RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

NSR 80395 83497

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit 1302 No. PSDTX~~1284~~, and Nonattainment Permit Number N~~152~~; and 170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

As a Trustee for the Brazosport Independent School District the impact for our area and our school district for this new installation would be beneficial.

MW

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Jason Alexander

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1288, and Nonattainment Permit Number ~~N152~~ 178; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Re: Freeport LLNG Development, LP-Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit NO. ~~100129~~ 104840; PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More that 3,500 workers will be employed during the four-to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

Phone: (979) 233-8481 Fax: (979) 233-8048

Oyster Creek Police Department

3210 F.M. 523, Oyster Creek, Texas 77541

Tim Bradberry, Chief

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from the other states, Primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

Chief Tim Bradberry

Re: Freeport LNG Development, LP – Liquefaction Project:

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDT~~X1284~~ 1302, and Nonattainment Permit Number ~~N152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Patty Brinkmeyer

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Hyde:

The Texas Independent Producers and Royalty Owners Association (TIPRO) is a statewide oil and natural gas trade association with over 2,600 members ranging from the smallest family-owned companies to the largest publicly-traded independents, and includes large and small royalty owners. TIPRO strongly urges you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Many TIPRO members will benefit from this project and would like to see construction of the export terminal begin without delay.

Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. They have designed a state-of-the-art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. We are confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

Dear Hon. Hutchinson, We (Hideaway on the Gulf) are a small community of caring owners, not wealthy just hard working tax payers and mostly senior citizens that saved for years to have a tranquil place to relax but now our homes and health are in grave danger and request your assistance in opposing a permit for an LNG pre-treatment facility that is to be constructed less than 1/2 a mile from our community. Your letter in FERC Docket PF11-2 states you support their application (this website doesn't allow attachments) so as a neighborhood with much to loose and obviously no voice from those representing us, where do we turn? Have you looked at the location of their proposed facility? In the event of some terrorist attack, plant accident, or natural disaster the residents would be unable to evacuate because of the location they have chosen. There is only one road in or out, how would anyone get help if we needed it? . I also wish to mention it would have a profound affect on our precious wetlands since it sits adjacent to the Brazoria National Wildlife Refuge including all it's waterways.
This is our website, our cause, our plea for fellow Texans.

Re: Freeport LNG Development, LP/Air Quality Permits #100129 and #100114

Dear Mr. Cole:

Thank you for your concerns regarding Freeport LNG Development, LP/Air Quality Permits #100129 and #100114. Senator Kay Bailey Hutchison has forwarded a copy of your correspondence to the Texas Commission on Environmental Quality (TCEQ) for a response.

These permit applications were received by the TCEQ on December 20, 2011 and are currently under technical review. Please be assured that your letter will be forwarded to the TCEQ staff responsible for reviewing the permit application. At the conclusion of the technical review, all timely filed comments will be considered by the staff prior to the final decision on the application. In addition, you will be added to the mailing list and receive a copy of the formal written response to all timely filed comments.

The TCEQ appreciates your interest in environmental issues. If you have any further questions or concerns regarding this permitting issue or the permitting process, please feel free to contact TCEQ staff at 1-800-687-4040.

Sincerely,

Bridget C. Bohac

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

David J. Collins — Signature

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

cc

Web Mail Message

I am sending this message in my concern for my family's safety and economic welfare. Freeport LNG has issued permits to FERC and TECQ to construct a pretreatment plant within .5 miles of 3 resort community neighborhoods. My knowledge was that when we bought our home property 18 years ago that we were not within an industrial zone site. Now FLNG has purchased property on CR 792 with the intent of putting a hazardous plant in the backyards of our neighborhoods. Many causes for concern which there are documents available if researched. I will leave that to your staff to do. What gives this corporation the right to devalue our life savings. Most of these resort homes are owned by retired families. I have taught in the Texas school system for 28 years with no raises the last 4 years and am retiring this year just to see my property value and way of life take a decrease if they are allowed to continue with their efforts. There are other sites available, 4 of which they considered before purchasing the property on CR 792. Thank you for your consideration of looking at this matter with the working people in mind and not the corporation's interest. They do have other options...I am not against bringing economic growth for our community, just not in my backyard!!

Re: Freeport LNG Development, LP/Air Quality Permits #100129 and #100114

Dear Ms. Coots:

Thank you for your concerns regarding Freeport LNG Development, LP/Air Quality Permits #100129 and #100114. Senator Kay Bailey Hutchison has forwarded a copy of your correspondence to the Texas Commission on Environmental Quality (TCEQ) for a response.

These permit applications were received by the TCEQ on December 20, 2011 and are currently under technical review. Please be assured that your letter will be forwarded to the TCEQ staff responsible for reviewing the permit application. At the conclusion of the technical review, all timely filed comments will be considered by the staff prior to the final decision on the application. In addition, you will be added to the mailing list and receive a copy of the formal written response to all timely filed comments.

The TCEQ appreciates your interest in environmental issues. If you have any further questions or concerns regarding this permitting issue or the permitting process, please feel free to contact TCEQ staff at 1-800-687-4040.

Sincerely,

Bridget C. Bohac

These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Roger Cornelison — Signature

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. I04840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284,~~ 1307, and Nonattainment Permit Number N~~152,~~ 170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Re: Freeport LNG Development, LP – Liquefaction Project: 104840

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit PSDTX1302 No. ~~PSDTX1284~~, and Nonattainment Permit Number ~~N152~~; and N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Commissioners:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good

environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

James P. Davis Signature

CHIEF CLERKS OFFICE

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number ~~N152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Eric G. Graff Signature

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in the healthcare industry in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses. As the leading healthcare safety-net facility for the region, we desperately need the economic stimulus this project will have on our local economy.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project.

Sincerely yours,

Al Guevara

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these

projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

Louis Guidry

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1307, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Sarah Hall Signature

Re: Freeport LNG Development, LP – Pretreatment Facility and Liquefaction Plant (Proposed 104840 State Air Quality Permit Nos. ~~100129~~ and 100114, PSD Permit Nos. ~~PSDTX1284~~ and PSDTX1282 and Nonattainment Permit Numbers ~~N152~~ and N150 PSDTX1302 N170

Dear Mr. Hyde:

I am writing on behalf of the Texas Association of Business (TAB) to request that you and your staff move as expeditiously as possible to process and approve Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities referenced above. TAB is a broad-based, bipartisan organization representing more than 4,000 Texas employers and over 200 local chambers of commerce. As Texas' leading employer organization for more than 90 years, TAB represents some of the largest multi-national corporations as well as small businesses in almost every community in the state.

One of the fundamental principles that guide the work of TAB is the support of free markets and free trade. The Freeport LNG project clearly represents those market principles. This project will generate benefits felt throughout Texas as well as to the many members of TAB and our chamber of commerce partners. It is in the best interest of the state of Texas to have construction of the export terminal begin without delay.

Freeport has responsibly designed a state of the art facility that will ensure that operations will maximize energy efficiency at any level of production. While the design of these facilities will ensure that environmental impacts will be minimized, the construction and operation of the project will dramatically and positively affect the economy of the surrounding community as well as the state as a whole.

More than 3,500 workers will be employed during the four- to five-year construction period. Over 160 new full-time employees will be required to meet the demands of management, operation and maintenance of the new facilities. It is also estimated that production, processing and transportation of the natural gas required to supply the facility will create between 20,000 and 25,000 additional new jobs, in the Gulf Coast region and other parts of Texas.

The economic benefits of the project go well beyond the creation of a significant number of jobs, however. In fact, it is estimated that the Freeport LNG liquefaction project will add between $4.3 billion and $6.2 billion *per year* to the Texas economy. This benefit will be directly felt within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

With such benefits at stake, it should come as no surprise that there is considerable competition for the development of LNG export terminals from other states. There is an equal degree of competition for the capital investment funding that is available in the market with which projects such as Freeport LNG can be financed and competition between those countries that are interested in securing LNG supplies from exporting countries. As is the case for any large capital project that requires TCEQ authorization, prompt approval of the air quality permits will help keep Freeport LNG on a schedule that will allow both its successful development and the realization of its significant economic benefits..

