TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 MAY 28 PM 4:10
CHIEF CLERKS OFFICE

Office of the Chief Clerk
MC105, TCEQ
P. O. Box 13087
Austin, TX 78711-3087

Re: Application for Permit No. 2324

Dear Chief:

Thank you for the opportunity to present my view before the TCEQ. I am a resident of Montgomery County and along with all my neighbors I am adamantly opposed to the permit for a landfill on North Walker Road. This whole process began without notifying the citizens that will be affected. By the time we all learned of this application, it is basically too late to do anything about it. At the required open meeting held by MLS, the applicant was not in attendance and the attorney and the engineer that did attend could not answer our question and have not gotten back with us as promised to give us those answers.

More studies must be done. Information MLS supplied to the TCEQ for the permit is outdated, corrupted and many serious issues have not been addressed.

(1) The statistical data on water wells within the one-mile perimeter of the proposed landfill site is outdated and incomplete. Metroplex states in it's application that land use within one-mile of the site is predominantly undeveloped or agriculture/residential with some light industrial areas. This information is outdated and untrue. Only 46 wells were identified on the petition with the most current drilling date being in 1984. An actual count would put that number at over three hundred, of which many were drilled in 2002 and 2003. Also, there is a land development of over 300 acres Northwest of the proposed landfill that will be adding another 200 homes, plus the new development at Crockett Trace of 110 wells, also is on the border of the 1-mile radius on the west boundary. **No permit should be granted for a landfill until more complete and accurate information is obtained and studies done by Montgomery Landfill Solutions. Studies should be required to ensure that seepage and saturation from the landfill would not harm the health of the growing population and the hundreds of residents**

that draw their only available water from wells many of which are only 30 to 60 feet deep.

(2) The proposed landfill is in a 50 year flood plane located very near Spring Branch and is crossed by Lawrence Creek. This is a watershed area of the Evangeline Aquifer that averages 40 to 60 inches of rain a year. These streams are tributaries to Lake Houston. The drainage basins for the proposed landfill are located within 75 feet of the streams and as the landfill grows in elevation hydraulic pressure will increase and the drainage basins will not be able to contain the flood run off which, out of necessity, will spill into the swollen streams in particular Lawrence Creek on the east side where the sedimentation basin will be discharging. This contaminated mass will then spread and dries on the surfaces of the flood plane all downstream and could spread contagion through the air. More complete studies are needed on flood control.

(3) A complete list of all materials and substances to be permitted in the landfill should be presented and any toxic materials eliminated. The term "construction and demolition materials" is too general. It may include pressure treated lumber that contains arsenic or old lead based paints, asbestos products or any number of other harmful substances. More studies should be done to see how this could affect the ground water and the public health.

(4) Cheesemakers Incorporated is a cheese factory located at 2266 South Walker Road, one and a half miles south of the proposed landfill and several feet lower in elevation. The factory has been in operation for several years and has a well as its only source of water. This factory produces dairy cattle cheese and is the largest producer of goat cheese in Texas. Studies should be done to ensure that the proposed landfill poses no risk to this food product, which is exported all over the world. You don't have the right to all Big Businesses to harm smaller businesses.

This landfill is not going to enhance the quality of life for the residents. There is no need to go into the garbage business for Harris County and 3other counties. As Public Servants you have a responsibility to your constituents and that would include the little guy as well as Big Business. This landfill issue is a form of environmental terrorism and corporate intimidation. We now feel that any large tract of land in our neighborhood could become a landfill. I ask that you not continue and act as though a landfill is a benign undertaking.

We are requesting that the TCEQ public hearing on this application be held in Montgomery County, TX. We are also requesting that we be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or wastewater discharge application in Montgomery County.

Sincerely,
The attached 459 residents near the proposed site

cc: Todd Staples
Ruben Hope
Tommy Williams

Re: Application for Permit No. 2324

Dear Chief Clerk:

We are writing to you with our concerns for this landfill.

The safety of our children remains to be a big concern for us. North Walker Road is the only road into our quiet subdivisions. It is a narrow 2-lane, 18 ft., blacktop road. There will be 355 garbage trucks per day going into and out of our subdivision. Why would you approve another landfill in that area when the existing landfill at Security has 6 years left and they have applied for an increase to have 22 years of use? Why can we not use the existing landfill and eliminate the excessive amount of trucks and traffic?

This landfill will be very near churches, schools and day cares. This borders on child abuse and neglect.

MLS held their mandatory meeting with the residents on 4/22/04. The owners did not attend and left us to the mercy of their attorney, David Crews, and the engineer, Mr. Horowitz. Both played "dumb" and could not answer any questions.

The homes around the area of the proposed site have private water wells as their source of water. You will allow them to contaminate our water and then they could put in a commercial water system and force all of us to buy water from them.

The proposed area on North Walker Road is an area that has frequent flooding.

Have you even considered the impact that disturbing the area and digging into the land would create on the fault line and the shifting of the surfaces?

We respectfully request that you deny this permit. We also request that the public hearing be held in Montgomery County, Texas, and that we all be added to your list to receive notices of pending permits for landfills, waste water discharges and transfer stations.

