TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2008 APR 15 PM 3:37
CHIEF CLERKS OFFICE

My name is Dana Abernathy and I live four miles from the proposed landfill Sight. My property is adjacent to Peach Creek and thus subject to possible water contamination. My water well is a shallow one, approximately 70 feet, and thus even more vulnerable to contamination. I have two small children, ages 1 and 3yrs, who drink water from the well. I water my garden with well water, my children swim and bathe in well water, my horses and other livestock is also dependant on the purity and potability of our water supply.. I feel that the measures proposed to prevent ground water contamination are inadequate and request that the permit for the landfill be denied. I am also very concerned with the devaluation of my property.

Sincerely,

Dana Abernathy

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

2004 APR 27 PM 1:15
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

2004 MAY 27 AM 9:52 BY

CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), L. P., **Propuesta de Permiso No. 2324**

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Charles Armstrong

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. Proposed Permit No. 2324

Office of the Chief Clerk
TCEQ, MC105
P.O. Box 13087
Austin, TX 78711-3087

Dear Sir or Madam:

I am a college student in Dallas whose permanent residence is in East Montgomery County, near the proposed landfill site. After my years in college, I hope to return to the area in which I grew up and to the homesite that I helped clear, build, and maintain. However, I do not wish to return to an area that has a noxious odor due to garbage, massive mountains of trash visible from my front porch, or poisoned, undrinkable water due to waste materials seeping into the ground water supply. I also do not think that putting a large mountain of trash that no one would want to live near is good for the growth of Montgomery County.

Sincerely,

Paul Bacque

Proposed Permit No. 2324

Office of the Chief Clerk
TCEQ, MC105
P.O. Box 13087
Austin, TX 78711-3087

Dear Sir or Madam:

I am a soon to be college student, who was raised in East Montgomery County, near the proposed landfill site. After my years in college, I hope to return to the area in which I currently reside. However, I do not wish to return to an area that has a noxious odor due to garbage, massive mountains of trash visible from my front porch, or poisoned, undrinkable water due to waste materials seeping into the ground water supply. I also do not think that putting a large mountain of trash that no one would want to live near is good for the growth of Montgomery County.

Sincerely,
Paul Bacque'

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** There is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day. The road will be destroyed in a matter of months.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** There is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.

2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. The threat of the proposed landfill being constructed in our community has stopped the new home construction in the subdivisions, properties owners that planned to sell their property cannot, and those that purchased land to build their dream home, will not. Property values have plummeted. Retirees who hoped to have an estate to support them in their senior years are losing their financial security.

3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit and the main entrance into our subdivisions and properties. The lives of school children waiting for their school bus, riding their bikes and walking to their friends or relatives, will be endangered every day.

4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 200 + acres of timber are removed from the proposed landfill site for construction of a 273 foot tall landfill, then the natural barrier to contain the flood waters will be eliminated. The wetlands on this property has protected many property owners from flooding. With the elimination of the wetlands, the creeks will widen and flood the surrounding properties. Retention ponds will not help.

5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.

6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting a contested case hearing and that the TCEQ public meeting on this application be held in Montgomery County, Tx. RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Paul Barretto

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 APR 27 P 2:4
CHIEF CLERKS OFFICE

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** There is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day. The road will be destroyed in a matter of months.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Randy L. Bone

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. Re: Montgomery Landfill Solutions, L.P., Permit 2324

I live in the one-mile radius of the proposed landfill site and my property is near the Parker Road and the N.Walker Road intersection just passed the S-Curve. I along with the rest of my neighbors oppose this particular landfill location. We have factual evidence that proves that this land is not suitable for a landfill site. The terrain in a great many areas is swampy lowland and includes within its boundaries, a large number of wetlands that are used by wildlife. I am concerned about the pollution that these trucks will bring into my neighborhood. Airborne dust from the waste would contaminate the air we breathe and pose many associated health threats. In addition, the only road planned to the site, N. Walker Road is a narrow (2) lane county road that does good to just handle our local traffic, which includes school buses. It would be next to impossible for the large heavy trucks to maneuver through.

We already have an industrial dumpsite on Loop 336 and the Security Landfill 1and ¼ miles down the road. They have over 29 years of life left in that site. We do not have a need for yet a 3rd landfill and especially another one in our area. We have all of the landfills in Montgomery County right here. It is not necessary to continue to disenfranchise this one area when we have thousands of acres of land in Montgomery County that could be safely used for a landfill.

Please do not grant Montgomery Landfill Solutions a permit to operate this unnecessary landfill on N. Walker Road.

Respectfully,

Phillip Branch

There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Pam Brown

RE: Montgomery Landfill Solutions, L. P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit.

1) **Current Landfills in Area:** There is a Type 1, 375-acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, 6 miles to the west, and a proposed transfer station 8 miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development:** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new home sites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic Safety:** The entrance to the proposed landfill on North Walker Road is a two-lane, 21' wide county road, and the only entrance into our community and properties. The lives of school children waiting for their buses will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the floodwaters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1-mile radius of this proposed landfill site have water wells as their only source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U. S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but also serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or wastewater discharge application in Montgomery County, Texas.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

2004 MAY 27 AM 9:54

CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), L. P.,
Propuesta de Permiso No. 2324

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Francisco Cervantez

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

Comment 1: Trash and Waste processing is an Absolute required Social service which must be provided with the Absolute guarentee of public Safety. The current process of detecting and seperating non-class 4 materials is flawed. there are ways of insuring that hazardous Materials never make it on the truck much less to the landfill. By placing the responsibility of seperating the trash on the waste hauler, MGS ~~is~~ is not recognizing their responsibility to guarentee public safety.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

2004 APR 26 PM 2:39
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Evelyn A. Collins

MW

I live very close to this tragic event about to happen in many lives. We bought + moved here in '81 to be in a clean and safe area.

We have + enjoy well water.

We have asthma.

I have asthma, copd + am on Oxygen 24-7-365.

How am I supposed to be able to walk outside + try to maintain a breath of fresh air.

If I wanted poluted air water soil + veiw, I ~~would~~ would live close to a nuclear plant or in a large city.

But instead, we live here. Clean, fresh air, nice pure well water, walk barefooted w/o worry.

Now What?

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, waste water discharge application in Montgomery County, Texas.

8/9/2004

Hi, my name is Patricia Crofton, a resident and homeowner in Midway for 17 years. Just down stream on Lawrence Creek from the proposed dump. We moved to this community because it was a safe, peaceful environment for us to raise our children. The traffic flow was minimal, therefore we didn't have to worry about them riding bikes, walking or riding their horses down the streets around us. Our kids are now grown but this dump moving in will change everything for our grandchildren. No longer will the streets be peaceful due to under paid, over worked drivers in the least maintained trucks on the road (just ask the DOT).

Lawrence Creek is a water holding creek and during every hard rain it comes out of its bank and exceeds the 100-year flood plan. Many times, it is within feet from our front door. It will contaminate the ground water for our well along with the drinking water and grazing areas for our Quarter Horses. Our grandkids playing area will consist of other people's wastes. This is not the place for a dump, a community center for the children maybe, but not a dump. Our community is a strong one and will do what ever it takes to keep this dump from happening. How many dumps are there within 2 miles of your home? Thank you for your time.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

2011 APR 29 PM 2:3
CHIEF CLERKS OFFICE

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Barbara Dawson

AT PUBLIC MEETING

37868
MSW

LADIES AND GENTLEMEN

We are writing to express our strongest concern regarding the Type IV landfill Permit No. 2324 at the proposed location on 3760 N. Walker Road in Montgomery County TX. This landfill is literally in our back yard. We live on Adcock Acres on the West Side of the proposed landfill site. I know quiet a bite about landfill since we, and the residents of East Montgomery County are almost completely surrounded by landfills. We compete with the convoy of garbage trucks that congest every major road by their constant trips to the existing landfills, East, West, and in the Middle of Highway 105.

2004 AUG 11 PM 2:41
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Twenty years ago my wife and I began looking for a place to retire. During that time I gave up, but my wife did not. She found a place and demanded I go look. It is 5 acres with a white brick, 3-bedroom home. Our place! Five years later, we lose everything?

I retired from the military as an officer (25 years of service), I am now 60 years old and I have worked for the Conroe Independent School District for almost 15 years. I moved to this area with my wife and mentally challenged son so we could have a quiet place to spend our days. We wanted the fresh air to aid my asthmatic son with his respiratory problems, the land to grow our gardens, and the acreage for our cattle, sheep and poultry. This proposed landfill will affect every single aspect of my family's life.

I am, as I stated earlier, 60 years old and will retire from the School District soon. I must prepare for my family's future and mine. We applied for a home improvement loan. The bank denied our application, as they all know about this 3rd landfill. I cannot sell my home because no family wants to live near a landfill. We have (three) landfills and a transfer station with an incinerator coming soon. My family will be forced to <u>WALK AWAY,</u> we will be forced to take bankruptcy, and we will be leaving our home and dreams if this landfill is authorized.
My wife and I cannot accept the disastrous consequences this landfill will create for our son's health. Air quality, for our son's health is a predominate issue. We are extremely concerned about contaminated materials that would be hauled in and then stirred up by equipment at this proposed dumpsite. As an employee of Conroe I.S.D. I personally have seen what is placed in construction dumpsters, Ceramic tile, Venal tile and old carpet containing asbestos fibers, and mountains of

fiberglass installation. Everyone knows the public throws everything imaginable in construction dumpsters. Not TCEQ or any regulatory agencies inspect these dumpsters or dumpsites. This is not QUALITY by any standard and this is especially hard for all of us to understand when it is said, "this will be a sticks and stones" landfill. If this is so, then why aren't they recycling this material?

Water quality deeply concerns us. We obtain our water from a well source and as we understand it, this landfill will only have a clay liner that is very close to our aquifer. This landfill is in the middle of wetlands and there are two creeks that flow to the east and west of this proposed landfill. The county closes South Williams Rd. at lease 2 to 3 time a year because of flooding conditions. This will most certainly cause the mixing of the landfill contaminates which will flow into the creeks and over North Walker Road. Our groundwater will be contaminated! How can anyone consider taking a chance with ruining their water and endangering everyone's health?

One of these creeks is the Evangeline Aquifer and I have always been told it is Artesian. There are minnows and air bubbles in the Lawrence Creek and I believe that this is fed by that aquifer. I am not a hydrologist but we do know that this landfill could not possibly be good for an Artesian well.

There is no need for a landfill in our community. The Security landfill announced that it is expanding 55 more acres and will extend the life of that landfill by 29 years.

Please contact us if you are interested in photos of migratory birds and additional information concerning water runoff from South Williams, Southeast to North Walker Road.

Sincerely,

Leamon J. Dowden and family

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 MAY 28 PM 3:57
CHIEF CLERKS OFFICE

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P.'s (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

2004 APR 27 PM 4:11
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

James Ernst

RE: Montgomery Landfill Solutions, L.P. - 2324

Dear Sir,

The above mentioned landfill is very near my residence and we object to its placement near an area with so many elderly people. We both have asthma and COPD and my husband has been diagnosed with some beginnings of asbestosis. The burning necessary to any landfill would certainly be detrimental to our health and well-being.

Any consideration to our situation, as well as others like us in this area would be appreciated. There is a lot of vacant land in Montgomery County that is not in residential areas and we hope that you will deny this permit.

Sincerely,
Kenneth and Mary Everitt

3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Jon Fife

Re: Application for Permit Number: 2324
Applicant: Montgomery Landfill Solutions
471.00 acres, H S Williamson Survey, A-632
Montgomery County, Texas.