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Sincerely,

Bill Hammond, President

Re: Freeport LNG Development, LP – Liquefaction Project:

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number ~~N152~~ F0;
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

As a citizen of Brazoria County, I want to express my support for the Freeport LNG Liquefaction Project and the above referenced permits. This project consists of two facilities, the Pretreatment Facility and the Liquefaction Plant, identified above. It is my understanding Freeport LNG has cooperated with the local community and addressed whatever concerns may have been raised, particularly those associated with the original proposed location of the Pretreatment Facility. As a responsible corporate and community partner, Freeport LNG worked with the community and ultimately moved the location of the Pretreatment Facility at a considerable expense to Freeport LNG.

With the location now decided upon, we request that the air quality permits for the LNG Pretreatment and Liquefaction Facilities be granted as soon as practicable so that construction can begin without further delay. This construction project is expected to have a positive impact on our local economy as well as be environmentally sensitive. Indeed, we are informed that Freeport LNG designed a state of the art project that incorporates zero-emission electric motors and state of the art emission control equipment. This aspect of the project is particularly noteworthy given the nonattainment status of Brazoria County.

We expect Freeport LNG's project will add a number of new jobs to our community. Reports suggest that more than 3,500 workers will be employed during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities longer-term. It has also been estimated that between 20,000 and 25,000 new ancillary jobs are to be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

MS

Freeport LNG reports that, in addition to the significant job creation, the total economic stimulus of its liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. The company further represents that many of the benefits are expected to accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Many of my friends and colleagues have grown up in Brazoria County, and after more than 13 years as a resident and former elected official in Brazoria County, I have significant ties and an appreciation for our local petrochemical industry leaders. Many of my friends and colleagues are able to provide for their families because of the positive investments our local petrochemical leaders make in our community.

I join many others in supporting the Commission's review and approval without delay of the permits for Freeport LNG Liquefaction Project. Thank you for your consideration.

Sincerely,

Felicia Harris

Re: Freeport LNG Development, LP – Liquefaction Project:

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170, and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Joe Harrison

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840 ~~100129~~, PSD Permit No. ~~PSDTX1284~~, and Nonattainment Permit N170 Number ~~N152~~; and PSDTX1302
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Hyde:

The Texas Oil and Gas Association ("TXOGA") is a not-for-profit corporation representing the interests of the oil and gas industry in the State of Texas. Founded in 1919, TXOGA is the largest and oldest petroleum organization in Texas, representing more than 5,000 members. The membership of TXOGA produces in excess of 90 percent of Texas's crude oil and natural gas, operates nearly 100 percent of the state's refining capacity, and is responsible for the vast majority of the state's pipelines. In state fiscal year 2013, the oil and gas industry employed 407,000 Texans, providing wages and salaries of over $49 billion in Texas alone. In addition, large associated capital investments by the oil and gas industry generate significant secondary economic benefits for Texas. TXOGA member companies produce a quarter of the nation's oil, a third of its natural gas, and account for one-fourth of the country's refining capacity.

As Executive Vice President of the TXOGA, I strongly urge you to act quickly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Many of the members of TXOGA will benefit from this project and would like to see construction of the export terminal begin without delay.

Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. They have designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

304 West 13th Street • Austin, TX 78701-1823 • Tel: 512-478-6631 • Fax: 512-472-3869 www.txoga.org

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

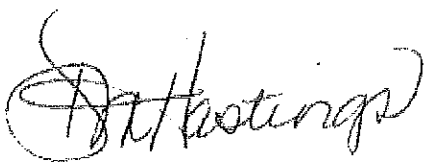
In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries, which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration. Let's keep Texas Strong.

Should you need additional information or comment, please contact me at dhastings@txoga.org or (512)478-6631.

Sincerely,



Deb Mamula Hastings
Executive Vice President
Texas Oil and Gas Association

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Hyde:

The Texas Oil and Gas Association ("TXOGA") is a not-for-profit corporation representing the interests of the oil and gas industry in the State of Texas. Founded in 1919, TXOGA is the largest and oldest petroleum organization in Texas, representing more than 5,000 members. The membership of TXOGA produces in excess of 90 percent of Texas's crude oil and natural gas, operates nearly 100 percent of the state's refining capacity, and is responsible for the vast majority of the state's pipelines. In state fiscal year 2013, the oil and gas industry employed 407,000 Texans, providing wages and salaries of over $49 billion in Texas alone. In addition, large associated capital investments by the oil and gas industry generate significant secondary economic benefits for Texas. TXOGA member companies produce a quarter of the nation's oil, a third of its natural gas, and account for one-fourth of the country's refining capacity.

As Executive Vice President of the TXOGA, I strongly urge you to act quickly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Many of the members of TXOGA will benefit from this project and would like to see construction of the export terminal begin without delay.

Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. They have designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

304 West 13th Street • Austin, TX 78701-1823 • Tel: 512-478-6631 • Fax: 512-472-3859 www.txoga.org

MW

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries, which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration. Let's keep Texas Strong.

Should you need additional information or comment, please contact me at dhastings@txoga.org or (512)478-6631.

Sincerely,

Deb Mamula Hastings
Executive Vice President
Texas Oil and Gas Association

Regarding the pretreatment plant location and possible tax abatement to be granted to Freeport LNG: My husband and I live full time in Hide-A-Way on the Gulf on CR 792, which we bought for a retirement home, as did most of my neighbors. I understand that we live in an industrial area, but to locate a natural gas pretreatment plant this close (<1/2 mile) to a residential community with no escape route in the event of emergency seems to absolutely disregard the threat to our health and safety, not to mention the detriment to the value of our property.

The actual number of employees (<50) for this facility seems relatively inconsequential, especially considering the possibility of tax abatement being offered to this facility. The 24 hour congestion, and wear and tear on our ONLY access road will warrant considerable taxpayer expense.

There are several alternate locations which are imminently more suitable for this facility and which do not compromise the safety, health, and financial resources of so many Brazoria County citizens.

Please use whatever authority you may have to persuade this Conoco-Phillips subsidiary to locate this new facility in a more appropriate setting. Please.

Sincerely,
Barbara Hawkins

Re: Freeport LNG Development, LP/Air Quality Permits #100129 and #100114

Dear Ms. Hawkins:

Thank you for your concerns regarding Freeport LNG Development, LP/Air Quality Permits #100129 and #100114. Senator Kay Bailey Hutchison has forwarded a copy of your correspondence to the Texas Commission on Environmental Quality (TCEQ) for a response.

These permit applications were received by the TCEQ on December 20, 2011 and are currently under technical review. Please be assured that your letter will be forwarded to the TCEQ staff responsible for reviewing the permit application. At the conclusion of the technical review, all timely filed comments will be considered by the staff prior to the final decision on the application. In addition, you will be added to the mailing list and receive a copy of the formal written response to all timely filed comments.

The TCEQ appreciates your interest in environmental issues. If you have any further questions or concerns regarding this permitting issue or the permitting process, please feel free to contact TCEQ staff at 1-800-687-4040.

Sincerely,

Bridget C. Bohac

RE: Freeport LNG Development, LP-Liquefaction Project

1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
CHIEF CLERKS OFFICE
FEB 21 2014

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,
Barbara Hawkins Signature

Attention: Ms. Bridget C. Bohac, Chief Clerk

Reference: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number 170 ~~N152~~; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am an officer of a business in Brazoria County and want to see the area grow and our employees have meaningful and significant jobs for decades to come. As such, I am lending my support for the important Freeport LNG Liquefaction Project. It is a world scale project with the Pretreatment Facility and Liquefaction Plant as defined in the proposed permits referenced above.

It is exciting to have this one project put more than 3,500 construction workers to work in the County, and these jobs will cover a four- to five-year construction period, much longer than the norm. We hear the permanent jobs created will top 150. That many new employees and their good paying jobs will have a noticeable effect through positive economic impact on the Brazoria County area. To that end, and without delay, the air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted post haste.

