CHIEF CLERKS OFFICE

Re: Beneficial Land Use Permit - Proposed Permit No. WQ0004745000
Beneficial Land Use Permit - Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Signature: [Signature: Tony Ray Buzan]

Austin, Texas 78711-3087

This is a serious deficiency since many neighbors that live on their land have only shallow wells as their sole source of water. NOTE: I would like a TCEQ interpretation of how the 1 mile radius disclosure is measured. Is it measured from the center of the site, which would not make sense for a large site; or 1 mile out from all outside boundaries of the site, which would seem to address the hazards associated with the sludge.

- Item 8a requires a map with "The approximate property boundaries of all landowners within ¼ mile of the property boundaries where the beneficial land use area is located". **This appears to be a serious fault with the applications.** This may be negligent due diligence by the listed operator of the site, American Water Services RM, Inc. This may be an effort by the applicants and the Stiles parties to reduce the number of neighboring property owners listed in the application, knowing that it could possibly increase the opposition to the sites. This may be due to an interpretation of "contiguous property" in TAC sections rules 312.8(29)&(54),

Lester Stiles is President of Stiles Ranch, Inc. and is also included each applications Neighboring Property Owner list as "Marina Wilkins, c/o Lester Stiles, PO Box 445, Thrall, TX 76578-0445". Marina Stiles Wilkins was an absent landowner who lived in the Northeast US and died in 1989. It is a conflict for the Wilkins property to be considered a Neighboring Landowner since Lester Stiles has operated and/or managed this land for many years. The Wilkins PO Box 445 in Thrall is the same as the PO Box 445 in Thrall Steyen. Stiles lists as his address. Why would Lester Stiles cause the Wilkins property to object to the sludge plan since he apparently has an interest in Stiles Ranch, Inc. which will more than likely collect a fee for dumping of the sludge on its land.

The Wilkins property borders the approximately 1/3 of the northern boundary of the South Tract and borders the entire south boundary of the North Tract. Taking out the Wilkins property due to the conflict of interests has an interesting yet negative result for several property owners.

- Mrs. Edwin Wilkins of Salem, NY should be added to the North Tract neighbor list.
- Cullen Johnson and Elizabeth J. Williamson are on the South Tract list and should be added to the North Tract List.
- Sid Ging is on the South Tract list and should be added to the North Tract List. Sid says he never got his notice letter from TCEQ.
- Frank Stiles and G. S. Brown are on the South Tract list and should be added to the North Tract List.
- Tony and JoAnne Buzan should be added to the North Tract List.
- Mark and Kurt Sobotik should be added to the North Tract List.

~~Taking out the Wilkins conflict of interest property does not just add more properties to the neighbor list, it illustrates how many landowners will have the sludge dumped on two or even three sides of their property. My source is the maps in the applications plus the property owner online public records and maps of the Williamson County Appraisal District. (www.wcad.org). The WCAD online maps appear to be generally accurate with respect to locations and dimensions of properties.~~

I did not even address the violation of the ¼ mile notice requirement. I do not have a scaled map to make this determination.

Buzan-Hr 050528

WITH RESPECT,
TONY RAY BUZAN

Dear Texas Commission on Environmental Quality,

I request a contested case hearing. As I write this request and use the guide you have provided, it gives me great concern. You state that *the above referenced application meets the requirement of applicable law* and you have set the characteristics of an "affected person". Then you go on to say that I must demonstrate that I meet the applicable legal requirements to have my hearing granted. Since I am not an attorney, where might a person find those legal requirements and has anyone ever requested a contested hearing and won? Curious to know because I feel you are setting me up to fail and wonder has anyone ever been successful with this process? Your mission statement is really amusing and I find offensive because you are not protecting me and my family. To state as specifically as I am able of my location would be directly in the middle of both proposed sites. You do the math because I am positive you have me outside of the restricted area for the application site.

