project of this size is not needed as there are too many units with vacancy now. Cypress Creek does not need additional effluent dumped in to the tributary which floods homes through out the area. This area is prone to flooding. In fact, recent rains

MW

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. There is no compelling reason for this community to have to deal with a forced real estate development that benefits the developer. This project harms the adjacent middle school, the subdivisions of Ravensway, Coles Crossing, Longwood, Lakewood Glen, Lakewood Oaks Estates, Rock Creek not to mention a very undeveloped watershed. The local FWSD chose not to provide services and that should tell you everything.

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water a day via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

have caused severe flooding issues in my neighborhood this past month. This area will flood again and the added stress of additional water flowing in daily will only make the current flooding issue more prominent. Do NOT permit Nantucket to build this facility in an area already dealing with flooding. (Please see aerial photo of our neighborhood facilties flooded.)

COMMENTS: we are vehemently opposed to "The Lodge"! This area does not lend itself to appropriate transportation for those that would inhabit such a place. This is a proposed start to something that would cost taxpayers millions and property' owners in the area even more! It is ridiculous cronyism that this is even being discussed AGAIN! Take it back inside "The Loop" where transport and other supporting amenities already exist! This is a ridiculous and incredulous proposal! Stop the madness or we'll start investigating those that keep

MW

advocating for this group to build ANYWHERE in 77429. We're so far outside of any real services to wholly help the people this group says it's going to support, AND THERE IS NO NEED to help the lesser fortunate to amass in an area that doesn't have the transit, job opportunities or other resources to truly give those who qualify for this housing the necessary and immediate support to make this endeavor worthwhile.

COMMENTS: I respectfully request that this permit be DENIED. As a resident of a neighborhood bordering Cypress Creek, I've seen the creek overflow its banks and believe that it cannot sustain an additional, sizable, and consistent flow of effluent. The quality of the local ecology is also essential. Our family walks the trails at a park along Cypress Creek and am highly concerned about the potential effects of additional effluent running

MW

through the creek. Please schedule a public meeting to allow our community to make offer feedback on this request. Thank you for your consideration.

COMMENTS: I request the this permit be denied for the following reasons: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern.

MW

The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I also request that TCEQ hold a community meeting to further discuss this matter with those of us in the community directly affected by this permit request. Respectfully, J. Kramer

RECEIVED
NOV 12 2015

COMMENTS: Please call for a public meeting on this permit. Cypress Creek is overloaded and we don't need additional storm water or daily water in the creek. I have lived here a long time and know how this creek rises and areas that flood. I'm also concerned that the treated water will end up harming the existing fish and other living animals that use this water. My husband and son fish the creek. I fear the bacteria and chemicals will begin causing problems. Please don't allow this eco system to be altered. Thanks.

COMMENTS: Deny this request for the following reasons: 1.Flooding: The planned discharge and runoff into Cypress Creek as a result of this proposed project is lunacy and reflect the proponents lack of concern for the well being of those who reside within the area. This watershed is already taxed to the point of near flooding during significant storms even after significant improvements for flood mitigation that have been constructed within the past five years. Witness the rain and near flooding of this past May 2015. 2. Environmental

Concerns: This project will discharge "treated" waste water into Cypress Creek, considerably altering the ecosystem of Cypress Creek by either dumping "treated waste water" or dumping waste water into the creek from a facility constructed by a developer without regard to those in the area.

COMMENTS: Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. In spite of being denied permits to build, they are now requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water a day via a storm sewer that will subsequently end up in Cypress Creek. This area is

known to flood. The recent rains have caused severe flooding issues in my neighborhood this past month. This area will flood again and the added stress of additional water flowing in daily will only make the current flooding issue more prominent. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: Michael Lawson & Donna Lawson request that this permit be denied. A) The additional storm water on top of t he daily output of the water treatment plant would be detrimental to the area around Cypress Creek. Flooding would certainly become an issue with the development of the area. B) Our concern with chemicals used to treat the water, is that it could harm wildlife and contaminate surrounding grounds. C) At our previous residence in Illinois, there was a water treatment plant less than 2 miles away from our home and the

odors that emitted from the facility were just disgusting and unbearable depending which way the wind was blowing. Some residents were forced to sell their homes due to these odors, this in turn led to property value decline. Believe me, nobody wants to live next to a water treatment plant. In the best interest of all parties, a Public Meeting needs to be held so that all concerns can be addressed.

COMMENTS: I am very much opposed to Nantucket Housing, LLC Blazer Building Inc. building a waste water treatment plant and dispose of (as they say) the up to 55,000 gallons a month of treated water via a storm sewer (are you kidding me?) that will subsequently end up in Cypress Creek. I believe they will ultimately dispose of much more than they admit, and this area is already prone to flooding. In fact, recent rains have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility

of contaminating Cypress Cheek with numerous waterborne pathogens from this system is not acceptable. This group is attempting to permit the building of this system as a prelude to building apartments in this area that are not needed and would require a lot more than 55,000 gallons per month. The chemicals used in the treatment process will harm the aquatic life that resides in Cypress Creek and change the water quality. This creek is currently used for agriculture, fishing, kayaking and swimming. The proximity to Cypress Creek is one reason we moved to Cypress. PLEASE, PLEASE, PLEASE DO NOT permit Nantucket to build this facility and cause further damage to an area already dealing with flooding.