Ladies and Gentlemen:

I am writing this letter in protest of the referenced application. I currently own 10 acres of land situated approximately 1500 feet from the proposed waste site.

Last January, when I first heard of this application, I thought "This is one of the stupidest things that I have ever heard in my life". Being in my mid fifties that says a lot, considering Viet Nam and Watergate, etc. I looked into the situation and now I think to myself, "This truly is one of the stupidest things I have ever heard in my life". I think this for a variety of reasons, as follows:

First of all, there already exists an operating landfill within a couple of miles of the proposed site. Montgomery Landfill Solutions ("MLS") proposes this landfill to receive "construction materials only" or "sticks and bricks". The existing landfill (Waste Management's Security Landfill) is enlarging its capacity with enough area to accept "sticks and bricks" along the expanding volumes of household trash for the next twenty (20) years. Therefore it really seems useless to construct another landfill in the immediate area.

I purchased this property five years ago. It was a "jungle". You see, some County or State Agency had granted a permit to mine iron ore on this 10 acre tract and the 10 acres behind it. What they left was atrocious. The "mud hole" where the actual mine was located, had turned into a home for the water moccasins. Since the miners had stripped off the top soil of 16 or so acres, the vines had taken root and had just about killed what

trees the miners had left behind. I will quote my 4 year old grandson, "This is a mess." Well, the pond in now free of snakes, which have been replaced by bass and brim. My neighbors, on the adjoining tract, have some fine pasture and I have replaced the vines with grass and the trees are now safe from the vines. You can also walk from the front porch of the house that I have built to the pond (about 100 feet) barefooted, without fear of stepping on stickers or having the exposed iron ore cut your feet.

We have all worked very hard to allow these positive changes to occur. Adding another landfill to this area constitutes unfair land use and it disenfranchises all of us "red-headed step-children" that live in this part of Montgomery County. We thought that there were laws against such things. I figure that is MLS's game plan. "Look out there in East Montgomery County. They are a bunch of stupid, poor red-necks and Mexicans. They couldn't stop the Security Landfill, they will not be able to stop us either".

Further, my place is not for sale, but one day I will die and whoever inherits this land will be robbed of potential value, since it would be located in "Landfill Central Station". I thought that government existed to protect all of the citizens from such unfair practices. This area is growing quite rapidly. In the five years that I have been out here, there have been at least 10 new homes built on Pine Shadows Road alone. These homes are filled with children's hopes and dreams. Last summer, no less than a half dozen people inquired about the possibility of acquiring "an acre or two" in order to build a house. They all had kids and were looking for a safe, peaceful place to raise their children without all of the "trash", crime and pollution of the big city.

Then there is the aspect of the access road to the landfill. This road (North Walker Road) is the primary entrance to our subdivision known as Hidden Acres. It also serves as the primary entrance to Greenwood Acres, Oak Ridge Ranch and Dodd Subdivisions. In the mornings small children wait their school buses on this road, which, at present, is just a "cut above" the original cow path that was followed when the first road was put in (i.e. this is a winding road). Currently the road is used for passenger cars, pick-up trucks and farm equipment. If a farmer has his hay rake on his tractor and is going to another pasture down North Walker Road and he meets a car coming the other direction, he has to go into the ditch so the car can pass. The road is also very narrow. But you know, those of us who live out here are fine with North Walker Road just the way it is. You see, most of us, if not all of us, choose to live out here where it is peaceful and quiet. We enjoy the country atmosphere of waving to our neighbors when they pass in a car. We enjoy knowing each other and visiting down at the Midway Store. We chose to move out here to get away from the smog and congestion of the city. I have a neighbor across the street who is a Houston Fireman, another who is a Houston Policeman. A landfill in the neighborhood seems to be a nice way of repaying them for their years of loyal service. Some of my neighbors made the choice of living out here 40 years ago. Now MLS wants to dump millions of tons of Houston's garbage in their front yard.

MLS proposes to bring 350 trucks per day down this "cow path". That also means that there will be 350 trucks per day leaving the proposed landfill. So in total MLS wants to

bring 700 trucks a day down our precious cow path. Surely they jest. Those 700 heavy vehicles will traverse almost two (2) miles of North Walker Road.

They will tear up this road. In the winter, when the hard wood trees are asleep (an oak tree can drink hundreds of gallons of water a day) and we get a lot of rain, the water table rises almost to the surface. I know this because my house is build on a pier and beam foundation and every winter I have water standing under my house. This is not "run off" water, but seepage. That much extra weight on North Walker Road with the water table that high will completely destroy the road bed and render the road impassable to cars. It will also cause vehicles, some of which would be the garbage trucks ("18 wheelers"), to swerve in order to avoid potholes, which in turn will endanger the lives of our young children who are waiting for their school buses. This is insane. For God's sake this is a neighborhood!

Since I am on the subject of a high water table, the proposed landfill threatens to endanger our water supply. Out here, we are all on private water wells because there is no public water supply available. The proposed landfill calls for MLS to dig fifty plus feet below the surface of the earth and install a three foot thick clay liner. Do you know what happens to wet clay? It becomes mush. Add to that fact this; the proposed site is the lowest piece of property out here. It is a "Hardwood Bottom" and with the hardwoods cut down it will only intensify the problem. It is also very near the headwaters for two creeks. That means that the liner will be exposed to ground water for much of the year and will all turn to mush.

MLS says that only sticks and bricks will be put into the landfill. Are they going to inspect what goes into the dump – absolutely not. Have you ever been to a construction site? I have and I have seen guys throw barrels of whatever into trash containers. A guy has a couple of old car batteries in the bed of his pick-up, into the container. Got any tires or an old electric transformers, "ah, just throw it into the dumpster". When those barrels and batteries and transformers burst, that mess that is their content will fall onto the landfill liner, which is now mush and the contaminants will seep into the ground water. Conversely in August and September, (when the hard woods have been awake for 6 months and we get less rain and more evaporation) the water table falls significantly. My guess is that it falls to eighty feet deep or so. That means that the mush of a liner will dry out. Do you know what happens to clay that has been water logged and then dries out? It cracks, that's what. I've seen clay crack down fifteen feet deep or so. Much more than the three feet that MLS wants to install. If the contaminants don't soak through the liner when it is mush, they certainly will when it cracks. I have noticed that during the late summer, I get a red ring at the water line in the toilets. This is because the water table has dropped and more iron is in the water. Once we get a heavy rain in early fall, the red ring goes away. Clean the toilets as much as you want during the dry time, the ring is back quickly. It takes 7 days after that first fall rain for the water to seep into the aquifer and for the red ring to disappear. MLS says that should their water monitoring wells pick up any unusual contaminants, they will notify us in writing in approximately 30 days. Thanks a lot MLS. In the mean time we will be drinking and showering in battery acid.

Along these same lines, this area is highly faulted. Christmas of 2002, one of my grandsons and I were riding on the tractor when all of a sudden, the tractor sank up to the frame. I mean hopelessly stuck, without warning. You see, we have areas out here that get very "boggy" during the winter months. That spot is near a location that I wanted to build a road, so last winter I checked it out again. Much to my surprise, the boggy spot was not there. It had moved about 8 feet to the east. A geologist friend told me that he thought it was because of faulting. There seems to be some shallow, surface faults that open for a year or two, then are closed and are reopened at another location. I think that MLS is playing with fire and we are the ones that are going to get burned. If the soggy liner doesn't leak and the liner doesn't crack during the dry times, then it surely will crack when these surface faults "relocate".

Of course, once the ground water is contaminated, the TCEQ and every other State or Federal Agency will say "There is nothing we can do about it". And that will be a true statement; because once our water supply is contaminated there is nothing that can be done about it. The time to do something about it is NOW. Please do not allow MLS to jeopardize our children's safety and our water.

This problem will affect more than just those of us who live immediately adjacent to the proposed site. Lawrence Creek flows through the proposed site. It then passes under Walker Road and begins its journey south to the San Jacinto River, and we all know where that river ends up. When we get heavy rains, Lawrence Creek overflows and the water runs OVER Walker Road instead of under the road. MLS says that they will build retaining ponds to hold this water. Those ponds better be real deep because water enters Lawrence creek from all directions (including from the landfill site), except from the southeast, which is the direction that the creek drains. Once the battery acid hits Lawrence Creek then it's in Houston's drinking water. Harris County is currently redoing their 100 year flood plane maps. It is my understanding that the existing Harris County maps are only a few years old, but are in need of being updated, and that thousands of acres that were previously out of the flood plane are now in the flood plane. It is also my understanding that the existing 100 year flood plane map for eastern Montgomery County dates back to the late 1970's and is terribly out of date. A whole lot has changed since the 1970's and it seems to me that you have the responsibility of finding out exactly how much has changed and to see to it that the Eastern Montgomery County flood plane maps are redone prior to approving their permit. I'm sure that redoing the flood plane maps is not your "job", but it is your job to make sure that this landfill will not contaminate existing water ways. If you elect to make your decision on data that is not the most current information, then it seems to me that you are in violation of state and federal laws that pertain to willful misconduct and gross negligence, because you are now aware of the problem.

By the way, I have tried to find another landfill that MLS operates. I can't seem to find one. It is my understanding that the TCEQ has previously granted MLS two permits, but those landfills were sold to BFI soon after the permits were granted. Who in your office is on MLS's payroll? I have seen unscrupulous oil companies do this same thing in the past. They buy their leases in some bogus company name and then have the leases

assigned to their company. The people who signed the leases say "If I had known it was those crooks, I never would have signed the lease." Of course, then it is too late. Is that what MLS is? The cover guy? It seems to me that these permits should not be assignable without another approval process, since the company operating the landfill is critical to environmental safety.

I went to MLS's "required public meeting" last Thursday evening. I wanted to know who is this MLS? What are their financial resources? What is their experience in the landfill business? Problem is, no one from MLS was present. Mr. Imre Szekelyhidi, Manager of Montgomery Landfill Management, LLC who is General Partner of MLS, was no where to be found. Guess he was on his yacht on Lake Austin, where he lives. A hired engineer and hired lawyer were present, both of whom "knew nothing", nor could they even answer the most basic questions. If that was the "required meeting", then the "requirements" suck. We are supposed to entrust the safety of our children and our water to people whom we do not even know? In many circles, that is known as rape or prostitution. Both are illegal in this state, at least the last time I checked.

This part of Montgomery County has always been a part of the country that has been abused. From the days of the iron ore mines to the days of the landfills. Seems to me enough is enough. You see, in truth, the biggest problem I have with this entire landfill thing is that it endangers two of the most precious things that I have. (1) My place and (2) my dream.

I was raised in an environment that was anything but "child friendly". My father liked to drink too much and then he liked to beat me up. My mother was nuts, at best, and there was plenty of emotional abuse. All this lead to several instances of sexual abuse during my teenage years, the final of which occurred while I was a soldier in Viet Nam. I had a bunch of the "isms" and during the past fifteen or so years I, along with the help of some really good people, have managed to confront and deal with all of these issues.

I bought this place with the intention of doing something for the children. At first I wasn't sure exactly what, I just trusted that God would direct my path. I've come out here and worked hard at this project, harder than I have ever worked on anything in my life. Over time, this place has healed, so have I. In the next year I have plans to inaugurate and dedicate "Camp Mohawk" to the betterment of the little ones. I am part Cherokee Indian (in blood, but all Cherokee inside), and my Cherokee name is Five Hawks. It means this, to the Indian there are seven directions: over, under, north, east, south, west and center. A Cherokee Medicine Woman by the name of Painted Sky named me. She said, "Creator God has been over you since the start, protecting you; Our wonderful Earth Mother has been under you feet from the beginning, guiding your path; there are four big Red Tailed Hawks that guard north, east, south and west and you, my child, are the Hawk in the middle." My friends call me "Mohawk", for short.