Here is my attempt to sound like an "affected person". My name is Hope Ging and I bet I am Hope Ginley (identified as a concerned citizen in only one permit). I live at 800 County Road 430, in Thrall, Tx, 76578. I will be the individual who is going to get to live in the middle of this facility. I will be the affected person who takes my son the doctor when he gets some type of respiratory/staff infection. I will be the affected person who can't go outside or open my windows. I will be the affected person who can't sell her house and ultimately will lose her affected ass. I will be the affected person who will watch my parent's health, also affected, deteriorate and some day be the proud recipient of 100 plus affected acres that I can hopefully pass to my affected son. The EPA has a name for me in their documentation. I will be a HEI. "Highly exposed individual." I would say that I am affected when I am addressed with a cute little acronym in a government document. The EPA addresses the risk of cancer from exposure to dioxins in land-applied sewage sludge. The risk assessment predicted that the cancer risk for an HEI is low, but since the general public has less exposure than the average HEI, there is not a need to regulate the dioxins. You mention the EPA throughout your letter. I would like to request some data from you about the EPA's studies etc. The documents I have viewed indicate good intentions by the EPA but are not confirmed. With respects to non-cancer effects on the HEI, the EPA doesn't have a method to calculate or measure the risk. Here's a thought. Maybe ask the same people you studied for cancer if they experienced any non-cancer afflictions. Not rocket science..... The EPA conducted a study using the group, Screening Ecological Risk Analysis (SERA). They claim wildlife should not be significantly affected and goes on to include that this study did not include invertebrates or plant life. Define significantly. SERA was designed to be consistent with

the EPA's Guidelines for Ecological Risk Assessment. As a state agency, wouldn't you identify that as a conflict of interest?

You use the words personal justiciaple interest. I am not sure what that means and the funny thing is my computer highlights it as a misspelled word. Anyway can you better inform me of my legal rights, duty, privilege, power; or economic interest? Legal rights can be misconstrued simply because it is all in the interpretation. However, why is duty, privilege, and power listed? Prior to this experience I thought those existed, but you get to define them for me. Does the quality of my life for the last 2 years count for anything? Fortunately this is a long drawn out process and maybe even purposely so for the individuals that are going to be "affected". I am 35 years old and a mother of a wonderful, healthy little boy. I emailed a nurse with DSHS about immunizations and were there any additional ones I should try to get for my son. Fortunately we meet and exceed the minimal requirements for the state, but she did advise that my son not go outside on windy days or he should never go out into the field. I read articles and stories about Shayne Connors and Tony Behun. Both of those individuals died from illnesses contacted after living by a field fertilized with this crap. Keith Massey is in Fort Bend County in Texas. Maybe check with one of your reps named Donna Phillips; she is identified in the newspaper article in the Houston Press. I would think she would remember the Massey's grandson who experienced massive birth defects. Would you say they met your definition of an "affected person"?

Could you as a state agency ever be honest and respond to me with the truth? My question wasn't answered in the comment and response section. I specifically asked how much federal funding does Texas receive from this. Is there room for discussion when federal funding is involved or is this adding insult to injury by making me plead to you for some assistance? All agencies have hearing procedures to make the public feel like they are getting their due process however, what is the dollar amount received from the federal government? Where and how is that money applied? How much is my family worth on paper. Is there some kind of recourse for us? Should I send you my receipts for the co-payments and prescription we are about to have? Agricultural costs? That may be something to think about. We have cattle and they are taken to the sale. Can an auction barn refuse your cattle? Who is going to want to buy hay from us? It is fixing to be session so why doesn't TCEQ ask the legislature to mandate the use of this stuff for all the state parks. I would think you would really be making a statement if the capital was fertilized with this. What about the University of Texas? What about all the landscaping being done to beautify all our new toll roads. Maybe you could work a deal with TxDOT.