Sincerely,

The attached 120 names of concerned residents near the proposed landfill site.

Re: Montgomery Landfill Solutions, L.P., Proposed Permit # 2324

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 MAY 28 PM 4:04
CHIEF CLERKS OFFICE

Dear Chief Clerk:

I want to ask you to NOT permit #2324 proposed by MLS. This area has a lot of flooding and the size of the mountain that this landfill will create will cause more flooding. Where do you think the water will go. It cannot flow uphill. It will have to flow downstream. This landfill is between 2 streams and everyone in this area gets their drinking water from private water wells.

We attended the meeting held by MLS and the only people who came from MLS were the attorney and the engineer. Neither one could answer our questions. I ask you to **demand** they hold another meeting and **demand** the owners appear before the community and answer our questions.

Thank You,

The attached 64 names of residents near the site of the proposed landfill.

OPA
JUN 01 2004

CC: Todd Staples
Tommy Williams
Ruben Hope

We are requesting that the TCEQ public hearing on this application be held in Montgomery County, TX. We are also requesting that we be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or wastewater discharge application in Montgomery County.

We give permission to send a letter to TCEQ and add our names & addresses.

Help stop the landfill being put in our neighborhood!!

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 APR 27 PM 2:07
CHIEF CLERKS OFFICE

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

MAY 0 3 2004

BY

TCEQ,

I am writing this letter to state my opposition to the landfill which would be located at North Walker Rd. near Texas 105, inside a residential subdivision.

I attended a meeting at S.F. Austin Elem. on Thurs. April 22 at which Gary Horwitch and David Crews attended. Mr. Horwitch explained the procedures for opening the landfill. The meeting concluded with a question and answer session. One of the questions asked by a resident living across from the proposed site was "How long will it be before I am

notified if my well becomes contaminated, and how will I be notified?"

Mr. Horwitch admitted that it would take approximately 1 month before he would be notified, and it would be done by mail. Does it sound like drinking contaminated water for at least a month is environmentally safe?

Do you realize that if you approve this application it will endanger the health of many citizens, and all types of wildlife I have lived out here since 1981 and I have seen: wild rabbits, squirrels, possum, raccoons, foxes, wild hogs, armadillo, roadrunner, crane, turtle and deer. There are also 10 acres of wetlands on the landfill site.

Pres. Bush is trying to protect the wetlands. What will happen to these animals homes, and what will happen when they drink contaminated water?

There are all types of safety issues, the main one being the tiny, country road where children wait for the bus and ride their bikes to the store. We also do not have a traffic light at the intersection to our neighborhood.

The engineer, Mr. Horwitch, would not guarantee that the drinking water would not be contaminated. Can you guarantee this if this application is approved? Please consider our and our children's welfare.

Thank you, Melissa Barton

Conroe, TX 77384

Don A. Thompson
5425 Polk Ave
Houston, TX 77023

Mr. Don A. Thompson,

I have been a resident of Conroe for eight long years and I have never been more irate than when I think about the current issue with the possible landfill in Montgomery County. It seems like every week I get another letter from the TCEQ, and ever week I read it with disappointment.

The landfill situation should not be this drawn out. As a resident of Montgomery County, I would rather the landfill be somewhere that it can better be contained away from our friends and neighbors. I do not feel that any one in the Texas Commission on Environmental Quality has proven to be actively and intelligently planning their moves. This greatly worries me. With all the time it is taking to sway the residents or get the permits granted against their will, the landfill could have already been approved in a nonresidential and low-traffic area.

I am not out to protest, but I would highly appreciate it if the TCEQ would show some effective actions. The possible Montgomery County Landfill has been protested in schools and community events in Conroe, Montgomery, and Willis for over a year now and I feel that nothing has gotten through to the TCEQ. Environmental waste is not something to toy with. Please understand how the residents of Montgomery County feel and how you would feel if you had to leave your home because the TCEQ cannot waste efficiently.

Thank you,

Samantha Baumgarten

Mr. Don A. Thompson,

I have been a resident of Conroe for eight long years and I have never been more irate than when I think about the current issue with the possible landfill in Montgomery County. It seems like every week I get another letter from the TCEQ, and ever week I read it with disappointment.

The landfill situation should not be this drawn out. As a resident of Montgomery County, I would rather the landfill be somewhere that it can better be contained away from our friends and neighbors. I do not feel that any one in the Texas Commission on Environmental Quality has proven to be actively and intelligently planning their moves. This greatly worries me. With all the time it is taking to sway the residents or get the permits granted against their will, the landfill could have already been approved in a nonresidential and low-traffic area.

I am not out to protest, but I would highly appreciate it if the TCEQ would show some effective actions. The possible Montgomery County Landfill has been protested in schools and community events in Conroe, Montgomery, and Willis for over a year now and I feel that nothing has gotten through to the TCEQ. Environmental waste is not something to toy with. Please understand how the residents of Montgomery County feel and how you would feel if you had to leave your home because the TCEQ cannot waste efficiently.