Well, the Hawk in the middle has a dream. It's a wonderful dream. It is based on the way that the Cherokee Indians raised their children in the "old days". It also goes along

with what I have experienced in this life. In my childhood of "nutsness", one person took me in and loved me. My Grandfather, my PawPaw.

It just so happens that the ancient Cherokee's raised their little boys like this. The boy spent his first 5 years primarily with his mother. She taught him the basics of life. How to care for himself, numbers, the directions, etc. When he was six years old, he graduated to "PawPaw School", i.e. he and the other boys who were between the ages of 6 and 11 went to the woods with their grandfathers and their grandfather's friends. There they learned to build a shelter, raise a garden, fish and canoe. They learned to take care of the animals and to take care of the earth. Their education continued in "Daddy's School" from the ages of 12 to 18 after which time they returned to spend three weeks of hell with their mother (she knew all the stories they had heard around the campfire and planned on straightening them out), before being accepted in the Nation.

People in the mental health field today will tell you that after an abused child is 8 or 9 years old, the child is almost unreachable (at least the chances of success are reduced drastically and the child is headed down a rough path that will be filled with violence and repeated abuse). My plan is to take the abused 6 year old boys and introduce them to some truly wonderful PawPaws. The venture in called "Paw-Paws R Us". There are a lot of 65 year old men who do not see their grandkids near enough and who do not have real purpose in their lives. You know the type. Strong, loving men who have a vast wealth of wisdom and knowledge and no one to share that with. Men who have strong hands and kind hearts. I see them every day. I've recruited several so far with plans to have at least a dozen of them by next summer. The kids – there are tens of thousands of them in our five county City of Houston alone. The Paw-Paws can teach the kids to work with their hands, hearts and heads. They can also show them that not all men will beat them up and that there are some men who will love them in a healthy way.

I have shared this idea with many in the health care profession, who all support the idea with enthusiasm. Several have said "Why didn't I think of this". It will work, I know that it will because it has worked in my life. That is my dream, to bring the abused six year old boys the first year, followed by the girls the next year ("MeMaws R Us"). Ultimately a foster care/orphanage for the abused kids, run by Paw-Paws and MeMaws, where the older folks have a purpose in life again and the kids learn how to love. And when the kids grow, to provide the 12 to 18 year olds with "Daddy School" and when they graduate from High School, to send them to college or to whatever educational opportunity seems to make the most sense for that child. I am aware that segregated (boys and girls) education is a popular thing – the Cherokee's (and other groups) had the idea first.

MLS is jeopardizing my dream. They ruin the water, what will we drink or shower in? They mess up the road, how are the kids and PawPaws going to get here safely. And when we are sitting around the camp fire at night, the roar of the bulldozers on the other side of the trees in going to create a "true sense of peace and safety".

This area out here is not "River Oaks – Houston". But we are people, people with dreams and hopes. MLS could move their site a few miles away and find places where no people live. I recently made a trip to Dallas to visit my daughter, son-in-law and Grandson. As I was leaving Dallas on I-45, I noticed that there is a huge landfill on the west side I-45 maybe 15 miles south of Dallas. That part of the country is prairie and you can see for miles. From the landfill, you can see three or four houses off in the distance, but none "right across the street". If other companies can act responsibly and put in their landfills before the people move in, then why can't MLS? Why jeopardize so much when the landfill isn't really necessary to begin with, except to fulfill corporate greed.

I've been "surfing the web" to attempt to determine the relationships between the various landfill conglomerates. It is truly a maze. I did find this much out. On its 2000 10K form, Waste Management listed BFI as one of its subsidiaries. There is some sort of corporate history between the two. If MLS gets this permit and sells this landfill to BFI, then, in essence, Waste Management has cornered the North Harris County, Montgomery County and Liberty County multi billion dollar a year business for the next 50 years. I thought that was called a monopoly, and I thought those arrangements were illegal. It seems to me that you have a responsibility to make sure that the granting of this permit does not violate the antitrust laws of this state and this country.

In light of the above I hereby request a public hearing to allow these and other issues to be raised. I also request that the meeting be held in Montgomery County were those of us who have concerns can be present (rather than in Austin where last public hearing on this issue was held). There are only a few of you to travel for the meeting (and we as tax paying citizens pay for your travel), there are hundreds of us (who take our own time off work and pay for our own travel).

I am sending this letter to you, but I have decided to CC a few folks that I think might be interested.

I am going to send a CC to Norma Kay Lord who is a Cherokee Medicine Woman in the Woodlands who has helped me along my way. I will ask her to pray with me to Creator God to ask if he will help stop this foolishness.

I attended Candlor School of Theology at Emory University in Atlanta. I met a woman there whom I proudly call my Sister. She has been a political activist since Viet Nam and she has visited me here, where she received a true spiritual blessing. Maybe she will have time to help with some of her prayers or maybe she can help stir up the Methodist. Her name is The Reverend Joy Brown.

I am going to CC Ms. Debra Scott, who is the Chairperson of the Cherokee Council of Greater Houston, and who whole heartedly supports the "Paw-Paws R Us" concept. Maybe she can help stir up the Indians along with the offering of her prayers.

I recently presented the "Paw-Paws R Us" program to an old friend. He has recently embarked on a new business venture and has pledged one half of the profits of his new

venture to the program. He is a savvy business man, and he sees the potential. You see if you can stop the violence early in these kids' lives, you can keep them out of the system (TDC). That's our "seed money", provided that his venture is successful. If his venture is not successful then I'm quite confident that God will provide other seed monies. I'm going to send his wife a copy of the letter. I bet she'd love to help.

Four years ago, George W. Bush asked me for help in his campaign. I agreed, now he wants me to help again. I plan on stapling the check to his CC of this letter. He might not have time to read it, so I though I would also send one to his bride. Maybe she can help too!

On Earth Day each Presidential Contender bragged about how many acres of wetlands their administration would restore. (Since you are in the Environmental Quality business I assume that you are aware that we are in a crisis when it comes to wetlands and that the entire 471 acre proposed landfill site is wetlands of which less than 15 acres will be remediated - since the Army Corp of Engineers only has jurisdiction over the two creeks that run through the property). In light of this, I decided to donate a check to John Kerry also stapled to his CC of this letter. He might not have time to read it, so I am going to also CC Mrs. Teresa Heinz Kerry, maybe she can help.

I used to work for a wealthy and influential man in New York. He and his son have a lot of political friends and warm places in their hearts for the little ones. They might know someone who can help.

I have a friend in Fort Worth by the name of Tex Moncrief. I think Tex might know a politician or two. He might help.

Kay Bailey Hutchinson has always been nice enough to answer my letters, maybe she can help.

I recently conducted business in the State of Alabama (MLS also has attempted to permit landfills there too) where I met a number of young Democratic activists. I am going to CC them so that they can see how not to run a state.

Ruben Hope is my State Representative, Todd Staples is my State Senator and Rick Perry is my State Governor. They'll get one too, hopefully the entire state government isn't nuts. Guess I might as well send CCs to their wives while I'm at it.

Terry Kleiver, a writer for the Houston Chronicle, has written several stories about this landfill situation. Maybe his CC of the letter will prompt some additional ideas in his mind. You and MLS want publicity – maybe he can give it to you!

Since there is a chance that this landfill might violate some of the anti-trust laws and unfair land use laws of our country, I better CC the US Attorney in Houston, the State Attorney General, the US Attorney General and the ACLU just to make sure that our rights as citizens of the State of Texas and the United States are not being violated.

My oldest son's name is Jonathan Fife. He is a veteran of the US Army and a member of the National Guard (Active). He recently lost a very close friend in Iraq. He and his friend's mother met President Bush at Fort Campbell, Kentucky. Mr. Bush told him that if he needed anything to let the President know. Guess the Commander and Chief might get two copies.

I've been in the oil and gas business for over 25 years and am a member of the American Association of Professional Landmen. In addition, during my career I have met a number of high roller Oil and Gas Attorneys, some work for large firms. Maybe they will help.

By the way, MLS never thought it necessary to notify the owner of the mineral estate of the 471 acre tract, to inform them that MLS would be destroying their rights of ingress and egress. The mineral owner is not real happy and since the mineral estate is the dominant estate in the State of Texas, the granting of this permit seems to be in violation of State Laws. Maybe you ought to check this out too. Since we are on that subject lets get down to the "nitty gritty". MLS tried once to "slip" this permit through your process. You were about to approve the permit before a group of women in our community caught on. Then MLS had to go back and "tell the truth". You know the story, their attorney lied to the County Commissioners saying that only Montgomery County waste would be put in the landfill, after which they filed papers with your office saying that the landfill would accept sticks and bricks from five different counties. Now they have tried to "slip" this permit past the mineral owner. DO YOU PEOPLE SEE A PATTERN HERE? These are crooks, liars and thieves. GET A GRIP! All that MLS is interested in is getting the permit approved no matter who gets hurt in the process.

My point is this, someone is going to listen me. I just bought a new box of stationary with envelopes and stamps. I think I have a charge card with enough room left to buy another box, if necessary. Someone will listen, I hope it is you.

Thank you for your time.

Yours truly,

Mel Fife

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

2004 APR 29 PM 2:09
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

M. Fife

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Dorothy Fitch

ON THE BACK OF THIS FORM

Please give this to the person at the information table. Thank you.

My wife AND I own 6.72 ACRES on Hwy 105 THAT INCLUDES A portion of LAWRENCE CREEK. THE LANDFILL WISHES TO BUILD BETWEEN LAWRENCE AND PEACH CREEK. LAWRENCE CREEK AND PEACH CREEK ARE MAJOR TRIBUTARIES THAT FEED LAKE HOUSTON WHICH IS THE PUBLIC WATER SUPPLY FOR OVER 5 MILLION people AND THE FOURTH LARGEST CITY IN THE UNITED STATES. THE LANDFIELD OWNER'S STATE THAT NO "HAZARDOUS WASTE" IS permitted IN A TYPE IV LAND FIELD (LF) BUT THERE IS NO FEASABLE WAY TO GAUARANTEE THAT THE LANDFIELD WILL NOT ACCEPT HAZARDOUS CONTAMINATED WASTE. THE L.F. PLANS TO HANDLE 600 trucks IN A 12 hour period- 50 trucks AN hour. 1.02 trucks A minute. 12-14 YARD dump trucks. THERE IS NO WAY TO GUARANTEE THAT THEY WONT ACCEPT THIS HAZARDOUS MATERIAL BUT THEY ASSURE US they will CONTAIN THEIR WASTE THE ARMY Corps OF ENGINEERS promised to build Levees to protect New Orleans. BUT KATRINA proved THAT even THE BEST PLANNING CAN FAIL. SO WHAT HAPPENS WHEN this LAND FILED MEETS AN UNforseen CATASTROPHE, we poison our little community, ALL the little communities from here to LAKE HOUSTON AND THEN THE WATER SUPPLY OF THE FOURTH LARGEST CITY. IN THE NATION. So BEYOND the loss in property VALUE, ADDED dangerous traffic to highway 105. we have A LARGER ISSUE THE POSSIBILITY OF A CATASTROPHE LARGE ENOUGH TO COMPROMISE THIS LANDFILL AND POLLUTE MILLIONS OF CITIZENS. I OPPOSE THIS LANDFILL.