CYPRESS TX 77429-2206

PHONE: 2817034094

FAX: 2817034094

COMMENTS: I would like to emphasize that we (the residence and parents of Cypress) do not want chemical water being dumped into our creek and then backing up in to streets and yards where our children and animals roam. We see the dangers of chemical water and how it affects the people, the environment and the animals who depend on clean water. There are many studies that show chemical water is bad for all involved. Why would you even consider putting a plant next or close to an elementary school, a day care, a home for geriatrics

MW

and school/home for mentally challenged people? We also need to emphasize that our natural environment would be destroyed by the chemicals - killing off the creek inhabitants and the wildlife that depend on the creek water. Our little piece of heaven already floods - for example, Memorial Weekend 2015 - we had a tremendous amount of rain backing up into the streets and peoples homes. Do you think that is OK? I don't think so! Who is going to pay for all the damage it does to our homes, our health, our kids health, our animals health. Surely not the builder - he is in it for the bottom line ... the MONEY... and who cares who it hurts. KEEP THE CHEMICALS and thousands of gallons of water from being pumped into the creek - which breaks down our ECO System. Keep Cypress GREEN ... Keep Cypress CLEAN ... Cypress Creeks are a natural water way, not a dumping ground for chemicals and trash water.

COMMENTS: The area proposed for this project is already flood prone. It will be even more dangerous to surrounding homes and businesses if more water is pumped into Cypress Creek. This is to say nothing about the chemicals that will alter the fish and other wildlife with the effluent from the proposed plant. The area does not need, nor want a water treatment plant and its operation will destroy a beautiful environment and is likely to cause costly flooding. Please do not permit #WQ0015381001.

COMMENTS: I strongly request that this permit be denied. As a longtime resident of the Cypress Creek area I am very concerned as to what an additional 55,000 gallons of effluent per day will do to Cypress Creek. Cypress Creek is already overly burdened and prone to flooding caused by all of the growth in this area. Adding this additional discharge to the additional storm water from the existing development will only increase the probability of more flooding. Effluent is treated waste water which increases the possibility of numerous

waterborne pathogens. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. This has a strong potential for changing the entire econsystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I request that a Public Meeting be held allowing the area residents that are impacted by this development is express their concerns.

PHONE: 2816395037

FAX: 2816395037

COMMENTS: DENY THIS PERMIT .. MY REASONING IS AS FOLLOWS: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens, including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern.

MW

The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails.

COMMENTS: As a resident of the Huffmeister area I strongly protest the construction of a housing project on Huffmeister Road whose developer proposes to dump waste water treated on the developer's site into a drain that will end up in Cypress Creek. My reasons are as follows: 1) the area is presently overbuilt with subsidized/low income apartments, and 2) the almost certainly resulting pollution of Cypress Creek is unconscionable. Various environmental interests and Precincts 13 and 14 have made major efforts in

MW

establishing parks along Cypress Creek that raise the quality of life of residents near Cypress Creek. Fish and wildlife are returning to the creek. Dumping treated waste water with unknown chemicals into the creek will work directly against those efforts.

FAX:

COMMENTS: I request that this permit be DENIED. This is request is based on the following criteria: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being

released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. In lieu of an out-right denial of the permit, I request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: I am writing to request that this permit be denied. A water treatment plant would put an additional 55,000 gallons of water into the creek on a daily basis. This does not include the additional water from storms that would drain into the creek. Our subdivision along with others already have issues with severe street flooding during a heavy downpour. My second concern is that this is treated waste water which increases the possibility of waterborne pathogens. Also, the chemicals used in the treatment process can change the water

MW

quality and be harmfull to the aquatic life in the creek. The creek is used for fishing, kayaking and swimming. Currently, the county is building trails, park systems along the creek for public use. We should be trying to clean up the creek, not add more pollutants to it. There are may residents in our area who share my concerns. I believe a public meeting would be very helpful. A public meeting would give the community an opportunity to ask questions and submit their comments.

COMMENTS: Please note that Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact,

recent rains have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. COMMENTS: To whom it may concern, This is a formal request that this permit (permit # WQ0015381001) be DENIED for the reasons stated. Flooding is a major concern for the Cypress area. Cypress Creek is already over burdened and prone to flooding. It is our understanding that this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis and that this number does not include the addition of storm water from the developed property. The waste water will increases the possibility of numerous

MW

waterborne pathogens, including but not limited to viruses, bacteria, salmonella & protozoa, being released into the creek. This is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and ATV trails. We request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request. Sincerely thanking you, Christopher & Laura Newman

COMMENTS: I oppose the above company ind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding.