We really take notice when we hear that beyond the jobs created, the total economic stimulus of the Freeport LNG liquefaction project could reach as high as $6.2 billion per year. These benefits flow out beyond Brazoria County, throughout Texas, and specifically to the sources of the natural gas used in the facility, those being areas of major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford here in our great state.

I have watched Freeport LNG throughout its recent lifespan and found them to be environmentally sound for my County and State. They have shared plans that indicate a

TIC Energy & Chemical, Inc. 304 North Gulf Blvd., Freeport, TX 77541
Phone 979.233.5555. Fax 979.233.3050

continuation of this stewardship in the design of the liquefaction project. I have seen their plans and heard discussions about state of the art emission control equipment and early on heard about their decision to use the more costly electric motors as the primary drivers for gas liquefaction. When compared to gas turbine engines, this higher cost for electric motors rewards us all with a facility that produces no greenhouse gas emissions or emissions of NOx or VOC due to these motors. It appears the Project will have a minimum emissions footprint.

With all the merits of the Project, I would urge the Commission to move quickly and approve the requested permits, allowing construction to begin soon on this win-win project. I am always fearful that third-party abuse of the current regulatory regime could hamper this major economic driver for our area. Grant approval and watch our area grow!

Sincerely,

James B. Heath

Re: Freeport LNG Development, LP – Liquefaction Project:

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170, and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I own a printing business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,
Danny Hickey

COMMENTS: Would like to oppose the location of this LNG plant on CR 792. It will be close to my house that I have lived in for the past decade. I am very worried for the health of my family if this plant is let to be built. The flares at the plant will be polluting the air quality. The noise from the plant will also not be welcome, as right now when you walk out at night you can hear a pin drop outside. The plant will have horns, sirens, loudspeakes. Methane, Ethane, Carbon Dioxide, are all things that I would rather not have to deal with. Also if the plant is built it is said to be elevated and that will cause dust from the truck needed to bring in all of the dirt need to elecate the foundation.

Re: Freeport LNG Development, LP – Liquefaction Project: 104840
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit No. PSDTX~~1284~~1282, and Nonattainment Permit Number N~~152~~148, and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

Terry Jeffers, Mayor Pro Tem

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDT~~X1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

Our organization works with many businesses in Brazoria County and we want to express our support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Beth Journeay

1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging the fragile ecosystems. The new location is very close to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Signature

Richard D Linn.

Washington, DC 20510-4304

Dear Senator Hutchison:

I don't know if it has been brought to your attention but please hear me out. Freeport LNG is in the process of getting the final papers/ permits to build a LNG Scrubbing Facility off of CR 793 in Brazoria County Texas. I am not opposed to the new plant but it should be built in one of the two original proposed sites, not off of CR 723.

The CR 723 residents would be subjected to unreasonable life safety, health and economic impacts upon approval of Freeport LNG L.P. Amendment application.

Original proposed sites are far clear of residential areas. Cleary Plant should be build one of these original sites versus the close proximity of new building site to residential neighborhoods

Sincerely,

Richard Linn

Re: Freeport LNG Development, LP/Air Quality Permits #100129 and #100114

Dear Mr. Linn:

Thank you for your concerns regarding Freeport LNG Development, LP/Air Quality Permits #100129 and #100114. Senator Kay Bailey Hutchison has forwarded a copy of your correspondence to the Texas Commission on Environmental Quality (TCEQ) for a response.

These permit applications were received by the TCEQ on December 20, 2011 and are currently under technical review. Please be assured that your letter will be forwarded to the TCEQ staff responsible for reviewing the permit application. At the conclusion of the technical review, all timely filed comments will be considered by the staff prior to the final decision on the application. In addition, you will be added to the mailing list and receive a copy of the formal written response to all timely filed comments.

The TCEQ appreciates your interest in environmental issues. If you have any further questions or concerns regarding this permitting issue or the permitting process, please feel free to contact TCEQ staff at 1-800-687-4040.

Sincerely,

Bridget C. Bohac

CHIEF CLERKS OFFICE

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

As a citizen of Brazoria County I want to express my support for the Freeport LNG Liquefaction Project and the above referenced permits. This project consists of two facilities, the Pretreatment Facility and the Liquefaction Plant, identified above. I wholeheartedly offer my support for the swift approval of Freeport LNG's permits. Freeport LNG has cooperated with the local community and addressed our concerns, particularly those associated with the original proposed location of the Pretreatment Facility by moving the location of the Pretreatment Facility at a considerable expense to Freeport LNG.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so construction can begin without delay. Freeport LNG has gone the extra mile in designing a state of the art project that incorporates zero-emission electric motors and state of the art emission control equipment. This aspect of the project is particularly important given the nonattainment status of Brazoria County.

In addition to significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. My family and I work in and rely upon the economic development generated by this industry. Additionally, the retail service sectors in this area make their living from the large petrochemical employers here.

I urge the Commission to vote "yes" on quick approval of the permits for Freeport LNG Liquefaction Project so we can put people back to work. The sooner this permit is issued, the sooner more jobs will be created in Brazoria County. Thank you for your consideration.

Sincerely,

Robert S. Lockett, III

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170, and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

As a citizen of Brazoria County I want to express my support for the Freeport LNG Liquefaction Project and the above referenced permits. This project consists of two facilities, the Pretreatment Facility and the Liquefaction Plant, identified above.

Freeport LNG has gone the extra mile in designing a state of the art project that incorporates zero-emission electric motors and state of the art emission control equipment. This aspect of the project is particularly important given the nonattainment status of Brazoria County.

This project brings much needed jobs to our community. More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

I urge the Commission to vote "yes" on quick approval of the permits for Freeport LNG Liquefaction Project so we can put people back to work. The sooner this permit is issued, the sooner more jobs will be created in Brazoria County. Thank you for your consideration.

COMMENTS: I respectfully request TCEQ thoroughly review the chemicals FLNG has stated through written documents to your agency as well as to FERC which will be emitted into the air/atmosphere. I want to be clear, I am not attempting to hinder or block job creation in Southern Brazoria or elsewhere but want the air we breathe not to be impacted or impaired further by the construction of the pretreatment plant or their other proposed facilities in our area. I DO want air monitoring systems installed in and around the FLNG location(s)

and in southern Brazoria County in general as there is currently only one (1) which is located in Lake Jackson Texas. In reviewing the TCEQ website which indicate and reflect the locations of existing air monitoring stations, it became crystal clear southern Brazoria County is seriously lacking in these systems. I estimate that 80 to 85% of the year, the prevailing wind is from the south and southeast which will take FLNG pollutants over our subdivision (Hide-a-Way on the Gulf). Our subdivision was established in the early 1960's and consists of approximately 175 residential homes. It is completely unacceptable that our area has been unprotected by air monitoring systems for this long and with the building of additional chemical plants places an urgent need for our area. It is my understanding there are many different type of air monitoring systems and substantial cost differences between them but we need air monitoring systems that will pick up the particulate that will be released by FLNG. In closing, I believe commerce and residential communities may co-exist but safeguards such as air monitoring systems are a necessity for this to occur. FLNG could be a good neighbor but they have informed us in various meeting, they will not install these systems unless required to do so. However, I also realize TCEQ may install at will. Thank you for your attention in the matter.

Freeport LNG(FLNG) is planning to build a LNG "pretreatment" in a residential area, Brazoria County Road, CR 792. There are 4 subdivisions within a 1 mile radius of the proposed plant putting at least a hundred people in the affected zone. FLNG has 3 other alternate sites which are in industrial areas. Request you write a formal letter to FLNG requesting that they relocate to one of the alternate sites. Please contact me for any further information. Thank you. Bob Maddison

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. ~~PSDTX1284~~ PSDTX1282, and Nonattainment Permit Number ~~N152~~ N178; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Jana Maddox

We are in the process of fighting Freeport LNG's proposed retreatment plant on CR 792. The company was secretive and not forthcoming to our community during the purchase of the property or planning of the facility. We found out about it in the last hour and are desperately trying to get our voices heard before our community is forever effected by the proposed location of this plant. With that I'd like to ask for your help. We would like you to get more information on the project and hold a public hearing so our voices can be heard. We are not opposed to the plant, but we are opposed to its proposed location which is the only road in and out of our community. We certainly do not want a retreatment plant within a ½ mile of our homes and small wonderful communities. We selected this area on the water because it was hidden and in a quiet peaceful area that is surrounded by the Brazoria Wildlife Preserve. Please help us in our plight.