☒ I wish to provide formal written comments at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)

ON BACK OF THIS FORM.

Please give this to the person at the information table. Thank you.

① WHAT ARE THE HOURS of operation for the landfill?
7AM-7PM

② How many trucks are scheduled per day?
Start 400 Shedule 608

③ How large are the trucks. (capacity to haul debris)?

④ How many inspectors?

⑤ IF A truck, having DEBRIS, IS UNLOADED THAT IS A LOAD THAT IS CONTAMINATED, how will that LOAD BE Removed?

My Point, IN A 12 hour period 600 trucks will UNLOADED, AND SUPPOSEDLY INSPECTED. If there were 10 inspectors, how would they ~~have~~ feasibly be able to inspect the thoroughly?

600 trucks. 12 hours per day. That's 50 trucks per hour. or 1 truck every 1.02 minutes. How does A company INSPECT 12-14 yards of DEBRIS in 1.02 minutes? our only water supply is a water well that is located 100 feet off of Lawrence creek.

So what are our options? Sell our houses at less than the price we paid or stay and develop diseases that kill our families slowly.

Office of the Chief Clerk
MC105, TCEQ
P.O. Box 13087
Austin, Texas 78711-3087

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** There is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day. The road will be destroyed in a matter of months.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

2004 APR 29 PM 2:35
CHIEF CLERKS OFFICE

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Susan K. Franks

In 1994 7/8 my property was flooded by a rain. My property is beside the proposed landfill site. How can a retention pond(s) contain that much water. A heavy rain or Hurricane will overflow the ponds and contaminate Lawrence Creek and the area water wells. Lawrence Creek runs into Peach Creek which feeds into Lake Houston. Houston will be getting 95% of their water from Lake Houston in the next 5 years. It is already in the planning. If they dig down 20' when putting the clay down, they'll hit water. I only went down 5' and hit water on my property. How are they going to prevent water from coming up thru the clay liner? There isn't any way to keep "house-hold trash" out of the trucks going to the landfill. Obviously the "traffic study" wasn't done on a 24 hour bases. 3 hours of traffic count during 2-5pm isn't a study. How do we prevent lead based paint from getting into the landfill. They took lead base paint off baby cribs for a reason!

I feel this "landfill" is a hazard to our health!

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

2004 APR 27 PM 2:40
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

Dear Ms. Castanuela:

We are a Home Builder based in Conroe, Texas.

We have built twenty one (21) homes in the N. Walker Road area in the last two (2) years. This area is a large portion of our business or at least it was until a proposed landfill was announced in December of 2003.

We had two contracts set to close in December 2003 in this area. One contract was for $203,000.00, the other for $276,000.00. Both cancelled when informed of the pending landfill.

We also had several pendings, all have cancelled and gone elsewhere.

We had a lower priced spec home we did manage to sell at a greatly reduced price.

This is a nice area and was growing rapidly. We will obviously not build here on speculation, unless this landfill is denied. We have already lost a great deal of business and profit.

The real travesty is the local people who have their life savings invested in homes and land, whose value has plummeted overnight.These are people who did not gamble their life savings on Enron stock, but they have been just as devastated by something completely out of their control.

There is a lot of empty land in areas that are not developing. Please do the right thing and deny this landfill on the grounds that it is not the best use of the area.

Thank you,

Dan Glassel

RE: Montgomery Landfill Solutions, L.P., Permit 2324

I am a resident in the area, I only lived here for a couple of years but I am young and thinking of living on my property. As time pass, I observed that they are seeking for a new Landfill near my subdivision. As a resident of the Deerwood subdivision, which consists of most Hispanic population, I can safely say that we feel as if we are not brought into the decision of the new landfill. Most of the residents of my subdivision were not informed of the possibility of the landfill, since there wasn't any information given in Spanish. Some of us started to find out of it, when the CAML started to inform us in Spanish. I feel that everybody has the right to be informed, even if we speak a different language or have different level of education. We all human being and we will be the ones living very near this Landfill. There is only one way in and out of our subdivision, and it would give us one more stone in our way home. We all work very hard and will like to take part of the decisions in our area. As we know we don't have political representation, medical assistance for low income undocumented residents. So if the landfill is made our kids will have the possibility to get sick and taking them to get medical assistance will be another stone in our way. We love our family and is very important to us as Deerwood residents.

Thank you for your time and I respectfully say we don't want another landfill as our neighbor.

Respectfully,

Gabriela Gonzalez

MC105, TCEQ
P.O. Box 13087
Austin, Texas 78711-3087

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Juana Gonzalez

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

2004 MAY 27 AM 9:52
CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), L. P.,
Propuesta de Permiso No. 2324

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

CHIEF CLERKS OFFICE

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Clyde Wayne Hales

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Rebecca L Ham

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

2004 APR 27 PM 2:12
CHIEF CLERKS OFFICE

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

936-231-5201, dandonild@ev1.net.

~~I live on Stallion Dr. in the SE corner of Conroe, just west of Stewart's Ferry, the proposed landfill~~

My name is David Henderson, and as a teacher of Environmental Science, I touch the future.

In my Environmental Science class, I try to get my students to understand a few basic concepts. Those are as follows...

The 3 R's of sustainably Solid Waste Management, "Reduce, Reuse, Recycle", are the foundation of a solid waste management that is sustainable & ecologically viable. Landfills have no place in this. Landfills take what is actually a potential resource and buries it underground to become no longer a potential resource, but a serious, dangerous problem.

~~A~~Again, as a teacher, I touch the future. ~~A bright~~ future can be glimpsed in The Woodlands, or in Conroe, where 3 recycling centers already existin this county. If this landfill is allowed to be brought in, we, the residents of Eastern Montgomery County, will feel the effects of this landfill for generations, and it will not be a future that I want ~~to be~~ my students to be a part of. It will be one of rural slums, decreased tax roles, & traffic mortality, not to mention polluted groundwater, increased flooding, & more air pollution.

Finally, I teach my class that 1 person can make a difference. Tonight on March 10, 2005, over 2000 citizens of East Montgomery County have voiced their disapproval of this potential blight upon their community. Do we not make a difference in our unanimous voice against this landfill?

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), LP. 52
Propuesta de Permiso No. 2324

CHIEF CLERKS OFFICE

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

Firma

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

I live in Harris county. We have plenty of polutants as it is in Houston to add more. My family and I are wanting to move to a more rural area. like. Montgomery County for fresh are and for our kids to live a healthyer life. and Now with this were are we to go. TECQ will not do anything about a filtration on any problem that this may cause. my expirience in Houston with it's refinerys has been that. we call because the polutants are so bad we can't stand the stinging in our eyes and nose. All they say well its not bad and not in your home. when you smell it in your home call us back. Don't harm are children more. than we + they are already harmed.

RE: Montgomery Landfill Solutions, L. P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit.

1) **Current Landfills in Area:** There is a Type 1, 375-acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, 6 miles to the west, and a proposed transfer station 8 miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development:** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new home sites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic Safety:** The entrance to the proposed landfill on North Walker Road is a two-lane, 21' wide county road, and the only entrance into our community and properties. The lives of school children waiting for their buses will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the floodwaters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1-mile radius of this proposed landfill site have water wells as their only source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U. S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but also serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or wastewater discharge application in Montgomery County, Texas.

Sincerely,

Signature

CHIEF CLERKS OFFICE

Office of the Chief Clerk
MC105, TCEQ
P.O. Box 13087
Austin, Texas 78711-3087

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** There is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day. The road will be destroyed in a matter of months.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** There is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day. The road will be destroyed in a matter of months.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Address: 1588 North Walker Rd

City/State: Cleveland Tx **Zip:** 77328

Phone: (281) 455-7855

☑ **Please add me to the mailing list.**

Are you here today representing a municipality, legislator, agency, or group? ☐ **Yes** ☐ **No**

If yes, which one? _____

IF YOU WANT TO GIVE FORMAL COMMENT PLEASE ✓BELOW

☑ **I wish to provide formal oral comments.**

☑ **I wish to provide formal written comments at tonight's public meeting.**

(Written comments may be submitted any time during the meeting.)

I Feel it is unfair you held a meeting of such Importance to Our Community without Adiquite Space for all concerned. I would like to have another meeting scheduled where we all can hear what the MLS has to say. This is our home you are taking away from

OVER

Along with the effects you have on our homes Many of us have Investment Property which will decrease our value. With all the wells on our property it's Impossible to not contaminate our water that our Familys and generations to come will drink doubtfully that the MLS with offer to deliver each and Every home Bottle water.

Granted we all have trash however there are 100's ~~and~~ of acres when a Landfill could Be placed away our Family Homes.

Also this will Also ruine the Road we must drive on Each and Every day. Pretty Sure MLS will not had out checks for maintance on our autos.

4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the floodwaters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1-mile radius of this proposed landfill site have water wells as their only source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U. S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but also serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or wastewater discharge application in Montgomery County, Texas.

Sincerely,

Laurie Kirkland

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

CHIEF CLERKS OFFICE
2004 APR 22 PM 2:43
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
OFFICE OF THE CHIEF CLERK

Please give this to the person at the information table. Thank you.

I was born and raised in East Montgomery County. When I married, my wife and I chose to settle and raise our family in East Montgomery county. This is my home. I have hundreds of family members who live here, and thousands of friends who call this home.

When this landfill effects the health of the people of East Montgomery County, as it inevitably will, I want you to know that I intend to hold each of you personally responsible. I hope that you are prepared to take responsibility when my family, neighbors, friends, and the people I love become ill because of the contamination that this landfill will bring to our water aquifers.

When you're in your comfy Austin office, I hope you will truely put yourself in our shoes, and follow your conscience as you make your decision whether or not to allow this landfill.

Please - I beg you - don't put a landfill in our back yard that you wouldn't want in your own! And, please be assured that you will be held responsible for decision.

Matt Harris Jane

At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.

Re: Montgomery Landfill Solutions, L.P., Permit 2324

My name is Melody Logan. I am a resident in the area and I am concerned about:
Water well contamination - increase of traffic - Large trucks - on narrow roads - road damage decreasing of property values noise of Diesel trucks in a quite sub-division Children waiting for school bus & unloading

I am also requesting that the TCEQ public meeting and contested case hearing on this application be held in Montgomery County, Texas to insure that the residents and local government officials will be able to register their concerns about this landfill proposal.

Sincerely,

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 MAY 28 PM 4:03
CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions, L. P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit.

1) **Current Landfills in Area:** There is a Type 1, 375-acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, 6 miles to the west, and a proposed transfer station 8 miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development:** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new home sites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic Safety:** The entrance to the proposed landfill on North Walker Road is a two-lane, 21' wide county road, and the only entrance into our community and properties. The lives of school children waiting for their buses will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the floodwaters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1-mile radius of this proposed landfill site have water wells as their only source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U. S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but also serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or wastewater discharge application in Montgomery County, Texas.

Sincerely,

Pat Lukasheay

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Amber McClelland

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

2004 MAY 27 AM 9:52

CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions (Soluciones de Relleno Sanitario de Montgomery), L. P., **Propuesta de Permiso No. 2324**

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

Maria Mejia

Ref: Proposed Dump Site at 105 & N. Walker Road

Ladies and Gentlemen, thank you for allowing us to speak. My prayer is that you will not only hear our voices but you will hear our plea to save our community.