In fact, recent rains have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: I respectfully request that you deny this permit for a water treatment plant. There are several reasons why this water treatment plant is a bad idea. First, the area around Cypress Creek floods. In a recent news article, it was noted that Telge at Huffmeister (right at the Creek) is one of the worst flooding areas in Houston. Houses in this area are on stilts. This permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed

property. This area cannot support this water treatment plant. Secondly, the treated waste water may introduce numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa. This is a serious health concern. Thirdly, the chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and ATV trails. I respectfully request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request. Homeowners in this area deserve to have a voice in the future of their personal health, as well as, their overall quality of living. Thank you, Debbie Nickerson

COMMENTS: I ask that you deny the request for this permit. I am a native Houstonian. I have lived in Cypress for 40 years. I am the treasurer of my HOA. I love where I live. We chose to buy our home near Cypress Creek, because it is a natural sanctuary area. I ask that you deny the request for this permit for several reasons. First, Cypress Creek which backs up to my neighborhood, already is overly burdened and prone to flooding. We have homes on stilts in some areas. This request will allow the addition of 55,000 gallons of waste

water daily into Cypress Creek. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and ATV trails. It will also effect the home sites are on stilts by contaminating the soil. Please help us by denying this permit. I ask that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: Please Deny this permit application to discharge waste water into cypress creek. My family lives on property adjoining the creek less than 1/4 mile from the bridge near where this proposed waste would be discharged. I have a young son who likes to fish in the creek and a daughter on the way who will surely follow in his footsteps and they do not need to come into contact with the bacteria, viruses and protozoa which can potentially be found in the effluent. There is already a large number of waste water treatment plants

MW

discharging into the creek, we do not need another one discharging 55,000 gallons a day, especially this close to our home, to an already overburdened, flood prone creek. I would additionally like to request that a public meeting be held so that we may give further comments and ask additional questions regarding the permit request.

COMMENTS: Good Evening Ladies and Gentlemen of the board, I am writing as a concerned citizen of Ravensway that is against permit number WQ0015381001. I am asking for this permit to be denied for the following reasons; 1) First and foremost the issue of flooding. Our neighborhood is prone to flooding without the additional 55,000 (potential) gallons of water that would rush into our creek. Given a light rain storm the potential for the flooding to reach historic levels in Ravensway is very concerning. We also need to be

MW

cognoscente of all the additional water that would be runoff from this area. With the land being developed we would lose the natural "run off". This is a serious concern and needs to be addressed. Preferable with a public hearing, which I am requesting. 2) The treated waste water self. While this may be an "acceptable" way to get rid of waste I do believe, firmly, that none of the members of this board or our community would want to have it draining where we use our bikes. Go look at the wildlife. Walk around and enjoy time with our kids. I use those trails by the creek weekly for biking, and just the creek alone has caused noticeable erosion in the 4 years I have lived here. Adding to that with 55,000 additional gallons would cause un-fixable damage to the ecosystem and to the areas where we go for recreation. Now let's get to the issue of the chemicals that are used for this. If my chemistry minor holds correct it takes vast amounts of chemicals to treat water to have it be "acceptable" to put in a runoff. What will that do to the many birds, deer, raccoon, fish, etc that use the creek as a water source. What kind of ecological damage can we expect from the fallout of even more chemicals near our homes? This isn't something to take lightly. At all ladies and gentlemen. We should also note the potential for microbial diseases associated with treated waste. And we shouldn't ignore what would happen should we have flooding with this treated waste water. Sickness. Disease. Not just for humans. But for wildlife as well. My concerns are valid and alarming. I am requesting a public meeting so TCEQ can hear why we don't want this apartment complex, or any apartment complex to come to our area and destroy a part of what makes Cypress Creek and Cypress beautiful. Our concerns need to be addressed and answered. I urge you to give us our voice so you can rightfully deny this permit WQ0015381001. I thank you for your time, and look forward to having you hear our concerns. Sincerely, Paul Norman

COMMENTS: Good afternoon, First and foremost this place was brought up through our community and was vehemently denied. The developer was denied services to water and sewer. Now they have devised a plan that is going to erode our cypress creep and potentially cause worse flooding to our community, and our subdivision. The ecosystem is very vulnerable to treated water waste. Safe or not, once flooding starts you get a buildup of mosquitoes that spread west Nile disease, on top of the microscopic bacteria that I don't think anyone wants in

MW

their backyard. We have a substantial amount of wildlife that will also be affected by this decision to permit this travesty. Why would you approve this? In a community that doesn't want the apartments, and will suffer the consequences of their greed. We cannot take the economical hit to our subdivision nor the ecological consequences to the land and our wildlife that surround it. I am asking, pleading, that this request be denied. We don't want it and can't afford the repercussions surrounding it. Thank you for your time, and your denial to this permit.

COMMENTS: I would like to have the permit denied due to: a.Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The

chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I would like to request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: THIS IS MY REQUEST THAT THIS PERMIT BE DENIED!!!!! The following are my comments related to this proposed permit: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses,

mw

bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails c. Traffic congestion and the impact on already overburdened roadways in the proposed area cannot be tolerated by our neighborhoods and school facilities. d. We feel that we have enough low income housing that has to be supported in our community. We are also very concerned as to the increased crime circumstances that seem to happen to these areas. e. We also request that a Public meeting be held that will allow others an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: Cypress Creek is already overburdened and very prone to flooding. The Homeowners in the lower part of Ravensway have to deal with this all the time. Also it should not be allowed to have two low income housings 2 minutes apart. If 55 gallons of wastewater is disposed every single day we will start flooding even further up. There is so much wildlife on the creek and the chemicals us would definately impact the

animals not to mention the people who live here. I urge you not to allow this to be build. We already habe enough thickness everywhere. Please deny this request. Thank you and God bless. Renate H. Paul

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: I move to Deny the permit as the cypress creek area is already overly burdened and prone to flooding. Adding the additional 55,000 gallons of effluent per day will cause actual, imminent and irreparable harm to those neighborhoods in the cypress creek area. The proposed Meadows at cypress Creek project also contains a phase 2 which will double the effluent burden on the creek which has not been discussed.

