**COMMENTS:**Hello, As a San Patricio county resident, I would like to know what "best available control technology" will be used and what assurances there are that it will actually be installed. I would also like to know what the human health effects are for these levels of particulate matter, volatile organic chemicals, sulfur dioxide, and nitrogen dioxide? How much mercury will be emitted? How will this affect air quality for San Patricio county especially considering we are in the Corpus Christi airshed? I would like information regarding our current air quality as well. Sincerely, Adair Apple