My name is Frankie Milley.
I am the founder and director of Meningitis Angels and the state director of Texas Immunization Partners. I am a volunteer advocate for children's health and immunizations issues. I serve on the Centers for Disease Control (CDC) Steering Committee for Meningococcal Meningitis and partner with the Texas Department of Health (TDH) on immunizations and bio terrorism preparedness. I have been honored in the Texas House and most recently by the Senate and Governor Perry for accomplishments made on these issues.

I have lived in East Montgomery for 23 years. Bob and I built our home here and raised our only child, Ryan, who died at age 18, with bacterial meningitis.

Since Ryan's death in 1998 there have been many more cases of what is thought to be a "normally rare" form bacterial meningitis in the Security/Cleveland area all the way down stream to Humble, Texas.
Twice our areas have had to have mass vaccinations for this disease and in addition to Ryan's death there have been (5) more children and teens and at least one adult die from it.
This does not include the debilitations of some survivors from the disease which include renal failure, loss of limbs, blindness, deafness and brain damage.

This same area is considered a "Hot Spot" for this disease by both TDH and CDC for unknown reasons.
This bacteria along with other deadly bacteria and viruses can be found in contaminated dump materials, lakes, ponds and drainage water that eventually ends up in our water wells and water sources.

Just recently our area experienced an out break of a sometimes deadly Hepatitis A. Some 25 cases were reported.

In our small subdivision, of about 80 homes, south west of the current dump and south of the new proposed dump site there have been approximately (10) cases of cancer , with (7) resulting in death.
It should be noted (6) of the (7) deaths were in people under 55 years of age.

When our only child died, We lost a part of our identity, our very life as we knew it, our honor to be called mom and dad, to be the parents at a wedding, to ever hold a grand child or to have the comfort of a child in our old age when one of us has to leave the other..

Can I prove these rare disease incidents came and continue to come from the run off of a possibly toxic dump. No

Am I willing to risk any more of my family, friends, neighbors or our precious children to find out? Absolutely not!

Maybe, instead of a new dump the old one should be cleaned up.

I beg you all, you have the power to protect and save our community from the addition of another dump which may be allowed to harbor toxic environmentally dangerous materials because of poor regulation and monitoring and may poison our community. A dump that will most certainly put more large truck traffic on an already over populated deadly roadway and lastly totally destroy the value of property, homes and more important, generations of lives built in the immediate area.

.

Please Vote No to this DUMP!!!!!

Sincerely,
Frankie Milley, Ryan's mom

There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Maria Miramontez

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** There is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day. The road will be destroyed in a matter of months.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 MAY 27 AM 9:52
CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), L. P., **Propuesta de Permiso No. 2324**

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

League City, TX 77573

SUBJECT: Proposed 473-Acre Landfill by Montgomery Landfill Solutions at 3761 N. Walker Road, Cleveland, TX

2324

Dear Sir:

Please use all your available resources and expertise to prevent Montgomery Landfill Solutions from obtaining a landfill permit at their proposed 473 site. My wife and I purchased 10 acres at Peach Creek Plantation and have been developing the property. We do not want to have to live near a disposal site for Type IV waste nor do we want to have to deal with the additional traffic on an already congested highway 105. Please have them move their proposed land fill further north from any community development.

Thank you,

Mikel D. Morris

Petroleum Engineer

Concerns for Widening North Walker Rd

- How will drainage issues be handled to help prevent water runoff?

- Will there be a four way stop light at the intersection of 105 and North Walker Rd to help with traffic issues?

- Will there be a way to monitor/maintain the speed limit on the road for the safety of children riding bikes and pedestrians?

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 APR 29 P 2:16
CHIEF CLERKS OFFICE

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

S P Nelson

There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Samantha Ortega

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

2004 APR 27 PM 2:4
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

Dear Sir or Madam:

I am a U.S. citizen, a voter, and a property owner. My land is in Conroe, Texas and my family and I depend upon a private well for our water. I am deeply concerned about the landfill that is to be located in the Conroe area (in the vicinity of Peachcreek Planation) at the head of our aquifer and am writing to you to protest this landfill. As far as I am concerned this poses far too great a public health risk and beg you to reconsider the location of this landfill. While I understand the ever growing need for waste management in our area, locating a landfill so close to an aquifer and to a residential development strikes me as extremely foolish and dangerous.

Please consider seeking an alternate side for this landfill.

Thank you for your time.

With deepest concern,

Theresa Portillo

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2312, Protest and Request for Public Meeting

2004 MAY 28 PM 3:55
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Ms. Castanuela:

I am writing this letter to register my objection to the proposed Montgomery Landfill Solutions, L.P. proposed landfill. I am also requesting a public meeting.

There are numerous issues that, as a resident of the community, believe should be raised and addressed, including, but not limited to the following:

1) **Current Landfills in Area:** There is a landfill within 1 mile of the proposed landfill site. There is another landfill within 6 miles of the proposed site.

2) **Land development use, patterns of development.** Within the past 12-24 months, there has been a substantial growth of new developments (residential and commercial) within a 1-2 mile radius of the proposed landfill.

3) **Surface Water Drainage.** There are creeks on both sides of the proposed landfill, on the east by Spring Branch Creek and west side with Lawrence Creek that flow south, with tributaries and natural water ways flowing east, west and south. We will face increased flooding problems.

4) **Transportation:** There have been multiple fatalities at the intersection of North Walker Road and SH 105. SH 105 is a heavily used by commercial tractor-trailers as a short cut to Houston, Tx. (I-59 to I-45).

5) **Ground Water Contamination:** This facility will threaten the groundwater resource in our area. The application identified water wells as of 1997. There have been major developmental additions to our community since that report both residential and commercial.

6) **Dust and Dirt Pollution:** Many of us already suffer with allergies and asthma. This is also a community of senior citizens whose immune system is already stressed and any additional pollutants would be devastating.

7) **Notification to the Residents:** The proposed landfill was approved by our County Commissioners December 2, 2002. NO ONE IN OUR COMMUNITY WAS NOTIFIED, which will be taken into consideration at election time. I need to be kept informed and put on the mailing list to receive information by the Office of the Chief Clerk concerning: 1) the proposed landfill application; 2) any application Applicant may propose; and 3) any landfill application in Montgomery County, Texas.

I am requesting that a public meeting be conducted where the applicant will come forward and present his proposal to me and the community, affording us an opportunity to comment on the proposal.

Sincerely,

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 APR 27 PM 2:48
CHIEF CLERKS OFFICE

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2008 APR 15 PM 3:37
CHIEF CLERKS OFFICE

I'm not very well prepared concerning the Proposal of this landfill, but I did sit through this meeting and heard the comments of the state representatives, the Commissioner and the citizens of Montgomery County. The concerns of this landfill for future runoff + polution to the nearby creeks + lakes is huge. My husband and I just recently bought property in Peachcreek originally our goal was to buy far away from Houston's Refineries, yet not even a year later we find out that where we wanted to build our dream home + live with our family will be just as bad as where we live now. I don't think this is fair for anyone and what was most dissapointing about this meeting is that the TCEQ + representatives and owner of MLS were very unprepared to answer the questions of the community. The information they provided was changed throughout the meeting, and it was very evident that they don't care for the community. Their biggest concern is making money. I don't see how with as many trucks that will be dumping material they will have enough time to sort the material cautiously This needs to be stopped. I know this next comment is vain, but why not spend more money + go and dump this out in the desert. Oh wait the owner said diesel is to expensive + they need to have landfills that are close to waste material.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

One of my many concerns is over the **traffic and road problems** this landfill will create. The entrance to the proposed landfill on North Walker Road, is a two-lane 17-21' wide county road with a 15 ton weight limit, 35 mile per hour speed limit, a ten mile per hour "S" curve prior to arriving at the entrance of the landfill. North Walker Road is the only entrance into our subdivision and properties. I know that the projected 235 per day dump trucks and construction delivery vehicles, fully loaded, will exceed the **15 ton** weight limit. Not only will the trucks tear up our county asphalt road, create serious traffic congestion, endanger anyone on the road trying to get out of their way, but more importantly, endanger the lives of school children waiting for their bus along side of the road or riding their bicycles. There are no sidewalks, only ditches. The Waste Management Security Landfill, SH 105, Permit 1752 is just 1.5 miles from this proposed landfill site. The traffic on SH 105 is already congested with Waste Management, Western Waste, BFI trucks and other companies traveling to that site. Adding another 235-330 vehicles per day – one way - at this proposed site will create a severe endangerment to those traveling SH 105 and subsequently the residents of North Walker Road as trucks proceed to the proposed landfill entrance.

I trust you will consider this serious inadequacy on behalf of Montgomery Landfill Solutions in their permit application.

I am also requesting that the TCEQ Public Meeting be held in Montgomery County Texas and wish to remain on your list for notification of any impending landfills, transfer stations or water discharge permits in Montgomery County, Texas.

Sincerely.

Re: Montgomery Landfill Solutions, L.P., Permit 2324

2004 AUG 11 PM 2:46
CHIEF CLERKS OFFICE

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Waste burden of Montgomery County and 4 other counties (Waste Sources: Harris, Montgomery, Liberty, Waller, and San Jacinto Counties) are being force on one area where we already have 2 landfills now and a transfer station on 1485.

This beautiful wooded area with enormous potential as the next growth area in Montgomery County will become less attractive for housing developments and more attractive for industry, additional landfills and lower quality development. This affects all East County.

Three issues come to mind the discrimination of not communicating with the Hispanic population, the discrimination for lack of political representation, and the large truck traffic that will dominate access roads to the community.

First issue – 95% of the Hispanic community in Deerwood Subdivision do not speak English. We were not informed by the Texas Commission on Environmental Control or the Montgomery Landfill Solution (MLS). Our civil rights are being violated according to the 5th and 14th amendments. We have families too and were here today as a community voice to say we don't want this landfill in our backyard.

Second Issue : We lack political representation for East County along 105E. We do not have parks and recreation centers, Community Center, or Community Clinics. What we do have is landfills. Currently the landfills can only be proposed in East Montgomery County. Why isn't there a limit of landfills a county should have? Should East Montgomery County become a dumping ground for adjacent counties?

Third Issue: Large unmarked dump trucks will pass the Intersection of 2090 and FM1485. They will pass New Caney Elementary-Keefer Crossing, Middle School Complex, Caney Creek – Moorehead - Grangerland - Ben Milam, Creighton and Austin Elementary on 105 East in Cut-n-Shoot. This landfill will be design to receive 2,300 to 3,460 tons of waste per day, via 239 - 335 truck loads per day using our access roads in our community. This is putting our families, teachers, and school children in danger.

To solve the first issue discrimination of the Hispanic population-- you have awaken the sleeping giant in the Deerwood community . We have form a non-profit organization and the community has made a commitment to have a community center. We are coming together, sharing a vision. To promote educational and social programs and activities that will enhance and enrich our lives. **For the second issue political representation** will send letters to Texas Commission Environmental Control demanding stricter guidelines in monitoring landfills, demand research studies of our air, water, and wildlife and health issues. **Third Issue traffic and Safety** demand large dump trucks off local roads that pass schools. Have studies of noise level that will disturb residents and wildlife. Have more lanes on 105 East, traffic already exceeds capacity on two lanes.

Objections in wanting a neighborhood community center would be, you have community centers in Conroe. Wrong the community centers only accept Conroe residents.
Second objection by having a landfill it would create jobs.
Answer: You have not done your homework, what about researches that are needed to stop possible epidemic of diseases, studies of air control, water supply, wildlife, possible fires, property values severely reduce and monitoring guidelines to see what kind of waste is actually dump day after day, year after year.