Re: Freeport LNG Development, LP/Air Quality Permits #100129 and #100114

Dear Ms. Marsh:

Thank you for your concerns regarding Freeport LNG Development, LP/Air Quality Permits #100129 and #100114. Senator Kay Bailey Hutchison has forwarded a copy of your correspondence to the Texas Commission on Environmental Quality (TCEQ) for a response.

These permit applications were received by the TCEQ on December 20, 2011 and are currently under technical review. Please be assured that your letter will be forwarded to the TCEQ staff responsible for reviewing the permit application. At the conclusion of the technical review, all timely filed comments will be considered by the staff prior to the final decision on the application. In addition, you will be added to the mailing list and receive a copy of the formal written response to all timely filed comments.

The TCEQ appreciates your interest in environmental issues. If you have any further questions or concerns regarding this permitting issue or the permitting process, please feel free to contact TCEQ staff at 1-800-687-4040.

Sincerely,

Bridget C. Bohac

To TCEQ
RE FLNG Permit # 104840 and 10

I have a Home at 1675 Blue Water Dr, Freeport Tx 77541 in Hide Away on the Gulf. I Request That TCEQ delay granting the permit until such time our concerns are Resolved And Denied if such concerns are ignored.

Ambient Air Monitoring - There are huge petrochemical plants in Southern Brazoria County but NO Ambient monitoring within 7 miles of our Homes. It is imperative that TCEQ ~~pro~~ install an Air Monitoring station near our Homes - specifically on CR 792 near Hide Away on the Gulf

Provide Detailed, Practical Emergency Evacuation and Notification Plan for All Affeted areas Adjacent to the proposed facilities and the Pipelines That will support them.

NOX Emissions - The proposed facilities will emit huge amounts of NOX. FLNG will purchase pollution credits from ~~our area in~~ the Houston/Galveston zone which reaches 80 miles to the north and 70 miles to the East. Our levels of NOX will be elevated to unacceptable levels. Require FLNG to ~~Reduce~~ purchase NOX credits from Brazoria County that will directly impact us.

Require FLNG to use BACT that will Reduce Emissions by 98% not the 90% that is proposed.

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

CHIEF CLERKS OFFICE
2014 FEB -4 PM 4:12
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104340, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these

projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

Linda K. Martin

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Shelby E. Martell cc

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Non-Attainment Permit No. N150

Gentlemen,

We are homeowners in Oyster Creek Estates, one of the communities that will be directly affected by the Freeport LNG Pre-Treatment Facility.

We and other residents have been expressing our concerns about air contamination, and the potential for our air quality to be **significantly** affected by this plant. Repeated requests have been made for state air quality monitors to be installed in and around the plant ***prior*** to ground-breaking to provide a baseline measurement; however, to date no response has been received regarding these requests.

The new location of the proposed plant is very close to several residential areas. It is also several miles from any of the current air quality monitoring devices and in the opposite direction. The prevailing winds in this area will carry any emissions into these residential areas.

While FLNG states that the total permanent population is not expected to increase, it should be pointed out that since this is a coastal area with usually moderate, warm temperatures, it experiences a large year-round influx of vacationers as the proposed plant is in relatively close proximity to the greater Houston metropolitan area, which means a high tourist area. Also, the permanent population is comprised of many retired individuals, a population that has been reported as being generally more sensitive to air quality issues.

Which begs another question, that being will air monitors ever be installed in the areas close to the facility and the residential neighborhoods?

MW

Given that we are located within a major refining area for the State of Texas and for the United States, we do understand and accept the reality of co-existing with the various refineries. **We need your agency to install air monitors throughout this ever-expanding industrial area.**

Sincerely,

Bill & Susan Massey

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Non-Attainment Permit No. N150

Dear Mayor Garcia,

My husband and I have a home in Oyster Creek Estates, one of the communities that will be directly affected by the Freeport LNG Pre-Treatment Facility.

You may or may not be aware that many of us have been expressing our concerns about air contamination, and the potential for our air quality to be **significantly** affected by this plant, to the Texas Commission on Environmental Quality (TCEQ), the Federal Energy Regulatory Commission (FERC), and to the Environmental Protection Agency (EPA). We have asked for state-monitored air quality analyzers to be installed in and around the plant *prior* to ground-breaking so that we may have a baseline measurement.

We have just learned that some people who have great civic influence, but who do not live in any of the affected communities, are lobbying for fast action from the TCEQ on the time frame for making comments and holding a public meeting on this specific issue. These people will not be affected by the facility or, more importantly, by air monitoring or lack thereof.

We do not appreciate elected officials inserting their opinions on this issue when it does not directly affect them. FLNG may or may not pay a property tax but not only do the affected residents pay property tax, they are voters.

We ask you to use the voice of your office to help us get the word out that we really do need these air monitors and/or hold a public meeting on this matter. Would be very much appreciated. ***Help us, please.***
We appreciate your assistance in this matter.

Sincerely,

Bill & Susan Massey

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Non-Attainment Permit No. N150

Dear Honorable Rick Perry,

My husband and I have a home in Oyster Creek Estates, one of the communities that will be directly affected by the Freeport LNG Pre-Treatment Facility.

You may or may not be aware that many of us have been expressing our concerns about air contamination, and the potential for our air quality to be **significantly** affected by this plant, to the Texas Commission on Environmental Quality (TCEQ), the Federal Energy Regulatory Commission (FERC), and to the Environmental Protection Agency (EPA). We have asked for state-monitored air quality analyzers to be installed in and around the plant *prior* to ground-breaking so that we may have a baseline measurement.

We have just learned that some people who have great civic influence, but who do not live in any of the affected communities, are lobbying for fast action from the TCEQ on the time frame for making comments and holding a public meeting on this specific issue. These people will not be affected by the facility or, more importantly, by air monitoring or lack thereof.

We do not appreciate elected officials inserting their opinions on this issue when it does not directly affect them. FLNG may or may not pay a property tax but not only do the affected residents pay property tax, they are voters.

We ask you to use the voice of your office to help us get the word out that we really do need these air monitors and/or hold a public meeting on this matter. Would be very much appreciated. ***Help us, please. We appreciate your assistance in this matter.***

Gentlemen,

We are homeowners in Oyster Creek Estates, one of the communities that will be directly affected by the Freeport LNG Pre-Treatment Facility.

We and other residents have been expressing our concerns about air contamination, and the potential for our air quality to be **significantly** affected by this plant. Repeated requests have been made for state air quality monitors to be installed in and around the plant ***prior*** to ground-breaking to provide a baseline measurement; however, to date no response has been received regarding these requests.

The new location of the proposed plant is very close to several residential areas. It is also several miles from any of the current air quality monitoring devices and in the opposite direction. The prevailing winds in this area will carry any emissions into these residential areas.

While FLNG states that the total permanent population is not expected to increase, it should be pointed out that since this is a coastal area with usually moderate, warm temperatures, it experiences a large year-round influx of vacationers as the proposed plant is in relatively close proximity to the greater Houston metropolitan area, which means a high tourist area. Also, the permanent population is comprised of many retired individuals, a population that has been reported as being generally more sensitive to air quality issues.

Which begs another question, that being will air monitors ever be installed in the areas close to the facility and the residential neighborhoods?

mu

Given that we are located within a major refining area for the State of Texas and for the United States, we do understand and accept the reality of co-existing with the various refineries. **We need your agency to install air monitors throughout this ever-expanding industrial area.**

Sincerely,

Bill & Susan Massey

We have just learned that some people who have great civic influence, but who do not live in any of the affected communities, are lobbying for fast action from the TCEQ on the time frame for making comments and holding a public meeting on this specific issue. These people will not be affected by the facility or, more importantly, by air monitoring or lack thereof.

We do not appreciate elected officials inserting their opinions on this issue when it does not directly affect them. FLNG may or may not pay a property tax but not only do the affected residents pay property tax, they are voters.