Thank you,

Samantha Baumgarten

Of the violating landfills how many have actually been shut down?
I ~~grew~~ grew up in Clear Lake City. My husband & I moved to Newton Circle with our 3 children, now 4, with the intent of ~~that~~ moving AWAY from the pollution of the "big city." Now you are wanting to bring that within 100's of feet of our home. I am adamantly against having the landfill. The landfill is run by peopl & people ~~are~~ make mistakes. Despite all the safeguards I don't trust that every error will be caught.

CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2008 APR 15 PM 3:33
CHIEF CLERKS OFFICE

Please give this to the person at the information table. Thank you.

#1 There is no possible way that Hwy 105 can HANDle the traffic that these Trucks will contribute to.

#2 This Landfill will demish the quality of the Life in this Neighborhood! Would you be welcoming this Landfill in your Neighborhood?

#3 We Already have A Landfill in this Area — Why Another One!

#4 How do you justify placing a Landfill in the Middle of A Residential Area? Just Because the permit is Complete does Not Mean that the Landfill should be Allowed to Proceed, it doesn't Mean that this is A Proper Place to Place A Landfill. It Means that these People have enough Money to do Whatever they want to do.

#5 At this Meeting it Appears that the TCEQ were on the side of the Landfill Co.!

#6 Why would you Allow this Landfill to operate between 2 Creeks AND even take A chance ON Contaminating the water Supply?

#7 MLS has stated they had No plans for expansion now, but things Could Always Change. They would have to go through this process All over Again. If TCEQ gives their Approval Now, We All Know they would be Approved in the Future!

AUG 0 9 2004

AT PUBLIC MEETING

378868
M40

My family and I moved here 6 years ago from Houston. We liked the area because it was quiet and lacked the traffic that was present where we had lived before. My daughter and I opened a Feed Store that is located on Hwy. 105, just down from Walker Rd. I also drive a school bus for Conroe Ind. School Dist., and pick up children up and down Hwy. 105., as well as back in the subdivision where the landfill will be located if it is approved.

This area has grown very fast since we moved here. Along with this growth the traffic has increased as well. The number of garbage trucks and trucks hauling debris and construction waste into the existing landfill that we already have on Hwy. 105 is a great concern to me as well as to all the other residents in our area!

CHIEF CLERKS OFFICE
2004 AUG 11 PM 2:
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

We observe numerous trucks daily speeding into and out of the existing landfill. The drivers are discourteous, trash and debris fly out of the trucks. There is not and never will be enough law enforcement on Hwy 105 to prevent the situation we already have, and now you want to create a larger problem by creating another landfill in the same area. You want to place it in a neighborhood next door to homes and families. Where children play in yards and want to ride their bicycles on the street. Where people like to take walks, ride their horses, and enjoy quiet, country living! How many of you would like to have a landfill for a neighbor? How many of you want your children to play with the trash and debris that WILL fall from these trucks? How many of you want to take and afternoon walk and smell the smell that WILL come from the new landfill? How many of you want to go for a ride on your horse and have a large truck on the way to the landfill scare your horse, possibly run you out in the road in front of oncoming traffic? The things I have just spoken of are why most of us live here. The things we live here for are in danger! Our Children will be in danger! Our Water will be in danger! THE POSSIBILITY OF CONTAMINATION OF OUR WATER SUPPLIES IS A GREAT CONCERN. Our Property Values will be in danger? All of these things can and will happen if this landfill is allowed to be put in our neighborhood.

As I drive the school bus picking up children, garbage and trash trucks fly by like there is no tomorrow. I'm not sure how or where they got their drivers license, but they obviously have forgotten that a school bus is not allowed to drive over 50 MPH no matter what the speed limit is for everyone else! They must be color blind, or surely they could see the Big Yellow Bus, with our Big Yellow Lights flashing to let them know that we are ABOUT to stop to load or unload students, or our Big Red Lights flashing to let them know that WE ARE loading or unloading students and it is against the law to pass us on EITHER SIDE while we are stopped, and these lights are flashing. They drive up on our back ends like they want to push us out of the way. I have actually had to pull off on the side of the road because a trash truck was right on the back end of the bus honking his horn, and made me feel as though he might push me right off the road. Most bus drivers pull over as much as possible and let traffic go by, we don't want to cause traffic problems. I know that not all trash truck drivers are that reckless and inconsiderate, but it only takes one to cause a fatal accident. We have been told that we could expect 200 plus trucks into this new landfill on a daily basis. With this in mind do you really want to put this kind of potential problem in a neighborhood, whose only entrance and exit for the residents is WALKER RD. You are also looking at a potential hazard for school busses

using Walker Rd. in the am, mid-day and in the pm. These trucks need to empty their loads as quickly as possible and go after other loads. That's the only way they can be profitable. That profitability is a potential danger to all of us that live in this area!