COMMENTS: Please Deny a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can

MW

harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails.

COMMENTS: Please deny. We don't want them contributing to flooding & water pollution in Cypress. This area is prone to flooding. In fact, recent rains have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality.

The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: The proposed project would significantly degrade the character and nature of the neighborhood where it is proposed to be located. Further, during the recent 4 year drought, this area was in a crisis situation with regard to available water. We need no high water usage projects such as this which would negatively impact water supplies for what is a single family residential area.

COMMENTS: I strongly disagree with the purposes water treatment plant that would dump "treated" water into Cypress Creek. The creek would be polluted, flooding issues would increase and the ecosystem of the area would be severely damaged.

FAX: 8325730808

COMMENTS: This is an urgent request to deny this permit. My property is positioned next to the Cypress Creek in the Ravensway Subdivision. This are is not only prone to flooding, but the creek bend next to my home is eroding. The flow of water in this particular area rotates, and as development increases, the rotation increases, speeding the erosion rate. We have done all we can to armor our property, but I fear that an additional 55,000 per day being released at such close proximity to my property will not only put my home at risk, but will

affect my property value. I am requesting a public meeting to be held, so that the developer can address the concerns of our community.

COMMENTS: My property is adjacent to Cypress Creek in the Ravensway subdivision. I have 2 major concerns regarding the permit being granted that would allow an additional 55,000 gallons of water per day being released less that a mile upstream from my property. First, this section of the creek is prone to flood. FEMA maps recently moved my property to the 100 year flood plane, and my fear is that additional water being discharged into the creek will put my property at a higher risk of flood. Secondly, the banks of the creek closest

MW

to my home have been eroding at a higher rate as development upstream has increased. I am begging you to deny the permit for this TPDES. I have lived in my home for 16 years, and fear that the combination of problems that this project will bring will not on only put my home at risk, but decrease the value. I appreciate your attention in this matter. Feel free to contact me with any questions or comments.

COMMENTS: Waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that

resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: I am concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live about 5 miles from this proposed plant. I request a contested case hearing in this matter. My concerns include the following: 1. nuisance conditions 2. an increase of pollutant loading into Cypress Creek. Odors and pollutants will come from the wastewater treatment plant. Also, the package plant will not remove pharmaceuticals, which have a negative effect on human and aquatic life. My house backs up to

Cypress Creek, and from time to time my family and pet go swimming and fishing in the creek. In addition, my house floods when there is excessive rain fall. I do not want bacteria and other pollutants being discharged into Cypress Creek, reaching my family and house, causing us to get sick. I feel the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards. Thank you.

COMMENTS: I am writing to request that the permit application submitted by Nantucket Housing, LLC, be denied. As a resident of Cypress who has experienced the severe rainstorms in the area, I am deeply concerned about the possible flooding that may occur if the permit is approved and waste water as well as additional storm water is channeled into Cypress Creek. In addition to my concern over flooding, I am also wary of treated waste water's effect on Cypress Creek's ecosystem. I fear that the chemicals used in the treatment process would cause

mw

irreparable harm to the ecosystem and ultimately affect the use of the creek for the recreational activities that many currently enjoy. I am requesting that a public meeting be held so that TCEQ may hear the concerns of both residents and non-residents who enjoy Cypress Creek.

COMMENTS: I am writing to request that this permit be DENIED and we are opposed to this. We are concerned about the flooding in Cypress Creek as it is already prone to flooding. My neighborhood floods on a normal basis as is and this project will make the matter worse. Also, the treated waste water will increase the possibility of numerous diseases as well. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as

well as walking, biking and atv trails. I have worked extremely hard to be able to move my family to a nice area of Houston. I feel this project will have a negative impact on the services in the area, my safety and my home's property values, which I have invested in heavily. There is also a very nice school right by the proposed location, Millsap Elementary School, that I feel will be impacted negatively by this project. It already serves nearly 1000 students--this many new families will place a huge burden on the school. Who will pay for the new staff that will be added and the temporary buildings? Why the tax-paying, income-earning Cy-Fair community will shoulder that burden, of course! Additionally, where will these new families attend high school? Cy-Fair High School is alteady serving 3500 students and has numerous temporary buildings. As most of those who would be served by this project do not own vehicles and the proposed location is not convenient for people who travel using public transportation, one questions why this area has been chosen in the first place. I would like there to be a Public Meeting held on this topic where the community will come out and voice our concerns in person. Thank you

substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. If the above is not sufficient, then I request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: This project that has already been denied by the local MUD. This is an attempt to sneak around us not wanting a high occupancy apartment complex that will dump into our creek. Cypress Creek is the reason I invested in a home here and Cypress Creek is a very delicate watershed (as we all have recently seen). I say NO to allowing such a permit and hope you do too.