The fact that one oddball man can ultimately change the quality of my life is wrong. Check Steven Stiles out. Could that be taken into consideration? It would be factual to say that he is a failure set by the standards that come with his last name in this area. It would be factual to say that he is out in left field and doesn't know what inning it is. It would be factual to say that he has finally gotten revenge on all the people in this community and could you look into that and see if this whole process was done out of retaliation? One wingnut person can decide this for me and my family? My husband didn't get his land given to him and he poured out his blood, sweat, and tears to make it what it is now. Not only would you be robbing us of what we are entitled to but my son. If all went well he was to inherit our place. He was supposed to grow up out here and be

safe. We are not in the scary city. He can still go out and play when he wants to and you are going to take that away from him. You are violating his rights and I can explain to him early on that his government sold him out for a profit. How can one person be entitled more than another? That is wrong and you know it. Shame on you. You know that after this happens I couldn't pay you to live here or trade places with me. You see me as a statistic on a map. You hold me to be accountable and provide you with all this information on why this shouldn't happen, but one nutjob can do this and have an entire community affected. I hope your children come to Thrall one day. Again, shame on you. Shame on this process and shame on your agency.

I hope I have convinced you that I am an affected person and would like to be granted a contested hearing.

Hope Ging

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000
Beneficial Land Use Permit – Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

BY SM
CHIEF CLERK'S OFFICE
2006 NOV 10 PM 2:55
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

My sister, Elizabeth Williamson, and myself, Cullen Johnson, own land bordering the perimeter of the tract of land on which the permitted activities will occur. We, the above land owners, did not receive a mailed notice from the Commission and therefore we view the issuance of the permit in violation of the requirement.

We found out about the possibility of the spreading of biosolids on this adjacent land to ours from the neighbor next to our property (Tony Buzan and Sidney Ging), also, I was later informed that Mr. Steve Stiles informed Mr. Ging that we did not have a problem with this procedure. This is untrue. Mrs. Williamson and myself do indeed have a problem with this. We sent a letter with our concerns and attended the last meeting of concerned citizens.

Finally, under response #21, a functioning water well on our adjacent land is located within a one mile radius of the application site. This well is not indicated on any of the responses and is spring fed! This well is the only potable water source for the residence on our property which is adjacent to the land that is to be receiving biosolids.

Thank you for your consideration and response to this communiqué.

Sincerely,

Cullen Johnson

CC: Elizabeth Williamson
Tony Buzan
Sidney Ging

TEXAS
COMMISSION
ON ENVIRONMENTAL
QUALITY

The permits should be denied for the following reasons:

1. A populated area compared to a typical area of land application of wastewater treatment plant sludge. This area is close to Thrall, TX, and a number of small farms, and residences.
2. The area has a water table close to the surface. So close, that in the 1800's our grandfather, Dr. C. D. Johnson dug a well by hand, lined it with large rocks, and this spring-fed well is still running today. This spring well water is used by a tenant on our property, land that is adjacent to the land in question.
3. Most of the property indicated in the permits will run off onto our property where we have tanks. Cattle drink out of these tanks.
4. Upon examination of the data for area's that have had an application of wastewater treatment plant sludge, no base line was established for **heavy metals**. Therefore, it hasn't been established as to whether there was an increase in heavy metals due to application or that the heavy metals were present prior to application of the sludge.
5. The application of wastewater treatment plant sludge will result in my current tenant moving and the possibility of future rentals in question. In fact, my current tenant has indicated she will move if application of wastewater treatment plant sludge takes place. This was recommended by her son who is very familiar with water treatment as an employee of the State of Texas.
6. Although all applications are plowed in to cut down on air pollution, the time of application allows for air pollution to happen.
7. It is still not proven that all pathogens have been destroyed in the treatment of the wastewater treatment plant sludge. Data was not shown.
8. Williamson County would be well advised to avoid the future unknown problems associated with issuing these above permits, especially in light of the rapid growth of the county in this area and the cost of correcting the problems of sludge pollution of farm lands and water tables.

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit - Proposed Permit No. WQ0004745000
Beneficial Land Use Permit - Proposed Permit No. WQ0004746000
Beneficial Land Use Permit - Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Re: Beneficial Land Use Permit - Proposed Permit No. WQ0004745000
Beneficial Land Use Permit - Proposed Permit No. WQ0004746000
Beneficial Land Use Permit - Proposed Permit No. WQ0004748000

Dear Sir or Madam:

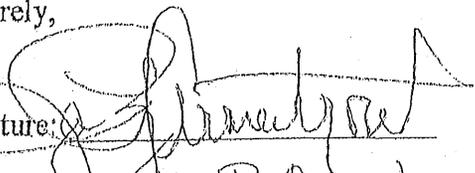

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

STEVEN STILES

To Whom it may Concern

BY JM

I am enclosing a newspaper article
Austin American Statesman 1/14/07.