In conclusion, Montgomery County will not be a trash land but a promise land. By giving all people their civil rights, political representation and traffic safety especially for our children. I say to this mountain be thou remove and be thou cast into the sea. If God be for us who can be against us!

Respectfully,

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), L. P., **Propuesta de Permiso No. 2324**

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

Firma

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, waste water discharge application in Montgomery County, Texas.

Sincerely,

Julie Rice

CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions, L. P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit.

1) **Current Landfills in Area:** There is a Type 1, 375-acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, 6 miles to the west, and a proposed transfer station 8 miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development:** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new home sites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic Safety:** The entrance to the proposed landfill on North Walker Road is a two-lane, 21' wide county road, and the only entrance into our community and properties. The lives of school children waiting for their buses will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the floodwaters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1-mile radius of this proposed landfill site have water wells as their only source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U. S. Army Corps of Engineers jurisdiction and others in the center of the property. I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2312, Protest and Request for Public Meeting

2004 MAY 28 PM 3:55
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Ms. Castanuela:

I am writing this letter to register my objection to the proposed Montgomery Landfill Solutions, L.P. proposed landfill. I am also requesting a public meeting.

There are numerous issues that, as a resident of the community, believe should be raised and addressed, including, but not limited to the following:

1) **Current Landfills in Area:** There is a landfill within 1 mile of the proposed landfill site. There is another landfill within 6 miles of the proposed site.

2) **Land development use, patterns of development.** Within the past 12-24 months, there has been a substantial growth of new developments (residential and commercial) within a 1-2 mile radius of the proposed landfill.

3) **Surface Water Drainage.** There are creeks on both sides of the proposed landfill, on the east by Spring Branch Creek and west side with Lawrence Creek that flow south, with tributaries and natural water ways flowing east, west and south. We will face increased flooding problems.

4) **Transportation:** There have been multiple fatalities at the intersection of North Walker Road and SH 105. SH 105 is a heavily used by commercial tractor-trailers as a short cut to Houston, Tx. (I-59 to I-45).

5) **Ground Water Contamination:** This facility will threaten the groundwater resource in our area. The application identified water wells as of 1997. There have been major developmental additions to our community since that report both residential and commercial.

6) **Dust and Dirt Pollution:** Many of us already suffer with allergies and asthma. This is also a community of senior citizens whose immune system is already stressed and any additional pollutants would be devastating.

7) **Notification to the Residents:** The proposed landfill was approved by our County Commissioners December 2, 2002. NO ONE IN OUR COMMUNITY WAS NOTIFIED, which will be taken into consideration at election time. I need to be kept informed and put on the mailing list to receive information by the Office of the Chief Clerk concerning: 1) the proposed landfill application; 2) any application Applicant may propose; and 3) any landfill application in Montgomery County, Texas.

I am requesting that a public meeting be conducted where the applicant will come forward and present his proposal to me and the community, affording us an opportunity to comment on the proposal.

Sincerely,

DAVID R. ROELLE

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Shelly Roge

Dear Chief Clerk:

I am writing in opposition to the pending permit application from Montgomery Landfill Solutions.

My wife and I purchased thirty-two acres, just this past year, in Peachcreek Plantation. Peachcreek Plantation is a 5600-acre residential subdivision located off of 105 between Duck Creek Rd and N. Walker Road. At the time that we purchased the property, we were not aware of the proposed landfill or we never would have bought the property. I don't think the other new property owners in Peachcreek would have bought there either if they had known about the landfill.

Peachcreek Plantation is still in the early stages of development but supposedly 85-90 percent of the property is already sold. I do not think that many of the new property owners know about the proposed landfill yet. Regarding the few that do know, they say that they are not going to build until this contested case hearing is resolved. So I speak for the thousands of Peachcreek Property owners as I write this letter.

My wife and I are investing our life earnings to pay for and improve our property. We plan on retiring on our property within the next six years. Two of our daughters have bought property next to ours and they intend to also build homes and raise their families in Peachcreek. If the proposed landfill is not stopped it will be devastating to us all.

I understand that in our location (and in the location of the proposed landfill); we are at the head of one of the three main aquifers in the Houston/Galveston area. I've read the proposed paperwork/plans and even with the "clay liner", we should not take the chance of contaminating the entire Houston/Galveston water supply. Along those same lines, most people in this area have their own private wells. It's of great concern that contamination of these wells isn't even going to matter once the landfill digging reaches the aquifer. The private wells in the area will be dry. This is obviously <u>not</u> the right location for <u>another</u> landfill.

Another concern that has been expressed but not fully realized is that N. Walker Road is the back entrance into Peachcreek Plantation. So, when the previous opposition mentions "increased traffic" at N. Walker Road Intersection and "rapidly growing residential area", that is truly an understatement.

MW

More concerns include: increased flooding of property in the area, contamination of groundwater run-off, and air pollution.

Please do not allow the permitting of Montgomery Landfill Solutions to do this in our area.

Sincerely,

John Romero Jr.

Montgomery Landfill Solutions, LP
Proposed Municipal Solid Waste Permit No. 2324

AT PUBLIC MEETING

PLEASE PRINT:

Name: Lorraine Romero

Address: 18523 Falcon Crest

City/State: Humble TX Zip: 77346

Phone: (832) 233-5891

☑ Please add me to the mailing list.

Are you here today representing a municipality, legislator, agency, or group? ☑ Yes ☐ No

If yes, which one? Montgomery County Citizens Against Landfill

IF YOU WANT TO GIVE FORMAL COMMENT PLEASE ✓ BELOW

☐ I wish to provide formal oral comments.

☑ I wish to provide formal written comments at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)

Please give this to the person at the information table. Thank you.

Concerns

1.) I do not believe we can take this chance that our water and air will not be polluted by this landfill.

2.) Traffic on 105 - Will the new traffic →

over

study consider growth of the 5600 acre Peachcreek Plantation community?

Peachcreek plantation population does not current reside there but will in the immediate future - as roads are currently being paved. Population of this Peachcreek Plantation community alone could easily accomodate 600 - 1000 families (1200 - 2000 vehicles per day - @ 2 vehicles per family to and from = 2400 - 4800 increased vehicles per day on 105.)

3.) I believe the increased traffic of trucks on 105 will endanger and create a hazard to our elementary children and their families. Austin Elementary is located in this ared.

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Mary Rosales

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Texas Commission on Environmental Quality
Protecting Texas by Reducing and Preventing Pollution

NOTICE OF PUBLIC MEETING ON AN APPLICATION FOR MUNICIPAL SOLID WASTE PERMIT NO. 2324

APPLICATION. Montgomery Landfill Solutions, L.P., P. O. Box 341506, Austin, Texas 78734, a municipal solid waste company, has applied to the Texas Commission on Environmental Quality (TCEQ) for a Type IV permit to authorize the disposal of brush, construction-demolition waste, rubbish, inert materials, man-made inert materials, trash, scrap tires that have been split and quartered, and yard waste that is free of putrescible and household waste. The facility is proposed to be located at 3761 North Walker Road, 1.4 miles north of the intersection of north Walker Road and State Highway 105 in Montgomery County, Texas.

The TCEQ Executive Director has determined the application is administratively complete and will conduct a technical review of the application. After completion of the technical review, the TCEQ will issue a Notice of Application and Preliminary Decision.

PUBLIC COMMENT/PUBLIC MEETING. A public meeting will be held and will consist of two parts, an Informal Discussion Period and a Formal Comment Period. During the Informal Discussion Period, the public is encouraged to ask questions of the applicant and TCEQ staff concerning the application, but comments made during the informal period will not be considered by the Commissioners before reaching a decision on the permit, and no formal response will be made to the informal comments. During the Formal Comment Period, members of the public may state their comments into the official record. A written response to all formal comments will be prepared by the Executive Director after the comment period closes and considered by the Commissioners before they reach a decision on the permit. A copy of the response will be sent to each person who submits a formal comment or who requests to be on the mailing list for this application and provides an address. However, if Applicant or the Executive Director request a direct referral for a contested case hearing before the written response to comments is prepared, then a copy of the response will only be sent to the parties participating in the hearing. Only relevant and material issues raised during the formal comment period can be considered if a contested case hearing is granted.

The Public Meeting is to be held:
Monday, August 9, 2004 at 7:00 p.m.
Conroe Tower
300 W. Davis, 6th Floor
Conroe, Texas 77301

INFORMATION. Citizens are encouraged to submit written comments anytime during the meeting or by mail before the meeting to the Office of the Chief Clerk, TCEQ, MC-105, P.O. Box 13087, Austin, TX 78711-3087. If you need more information, please call the TCEQ Office of Public Assistance, Toll Free, at 1-800-687-4040. General information about the TCEQ can be found at our web site at www.tceq.state.tx.us.

The permit application is available for viewing and copying at the Montgomery County Library, 104 I-45 North, Conroe, Texas 77301. Further information about the application may also be obtained from Montgomery Landfill Solutions, P.O. Box 341506, Austin, Texas 78734 or by calling Mr. Gary R. Horwitch, Metroplex Industries, Inc. at (281) 440-5503.

Issued: July 7, 2004

At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

2004 APR 29 PM 2:44
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. Subject: Proposed Permit No. 2324, Montgomery Landfill Solutions, L.P.

Dear Sir,

I reside in Montgomery County about three miles from the proposed landfill site covered by the subject application.

The proposed facility is an emotional issue in our community, but I realize that objective facts and findings should determine whether a permit is issued. I also subscribe to the belief that common sense should be embraced by the (approval) process.

There are a couple of issues associated with the approval of this application which cannot be ignored, and both are fundamental to the state's responsibility to its citizens.

First is the safety of the residents. The scenario of hundreds of heavy trucks moving through what is essentially a residential neighborhood just doesn't make sense. This isn't a case of residential development around an existing facility. The neighborhood was already there before application was made. The present infrastructure does not support this facility. Both Walker Road and Hwy 105 would require modifications to accommodate the increase in vehicular traffic. Congestion on State Highway 105 at the intersection with Walker Road is unavoidable. The incidences of vehicle accidents on Hwy105 are already one of the highest in the county. The additional risk to the residents should be quantified via statistical analysis and the results made public and given relatively high priority in the approval process.

Second is the potential risk to the environment. Regulations deal with non-conformance in retrospect. The need here is for preventative process. My personal experience is the existing landfill on Hwy 105 east of Walker Road does little or no inspection of delivered material. Relatively small quantities of highly toxic substances, which are resistant to environmental degradation, can easily be concealed during delivery. Example - polychlorinated biphenyls are not uncommon at construction sites where demolition of mature facilities are involved. Unless there is a physical inspection and characterization of everything entering the proposed facility, it should be assumed that persistent organic

MW

pollutants could enter the landfill and subsequently be released to the environment. This, in of itself, is an unacceptable scenario.

My opinion is obviously biased, however common sense indicates that commingling a landfill with an established neighborhood is unworkable and will lead to years of legal wrangling and litigation over unavoidable injuries and spillage.

Respectfully,

Alan P. Schuler

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Lyndle Selph

RE: Proposed Dump Site #2324 on North Walker Road in Montgomery County

Dear Board Members of the Texas Commission of Environmental Quality:

My name is Travis Selph. I currently live on 7050 North Walker Road, approximately 650 Feet from the proposed Montgomery Landfill Solutions, Type IV landfill, and permit number 2324. I am writing ,yet again, because I still have questions about the current permit's affect on the health of my family.