My last point to make is that we have been told that this landfill is for construction materials only. I sat at Caney Creek High School last school year, on the bus ramp waiting for school to let out and watched the new building construction that was going on. You would be amazed at what I saw being dumped in the containers that were being hauled out of there to go to a landfill. (I have a friend that works on construction sites, and he doesn't pay to have his trash picked up. He just hauls it to the construction site with him and gets rid of it. **It's free and everyone does it!**) Is there going to be someone climbing in and carefully checking each and every load that is taken to and dumped at this new landfill? If there is someone to do this checking, how well will he check the loads? How long will the line get to get into the landfill get? How much congestion and traffic will that cause on Walker Rd... What if inappropriate materials are found in a load that is brought in? Will they be turned away? Or will no one pay attention and let them dump their load any way?

WHO WILL ACTUALLY PROFIT FROM THIS NEW LANDFILL? CERTAINLY NOT THE RESIDENTS AND BUSINESS OWNERS OF THIS AREA! WE ALREADY HAVE A LANDFILL IN OUR AREA, IF ANOTHER ONE IS NEEDED, IT NEEDS TO BE LOCATED SOMEPLACE OTHER THAN A RESIDENTIAL AREA!

CHIEF CLERKS OFFICE

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

Are you here today representing a municipality, legislator, agency, or group? ☐ Yes ☐ No

If yes, which one?_____

IF YOU WANT TO GIVE FORMAL COMMENT PLEASE ✓BELOW

☑ I wish to provide formal oral comments.

☑ I wish to provide formal written comments at tonight's public meeting.

(Written comments may be submitted any time during the meeting.)

Please give this to the person at the information table. Thank you.

We have had ~~Eto~~ major flooding twice in the last 12 years. The roadbed cannot handle the traffic the trash trucks will provide. Our children walk on the road, ride bikes, skate, skateboard, and ride horses. This traffic will endanger their lives. Some people have water wells at 60ft. Their water will be contaminated. This is not acceptable.

Thank you,

Terry Daugart

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Terry Dawzart

CHIEF CLERKS OFFICE

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Betty S Grantham

MAR 10 2005

BY

Office of the Chief Clerk
MC 105, TCEQ
P.O. Box 13087
Austin, Texas 78711-3087

Dear Sir or Madam:

I am a resident of the Cut & Shoot area of East Montgomery County, near the location of the above-mentioned proposed permit. There seem to be many guidelines, for the placement of landfills, which would indicate that the site at 3761 North Walker Road, Cleveland, Texas in not an appropriate nor acceptable location for such a site.

The residents of East Montgomery County feel that they have been targeted for meeting all the landfill needs for several counties. There is a disproportionate number of economically disadvantaged and minority residents in the area as compared to the rest of the county. In addition to a large Hispanic population, statistics from the area schools show that as much as 69.5% of the student population at some elementary schools is economically disadvantaged. There is also a large senior citizen population in the area. These considerations make the citizenry of the area more vulnerable to the losses of property value, which they will experience, and less able to mount the monetary assets to protect themselves from such Environmental Discrimination. Both Hispanics and Senior Citizens are protected classes under the Civil Rights Act. Title VI of the act forbids environmental permitting decisions by state agencies that have a disparate impact on a protected class of people, even if such impact is unintentional. Clearly this is the case in East Montgomery County. Furthermore, the Due Process Clause of the Fourteenth Amendment prohibits the state from depriving individuals of "life, liberty, or property without due process of law." The citizens of the area feel that due process has been denied them. We do not feel that public notification about the landfill has been timely enough for a proper defense against

Environmental Injustice. Furthermore, state imposed discrimination is in and of itself a violation of due process.

I attended and testified at a meeting of the Texas Senate Natural Resources Committee on Tuesday, March 30. In attendance as well was a man by the name of Wade Wheatley. Mr. Wheatley is the Director of the Waste Permits Division of the Texas Commission on Environmental Quality. He testified that in the eight county region surrounding Houston, of which Montgomery County is part, that there was at least 33 years of landfill space remaining which is already permitted. When Senator Armbrister inquired as to why they were still issuing permits and suggested that the existing landfills were not in the right locations, Mr. Wheatley responded that this was in fact "basically" the case. The proposed Walker Road Landfill is less than 2 miles from the Security Landfill, which is in the process of obtaining permitting for a "major amendment" to authorize both a vertical and lateral expansion. With this expansion the remaining life of the Security Landfill will be 29 years. The life of the proposed Walker Road Landfill will be 40 years. Added together this will give a very small area of east Montgomery county **69** years worth of landfills. Since some areas of our country no longer have landfills due to environmental concerns, surely it will not take us 69 years to catch up with the rest of the country.

The proposed Walker Road Landfill is in an area, which has had massive residential growth and development in recent years. It is my opinion, that the permit application significantly misrepresents this growth. Our area is not the rural, undeveloped location in the corner of the county as represented in the permit application.

Mr. Wheatley additionally testified that there was a traffic and road survey done in the permitting process. I testified as to the fact that while Overweight Permits may help with the added cost of maintaining our county roads, which are not designed to handle the weight of the commercial traffic around a landfill, there is nothing to address the safety hazard to our county residents of having this overweight commercial traffic on our county roads. This is of particular risk to the school children, which must ride buses to and from Conroe ISD schools every day. I personally live on a county road, which has an abundance of commercial traffic as well as school traffic. Most of this traffic is either garbage trucks or dump trucks. While my road has had

numerous improvements and is well maintained, there are still quite a few accidents. During one week in 2003, these accidents resulted in three fatalities. Walker Road is a much more difficult road to traverse than the road which I reside on. I do not believe that it can be made safe for the mix of traffic, which this landfill would result in.