There seems to be enough danger to inform residents to avoid contact with the Lower Colorado River near Onion Creek due to partially treated waste water mixed with fully treated wastewater. An accident due to excessive rain. The sludge to be dumped in my immediate area will not be so diluted nor an accident.

The recent rains we had in our area were amazing. I really wish someone from TCEQ, an environmental agency or someone who could make a difference could have watched the waters flow. The springs, the creeks the overflowed tanks were awesome. This was just water, however after the dumping of sludge maybe we will have to avoid our springs, creeks, tanks & wells. (did I mention only source of wa

My husband and I are affected land owners. The Ging family are affected land owners. Mr. C. Johnson & Sister are affected land owners. The Sobotics land owners.

We all will have to continue to live here. I don't believe the Stiles live at their residence anymore.

I received a letter of questions and

MWD

answers from TCEQ. I think it was supposed to reassure me of the monitoring (done by the dumper) And where to call to report a violation, i.e. smell, noise, etc.

What makes you think I will report report violations? If TCEQ handles this part as well as the permit application part we are screwed.

The permit application states adjacent neighbors being notified.

None of the neighbors — the affected ones were notified I'm talking about the neighbors on CR 430, Not the list I'm sure Mr. Stiles gave up. Why was this not checked out??

Does it seem strange the neighbors that use the road, the ones that will smell the smells, have the run off, use their wells never received notice?

Stiles stood up at County commissioners meeting ^{WM.} & said a scientist surrounded by this has no problem with it, well, his sister was there, she told her brother & Mr. Cullen Johnson has repeatedly tried to say how against this he is

however, Stiles still tried to slip it by like he did to you.

In my opinion this was a shady nonorthodox permit application. Much was done, but the stuff that matters was not investigated or was overlooked.

I never knew what all TCEQ did until I got on the mailing list, and then I learned a small part.

I know this is very small considering some of the decisions you have to make. I just want whomever to know this is all we have. Our health, our home, the quality of life but the most important thing is our Grandson, so please don't let them send anything so bad that we can't keep him safe.

CENTRAL

AUSTIN POLICE DEPARTMENT

Police say this man robbed a Wells Fargo bank branch on Research Boulevard on Saturday.

AUSTIN Bank robber sought

Police are searching for a man who robbed a North Austin bank Saturday morning.

The robber entered a Wells Fargo bank branch at 10400 Research Blvd. about 10 a.m. Saturday, demanded cash and ran off with an undisclosed amount of money.

The man was described as thin and about 5 feet 10 inches and was last seen in an Adidas jacket with blue jeans and a green umbrella. Anyone with information about the robbery is asked to call the robbery tip line at 974-5092 or CrimeStoppers at 472-8577. This was Austin's first

Warning issued for Onion Creek

City officials are advising residents to avoid contact with the Lower Colorado River near Onion Creek.

Partially treated wastewater mixed with fully treated wastewater and rainwater and flowed into the river Saturday as a result of excessive rain.

The overflow began about 11:30 a.m., and by 5 p.m. about 1.6 million gallons had been released, according to the Austin Water Utility. The overflow was stopped before 7 p.m. Saturday.

Officials said the overflow will not affect public or private water supplies.

TCEQ §

I would like to request a contested hearing on the health issues that concern us as per we are on shallow wells that is less than 20 feet deep. We live across the road from the North ranch site and are concerned with the odor and different bugs that could infect the area. I'm also concerned with the air borne pathogens that could cause severe problems with my asthma and restrict my ability to work and function on a normal basis. Our grandson lives next to the site that borders Co RD's 1063 & 430. According to the Texas Dept of State Health Services in Austin and we were told not to be outside if the wind was coming off of these sites.