We ask you to use the voice of your office to help us get the word out that we really do need these air monitors and/or hold a public meeting on this matter. Would be very much appreciated. ***Help us, please. We appreciate your assistance in this matter.***

Sincerely,

Bill & Susan Massey

Gentlemen,

We are homeowners in Oyster Creek Estates, one of the communities that will be directly affected by the Freeport LNG Pre-Treatment Facility.

We and other residents have been expressing our concerns about air contamination, and the potential for our air quality to be **significantly** affected by this plant. Repeated requests have been made for state air quality monitors to be installed in and around the plant ***prior*** to ground-breaking to provide a baseline measurement; however, to date no response has been received regarding these requests.

The new location of the proposed plant is very close to several residential areas. It is also several miles from any of the current air quality monitoring devices and in the opposite direction. The prevailing winds in this area will carry any emissions into these residential areas.

While FLNG states that the total permanent population is not expected to increase, it should be pointed out that since this is a coastal area with usually moderate, warm temperatures, it experiences a large year-round influx of vacationers as the proposed plant is in relatively close proximity to the greater Houston metropolitan area, which means a high tourist area. Also, the permanent population is comprised of many retired individuals, a population that has been reported as being generally more sensitive to air quality issues.

Which begs another question, that being will air monitors ever be installed in the areas close to the facility and the residential neighborhoods?

MC

Given that we are located within a major refining area for the State of Texas and for the United States, we do understand and accept the reality of co-existing with the various refineries. **We need your agency to install air monitors throughout this ever-expanding industrial area.**

Sincerely,

Bill & Susan Massey

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Non-Attainment Permit No. N150

Dear Mayor Rinehart,

My husband and I have a home in Oyster Creek Estates, one of the communities that will be directly affected by the Freeport LNG Pre-Treatment Facility.

You may or may not be aware that many of us have been expressing our concerns about air contamination, and the potential for our air quality to be **significantly** affected by this plant, to the Texas Commission on Environmental Quality (TCEQ), the Federal Energy Regulatory Commission (FERC), and to the Environmental Protection Agency (EPA). We have asked for state-monitored air quality analyzers to be installed in and around the plant *prior* to ground-breaking so that we may have a baseline measurement.

We have just learned that some people who have great civic influence, but who do not live in any of the affected communities, are lobbying for fast action from the TCEQ on the time frame for making comments and holding a public meeting on this specific issue. These people will not be affected by the facility or, more importantly, by air monitoring or lack thereof.

We do not appreciate elected officials inserting their opinions on this issue when it does not directly affect them. FLNG may or may not pay a property tax but not only do the affected residents pay property tax, they are voters.

We ask you to use the voice of your office to help us get the word out that we really do need these air monitors and/or hold a public meeting on this matter. Would be very much appreciated. ***Help us, please. We appreciate your assistance in this matter.***

Sincerely,

Bill & Susan Massey

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging the fragile ecosystems. The new location is very close to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

MW

protesting Freeport LNG's building of Liquefaction and Pre-treatment Facilities along CR792. My husband and I have a home in Oyster Creek Estates, one of the communities that will be directly affected by these facilities. There are many reasons why these industrial facilities should NOT be built in this area: 1. Not compatible with our residential communities: This area is clearly residential and/or ranch, NOT industrial, and therefore is NOT compatible. Alternative land resources are readily available, including land already occupied by the company at its gas storage facility on FM 523, and further confirmation that the industrial facilities are not justified in such close proximity to historically residential/ranching communities. 2. Immense potential environmental threat: To date, there has been NO quantitative evaluation of the potential environmental impact of these facilities. These communities are built on canals feeding into Oyster Creek, a designated bottomland forest with associated wetlands and a high biodiversity of fish, which empties into the Intracoastal Canal. This area is a designated National Wildlife Refuge, the Brazoria National Wildlife Refuge, a vital complex of coastal wetlands and prairie harboring more than 300 bird species. The refuge serves as an end point of the Central Flyway for waterfowl in winter, and an entry point for neotropical migratory songbirds tired from a 600-mile Gulf crossing from Mexico's Yucatan Peninsula. It has a key location on the Texas Gulf coast which helps Freeport draw one of the highest Audubon Christmas bird counts in the nation - more than 200 species. The 5,000 acres of native bluestem prairie on Brazoria NWR represent one of the last coastal prairies in Texas. The loss of 1.2 million acres of historic wetlands in Texas makes the remaining areas especially important for wildlife. Both Oyster Creek and BNWR are part of an estuarine environment impacting the bay system, including Christmas Bay, one of the most pristine waters on the Texas Gulf Coast. 3. Potential public threat: Currently, CR 792 is the only road leading into or out of the CR 792 residential communities. It is grossly irresponsible of Freeport LNG to locate a high risk industrial facility in a residential community on a small secondary road. FLNG has failed to provide information or analysis on the consequences of an accidental release from the natural gas pre-treatment facility. Given the serious nature of this potential public, and environmental, hazard, safety should be of the utmost importance. 4. Economic Impact: The jobs that FLNG states the plant will create are immaterial as the jobs will be created wherever the plant is built. The truth of the matter is that the economic impact will be felt by us residents, and it will be immediate and devastating. While FLNG will receive a tax abatement for 7 years from Brazoria County, homeowner property values will decrease substantially. Not only will our homeowner insurance rates increase due to now being in a high risk, industrial area, we may actually not be able to obtain homeowners' insurance. Our quality of life will be severely impacted; specifically, our residential area will immediately be changed to an industrial area, with the resulting noise from construction and machinery, above/below ground vibration, low decibel noise, lighting, evacuation route, response measure to a release, release of toxins, impact on our water supply (how much drinking water taken from the aquifer; how much required to operate a plant of this size; potential toxicity). These are only a few of the many concerns we all have, and FLNG is truly non-responsive to them. No substantive information has been provided on these few, or any, of our concerns. Please help us.... Sincerely, Bill & Susan Massey 127 Kings Drive – Oyster Creek Estates Freeport, Texas 77541

I. Public Comments

Freeport LNG Development, L.P., has requested that the above applications be treated as a single application for purposes of major source new source review permitting. Sierra Club agrees that combined treatment is necessary. Sierra Club is concerned, however, that the draft permits understate the potential to emit volatile organic chemicals (VOC). Notably, the pretreatment facility will incorporate 115 pressure relief valves, and the liquefaction facility will incorporate another 60 pressure relief valves. Although the emissions calculations include estimates of fugitive emissions from these pressure relief valves, it appears that all emissions calculations exclude emissions associated with venting through these valves—i.e., the pollutants these valves will emit when they are actually operating to release pressure, according to their intended function. As demonstrated in the fugitive emissions calculations,

85 Second Street, Second Floor San Francisco, CA 94105-3441 TEL: (415) 977-5750 FAX: (415) 977-5793 www.sierraclub.org

the gas coming to these valves contains VOC, so venting through these valves will be an additional source of VOC emissions. It may be that these valves are intended to operate only in unusual conditions, such as startups, shutdowns, or malfunctions. As with flares and other such equipment, however, these emissions must nonetheless be included in emission totals.

Inclusion of these emissions is especially important because the draft permit finds that the project will have a potential to emit 24.96 tons per year (tpy) of VOC – only 80 *pounds* of VOC below the major modification threshold. *See* Preliminary Determination Summary for Permit 100114 at 2, Preliminary Determination Summary for Permit 104840 at 3. Accordingly, it is extraordinarily likely that when the emissions from the project are properly calculated, the project will be subject to the additional requirements imposed on major modifications, providing potentially significant emission reduction benefits.

II. Conclusion

It appears that the applications and draft permits improperly excluded a source of VOC emissions, and that if these additional emissions are considered, the project will be a major modification for purposes of the applicable Nonattainment New Source Review program.