The first of my concerns is water contamination. We are currently on a water well which is around 180 feet deep. This is the only means of water for this area, therefore, you can understand my concern. My question is can you guarantee this dump will not harm or affect my family's only source of water? Also, I would like to raise the question of the contamination of the ponds and creeks, specifically Lawrence Creek, because I am an avid fisherman. What affect would the run-off have on the wildlife surrounding the proposed site? What sort of health impact would it have on my family if we consume any game? Is there a chance the wildlife that must have this water to sustain life would sustain any damage from drinking run off water once the dump is up and running? Would there be a danger to my family swimming in these ponds or creeks? Have there been current studies done to support or substantiate a level of toxicity for surface water and runoff where there are many dump sites within a five mile radius? I ask this because there is currently a dump site within two miles of this proposed site, and two more within twenty miles.

Equally of concern, is the quality of air. Currently within my family unit, there are several members who suffer from lung diseases such as asbestosis. My concern is what will the quality of air be when the south and/or west wind blows over the dump site and stirs up the dust particles? Will this affect the quality of my children's developing lungs and the already diseased lungs of my family? Will this type of air pollution harm the lungs of the cattle my family raises and butchers for personal consumption, and/or will they be affected by eating grass and fee tainted with this type of dust pollutants? This is not only a concern for us, but for the public if I sell my calves to the general market for their consumption.

It is already well publicized that there is an air pollution problem in this general area. State mandates are already in effect in this county to help control and decrease the magnitude of the air pollution problem. Ozone alerts are after a daily occurrence during the summer months when the dust and drought conditions are oat their worst. Another

MW

dump site in this area would certainly contradict the state's current effort to control and clean an already frightening air quality.

Also, I would like to know the effects these dusts pollutants would have on a vegetable garden. Many members of this community grow small gardens, and most reap the benefits of their harvests. Would consuming any vegetables be a danger to my family? Has there been a study regarding this concern? What about the ground water used to irrigate during dry times? Has there been an environmental study proving that there are no ill health effects? Digging of retention ponds would only open the door for insect born diseases. If a permit is allowed, what will the policy be to combat the mosquito problem, specifically the West Nile virus?

This brings me to yet another concern. This type of dump does not require daily coverage. I would like to know what will be done to control the likelihood of mold and mildew from this dumpsite and its effects on my family.

I understand that dump sites are a part of our society and frankly no one wants them in their backyard. However, I feel we already have our fair share and it would only add insult to injury to allow another one in our small community. No one has bothered to ask my family if we suffer from any of the concerns I have asked of you. Can you guarantee me my quality of life will NOT be in jeopardy? Until you can, I cannot in good conscience sit passively by and let another dump site "slip" in.

I appreciate you taking the time to read my letter and I look forward to hearing a response from you.

Sincerely,

Travis Selph

RE: *Proposed Dump Site # 2324 on North Walker Road in Montgomery County*

Dear Board Members of the Texas Commission of Environment Quality;

My name is Travis Selph. I currently live on 7050 North Walker Road, approximately 650 feet from the proposed Montgomery Landfill Solutions, Type IV landfill, and permit number 2324. I am writing because I have questions about the health of my family.

The first of my concerns is water contamination. We are currently on a water well which is around 180 feet deep. Because this is the only means of water for this area, you can understand my concern. My question is can you guarantee this dump will not contaminate my family's only source of water?

Secondly, I am equally concerned about testing of the dump run off water and at whose expense would this testing be? Should my well be tested for contaminates? How often?

I also would like to raise the question of the contamination of the ponds and creeks, specifically Lawrence Creek, because my families

Selph, Travis

are avid fishermen. What effect would the run-off have on this type of wildlife? What sort of health impact would it have on my family if we consume this fish? Would there be an effect on the wildlife that must have this water to sustain life? What is the possibility of my family becoming sick from eating any wildlife (i.e. deer, squirrels, rabbits, doves, and ducks) that have consumed this water or contaminated waste?

Would there be a danger of my family swimming in these ponds or creeks? Have there been current studies done to support or substantiate a level of toxicity for surface water and runoff where there are many dump sites? (I would like to point out there is currently a landfill within two miles of this particular permit request and an additional two more with twenty miles.)

Equally of concern, is the quality of air. Currently within my families, there are several members that suffer from lung diseases such as asbestosis. If I am not mistaken, it is permissible for this type of dump to allow debris from construction sites to be dumped with the confines of the hole. My concern is what will the quality of air be when the wind blows from the south directly in line over my family's home? Will this affect the quality of my children's developing lungs and the already diseased lungs of my family? Will this type of air pollution harm the lungs of the cattle my family raises and butchers for personal consumption, and/or will they be affected by eating

grass and feed tainted with this type of dust pollutants? This is not only a concern for us, but for the public if I sell my calves to the general market for their consumption.

It is already well publicized that there is an air pollution problem in this general area. State mandates are already in effect in this county to help control and decrease the magnitude of the air pollution problem. Ozone alerts are often a daily occurrence during the summer months when the dust and drought conditions are at their worst. Another dump site in this area would certainly contradicts the state's current effort to control and clean an already frightening air quality.

Also I would like to know the effects these dusts pollutants would have on a vegetable garden. Many members of this community grow small gardens, and most reap the benefits of their harvests. Potatoes, tomatoes, onions, squash, peas, carrots, okra, watermelons, and cantaloupes, peaches, plums, and pears to name a few. Most of these, the entire fruit and vegetables is eaten, skin and all. Is this a danger to my family? Has there been a study regarding this? What about the ground water used to irrigate my crops? Has there been an environmental study proving that there are no ill health effects?

Digging of retention ponds would only open the door for insect born diseases. If a permit is allowed, what will the policy be to combat the mosquito problem, specifically the West Nile virus?

This brings me to yet another concern. This type of dump does not require daily coverage. I would like to know what will be done to control the likelihood of mold and mildew from this dumpsite and its effects on my family.

I understand that dump sites are a part of our society and frankly no one wants them in their backyard. However, I feel we already have our fair share and it would only add insult to injury to allow another one in our small community. No one has bothered to ask my family if we suffer from any of the concerns I have asked of you. Until further testing and evaluating is done, and someone can guarantee me my quality of life will not be in jeopardy, I cannot in good conscience sit passively by and let another politician "slip" another dump site in.

I appreciate you taking the time to read my letter and I look forward to hearing a response from you.

Sincerely,

Tami Seth

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Tamara Sherhouse

RE: Permit Application #2324

Dear Ms. Castanuela,

I am a 77-year-old that resides on North Walker Road where they are proposing to build a landfill. I am a widower and have to do all my driving myself. I do not have any relatives that live close enough to come and take me places. I am scared to death to travel on Hwy 105 as it is. The traffic is very heavy. Should this landfill be approved, the traffic will only increase on the highway. Not only that, North Walker Road will be impossible to get on and off of. I have lived in this community for over 53 years. This is my home. How can it be justified to put a landfill in our community? There are not any businesses here. There are only homes.

Plus I am also told that the proposed landfill will not have a liner. How can that be? What happens to our water supply? I have a well. That is the only water I have. I grow most of my own vegetables. What will we do for water? Who will be responsible if and when our wells are contaminated? We need answers.

Everyday I watch the wildlife on my property. What is going to happen to them?

Please see fit not to grant a permit for this landfill. We already have one less than a mile and a half from us. Why do we need another one? And why in a residential community?

Sincerely,

James Shropshire

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Lorel Shumway

Ms. Castanuela,

I am writing to you to express my objection to a landfill that is currently pending a permit near my community. I have serious concerns about the health and safety issues that a large landfill such as this will cause to my family and neighbors.

The proposed landfill location is only a few miles from my home that I have worked very hard buy and build. I do not want to see my property value go down and my taxes increase to maintain road damage from the dump trucks.

Also allowing this landfill will not only increase the risk of hazardous waste but also the possibility of ground water contamination. I have concerns that the run off from the landfill will contaminate my private well and water supply. As a parent of two small children it is my duty to provide a safe home and this landfill threatens that home.

I am asking that you please review this matter and deny any permit regarding a land fill in this area. Thank you very much for your time and consideration for this matter. Have a great day!

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

2004 MAY 27 AM 9:52
CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), L. P., **Propuesta de Permiso No. 2324**

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

María G. Solis

Dear Ms. Castanuela,

I am writing you in regards to the effect that the above proposed landfill has had on my development of Oakridge Ranch Estates. The landfill would be located within one mile of my development. I have been selling small acreage lots for residential homes there since 1999. We have about 20 families making Oakridge Ranch Estates their home to date. These lots must have both water wells and septic systems installed in order for people to make residences there. I first learned of the landfill proposal on 1/4/04. It was a great shock to learn of a proposed landfill so close to a residential community of so many families.

The homeowners of Oakridge Ranch Estates are terrified of the short and long range effects on their water quality from their wells due to the landfill . They are also very concerned for the safety of their children as they play, ride their bikes and wait for school buses along the proposed route of the trucks coming in and out of the landfill. These people brought their families to this area for clean country living away from the city.

My business of selling lots has suffered tremendously with the disclosure of the proposed landfill. By law, I must disclose the information and naturally people are not interested in owning property under such circumstances. Property values have plummeted in the area. We sold property through our real estate company close to the Security Landfill and got only $2500/acre. Further away on Hwy 105E, we received $38,000 an acre on a sale of property. A staggering difference and this impacts the community economy in a detrimental way.
On my previous property sales of Oakridge Ranch Estates I have people asking for their money to be refunded and several have stopped paying their lot payments altogether. I am at a standstill as far as selling lots at this time. The future of selling out these lots appears grim, as long as the word landfill is even mentioned.

Sincerely,

Jack Spera

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

OPA

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

CHIEF CLERKS OFFICE

BY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

January 23, 2004

Permit No. 2324

To Whom It May Concern:

The intent of this letter is to register the concern of the Conroe Independent School District (District or CISD) regarding the proposed landfill to be built in Montgomery County, within the CISD, on North Walker Road. It is the District's understanding that this new landfill has the potential of serving up to 355 garbage trucks per day and that these trucks will be hauling up to 6 million pounds of garbage into our school district on a daily basis. The health and well being of our students is of the highest priority to CISD. The District, as a landowner in the area, is concerned about the safety issues such a massive operation could have not only on the roadways in the area, but to the drinking water and air. It seems that our county has done its fair share as far as contributing to waste management in the area in that our county is the home of 2 other landfills. Please review the decision of where to place this landfill carefully.

Sincerely,

Donald J. Stockton
Superintendent
Conroe Independent School District

Fax Number (512) 239-3311
RE: Montgomery Landfill Solutions, L.P. Proposed Permit No. 2324

Dear Ms. Castanuela,

I am writing you in regards to the effect that the above proposed landfill has had on my development of Oakridge Ranch Estates. The landfill would be located within one mile of my development. I have been selling small acreage lots for residential homes there since 1999. We have about 20 families making Oakridge Ranch Estates their home to date. These lots must have both water wells and septic systems installed in order for people to make residences there. I first learned of the landfill proposal on 1/4/04. It was a great shock to learn of a proposed landfill so close to a residential community of so many families.

The homeowners of Oakridge Ranch Estates are terrified of the short and long range effects on their water quality from their wells due to the landfill. They are also very concerned for the safety of their children as they play, ride their bikes and wait for school buses along the proposed route of the trucks coming in and out of the landfill. These people brought their families to this area for clean country living away from the city.