In addition, at the proposed Walker Road site, there are geological problems, which increase the probability of ground water contamination.

Sincerely,

Mary M. Jennings Hartt

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. 3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Tina Jackson

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

Austin, Texas 78711-3087

BY _____

2007 DEC 19 AM 10:25

CHIEF CLERKS OFFICE

MSW 37868

Re: Montgomery Landfill Solution amended permit application MSW # 2324

Dear Ms Castanuela:

My comments are being submitted in response to the Notice of Application and Preliminary Decision for a Municipal Solid Waste Permit issued by the Texas Commission on Environmental Quality (TCEQ) November 13, 2007. These comments are submitted in opposition to the amended Application by Montgomery Landfill Solutions, L.P. for the proposed Type IV facility on the basis of the issues listed below.

The amended roadway configuration will cause dangerous traffic congestion at the SH 105 intersection and at the intersection of North Walker Road and the landfill private drive approximately 0.3 miles north of SH 105.

The new roadway width is narrower and the course thickness is thinner than the standards set by TCEQ in the earlier version of the permit proposal. HGAC mandated the need for roadway improvement and adequate traffic allowances.

The applicant has failed to provide adequate documentation on the availability and adequacy of the roads that will access the site.

The applicant's amendment has increased the number of waste vehicles into the proposed site and has failed to adequately quantify traffic volumes for North Walker Road and the impact of Landfill traffic on local traffic patterns.

The applicant has failed to provide sufficient information to demonstrate compliance with TCEQ rules regarding the design, construction and maintenance of a run-off managements system from the active portion of the landfill to collect and control at least the water volume resulting from a 24-hour 25 –year storm.

The applicant has failed to provide sufficient information to demonstrate compliance with TCEQ rules that natural drainage patterns will not be significantly altered.

The applicant has failed to provide sufficient information to demonstrate compliance with TCEQ rules about how it will handle, store, treat and dispose of surface water that has become contaminated at the landfill.

The applicant has failed to provide sufficient information to demonstrate compliance with TEQ rules that storage areas for contaminated water are designed appropriately with regard to size treatment, location and method and have an approved liner covering the bottom and side slopes.

The applicant has failed to provide adequate information to demonstrate compliance with TCEQ rules regarding location and quantities of surface drainage entering, exiting or internal to the site and the area subject to flooding by a 100-year frequency flood, including Lawrence Creek, tributary to Lawrence Creek, and the West Fork of Spring Branch.

The applicant has not demonstrated that no surface water or run-on water containing pollutants will escape the site and flow into the above creeks, surrounding jurisdictional wetlands, or surrounding private property. The Security/Midway communities will be exposed to contaminated surface water from the site if this is note adequately addressed.

The Houston-Galveston Area Council (HGAC) noted local government official's concerns that the proposed landfill increases flooding risk due to runoff from the landfill site. Serious drainage problems on and near North Walker Road exist despite adequate maintenance of drainage ditches. HGAC also stated that the applicant should demonstrate that the landfill will not exacerbate localized flooding. Lawrence Creek and West Fork Spring Branch flow into Caney Creek which in turn flows into Lake Houston (Houston's surface water source). Contaminated fluids carried by flood waters will travel from the site into the surrounding East Montgomery County Communities and into Lake Houston over the life of the proposed landfill.

MW

The applicant has not provided adequate information about groundwater and aquifer conditions at the site.

The applicant has not addressed a comprehensive groundwater monitoring plan for the site sufficient to protect the affected neighborhood down-gradient of the site.

The applicant has failed to provide adequate information that documents all wells, spring and water bodies within 500 feet and/or 1 mile of the sites.

The proposed landfill aerial buildup is 200 feet above the surface of the ground. This is the height of a 20 story building and will greatly exceed the height of the alleged tree cover precluding even minimal screening for the site. HGAC also expressed concern about the aerial buildup citing it as excessive for the surrounding terrain even with existing tree cover.

The proposed site has been injected into a rapidly growing residential area. The applicant has failed to adequately quantify growth in the Security/Midway area.

The Security Waste Management Type I landfill is 1.6 miles southeast of the proposed site and has recently expanded to accept Montgomery County waste for an additional 30 years. I believe this area has been singled out for landfill clustering. This practice is discouraged by HGAC waste management goals. The applicant has not been able to demonstrate any clear benefit this proposed landfill will provide to the community.

A significant amount of acreage bordering Lawrence and West Fork Spring Branch include jurisdiction wetlands. The applicant has failed to adequately demonstrate that these wetlands, associated wildlife, including migratory birds will not be disturbed or irreparably harmed.

The applicant has failed to demonstrate that the facility and/or the operation of the facility will not result in the destruction or adverse modification of the critical habitat of endangered or threatened species.

