The Galveston Bay National Estuary Program

GBNEP-50
February 1997

printed on recycled paper using soy-based ink

This work was performed and compiled under the direction of the Galveston Bay National Estuary Program (GBNEP) and the Management Conference structure outlined on page v. This national program ended in April 1995.

This project has been funded in part by the United States Environmental Protection Agency under assistance agreement # CE-06550-01 to the Texas Natural Resource Conservation Commission. The contents of this document do not necessarily represent the views of the United States Environmental Protection Agency or the Texas Natural Resource Conservation Commission, nor do the contents of this document necessarily constitute the views or policy of the Galveston Bay National Estuary Program Management Conference. The information presented is intended to provide background information for Management Conference deliberations in drafting of official polity in the Comprehensive Conservation and Management Plan (CCMP). The mention of trade names or commercial products does not in any way constitute an endorsement or recommendation for use.

A note to the reader:

This document is the final report from project work performed and completed under the review and approval processes of the Galveston Bay National Estuary Program (GBNEP) Management Conference which was convened from 1990-1995 (see organizational structure on page v). The information presented was intended to provide background information for Management Conference deliberations in drafting of official policy in the Comprehensive Conservation and Management Plan (CCMP).

The purpose of this study was to survey the oyster reefs of Galveston Bay and compare them to the earlier surveys to quantitatively characterize the long-term trends in reef coverage.

This study is being published by the Galveston Bay Estuary Program (GBEP) of the TNRCC. The GBEP was formed at the time *The Galveston Bay Plan* (the CCMP) was complete and implementation of *The Plan* began. The GBEP has the responsibility to see that *The Plan* is implemented by the many agencies and organizations who are partners under *The Plan*. State funding for the program was secured under an agreement between the TNRCC and the Texas General Land Office (GLO), as directed by the Texas Legislature.

This project was funded in part by the United States Environmental Protection Agency under assistance agreement number CE-006550-01 to the Texas Natural Resource Conservation Commission. The contents of this document do not necessarily represent the views of the United States Environmental Protection Agency or the Texas Natural Resource Conservation Commission, nor do the contents of this document necessarily constitute the views or policy of the Galveston Bay Estuary Program. The mention of trade names or commercial products does not in any way constitute an endorsement or recommendation for use.

Volume I refers to a set of maps that make up Volume II. Reproducing the large color maps was cost prohibitive, therefore, the original set is available for viewing at the Galveston Bay Information Center at Texas A&M University at Galveston.

Policy Committee

The Honorable Rodney Ellis, Chair
Texas Senate

Mr. John Hall
Chair,
Texas Water Commission

Mr. James Blackburn
Founding Chairman,
Galveston Bay Foundation

Mr. Charles Miller
Past Chairman of the Board
Greater Houston Partnership

Vice-Chair
Regional Administrator, EPA Region 6

Ms. Terry Hershey
Vice-Chair,
Texas Parks and Wildlife Commission

Mr. Charles W. Jenness
Chair,
Texas Water Development Board

Local Governments Advisory Committee

The Honorable Ray Holbrook, Chair

Management Committee

Mr. Myron O. Knudson, Chair

Ms. Barbara Britton, Vice-Chair

Scientific/Technical Advisory Committee

Dr. Robert McFarlane, Chair

Ms. Teresa Battenfield, Vice-Chair

Citizen's Advisory Steering Committee

Ms. Sharron Stewart, Chair

Mr. Ron Embry, Vice-Chair

Galveston Bay Public Forum

Dr. Don Bass, Chair

Program Director

Dr. Frank S. Shipley

VOLUME I GALVESTON BAY OYSTER REEF SURVEY: TECHNICAL REPORTS

Executive Summary 1

Report 1: The Status of Oyster Reefs in Galveston Bay 5

Introduction 5

Methods 5
- Technique Description 6
  - Capabilities for Discrimination of Bottom Type 6
  - Configuration of Acoustic System 7
  - Determination of Position and Relief 8
  - Procedure for Data Collection 8
  - Survey Limitations 9
  - Laboratory Analysis 9
  - Data Processing 11

Results 13
- Reef Description 13
  - Overview and Perspective 13
  - Natural Reef 14
  - Anthropogenic Reef 15
- Circa-1970/1991 Comparison 16
  - Background 16
  - East Bay 17
  - Trinity Bay 19
  - Red Bluff/Morgans Point Embayment 19
  - Clear Lake Embayment 20
  - Dickinson Embayment 20
  - West Bay/Pelican Island Embayment 21
  - Satellite Bays of West Bay 21
  - North Redfish Bar 22
  - Redfish Bar 23
  - Houston Ship Channel 24