COMMENTS: I would like to request that the permit #WQ0015381001 be DENIED for the following reasons. a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being

MW

released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I would also like to request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: I am requesting this permit be denied and a public meeting be held to give the public an opportunity to submit comments and ask questions regarding this permit request. I would like the permit denied because of flooding. Cy Creek already is over burdened and prone to flooding. The request is to allow 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. Just recently the creek on Kluge and close to Huffmeister was right at the point of going

MW

over its bank and someone from the water district was watching it on a constant basis. This just adds to the cost of monitoring an already burdened creek and increasing the cost of man power to watch it. Effluent is treated water which increases the possibility of numerous waterborne pathogens, including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Again, I am asking the permit be denied and a public meeting be held to give the public a chance to comment and ask questions.

COMMENTS: Before the "FINAL" decision is made reference the permit for Nantucket Housing, LLC, a new applications should to be submitted due to the fact phase 2 has been stopped by the outpouring support of the Cypress Community AGAINST this "affordable Housing" complex. As phase 2 has been stopped, there will only be 170 units instead of 370, a new permit application should be submitted and I would like to see the new

MW

permit DENIED. With the recent heavy rains in the Cypress area, any additional "drainage" into Cypress Creek will add to the already devastation.

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I request the permit be denied for Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: Flooding is a major concern in the Cypress, Texas area. Rain falls at record rates and floods streets, and other areas due to creeks and excessive building of treatment plants and apartments. This results in higher insurance rates, loss, and less quality of life. There is also a huge problem and research that is ongoing regarding ground water quality due to filtration plants, oil, refuse dumbing, recycling plants, etc. Cypress is to be a quiet and protected area if it is going to provide the quality of life that is there now.

COMMENTS: I am strongly opposed to granting this permit due to the discharge of waste into a free flowing body of water in a dense populated area that will effect children's health that come in contact with the water as well as the large number of units being proposed by this development. Phase 1 is for 170 units and Phase 2 is for 200 more units. 370 Units will be tightly sandwiched into this property creating a problem for the infrastructure of our schools, EMS, fire and all first responders.

FAX: 8325064701

COMMENTS: Please do NOT approve The Meadows at Cypress Creek to perform their own waste treatment on-site and discharge up to 55,000 gallons PER DAY of 'treated domestic wastewater' INTO CYPRESS CREEK. Our health and safety would be greatly impacted by this discharge to a creek that is already challenged by any significant rainfall. The fact that it is "wastewater" increases our concern. We live down-stream from this property!

COMMENTS: Deny the permit for a water treatment plant. This will cause flooding; Cypress Creek is already overly burdened and prone to flooding. This plant will allow 55,000 gallons of effluent into the creek. This will only increase the possibility of numerous waterborne pathogens. The chemicals used could cause damage to aquatic life and change the quality of water in Cypress Creek. This plant will only cause more problems for those currently living in this area. No one who lives here wants this plant. Please, have a public meeting. Allow

MW

the people who actually live here have their say as opposed to allowing a business dictate the quality of our lives for their own profit. They don't live here. They don't care about the environment or the quality of Cypress Creek. They only want to make money. Please, call for a public meeting. We do not want the plant nor do we want them to pollute our water!

COMMENTS: PLEASE DENY PERMIT WQ0015381001 (Nantucket Housing, LLC). My reasons are as follow: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request would allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being

released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Please hold a PUBLIC MEETING to allow an opportunity for the community to submit comments and ask questions regarding this permit. Thank you.

COMMENTS: We were opposed to the establishment of 'additional' government housing planned for our vicinity by this same developer in the near past. We certainly are opposed for any associated 'waste water' processing facilities near our neighborhood of a school and homes. To even suggest that the products of this 'waste water treatment facility' would be 'dumped' into Cypress Creek is a dispicable confront on us, the citizens and residents of the Ravensway community. An accompanying concern is the replacement of watershed

grasslands with structures, decreasing the amount of natural open-land absorption, adding to the water flow of Cypress Creek, that has finally been addressed by Engineers to stay within its banks. I request a public meeting to give us, as residents, an opportunity to voice our concerns in this matter.

COMMENTS: I am concerned about the recent permit application of meadows at cypress creek and Blazer Inc. I reside on a neighborhood close to cypress creek and during high precipatation days, flooding is a major concern for us. Our street floods when the creek flows out of its bank. Two sep occasions in 8 years have resulted in significant flooding on our street which did not allow us to leave our home. This May the street flooded but was passable. This is not street flooding but the creek rising above its bank. I have a major concern

about how much water will be discharged and how it will affect the flooding issues we already have in this area. I would like to request a public meeting to provide more information regarding this issue. Thank you.