The applicant has failed to demonstrate that its facility will conform to the Regional Solid Waste Management Plan by HGAC.

The cost estimated for closure and post-closure appears to be underestimated.

The above concerns compel me to request another public meeting to allow TCEQ to answer question about the amended roadway and revised traffic count. The applicant did not answer any questions at the first two public meetings. A third public meeting would allow the community to ask questions and get answers from the applicant. There are several new subdivisions near the site and many of the new residents do not know anything about the permit.

By this letter and for the above reasons I am also requesting a contested case hearing on Montgomery Landfill Solution's MSW permit 2324.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Bright LeMaster

RE: Permit Application #2324

Dear Ms. Castanuela,

Who decided to put a landfill in a residential community?

I have lived at my present address on North Walker Road for over 8 years. I moved here from Clear Lake to be in the country. I wanted quiet, open spaces, fresh air and the opportunity to plant and raise a garden. Now I am faced with diesel trucks, air pollution and odor, excessive noise, contaminated water and a much lower quality of life.

How do you justify that there is a need for this landfill when the Security Landfill is 1.6 miles away and it is expanding its capacity by 30%? The traffic on SH 105 East is already heavy with dump trucks. It is a known fact the North Walker Road cannot handle the weight of the trucks. What are the plans to maintain the only road into our community?

The proposed site is full of wetlands with two creeks on each side of the proposed construction site. Once MLS strips who knows how many acres of trees for the construction of the site, removing the natural barrier of water retention, the creeks will widen and expand due to the rain runoff. The wetlands in the middle of the property will be eliminated hence further reducing water retention. As MLS builds the mountain of trash, properties on the east, west and south side of the landfill will flood, carrying contaminants of whatever is placed in the landfill into our creeks, our yards and pastures, threatening our water wells, and eventually traveling to Lake Houston, Houston drinking water reservoir.

I would like this letter to be considered my protest against this proposed landfill. Please take it upon yourself to consider the facts and <u>not</u> let this permit be granted.

Sincerely,

Phillip Lindsey

Why was this location chosen for this meeting because if a crowd of over 171 people showed up (which did happen) all would not be heard. People had to stand in the lobby crowded together, no bathrooms provided. It seems like someone wanted over

to discourage people from speaking as a large group.

To Whom It May Concern:

I Pattie McGee and Tony Herrin (spouse) present this letter opposing Montgomery Landfill Solutions (MLS) Permit #2324.

We live at 18906 Oak Ridge Dr. We are no more than half mile from the proposed landfill. We moved out here June of 2003. But our dreams of buying land out here began in late 1998. Tony's mother could have her dream home and Tony and I could be closer to his daughter who lives in Conroe. Tony and his father built their own barge. It took them two years. This was going to be the family business. It was a pile-driving barge, used to drive piling for boat docks and such. So the plan was to get jobs on lake Conroe on weekends, but continue to work for Shirley & Sons during the week. After getting about five or six jobs lined up in early 2000; we began the task of finding land to buy. Tony's Mother found this property we live on now and began the process of buying it in early 2001. We had completed three jobs on Lake Conroe and began another. Tony's mother and father made their first land payment in April 2001. Unfortunately his mother became very ill and hospitalized with a brain tumor that same month. Taking care of her needs were over whelming. Tony and his father managed to finish up the job they started and let the others know they didn't know what the future held. Tony's mother fought so hard for her life for seven long months. She past away November 21, 2001. She wouldn't have wanted this landfill in the front door of her dream home, and we don't either. It took some time to deal with the affect of her death. The barge was cut up for scraps and Tony's father didn't need a big new house with out his wife. So Tony and I decided we would take over the payments on the land because he still needed to be closer to his daughter. September of 2002 Tony and I began clearing the land. We got enough cleared to drill a well, put in a drive way and electricity. Bought a travel trailer and moved out here June of 2003. Continued to cut trees and clear land. The plan was to build a shop building by June of 2004. We put in our own septic and did all the work our selves except drill the well. It's hard work but the reward is ours. Or so we thought! January 2004 the neighbors knock on our door advising us of the Proposed Landfill. Our Hearts sank. Our story is only one of many who worked so hard to build homes and dreams that now have the possibility of being crushed. We (I guess you could say) are luckier than most. We haven't built yet, and don't plan to until this is resolved. If this happens, we will leave Montgomery county, and won't look back. But in the mean time were waiting for resolution, and still living in the travel trailer. We want a home to live in. If we have to leave before this is done were going to continue to fight against this landfill for my friends. Please! Please! Consider what this could mean for our community. We'll lose more than we could possible gain.

My issues are.

#1. We don't need another landfill in our neighborhood.
#2. We need our creeks, streams, and wells protected.
#3. Our highway 105 especially, is already so dangerous.

#4. Health issues are concerning to me. I've seen documentaries on devastating diseases affecting whole neighborhoods surrounding landfills.
#5. These people aren't going to stop with construction trash and we all know it.
#6. Our property values will be affected.
#7. Our quality of living will be wrongly affected
#8. Our neighborhood already floods; this can only makes things worse.