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000
Beneficial Land Use Permit – Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

OPA RECEIVED

SEP 01 2005

To The TCEQ -

AT PUBLIC MEETING

I am expressing deep concern regarding the issue of Class B Sewage being dumped at a location very close to my home - I have a compromised immune system. I have diabetes, and asthma - My grand child has ETP, a condition that can cause death if he becomes ill from other ailments - I am concerned for him because he is a citizen of Thrall Texas. I have researched Class B Sewage. And I have found no beneficial use for it to be used in Thrall Texas. I have only found that it can be deadly. I know that it can carry deadly diseases that can compromise a persons health. Please reconsider the permit applications - This will cause problems for my grand child's community -

Thank you -

Sarah Clark

510 Porter St

Taylor, TX

76574

365-3204

RECEIVED
SEP 01 2005

2

To The TCEQ. Question to Regsards to Permits

- Are they going to test each truck load for toxins?
- We would like each truck load to be tested for toxins.
- Are they going to do air sampling - We want it as part of the permit.
- What are you going to do to protect our health safety?
- What happens when something goes wrong? E.E. - People get sick. People die? Who's going to protect us?

To whom it may concern;

OPA RECEIVED

SEP 01 2005

AT PUBLIC MEETING

I have worked in Austin, Texas for 25 yrs.
I worked on the new Health Dept. Building, all drains
in Building were made of epoxy. The people said
that nothing else would stand up to the chemicals.

I also worked at Free Scale Chip plant on
40183 near the Hornsby Station. The smell would
hit you in the face when you come off of
the hill on 973 going East.

I find it difficult to believe that the City
of Austin would use different sewer pipes ~~for~~
in the street for industrial sewage and another
for house waste. Think about it.

Hospitals dump all kinds of things down
the drain including low level radioactive waste.
Chip plants, Hospitals, and chemicals from industry
all go to some place. If this gets in the
drinking water someone's life is gone through a
painful disease.

Sincerely,

Steve Clark

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000
Beneficial Land Use Permit – Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Dear Sir

Please accept my comments regarding
above permits.

Do operators have experience with this
type facility

How can operators' expertise be
evaluated if new to the field

Road maintenance
decrease in property values

How much sludge dumped
whose is it anyway

Who will keep tabs on dumper

How will neighbors + small people
know if problem arises

How long have they been doing this

What about drums

has kind of
geo technical investigation done

are they going to put dikes/bench

on the Creek

Re: Beneficial Land Use Permit - Proposed Permit No. WQ0004745000
Beneficial Land Use Permit - Proposed Permit No. WQ0004746000
Beneficial Land Use Permit - Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

Beneficial Land Use Permit – Proposed Permit No. WQ0004746000
Beneficial Land Use Permit – Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely, *James Jirasek*

Beneficial Land Use Permit - Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms! Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

CHIEF CLERKS OFFICE

SEP 27 AM 10 13

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

~~I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms.~~ Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

To Whom it May Concern
Re: Class B Sewage -

I am a concerned citizen in Thrall Texas regarding the permits being issued for the dumping of Class B Sewage on the property 1 mile North of Thrall Texas. I have grave concerns regarding the health of my family and our community. Everything I have read about Class B Sewage leads me to believe this will be a health threat. Not to mention other info I have read about Class B Sewage states it can de-value my property. I am also concerned about the livestock being contaminated. I overall feel this is a mistake.

Thank You.

I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000, Beneficial Land Use Application Permit No. WQ0004746000 and Beneficial Land Use Application Permit No. WQ0004748000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000
Beneficial Land Use Permit – Proposed Permit No. WQ0004748000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

Re: Beneficial Land Use Permit - Proposed Permit No. WQ0004745000
Beneficial Land Use Permit - Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

CHIEF CLERKS OFFICE

2004 OCT 25 AM 10:12

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Steve Stiles

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Re: Beneficial Land Use Permit – Proposed Permit No. WQ0004745000
Beneficial Land Use Permit – Proposed Permit No. WQ0004746000

CHIEF CLERKS OFFICE

2004 OCT 15 AM 10:24

TEXAS
COMMISSION ON
ENVIRONMENTAL
QUALITY

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Dear Sir or Madam:

Please accept this as WRITTEN comments
& concerns.

Has Applicant provided COST/benefit ANALYSIS
should consider @ of money spent developing
& maintenance of proposed technology is in
best interest of public (NOT limited purely on
financial considerations or convenience).