COMMENTS: My residence is directly north and adjacent to the proposed Meadows @ Cypress Creek. There are several issues that i would like addressed before this project is approved. 1. What are the guidelines for odorous emissions? Are the guidelines such that the odor may be too bad to go outside at certain times so long as the average is within "approved " guidelines? 2.Are the water usage calculations realistic? Is the "353" units the number of apartments or the number of bedrooms? I am aware that Texas law allows 3 residents per

MW

bedroom and HUD guidelines say 2 per bedroom, but families with children will do more laundry, give more baths and use more water per person than single adults without children. I've been told that there will also be senior living residences. Is this assisted living? I'm aware that senior citizens will use the restrooms more frequently (commodes on average consume 27% of the water) because they "have to go" more often and they will not be leaving their residences to go to work. Has this additional usage been included in the calculations? 3. Finally, does the design consider loss of power,and have adequate storage capacity, or will there be an on site standby generator with auto/start when power outages occur? I have experienced numerous power outages over the years to the extent that i purchased a standby generator. Without power will the raw sewage gravity feed to the street or will it overflow the treatment plant onto the surrounding ground? Thank for addressing my concerns. CD Terry

REGULATED ENTY NAME MEADOWS AT CYPRESS CREEK

RN NUMBER: RN108328113

PERMIT NUMBER: WQ0015381001

DOCKET NUMBER:

COUNTY: HARRIS

PRINCIPAL NAME: NANTUCKET HOUSING LLC

CN NUMBER: CN604813121

FROM

NAME: Pamela Thompson

E-MAIL: jpthom17@yahoo.com

COMPANY:

ADDRESS: 12714 PEBBLE CREEK LN
CYPRESS TX 77429-3654

PHONE: 7135023188

FAX:

COMMENTS: I am requesting that that this permit be denied for the following reasons: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial

MW

concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: The area can not accommodate more water. There are homes and businesses in this area that are already having high water issues/flooding with recent rainfall. To burden the current system with more water is unquestionable. I have lived and worked in this area for over forty years and there have always and still are extreme flooding problems.Thank you for your consideration.

COMMENTS: Flooding – Cypress Creek is already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. Our street already floods as it is because we live near the creek in Enchanted Valley (not the Estates). Effluent is treated waste water which increases the possibility of numerous waterborne pathogens, (including but not limited to viruses, bacteria, salmonella & protozoa)

being released and this is a huge concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing and kayaking. This project will be within 1 block from an elementary school. Contrary to opinions, low income housing is a breeding ground for drugs, drinking, theft, burglary and other serious crimes. I ask, would you want this next to where your children or grandchildren go to school? Right now property values are on the rise in this area and this project would drastically decrease our home's value. We have worked to hard to move to this area away from decaying neighborhoods. A public meeting must be held allowing local residents an opportunity to voice comments and ask questions regarding this permit request. Thank you.

COMMENTS: I live right by Cypress Creek and with all the building going on around our area the creek is running at a much higher level than in earlier times. Allowing Meadow At Cypress Creek / Nantucket Housing LLC to dump their treated waste waster at 55,000.00 gallons a day into the creek will increase the water level in Cypress Creek even more, leaving little room when our storms come thru. We flood often and need to protect

the existing houses and businesses that are close to the creek. We do not need a housing project to go up on Huffmeister. Please deny the permit to build.

COMMENTS: This is my request that Permit #WQ0015381001 be denied to Nantucket Housing, LLC. The issuing of this permit would cause an even greater burden to be placed on Cypress Creek (allowing the addition of 55,000 gallons of effluent to the creek) which is already prone to flooding and also cause the water quality of the creek to decline significantly. We don't want Cypress Creek to be any more compromised than it already is.

MW

I respectfully request that you hold a Public Meeting regarding this matter so that all residents of this area might be able to submit comments and ask questions.

COMMENTS: Please deny this permit application for the following two reasons 1.) Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. 2.) Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern.

The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails.

COMMENTS: I request this permit be DENIED. We live down the creek from this proposed site and have culverts along both sides of our street as well as a drainage pond on our street. The additional 55,000+ gallons of effluent coming into the creek daily in addition to storm water from the developed property poses increased flooding risk to all along the creek and in this area. The treated waste water will bring waterborne pathogens as well as additional unwanted chemicals into the creek changing the ecosystem of Cypress Creek. The creek is an

MW

important asset to our community used for agriculture and recreation such as fishing, kayaking, walking, hiking and biking. Three to four times per week, I walk the trail at the park at Eldridge along Cypress Creek. I see great white egrets, blue herons, turtles, Mexican water ducks , bunnies, deer, red-headed woodpeckers, and a plethora of other birds. (We have actually seen a red fox run over in the road on Eldridge between Grant and Cypress North Houston by Cypress Creek as well.) The chemicals and water borne pathogens, including harmful protozoa and bacteria, that this development will bring into the creek will harm or destroy this wildlife. PLEASE HOLD A PUBLIC MEETING TO ALLOW QUESTIONS AND COMMENTS REGARDING THIS PERMIT REQUEST. Thank you for your consideration.

Marisa Weber

COMMENTS: Time has come to step back and assess the impact of the rapid area expansion on current and futire infra-structure needs. Schools are already stretched, roads are an absolute disaster, water is becoming a major concern. We are now being told that neither the recent school bond issue or the current highway expansion is sufficient to meet needs given the current pace of population growth. Yet ANOTHER apartment complex is certainly not in the best interest of this community.