Respectfully submitted,

Nathan Matthews

CHIEF CLERK'S OFFICE

RE: Freeport LNG Development, LP-Liquefaction Project

1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Mark McClendon Signature

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Brian Melass

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit No. PSDTX~~1284~~1307, and Nonattainment Permit Number N~~152~~170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

MS

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Evelyn Moore/President & CEO

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302 and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Re: Freeport LNG Development, LP – Liquefaction Project: 104840

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit 1302 No. PSDTX~~1284~~; and Nonattainment Permit Number N~~152~~; and 170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of

mw

the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

M. Music

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, 104840 PSD Permit No. PSDTX~~1284~~, 1302 and Nonattainment Permit Number N~~152~~, 170 and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am a banker doing business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses including First State Bank.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction **project. For example, the project incorporates state of the art emission control** equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed, which could jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Robert A. Perryman
President

CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating over our communties. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging the fragile ecosystems. The new location is very close to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic event. Each community is unique and one umbrella plan will not work. The city of Oyster Creek with a high population of low income residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with health issues that develop with age. TCEQ should also be aware that this area of Freeport has not been a manufacturing location before; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking, to establish a baseline.

Sincerely,

Clarence Phang Signature

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170;
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

As a citizen of Brazoria County I want to express my support for the Freeport LNG Liquefaction Project and the above referenced permits. This project consists of two facilities, the Pretreatment Facility and the Liquefaction Plant, identified above. I have been monitoring the progress of this project with great interest and wholeheartedly offer my support for the swift approval of Freeport LNG's permits. Freeport LNG has cooperated with the local community and addressed our concerns, particularly those associated with the original proposed location of the Pretreatment Facility. Freeport LNG worked with the community and ultimately moved the location of the Pretreatment Facility at a considerable expense to Freeport LNG.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so construction can begin without delay. With the construction of this project, Freeport LNG will drastically impact the economic viability of the area while also being responsible environmental stewards. Freeport LNG has gone the extra mile in designing a state of the art project that incorporates zero-emission electric motors and state of the art emission control equipment. This aspect of the project is particularly important given the nonattainment status of Brazoria County.

This project brings much needed jobs to our community. More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Many of us have grown up here and have significant ties and an appreciation for the petrochemical industry. I have several members of my family that work in and rely upon the

economic development generated by this industry. Additionally, the retail service sectors in this area make their living from the large petrochemical employers here.

I urge the Commission to vote "yes" on quick approval of the permits for Freeport LNG Liquefaction Project so we can put people back to work. The sooner this permit is issued, the sooner more jobs will be created in Brazoria County. Thank you for your consideration.

Sincerely,

Linda L. Pirtle

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1397, and Nonattainment Permit Number N~~152~~ 179, and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Shane W. Pirtle P.E.

Re: Freeport LNG Development, LP – Liquefaction Project:

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129,~~ 104840 PSD Permit No. PSDTX~~1284,~~ 1382 and Nonattainment Permit Number ~~N152,~~ N170 and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of

the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

Shane W. Pirtle P.E.

PLEASE HELP US

Freeport LNG plans to build an industrial complex right in the middle of a historical residential area. My name is Ron Poggemoeller, I'm 72 years old and my wife and I have lived in Hide-A-Way on the Gulf (within a short distance of this proposed facility) at 1671 Blue Water Drive for over eight (8) years. We bought and paid for this house with what we have saved for the last 36 years and intend to stay in it for the rest of our years. It is currently a lovely, quiet residential area that contains a lot of retired people that lovingly enjoy the life in our community. No one knew anything about the purchase of land or plans to build the industrial plant until December 13, 2011 when Keith Little of FLNG appeared at a Property Owners meeting at our club house. Freeport LNG had informed no one at all previously.

On January 19, 2012 a meeting was held at the Oyster Creek Community Building and a surprising turnout spilled into the parking lot. FLNG made a presentation at the Oyster Creek City Council meeting. The audience spilled over into the parking lot. Keith Little of FLNG fielded a number of tough questions. The topper was from a neighbor Andy - "Mr. Little where do you live?" He replied "West Houston." Andy pressed "I'm sure it's a nice house. I've got to
ask you. Would you want this at the end of your block?" Mr. Little replied "I'm not going to answer that."

Please help us, we certainly need it in this difficult, live changing situation. The following was prepared to give you an idea of our concerns with details for each point.

POINTS OF CONCERN

Proposed Industrial Facility Is Not Compatible With Our Residential Community

Proposed Industrial Facility Is a Imminent Threat to Public Safety
Proposed Industrial Facility would be an Immediate and Perpetual Public Nuisance
Proposed Facility Poses an Immense threat to the Environment
Proposed Facility will have an Immediate and Perpetual Negative Economic Impact
Freeport LNG has readily available Alternative Sites
Freeport LNG has acted In Bad Faith

DETAILS FOR ABOVE POINTS:

Not Compatible With Our Residential Community

The residential communities, small businesses, and cattle/horse ranches located along CR 792 are considered anon-industrial district based upon current land use. The history of development of this resident community has never included industrial facilities of any kind. Industrial plants DO NOT belong in residential communities.

2012 MAR -1 PM 3:47
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Imminent Public Safety Hazard and Threat

CR 792 is the only road leading into or out of the CR 792 residential communities. It isgrossly irresponsible of Freeport LNG to locate a high risk Industrial Facility in a residential community on a small secondary road. In the event of an industrial accident, residents would be trapped with no means of escape assuming that the neighborhood would still be standing. Such an event represents an unreasonable and unnecessary risk to residents of the CR 792 community. Limited access for first responders and accidental discharges of toxic pollutants into the air and water would represent additional risks to public safety. Lives could be lost because ambulance could not get access to rescue us.

Public Nuisance

The size and scope of an operational 75 acre, multi-story industrial complex, would infringe upon owners expectations of the full use and enjoyment of their property. Traffic congestion associated with heavy trucks and construction vehicles and
construction workers during a protracted construction phase would inhibit access to our community. The constant noise of heavy construction equipment, generators, etc, and construction dust etc.would discourage outsideactivities and community events, something that is a primary benefit of living and working near the water. After completion residents would live with the constant drone of low frequency noise and vibrations, industrial lighting at night, and the glare of waste gas flaring. In addition, the community would live under the constant threat of an Industrial accident that could take out the community at any time.

Environmental Dangers

Environmental threats due to air and ground water pollutants, not-withstanding, the threat from hurricanes and hurricane related tidal surges represents a great danger to the community. As a hurricane tidal surge subsides, it will carry the wastes from the plant and spread it over the community. Hydrogen Sulfide and mercury are just 2 of the toxic chemicals that will be produced at the proposed facility. These are both known carcinogens.

Economic Impact

Many CR 792 community residents have retired on modest incomes with their largest investment being their homes. They purchased their homes in a non-industrial area to enjoy their retirement. The conversion to a mixed industrial based land use will negatively impact their life-time investment, may impact property tax rates (highest and best use), and will increase home owner insurance rates which may not even be available for homes located in high risk, industrial area. Freeport LNG's corporate bottom-line should not take precedence over the CR 792 community's bottom-line. The proposed industrial complex will negatively impact the quality of life of he community and alter the scenic and recreational value and use of our properties. Our home value will plummet and we will not be able to sell when we need to.

Alterative Land Resources Are Readily Available

Location of the pretreatment industrial facility in the CR 792 residential community is not justified based upon ample alterative land resources available to Freeport LNG, including land already occupied by the company at its gas storage facility on FM 523.

Lack of good faith

The purchase of the land and application of permits was completed prior to ANY discussion with residents that would be affected by this industrial facility, indicating that Freeport LNG was fully aware that residents would be opposed.
First notification, of the proposed pretreatment industrial facility on CR 792, came on December 13, 2011, at the Hide-A-Way Property Owners (POA) meeting.

Re: Freeport LNG Development, LP/Air Quality Permits #100129 and #100114

Dear Mr. Poggemoeller:

Thank you for your concerns regarding Freeport LNG Development, LP/Air Quality Permits #100129 and #100114. Senator Kay Bailey Hutchison has forwarded a copy of your correspondence to the Texas Commission on Environmental Quality (TCEQ) for a response.

These permit applications were received by the TCEQ on December 20, 2011 and are currently under technical review. Please be assured that your letter will be forwarded to the TCEQ staff responsible for reviewing the permit application. At the conclusion of the technical review, all timely filed comments will be considered by the staff prior to the final decision on the application. In addition, you will be added to the mailing list and receive a copy of the formal written response to all timely filed comments.