Discussion 25
- Circa-1970/1991 Survey Comparison 25
- Persistence, Malleability and Modifying Agents 27

Conclusions 29

Appendices – Report 1 37
Appendix 1-A: Tables 37
Table 1. Total Reef Area in the Galveston Bay System. 39
Table 2. Total Reef Area by Location 39
Table 3. Total Man-made Reef 40
Table 4. East Bay Comparison: 1991 and circa-1970 41
Table 5. Trinity Bay Comparison: 1991 and circa-1970 43
Table 6. Red Bluff/Morgans Point Embayment Comparison: 1991 and circa-1970 44
Table 7. Clear Lake Embayment Comparison: 1991 and circa-1970 45
Table 8. Dickinson Embayment Comparison: 1991 and circa-1970 46
Table 9. North Redfish Bar Sector Comparison: 1991 and circa-1970 47
Table 10. Redfish Bar Comparison: 1991 and circa-1970 48
Table 11. Houston Ship Channel Sector Comparison: 1991 and circa-1970 49

Appendix 1-B: Figures 51
Figure 1. A typical chart record from the 300 kHz channel showing a reef within as area of muddy bottom 53
Figure 2. An example of an oyster reef on a spoil bank adjacent to the Houston Ship Channel 54
Figure 3. An example of a spoil bank adjacent to the Houston Ship Channel 55
Figure 4. A *Rangia* bed off Houston Point, Galveston Bay, as recorded by the 300 kHz channel 56
Figure 5. The equipment setup on the boat prior to deployment 57

Report 2: Spatial Trends in Community and Health-Related Characteristics of Galveston Bay Oyster Reefs 59

Introduction 59

Methods 60
Field Sampling 60
Laboratory Analyses - Population Parameters 61
Laboratory Analyses - Individual Parameters 61
Statistics 62

TABLE OF CONTENTS

Section *Page*

Results 64
Primary Data 64
Cluster Analysis and Auto-correlation 70

Discussion 72
Spatial and Directional Structure 72
Local Versus Regional Control 72
Model Simulation 73
Temporal Trends in Health Parameters 75
Predation Versus Disease 76

Conclusions 76

Acknowledgments 79

Appendices – Report 2 87
Appendix 2-A: Tables 87
Table 1. Reef Sampling Sites 89
Table 2. The TAMU/ODU oyster population dynamics model 90
Table 3. The primary data 99
Table 4. Partial Regression P-values 102
Table 5. Comparison between sites sampled by Soniat et al. (1989) and this study 105
Table 6. Comparison of gonadal-somatic index 106
Table 7. Comparison of *P. marinus* prevalence 106
Table 8. Distribution of *P. marinus* 107
Table 9. Site comparisons based on the sum of the weights for five factors affecting condition 108

Appendix 2-B: Figures 109
Figure 1. Estimated distribution of shell (l m^{-2}) 111
Figure 2. Comparison of variable means among bay sections 113
Figure 3. Estimated distribution of maximum clump size obtained using the 51 sampled sites 116
Figure 4. Estimated distribution of oysters obtained using the 51 sampled sites 118
Figure 5. Estimated distribution of market-size oysters obtained using the 51 sampled sites 119
Figure 6. Size-frequency distributions for oysters from the 51 sampled sites 121

TABLE OF CONTENTS

Section *Page*

Figure 7. Estimated distribution of biomass using the 51 sampled sites 125
Figure 8. Length-biomass relationships for the 51 sampled sites 127
Figure 9. Estimated distribution of condition index in market-size adults 130
Figure 10. Estimated distribution of gonadal-somatic index in adult oysters 131
Figure 11. Estimated distribution prevalence of *P. marinus* 132
Figure 12. Comparison of *P. marinus* prevalence 134
Figure 13. Estimated distribution infection intensity of *P. marinus* 135
Figure 14. Example plots of *P. marinus* infection intensity versus anterior-posterior length or biomass 137
Figure 15. Estimated distribution of crabs 138
Figure 16. Crab carapace width size-frequency distribution 140
Figure 17. Estimated distribution of mussels 144
Figure 18. Plots of mussel length size-frequency distribution 146
Figure 19. Cluster diagram for the variables normalized and standardized 151
Figure 20. Correlograms of Moran's I versus distance along the Gabriel network 152
Figure 21. Correlogram of Moran's I versus compass direction computed with respect to the Gabriel network 155
Figure 22. Oyster abundance (ind m^{-2}) 158
Figure 23. Adult oyster abundance (ind m^{-2}) 159
Figure 24. Oyster biomass (lb ft^{-2}) 160
Figure 25. The number of eggs produced 161
Figure 26. *Perkinsus marinus* prevalence 162