My business of selling lots has suffered tremendously with the disclosure of the proposed landfill. By law, I must disclose the information and naturally people are not interested in owning property under such circumstances. Property values have plummeted in the area. We sold property through our real estate company close to the Security Landfill and received only $2500/acre. Further away on Hwy 105E, we received $38,000 an acre on a sale of property. A staggering difference and this impacts the community economy in a detrimental way.
On my previous property sales of Oakridge Ranch Estates I have people asking for their money to be refunded and several have stopped paying their lot payments altogether. I am at a standstill as far as selling lots at this time. The future of selling out these lots appears grim, as long as the word landfill is even mentioned.

Sincerely,

Pete Stone, Owner//Oakridge Ranch Estates

CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Pete Stone

☐ **Please add me to the mailing list.**

Are you here today representing a municipality, legislator, agency, or group? ☐ **Yes** ☑ **No**

If yes, which one? _____

IF YOU WANT TO GIVE FORMAL COMMENT PLEASE ✓BELOW

☐ **I wish to provide formal oral comments.** — Yes but no room so

☑ **I wish to provide formal written comments at tonight's public meeting.**

(Written comments may be submitted any time during the meeting.)

Ground water pollution is assured and long standing homes farms + ranches will be ruined - The impact to Conroe, to Montgomery County, to all adjoining areas will be irrevocable, financially devastating and forever ruin the nature of the community and its rural heritage. There are many remote areas in surrounding counties for landfills. The road system will not support this traffic as well.

Please give this to the person at the information table. Thank you.

Save Conroe - No Landfills

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

2004 APR 27 PM 4:1
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

James A Treadthan

AT PUBLIC MEETING

IT APPEARS THAT TCEQ IS INTENT ON MAKING EAST MONTGOMERY COUNTY A DUMP. THERE ARE ALREADY SEVERAL LANDFILLS IN EAST MONTGOMERY COUNTY. I AM NOT SAYING WHETHER ANOTHER LAND FILL IS NEEDED JUST THAT ANOTHER ONE SHOULD NOT BE PUT IN EAST MONTGOMERY COUNTY.

ADD THIS APPLICATION TO THE PROPOSED TOXIC WELL APPLICATION & IT APPEARS THAT TCEQ IS LOOKING AT TOO MANY APPLICATIONS THAT WILL LOWER LAND/PROPERTY VALUES! THIS WILL LEAD TO THE EAST COUNTY BEING VIEWED AS A DUMP. THIS IS ONE OF THE FASTEST GROWING COUNTIES IN STATE & I BELIEVE THAT THESE FACILITIES SHOULD NOT BE PUT IN HIGH POPULATED, GROWING LOCATIONS.

— LASTLY DO ANY OF THE PEOPLE ON THE PANEL LIVE W/I 5 MILES OF THIS PROPOSED LANDFILL?

MW

Montgomery Landfill Solutions, LP
Proposed Permit MSW 2324

MEETING AGENDA

April 10, 2008 - 7:00 pm

- Introduction [7:00 p.m.].....TCEQ
- Identify Elected Officials.....TCEQ
- Presentations.....Applicant & TCEQ

Informal Discussion Period

- Questions & Answers.....Public

Members of the public may ask questions during this time period. TCEQ staff and the Applicant will respond to questions. This time period is for discussion purposes and for obtaining information from TCEQ staff and the Applicant. **Questions and/or comments made during this period will not be considered formal comment, and will not go to the Commissioners. Additionally, no written response will be prepared for comments made during this period.**

Formal Comment Period

- Formal Comments.....Public

During the formal comment period members of the public may voice concerns or comments. **Neither the Applicant nor TCEQ staff will respond during the formal comment period.** A formal, written response will be prepared by the Executive Director on the permit. **The Executive Director will summarize the formal comments and prepare a written response which will be made available to the public upon request.**

Everyone who wishes to comment will have the opportunity to do so, however, we may ask that each commenter limit their time so that everyone will have time to speak.

- Closing Remarks/Adjournment.....TCEQ

Please Note: Written comments may be submitted anytime during the evening.

Chief Clerk:

2004 APR 27 PM 2:37
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

2004 MAY 27 AM 9:52
CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions (Soluciones de Relleno-Sanitario de Montgomery), L. P.,
Propuesta de Permiso No. 2324

Empleado en Jefe:

Escribo para manifestar my objeción a la propuesta de la compañía "Montgomery Relleno sanitario Solutions, L.P. (MLS)" de un relleno-sanitario en la carretera SH 105 y el camino North Walker Road, en el Condado de Montgomery, Texas.

Hay numerosas dificultades que deben ser consideradas por el TCEQ durante la etapa de revisión técnica de este permiso.

1) **Rellenos Sanitarios Existentes en el Área:** Hay un relleno Tipo 1, de 375 acres a sólo 1.2 millas al este del relleno propuesto por la compañía MLS. Hay un relleno sanitario industrial en el anillo 336, a 6 millas al oeste, y una estación de traslado propuesta a 8 millas al oeste del relleno propuesto por MLS creando un "grupo" de rellenos sanitarios en nuestra área inmediata.
2) **Uso de Suelo para Desarrollo, Patrones de Desarrollo:** En los pasados 12-24 meses, ha habido un crecimiento substancial de nuevos desarrollos (residenciales y comerciales) en un radio de 1-2 millas de distancia del relleno sanitario propuesto. Se han identificado al menos 1,000 sitios de nuevas casas. Un relleno sanitario más tendría un impacto devastador.
3) **Transporte y Seguridad de Tráfico:** La entrada al relleno sanitario propuesto en el camino North Walker Road es una entrada de dos carriles de 21pies de ancho de camino del condado, y la única entrada a nuestra comunidad y propiedades. Las vidas de nuestros niños en edad escolar que esperan el autobus estarán en peligro todos los días.
4) **Drenaje de Agua Superficial:** Hay corrientes de agua activas tanto al este como al oeste del relleno sanitario propuesto. Si se eliminan 273 acres of troncos del área del relleno sanitario propuesto para construcción, la barrera natural que contiene las inundaciones será eliminada.
5) **Contaminación de Agua de la Tierra:** Las propiedades en un radio de una milla del relleno sanitario propuesto tienen pozos de agua como única fuente de agua de uso y consumo. Algunos puentes apenas llegan a los 30 pies de profunidad.
6) **Bosque Encharcado:** El sitio del relleno sanitario está saturado con bosques encharcados, algunos bajo la jurisdicción del U.S. Army Corps of Engineers (Cuerpo de Ingenieros del Ejército de Estados Unidos y otros en el centro de la propiedad. La retención de agua (charcos) de los bosques encharcados no sólo ayuda a proteger a nuestra comunidad de las inundaciones sino es además un habitat natural para la fauna silvestre y lugar de descanso para aves migratorias como patos y gansos.

Demando que la reunión pública del TCEQ respecto a esta petición tenga lugar en el Condado de Montgomery, Texas. Solicito ademas que se me anexe a su lista de correos para recibir notificaciones publicas próximas respecto a cualquier posible relleno sanitario futuro, estación de transferencia, y/o aplicación de descarga de desagüe en el Condado de Montgomery, Texas.

Sinceramente,

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Kimberly Watkins

☑ Please add me to the mailing list.

Are you here today representing a municipality, legislator, agency, or group? ☐ Yes ☒ No

If yes, which one? _____

IF YOU WANT TO GIVE FORMAL COMMENT PLEASE ✓ BELOW

☐ I wish to provide formal oral comments.

☒ I wish to provide formal written comments at tonight's public meeting.
(Written comments may be submitted at any time during the meeting)

(over)

Please give this to the person at the information table. Thank you.

My house will be in close proximity to this site. I have concerns of ground water contamination, noise pollution, and decrease in property value. The addition of a 200 foot hill is not what I want to see out my back door. I believe that more consideration needs to be taken as to how this facility will affect this community. There are No benefits.

Thanx, Sincerely,

Carolyn Lewis

Re: Montgomery Landfill Solutions, L.P., Permit 2324

We live within the one-mile radius of the proposed landfill site and our property is just passed the second S-Curve at the North Walker and Parker Road intersection. We along with the rest of our neighbors oppose the landfill location. Where we live we have shallow wells. Our family has lived here since the early 1900's and owned much of the property along N. Walker Road. We are deeply concerned about the contamination that will come to our water and we are as well concerned about being able to get out of our driveway when these hundreds of garbage trucks start racing through our residential neighborhood. Our health cannot take the pollution and contamination that will be brought into our homes. We also know as well that this lowland is not suitable for a landfill and the roads cannot endure the abuse of hundreds of huge and heavy garbage trucks either. It is difficult enough to maneuver single cars through this narrow road and it is clear to those of us who live here that two garbage trucks cannot safely pass on this road.

We have an industrial dumpsite on Loop 336 and the Security Landfill 1 ¼ miles down the road. Why do you need to put yet a 3rd landfill in this one small area? It is not necessary and it is not worth the health and safety risk to the residents who live here either.

Please do not grant these greedy landfill people a permit to operate this unnecessary landfill on N. Walker Road.

Respectfully,

Jo Ann Welch

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Kimberly Wilkinson

4-10-08

The proposed location of this landfill will substantially devalue the property for the Eastern one-half of Montgomery County. Local governments are providing publicly funded tax abatements for a major international theme park to be built within 20 miles of this site. Any landfill, including this one, will adversely impact Theme Park development and result in a major decline in property and sales taxes in the eastern half of the County. The landfill could cause the economic failure of the Theme Park development, thereby reducing property values in the Eastern half of Montgomery County. This should not be allowed.

I am a resident of the Conroe/Cut-N-Shoot area. The property I grew up on 11105 Newton Circle, Conroe, Texas 77303 where we continue to own. My parents now live at 11492 Post Oak Road, in Willis Texas.

Our family wishes to convey our opposition to the Montgomery Land Fill, and oppose all Toxic Wells or dumps in our area. Please deny the permit application 2324.

The Newton Circle property is where I grew up. I remember what Peach Creek was like when Newton Circle was first developed in 1970s. The watershed has retained significant damage and the forest has been overdeveloped. In fact, over-foresting is destroying this environment, and has detrimental impact to the Peach Creek Watershed. I ask that your office pursue projects to assess the damages to Peach Creek, and develop a community plan to restore Peach Creek and the surrounding areas. I implore you to develop protocol that protects indigenous species, and wildlife, including birdlife in this region. I ask that the destruction of forestry be held to a standardized limit. I also implore the preservation of public records of this area, to allow residents to access that data.

Our family opposes the use of National Forests by corporations and cattle ranchers. We oppose clear-cutting allowing encroaching developers to strip us of timber, under the guise of "Selective Forestry". We oppose the leasing of National Forestry Land by these private corporate interests selling off our resources and then penalizing the residents with increased taxation, fewer restorative projects that employ community members, and restricting us from being able to use the forestry as individuals and as a community for our selective purpose. Especially when that purpose is restoration and recovery of national resources.

We also oppose the current program of outfitting private wells with government utility meters. In addition we feel if you have the time to meter wells on private properties, then perhaps you would have the time to prevent damage to the Aquifers.

I would like to know how your office intends to pursue the public interest of the Peach Creek Watershed, and what your position is regarding the issues enumerated above.

Thank you,

Jennafer Yellowhorse

CHIEF CLERKS OFFICE

The land that MLS has cleared is in a National Forest. My understanding is that land in a National Forest cannot be cleared of all trees in large acres of land. I would think that clearing more than 400 acres of land for the landfill would be a problem. Has this issue been addressed? How will the Sam Houston National Forest be affected?

CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Melba York