People in area were not allowed to
comment on impacted area were they supposed
to?

Do roads leading to ~~site~~ site Flood?
Sometimes

What type of TRAFFIC FLOW pattern has been seen?

How will litter, mud be controlled on road?

What will be the impact of proposed site
on WATER shed, in area?

Impact on EXISTING drainage

What effect will site have on quality & quantity
of Receiving streams, ponds?

What effect will quality & quantity of water in the drainage system have on the surface and shallow ground water users in the area

Adequate water in case of fire

What direction is present groundwater flowing & what effects will proposed site have on the flow of groundwater

What impact will the site have on existing wells shallow and deep

Has a water well inventory of shallow and deep-water wells in the area AND DOWN Gradient of the site been performed?

Has the down gradient geology been investigated?

Has APPLICANT identified the location of NATURAL SPRINGS in area?

What effect will site development have on natural springs in area

What is proximity of aquifer at the site itself & in surrounding area?

What is the proximity to recharge zones
surface or near surface of the aquifer

Subsurface Conduits

* What oil/gas pipelines + other
utilities are present on site

What effect on wildlife habitat

IS there plan for non-lethal control of
scavenger birds at site

Will buffer zone of vegetation be
provided around site?

RE: American Water Services Residuals Management, Inc.
TCEQ Permit No. WQ0004745000 and WQ0004746000

Dear Sir or Madam:

As a concerned citizen, I am writing this letter to submit my issues related to the proposed sludge site in Williamson County, Texas.

I am concerned about the following:

1. The effects it may have on our drinking water.
2. The negative health effects it may have on my family and me.
3. The negative health effects it may have on my animals and wildlife in the area.
4. The "odor" of raw sewage.
5. The possible run off into the creeks.
6. The negative effects it may have on the value of my property.
7. The transmission of viruses and diseases through flies and wildlife.

I oppose the granting of any permit to allow anyone to dump sludge on the proposed site.

RE: American Water Services Residuals Management, Inc.
TCEQ Permit No. WQ0004745000 and WQ0004746000

Dear Sir or Madam:

As a concerned citizen, I am writing this letter to submit my issues related to the proposed sludge site in Williamson County, Texas.

I am concerned about the following:

1. The effects it may have on our drinking water.
2. The negative health effects it may have on my family and me.
3. The negative health effects it may have on my animals and wildlife in the area.
4. The "odor" of raw sewage.
5. The possible run off into the creeks.
6. The negative effects it may have on the value of my property.
7. The transmission of viruses and diseases through flies and wildlife.

I oppose the granting of any permit to allow anyone to dump sludge on the proposed site.

CHIEF CLERK'S OFFICE

Re: Beneficial Land Use Permit - Proposed Permit No. WQ0004745000
Beneficial Land Use Permit - Proposed Permit No. WQ0004746000

Dear Sir or Madam:

My fellow citizens and I are deeply concerned with the recent prospect that American Water Services Residuals Management, Inc. may be dumping tens of thousands of tons of sewage a year on a portion of land located approximately one mile east of the City of Thrall and northeast of the intersection of US Highway 79 and Farm-to-Market Road 1063 in Williamson County, Texas. Existing EPA law allows the dumping of these biosolids as fertilizer. I acknowledge that the EPA provides procedures and research for the proper handling of biosolids; however, I am also aware of the criticism toward the EPA's research by the scientific and political community.

I have read anecdotal and scientific evidence regarding serious health issues that occur near so-called sludge farms. Our particular problem is exacerbated by the fact that AWS and the property owner are proposing spreading biosolids and potentially exposing our children to airborne pathogens known to cause respiratory and other health problems. The notions of decreased property value and diminished quality of life seem relatively unimportant next to the possibility that a child may die of an illness acquired by exposure to the sludge.

I am writing to you because I feel you have the power to help prevent this from happening. Please do what you can to prevent the Texas Commission on Environmental Quality (TCEQ) Beneficial Land Use Application Permit No. WQ0004745000 and Beneficial Land Use Application Permit No. WQ0004746000 from being approved.

Sincerely,

Steve Stiles