I believe this landfill is not "Need" but "Greed".
Please Don't Let Greed Hurt So Many People.

Sincerely,

Pattie McGee

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

April McHenry

LaDonna Castanuela, Chief Clerk
Office of the Chief Clerk (MC 105)
Texas Commission on Environmental Quality
PO Box 13087
Austin, TX 78711-3087

RE: Permit Application #2324

Dear Ms. Castanuela,

I would like to voice my protest against the proposed landfill on North Walker Road in Montgomery County. I live on 33 acres at 1640 North Walker Road. My grandparents bought this property in 1938 and lived there until their deaths. My mother inherited the property and also lived there until her death. I now own the property.

I do not feel there has been any consideration is being given to the fact that North Walker Road is a two lane, 21' wide asphalt road and was not built to handle vehicles exceeding 30,000 lbs weight limit. The entrance to this proposed landfill is a residential community. That is what the road was built for. Not for industrial trucks. How are we to enter and leave our homes with trucks parked waiting to enter a landfill? Our children ride their bicycles on this road as we do not have any sidewalks. Residents have to walk in the road when exercising. Children wait for the school buses. How can there even be any consideration given to allowing a landfill to be constructed in our community?

My next concern is our water system. Everyone in the area has a water well. This is our only source of water. MLS is proposing to put a landfill in with no liner. What is going to happen to our water table? What will we do when we have no drinking water?

Please consider all the facts when making your decision not to grant this permit. Would you want a landfill in your neighborhood?

Sincerely,

Marigrace O'Neil

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, LP. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 APR 29 PM 1:36
CHIEF CLERKS OFFICE

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

TRUDILEE O'NEIL
1588 N. WALKER Rd.
CLEVELAND, TEXAS, 77328

OPA RECEIVED
AUG 09 2004
AT PUBLIC MEETING

Thank you for giving me the opportunity to speak this evening on my concerns about the apposed landfill. My name is Trudilee O'Neil and I live at 1588 N. Walker Rd. My land sits a half mile from 105 and a half mile from the apposed landfill. The 35 acres that I live on was purchased by my mother's parents Noble and Grace Cayton back in 1936. My mother Mavis Cayton was in the first graduating class out of Splendor High School. This land has been very good to five generations me being the third. My grandparents sold produce, raised and sold cattle and hay. Still to this day our crops are as bountiful as they were back then.

2004 AUG 11 PM 2:41
CHIEF CLERKS OFFICE
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

I was born in 1958 and at 9 months old my father pasted away leaving 3 small children, my mother had to work so my 2 sisters and I went to stay with my grandparents. As a small child I can remember not being allowed to go to the front of the

house because of the dust and dirt caused but all the trucks running back and forth all day long. The trucks were full of iron-or, gravel, trees, sand, and top soil which used to build the town and roads of Conroe. My grandfather told us one day the trucks would stop after they taken all they could take. My sisters and I would go with my grandparents to town to gather supplies once a week, getting to go was a big thing when I was little but more enjoyable when my grandfather didn't accompany us, because he would stop every county and city official's he would see and ask them how the front of their house looked or how their roads were or how often could they enjoy sitting on there front porch.

At the time I didn't understand the anger my grandparents felt about the trucks destroying our roads, but now I do. I have realized the history is repeating its self and its up to this

community to stop it, because this time the trucks will be bringing it in instead of taking it out. They will be bring us all the dangers the environmentalist have spoken about for years.

My question about this whole matter is "Why this land " is it because this land was so cheap, because this land was so worthless. But now it is worth so much, it worth destroying a whole community. Its worth destroying air we breath, the water we drink from our water wells. Is it worth the danger of the cars on the roads with these great big trucks, is it worth the danger our children have to face trying to get on and off the school bus each morning and afternoon. I think not I was told all my life if you are good to the land the land will be good to you. This will not be good for the land, their for this will not be good for us.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
2004 APR 29 PM 2:33
CHIEF CLERKS OFFICE

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

Signature

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

August 9, 2004

To Whom It May Concern:

A lot of us residence moved out to the country because of the fresh air and better living conditions.

Those who have their porches facing the road in which the proposed dump is going in:

- We don't want to see: 200 Garbage Trucks rolling down the road
- We don't want to smell: Stinky Garbage
- We don't want to drink: contaminated well water.
- We don't want to have to dodge: Garbage trucks on our narrow roads

We have only two ways to get in our subdivision. The roads are narrow and we have had a lot of growth in the years I live there.

We have a lot of retired people that live in the area. We don't need to take a chance in having them have any added health problems due to the dump.

The people who search for locations needed for dumpsites need to keep in mind in the type of location to meet their needs. Residential areas are not the right location for dumps.

The East End of Montgomery County seems to be the part of the county that isn't taken care of. We have one dump in the area and I believe one is enough. Please take in consideration in relocating this dump where there is no residential living.

Thanks,
Danielle Reich

Re: Montgomery Landfill Solutions, L.P., Permit 2324

The proposed landfill location, on North Walker Road poses a very serious threat to the health and safety of the several hundred families living within one mile of the site and to the surrounding community.