MEETING AGENDA

Introduction [7:00 p.m.].....TCEQ

Identify Elected Officials.....TCEQ

Presentations.....Applicant & TCEQ

Informal Discussion Period

Questions & Answers.....Public

Members of the public may ask questions during this time period. TCEQ staff and the Applicant will respond to questions. This time period is for discussion purposes and for obtaining information from TCEQ staff and the Applicant. **Questions and/or comments made during this period will not be considered formal comment, and will not go to the Commissioners. Additionally, no written response will be prepared for comments made during this period.**

Clair Wheeler Questions
713-204-2653

Formal Comment Period

Formal Comments.....Public

During the formal comment period members of the public may voice concerns or comments. **Neither the Applicant nor TCEQ staff will respond during the formal comment period.** After the close of all comment periods, the Executive Director will summarize the formal comments and prepare a written response to comments (RTC). This RTC will be made available to the public and will also be mailed to those who submitted written comments or formal comments at a public meeting.

Everyone who wishes to comment will have the opportunity to do so, however, we may ask that each commentor limit their time so that everyone will have time to speak.

8) Why not SCADA ~~Test~~ monitoring by TCEQ? Paid for by Applicant

Closing Remarks/Adjournment.....TCEQ

6) Any caps on types & duration of off spec discharge?
7) Any counterparty risk analysis or permit applicant?

RECEIVED
NOV 12 2015
AT PUBLIC MEETING

operation & analytical

Please Note: Written comments may be submitted anytime during the evening.

1) Is 100% of equipment redundant?
2) Is all redundant equipment "hot" or all wired & plumbed for immediate operation?
3) Can I get a copy of the applicant's application?
4) Sludge Testing 1 time during permit - can this be at end of permit?
5) Hours of retention prior to raw discharge?

COMMENTS: See document uploaded

MW

Questions on Nantucket Housing Permit

1. Does Nantucket Housing LLC own the property the entire distance from the waste water treatment facility to the Cypress Creek?
2. Will there be continuous monitoring of Carbonaceous Biochemical Oxygen Demand or simply weekly grab samples? If yes what measurement technique will be used? What make and model analyzer will be used? How often will the analyzer be calibrated? What zero and span samples will be used? Will calibration samples be certified?
3. Will there be continuous monitoring of Total Suspended Solids or simply weekly grab samples? If yes what measurement technique will be used? What make and model analyzer will be used? How often will the analyzer be calibrated? What zero and span samples will be used?
4. Will there be continuous monitoring of Ammonia Nitrogen or simply weekly grab samples? If yes what measurement technique will be used? What make and model analyzer will be used? How often will the analyzer be calibrated? What zero and span samples will be used?
5. Will there be continuous monitoring of E.coli or simply weekly grab samples? If yes what measurement technique will be used? What make and model analyzer will be used? How often will the analyzer be calibrated? What zero and span samples will be used?
6. If there is not continuous monitoring how will daily maximum be calculated
7. Will there be a specific flow rate associated with taking a Grab Sample?
8. Will there be any other requirements on operating conditions when a sample is taken? I assume the loading on the system will not be uniform and sample reading would be a function of plant loading?
9. Can the grab sample be cherry picked i.e. take numerous samples and only submit the best one?
10. Why is the permit based on grab samples as opposed to composite samples? It appears composite samples are flow weighted.
11. The permit requires no solids or visible foam in the other (?) than trace amounts and no discharge of visible oil. (this sentence may have missing wording). How is this visual requirement monitored? Is parking area storm water routed thru the treatment plant? What process step is designed to remove oil as even ppm levels of oil present a visible result. How will the oil discharge requirement be monitored?
12. Reporting is self reporting. Does the permit allow for sampling by other interested parties? Could an interested party take samples at the end of the pipe at Cypress Creek and would the TPDES recognize this sample as representative of the discharge?
13. What statistical process will be employed to determine the frequency of instrument and analyzer calibration? The permit notes annually. If annual reading indicates the analyzer is off by 50% (example) would more frequent calibration be required?
14. Will all analyzers and instruments be calibrated against certified standards?
15. Will daily maximums be based on a chart or other type recorder? Who will review the charts and will they be available to the public upon request?
16. During scheduled maintenance is all effluent sent directly to the creek?
17. What stocking of spare parts is required to prevent extended downtime and potential direct discharge of sewage?