The TCEQ appreciates your interest in environmental issues. If you have any further questions or concerns regarding this permitting issue or the permitting process, please feel free to contact TCEQ staff at 1-800-687-4040.

Sincerely,

Bridget C. Bohac

Dear Commissioners:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new

P.O. Box 12967 ★ Austin, Texas 78711-2967 ★ 512/463-7131 ★ FAX 512/463-7161
http://www.rrc.state.tx.us

facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed, as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

RECEIVED
MAR 04 2014
AT PUBLIC MEETING

My name is Bob Pratt and I have worked in engineering, construction and project management of Petro-Chemical facilities for 35 years.

I am here primarily to discuss the FLNG pretreatment facility. (TCEQ permit 104840, PSD TX1302 and N170) because I am a property owner in turtle Cove and currently the President of the Turtle Cove Property Owners Association.

In regards to the air quality to be directly experienced by people, this pretreatment facility location has steadily gone from bad to worse.

FLNG could have located in a remote, industrial area up hwy 523 near their existing facility. They would have been within two miles of maybe one or two private homes and the rest of their neighbors would have been industrial facilities. The next location was too close to too many homes on CR792 and was not acceptable from an immediate proximity, safety standpoint. The current location is now directly upwind of the community of Oyster Creek, Turtle Cove, Oyster Bend, Hideaway on the Gulf and other subdivisions, as well as other concentrations of homes. Wind rose attached below.

This pretreatment facility is NOT a pipe-line, it is a chemical plant. I do not wish to hear FLNG continue to spout pipeline safety considerations in this pretreatment facility discussion. FLNG is asking to build a very large throughput chemical plant near our homes. This facility is intended to clean and compress a large natural gas product stream that has contaminants. It requires chemical processing to remove contaminants and therein is my concern. Although I fully understand the product stream has extremely low levels of contaminants, by removing them from huge quantities of gas, the contaminants will become concentrated in the process facility. The contaminants will then be processed, accumulated, destroyed and/or shipped out. This is where TCEQ shines! You know how these processes can damage our environment and how to regulate those issues. The first and simplest step is to stay away from PEOPLE. We, the residents immediately downwind will become the TCEQ's canaries! We are NOT choosing to move near FLNG, they are choosing to move near us and ruin the safe life we have chosen,,, away from the chemical plants.

Although I am sure TCEQ will require fugitive emissions monitoring, HOW will YOU monitor the desired compliance program when the TCEQ does not have any air monitoring stations that would detect anything going wrong at this location? You would have to trust FLNG. Examples of their compliance with TCEQ regulations attached below. These examples are not very encouraging to me. They "may have" met the actual definition of the TCEQ requirement while totally avoiding the intent of the requirement. TCEQ,,,Please help keep us safe by strict monitoring and control of FLNG.

In regards to other aspects of air quality, I hear some people talking about the benefits of the FLNG project benefitting the area from job creation. Well, from an air quality standpoint this is actually a NEGATIVE! We are already the upwind portion of a non-attainment zone. We have already experienced a major influx of people, commuters and traffic that will only get worse if this plan continues on current schedule. Many/most of those vehicles are from out of state (out of area) and will never be subject to testing requirements in a non-attainment zone, so they are already adding to the air quality problems.

And my above points are concerns from the standpoint of low level continuous exposure. Normal fugitive monitoring does not address the possibilities of serious events. The Henderson Nevada, high pressure natural gas line vapor cloud explosion was not about the seemingly minor welding fire in the plant. It was not about the explosion of the rocket fuel additives. It was primarily about the huge vapor cloud explosion caused when the previous events brought a high pressure (300 psi) gas line into play with the facility problems. That event is almost an exact parallel to what could happen at the FLNG pretreatment facility. Henderson was located miles away from any homes! A similar event at FLNG could level most of the homes in the community of Oyster Creek and our subdivisions.

So when you hear us say SOS (Save our Subdivisions) we are talking about saving people!

Thank You TCEQ and please continue to keep Texas Air Quality what it should be.

Re: Freeport LNG Development, LP – Liquefaction Project: 104840
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit 1302 No. PSDTX~~1284~~, and Nonattainment Permit Number N~~152~~; and 170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these

MW

projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

RE: Freeport LNG Development, LP-Liquefaction Project

1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

2014 FEB 24 AM 10:16 CHIEF CLERK'S OFFICE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Sharon Kamp

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1392, and Nonattainment Permit Number N~~152~~ 170;
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

As a citizen of Brazoria County I want to express my support for the Freeport LNG Liquefaction Project and the above referenced permits. This project consists of two facilities, the Pretreatment Facility and the Liquefaction Plant, identified above. I have been monitoring the progress of this project with great interest and wholeheartedly offer my support for the swift approval of Freeport LNG's permits. Freeport LNG has cooperated with the local community and addressed our concerns, particularly those associated with the original proposed location of the Pretreatment Facility. Freeport LNG worked with the community and ultimately moved the location of the Pretreatment Facility at a considerable expense to Freeport LNG.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so construction can begin without delay. With the construction of this project, Freeport LNG will drastically impact the economic viability of the area while also being responsible environmental stewards. Freeport LNG has gone the extra mile in designing a state of the art project that incorporates zero-emission electric motors and state of the art emission control equipment. This aspect of the project is particularly important given the nonattainment status of Brazoria County.

This project brings much needed jobs to our community. More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of

MC

the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Many of us have grown up here and have significant ties and an appreciation for the petrochemical industry. I have several members of my family that work in and rely upon the economic development generated by this industry. Additionally, the retail service sectors in this area make their living from the large petrochemical employers here.

I urge the Commission to vote "yes" on quick approval of the permits for Freeport LNG Liquefaction Project so we can put people back to work. The sooner this permit is issued, the sooner more jobs will be created in Brazoria County. Thank you for your consideration.

Sincerely,

A.J. Reixach

Re: Freeport LNG Development, LP – Liquefaction Project: 104840
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit (302 No. PSD~~TX1284~~, and Nonattainment Permit Number ~~N152~~; and 170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

cc

CHIEF CLERKS OFFICE REVIEWED NOV 20 2013 By

Mr Zak Covar
Executive Director, MC-109
Texas Commission on Environmental Quality
12100 Park 35 Circle
Austin, Texas 78753

RECEIVED NOV 18 2013 EXECUTIVE DIRECTOR

Re: Freeport LNG Development, LP – Liquefaction Project:

1. Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1382, and Nonattainment Permit Number ~~N152~~ N170, and
2. Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be

developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

CHIEF CLERK'S OFFICE
2014 MAR 18 AM 3:46
COMMISSION ON ENVIRONMENTAL QUALITY

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Re: Freeport LNG Development, LP/Air Quality Permits #100129 and #100114

Dear Ms. Session:

Thank you for your concerns regarding Freeport LNG Development, LP/Air Quality Permits #100129 and #100114. Senator Kay Bailey Hutchison has forwarded a copy of your correspondence to the Texas Commission on Environmental Quality (TCEQ) for a response.

These permit applications were received by the TCEQ on December 20, 2011 and are currently under technical review. Please be assured that your letter will be forwarded to the TCEQ staff responsible for reviewing the permit application. At the conclusion of the technical review, all timely filed comments will be considered by the staff prior to the final decision on the application. In addition, you will be added to the mailing list and receive a copy of the formal written response to all timely filed comments.

The TCEQ appreciates your interest in environmental issues. If you have any further questions or concerns regarding this permitting issue or the permitting process, please feel free to contact TCEQ staff at 1-800-687-4040.

Sincerely,

Bridget C. Bohac

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Kristen Sinor

Re: Freeport LNG Development, LP – Liquefaction Project:

1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above. As the former mayor of the city of Lake Jackson, I feel strongly this project will provide vital economic and social benefits to our community and to the state of Texas.