We live and have owned our property for more then 10 years. Our house is less then ½ mile from the proposed site on Walker Rd just north of the intersection of Oak Ridge. We are also parents of two 17 year old teenagers attending Caney Creek High school. We are very concerned about the overwhelming influx of large truck traffic that will access the landfill. This influx of large trucks will put parents, young school children and our high school students in danger everyday as they travel back and forth to school. This is a safety issue of enormous impact. The road they will travel goes right by the entrance to the proposed landfill. This is a narrow two lane road with very poor visibility in the early morning fog and a lot of blind, winding curves going to the proposed site. These trucks will also use the local roadways that pass by the Caney Creek-Moorhead-Grangerland complex located at the intersection of County Road 1485 and State Road 2090. These trucks will also pass by Creighton Intermediate on 1485 and Austin Elementary School and State Highway 105, in Cut and Shoot, approximately 3.5 miles west of the landfill site. Two of our communities' children have been struck and killed by commercial vehicles this past year near the Walker Road Community. And we ask you, is this landfill worth the life of even one child or youth in this area?

Sincerely,

Arlinda Smith and Billy L Smith Jr.

Austin, Texas 78711-3087

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am requesting that the TCEQ public meeting on this application be held in Montgomery County, Texas. I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, and/or waste water discharge applications in Montgomery County, Texas.

Sincerely,

RE: Montgomery Landfill Solutions, LP/Municipal Solid Waste Permit #2324

At the Public Meeting held in Conroe on August 9, 2004, we were advised that the market value of our homes and property in the area of the proposed landfill would not be considered in the decision-making process of the permit application referenced above. While that is naturally of great concern to all of us who have invested a considerable amount of money as well as time and effort to become a part of a community we love, I can understand your indifference to that issue.

However, it seems to me that the current and future tax base of the property in this area would be of ultimate importance to all the taxing authorities. This area has recently become the focal point of new residential development which is now and will continue to produce rapid increases of tax revenue for the COUNTY OF MONTGOMERY, CONROE INDEPENDENT SCHOOL DIST., NORTH HARRIS MONTGOMERY COUNTY COLLEGE, HOSPITAL DISTRICT, and the EMERGENCY SERVICES DISTRICT 12. The presence of the proposed landfill will have a certain and serious negative affect on future growth and development. It is highly unlikely that the tax yield from the intended landfill will compensate for the losses.

It is my sincere hope that the issue of tax revenues will be considered in the application process of the above referenced permit.

Respectfully,

Jan Stallworth

RE: Montgomery Landfill Solutions, L.P., Proposed Permit No. 2324

Chief Clerk:

I am writing to register my objection to the proposed Montgomery Landfill Solutions, L.P. (MLS) proposed landfill on SH 105 and North Walker Road, Montgomery County, Texas.

There are numerous issues that I believe should be considered by TCEQ during the technical review of this permit:

1) **Current Landfills in Area:** This is a Type I, 375 acre landfill just 1.2 miles east from the proposed MLS landfill site. There is an industrial waste landfill on Loop 336, six (6) miles to the west, and a proposed transfer station eight (8) miles to the west of the proposed MLS landfill site creating a "clustering" of landfills in our immediate area.
2) **Land Development Use, Patterns of Development.** Within the past 12-24 months, there has been a substantial growth of new development (residential and commercial) within a 1-2 mile radius of the proposed landfill. At least 1,000 new homesites have been identified in the immediate area. Another landfill in this area will have a devastating economic impact on us.
3) **Transportation and Traffic:** The entrance to the proposed landfill on North Walker Road, is a two-lane, 21' wide county road, and the only entrance into our subdivision and properties. The lives of school children waiting for their bus will be endangered every day.
4) **Surface Water Drainage:** There are active creeks on the east and west side of the proposed landfill. If 273 acres of timber are removed from the proposed landfill site for construction, then the natural barrier to contain the flood waters will be eliminated.
5) **Ground Water Contamination:** The properties within a 1 mile radius of this proposed landfill site have water wells as their own source for water consumption and use. Some wells are as shallow as 30'.
6) **Wetlands:** The landfill site is saturated with wetlands, some under the U.S. Army Corps of Engineers jurisdiction and others in the center of the property. The wetland's retention of water not only helps to protect our community from flooding but serves as a natural habitat for wildlife as well as a migratory resting place for ducks and geese.

I am also requesting that I be placed on your mailing list to receive future public notices of any landfill, transfer station, waste water discharge application in Montgomery County, Texas.

Sincerely,

Maxey Tharp

As a Realtor in this area, the proposed landfill is already having a negative impact on property values. In neighborhoods adjacent to the site, homes are becoming vacant in fairly new developments. While marketing the property for sale we must disclose items such as the proposed landfill. Prospective buyers are going to other areas because of the prospect of living so close to a landfill.

I live close by and worry about water pollution, noise pollution and bad smells. After listening to comments at this meeting, I don't think this facility can be inspected or operated correctly. Seems like TCEQ is trying to sell this one. Whose payroll are these people on?