18. What analytic approach will be employed to test for the items in Section 9.?
19. What are the criteria for "amending, suspending or terminating the permit" discussed in Permit Conditions 1.c and other locations within the permit.
20. In compliance it discusses altering or reduction of permitted activity. Is this practical in this situation? Are holding tanks included as a buffer for plant upsets? How many hours of operation are the holding tanks designed for?
21. In compliance the term "reasonable steps" is the criteria for avoiding events that would affect human health or the environment. Does the TPDES ever impose a higher standard such as best available? What levels does the TPDES employee. Does 'reasonable steps" have economics as part of the equation? If yes what are the economics of the next better technology? Has a HAZOP analysis of the system be performed? Have operating records of similar plants been reviewed/ what due dillegence has been done on the process design, equipment design etc.?
22. Is Management of Change (MOC) being required for this operation?
23. Compliance paragraphs g does not appear to have much meaning in that there is little likelihood of discharge into another outfall.
24. Compliance paragraph h. does appear to have some teeth but I fear still allows too much bypass activity. Could a cap be placed on time or volume of bypass? What is the definition of "essential maintenance". Does the permit require any duplicate equipment to avoid bypass from occurring? Have the high maintenance items of equipment been identified and a maintenance schedule been reviewed? "Essential maintenance for efficient operations" means the door is open for substantial operation in bypass mode. A poorly designed or operated plant could be perpetually in bypass mode. A standard that would protect the environment would require a holding tank for all non-compliant waste! That would encourage a robust plant design. Is this ever considered? If not why not? Not sure why we need to take risks on this type of project.
25. In the event of significant problems with the equipment what would the tenants in the apartments do? This is not a plant that could be shut down by a switch. Laws would protect the tenants and time would occur and health and environmental impact would compound.
26. Compliance i. discusses potential penalties. Has the TPDES done due dilagence on the counter party risk associated with Nantucket. If the TPDES were to establish penalties is the counter party a shell asset light entity i.e. can they financially guarantee performance? Can the liabilities be sold, transferred or convey to another party? Has a performance bond been considered if the counter party risk is high?
27. Please provide the sizing calculations used to develop the plant design.
28. Please provide a process diagram of the plant.
29. Please provide a list of all chemicals, quantities and storage containment plans.
30. Please provide information on any hazardous chemicals (specifically chlorine) if used.
31. What source of alternative power will be provided? What testing frequency will be used to ensure the alternative power source is reliable? Will this plant be provided redundant power from more than one grid or circuit, or is dependent on only one source of power from the utility?
32. What retention of inadequately treated waste water is included in the design?

33. Documentation - What could be claimed as confidential? Is this a proprietary design? Can the permit prequalify what is and what is not considered confidential by Nantucket? This allows Nantucket to declare anything confidential.
34. What method will be used to handle and dispose of sludge? If the sludge is not removed from the site for further processing at a professional location I reserve the right to ask more questions.
35. What is the maximum storage of sludge?
36. What odor containment process will be used?
37. Will maintenance be done by in house staff or outsourced? If outsourced what firms are being considered?
38. In all instances where the permit states "shall be tested during the term of this permit", does it allow the permit holder to wait until the end of the permit period to do the testing. Why not state "within 90 days of commencement of commercial operations" to ensure tests are done expeditiously.
39. What "reasonably anticipated adverse effects" are considered in granting of this permit? (P17)
40. Where it states "all sludge toxicity testing", what is done if there is no testing to date and the permit holder plans to wait to test until the end of the permit term?
41. When it states "dry basis" how dry is required? Is there a temperature and time required for drying?
42. What are "volatile Solids"? Does this refer to vapor pressure? Should it read "volatile materials"?
43. For Cumulative Pollutant Loading Rate. How is distribution across the acreage determined?
44. What is the Liquid Paint Filter Test and how does it apply in this permit?
45. What provisions will be in place to protect the facilities from a 100 year flood? Who determines if the facilities are adequate? How is this documented?
46. What triggers a change-over of the dual feed chlorine system. How often is the change-over system tested to ensure it is functional when needed. Is there a secondary shutdown in case the change-over is not complete?

COMMENTS: Please DENY the request from Meadows at Cypress Creek I do not trust a private sewer system to not pollute our stream. When money gets tight they will take short cuts and prefer to pay fines that build the type system with redundancy that is needed. Private entities should not run sewer plants as they are not technically equipped on a one off basis to be good at the process. Plus the following a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000

MW

gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. PLEASE - PLEASE - PLEASE have a Public Meeting allowing me an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: I request a public meeting to ask questions and voice concerns regarding this permit. As a community, we value our resources and that includes the habitat and ecosystem of Cypress Creek. Adding a housing unit that will dump waste water albeit treated into our creek is irresponsible and will increase the strain on an already stretched ecosystem. Please allow the members of this community to have a voice and ultimately, we ask that you do not allow this permit to go through.

COMMENTS: I am writing as part of the petition to deny approval of this pending development request. The entity reguesting this permit is doing so in order to circumvent the proper process, after being previously denied his development in the appropriate manner. In addition, the danger this proposal would cause to the environment is not worth the risk, and would cause flood damage to existing private homeowner property in the area, as well as damage to parks and rec areas where children play. It would cause health problems similar to

those caused recently in the San Jacinto River area as well. On top of it, residents simply do not want this housing built in their community bc of the current crime rate and property values that it would decrease even more. Please do not grant this to a person who is not actually interested in helping the community, just filling his pockets regardless of the costs to others, the evironmemt, health, and nearby properties.

FAX: 8329646595

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

MW

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: For one thing, we live across the street from Cypress Creek/Telge Park. Along with many of the "obvious and intelligent reasons" we are apposed to this! Please reconsider the location, where it would not be an environmental detriment to Cypress Creek. Thank you.

COMMENTS: request that the permit be DENIED. a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the

MW

treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Specifically request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: Please deny permit. Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding.

In fact, recent rains have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding. Please hold a public meeting about this permit request so that the local community that I am a part of can voice their rejection of this request for permit. Thank you, Humberto Zarate