Therefore, I believe the air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

CHIEF CLERK'S OFFICE

2014 MAR 13 AM 3:47

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

COMMENTS: Freeport LNG plans to build a liquid natural gas pretreatment facility 880 yards or less from our homes on CR 792. Toxic emissions will endanger the residents of Hide Away on the Gulf, Oyster Creek Estates, Bridge-Pointe, and Turtle Cove. Additionally, the estuarine environments of Oyster Creek, Christmas Bay, and the Brazoria County National Wildlife Refuge will be irreparably damaged. Freeport LNG has given no thought to the safety of the residents of our communities. CR 792 provides the only access to and from our communities. A plant incident closing the road will have dire consequences. First responders will be hindered from entering the residential areas, and residents will have no escape route. In times of drought, any type of fire will spread quickly in our environment of prairie grass and strong coastal winds. That doesn't even consider the incident may be an exploding pipeline under such pressure that the blast area is greater than the 880 yard distance to our homes. Freeport LNG has exhibited a total lack of responsibility about informing our communities of their plans. I request that you extend the period we have to contest the permit, so we may research the topic more thoroughly. However, I strongly recommend the permit be denied for a facility located so close to residential communities that were established long before this company came into existence.

Re: Freeport LNG Development, LP - Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1362, and Nonattainment Permit Number N~~152~~ 170;
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

My name is Miguel M. Suarez, I live at 700 Burnett Street, Quintana, TXb 77541-9112. As a citizen of Brazoria County I want to express my support for the Freeport LNG Liquefaction Project and the above referenced permits. This project consists of two facilities, the Pretreatment Facility and the Liquefaction Plant, identified above. I have been monitoring the progress of this project with great interest and wholeheartedly offer my support for the swift approval of Freeport LNG's permits. Freeport LNG has cooperated with the local community and addressed our concerns, particularly those associated with the original proposed location of the Pretreatment Facility. Freeport LNG worked with the community and ultimately moved the location of the Pretreatment Facility at a considerable expense to Freeport LNG.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so construction can begin without delay. With the construction of this project, Freeport LNG will drastically impact the economic viability of the area while also being responsible environmental stewards. Freeport LNG has gone the extra mile in designing a state of the art project that incorporates zero-emission electric motors and state of the art emission control equipment. This aspect of the project is particularly important given the nonattainment status of Brazoria County.

This project brings much needed jobs to our community. More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Many of us have grown up here and have significant ties and an appreciation for the petrochemical industry. I have several members of my family that work in and rely upon the

MS

economic development generated by this industry. Additionally, the retail service sectors in this area make their living from the large petrochemical employers here.

I urge the Commission to vote "yes" on quick approval of the permits for Freeport LNG Liquefaction Project so we can put people back to work. The sooner this permit is issued, the sooner more jobs will be created in Brazoria County. Thank you for your consideration.

Finally, in my family we believe that this project will be a considerable benefit to our Country since it will improve our balance of payments helping us to export an American product thus bringing dollars to our economy and reducing our deficit in the balance of payments. We also believe that this project will be a stimulus to the production of natural gas both for export and internal consumption.

I strongly reject the absurd statements made by some of my neighbors opposing this project. Several times I have debated and demonstrated by scientific arguments based on elementary Physics and Chemistry the absurdity of these fallacies and see no reasonable argument in their ideas other than unrrestrained greed and desire to obtain monetary advantages from this situation.

Sincerely,

Miguel M. Suárez

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

David W. Terry

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2014 FEB 24 PM 1:11
CHIEF CLERKS OFFICE

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

Signature

Re: Freeport LNG Development, LP – Liquefaction Project:
Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~ 104840, PSD Permit No. PSDTX~~1284~~ 1302, and Nonattainment Permit Number N~~152~~ 170; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these

projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

Eddie Venne

NSR 80395 83497

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Re: Freeport LNG Development, LP – Liquefaction Project:
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

I am in business in Brazoria County and want to express my support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses such as mine.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2014 FEB [illegible]
CHIEF CLERKS OFFICE

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.

Sincerely,

2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chief Clerk,

The Brazosport Area Chamber of Commerce and want to express our support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits referenced above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four- to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and good paying jobs will have a significant, positive impact on the local economy and businesses.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 billion and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

We urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely yours,

Nancy Wollam

RE: Freeport LNG Development, LP – Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit No. N152; and
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Ms. Bohac:

On behalf of the members and Board of Directors of the Economic Development Alliance for Brazoria County, I want to express support for the Freeport LNG Liquefaction Project, which consists of a Pretreatment Facility and a Liquefaction Plant, and the proposed permits reference above.

The air quality permits for the LNG Pretreatment and Liquefaction Facilities should be granted so that construction may start without delay. Development of this project will put more than 3,500 construction workers to work in Brazoria County during the four to five-year construction period, and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. This influx of new employees and high-wage jobs will have a significant, positive impact on the local economy.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between $4.3 and $6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

Freeport LNG has historically been a strong environmental steward in Brazoria County, and they continue this stewardship in the design of the liquefaction project. For example, the project incorporates state of the art emission control equipment and utilizes electric motors as the primary drivers for its liquefaction process (in lieu of gas turbine engines). Importantly, these electric motors produce no greenhouse gas emissions or emissions of NOx or VOC, thereby minimizing the emissions footprint of the project.

I would urge the Commission to quickly approve the above-referenced permits so that construction can begin on this well-designed project. We do not want this opportunity to be delayed due to third-party abuse of the current regulatory regime, which could prolong or jeopardize the significant benefits this project could have to the community.

Sincerely,

Re: Freeport LNG Air Permit Applications

To whom it may concern,

As 14-year residents of Freeport Texas, and 46-year residents of Southern Brazoria County, we wish to express our support Freeport LNG and their planned plant expansion in Southern Brazoria County.
This project means more jobs, more tax receipts for all County entities, and a better standard of living for many in the area. In addition, it will bring benefits to the United States as a country and to the State of Texas in the form of an improved balance of foreign trade and increased development of U.S. natural gas supplies.
Freeport LNG is a good community citizen and supports community endeavors.

Respectfully,

Peggy S. Yates

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

RE: Freeport LNG Development, LP-Liquefaction Project
1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840,PSDTX1302, and Non-Attainment Permit No. N170
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No PSDTX1282, and Non-Attainment Permit No. N150

Dear Mr. Covar:

As a resident of a community affected by FLNG's Pretreatment Facility, I am concerned about air contaminants. FLNG's November 14, 2012, application to the EPA proposes the following totals of GHG emissions per year: 1,579,155.21 tons of CO2; 43.39 tons of Methane; 1.30 tons of Nitrous Oxide; 0.017 tons of Sulfur Hexafluoride; and 1,580,866 tons of CO2e. This is equivalent to1,045,266.9 hot air balloons per **year**; 2,863.74 hot air balloons per **day**; 119.32 seven story hot air balloons per HOUR, floating towards our communities. Air toxics cause human health problems and environmental damage. Atmospheric deposition cause pollutants to settle on land or in water damaging fragile ecosystems. The proposed location is adjacent to residential areas in the city of Oyster Creek and Turtle Cove and over 5 miles from any current air quality monitoring systems. Also, the prevailing winds will carry the emissions in the direction of Hide-A-Way, Oyster Creek Estates, and Bridgepointe. These communities are located in the opposite direction of the current monitors and are off the monitoring grid. Chemical modeling and theorizing cannot accurately predict the Toxic Chemical Cocktails these emissions will create. It could truly be a life or death decision that you, TCEQ, are making for those of us who will suffer daily from the toxic fall-out these emissions create. Air monitoring systems need to be placed near these communities, and FLNG must be required to develop an acceptable plan of action for EACH community in preparation for a catastrophic release. Each community is unique, and one umbrella plan will not work. The city of Oyster Creek with a high population of low socioeconomic residents is closest to the planned facility. The communities of Hide-A-Way, Oyster Creek Estates, Bridgepointe, and Turtle Cove have large populations of elderly residents living with the health issues that develop with age. TCEQ should also be aware that this area of Freeport is traditionally a non-industrial area; we are primarily residential communities. We need on-going monitoring systems beginning now, before ground-breaking of the plant, to establish a baseline. Additionally, I request TCEQ hold a public meeting for the affected residents of these communities.
