Re: Freeport LNG Development, LP - Liquefaction Project: 104840

- 1) Pretreatment Facility: Proposed State Air Quality Permit No. ~~100129~~, PSD Permit No. ~~PSDTX130~~ No. PSDTX1284, and Nonattainment Permit Number ~~N152~~, and ~~N170~~
- 2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Commissioners:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to

produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between \$4.3 billion and \$6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

CHIEF CLERK'S OFFICE

2014 MAR 11 AM 9:55

TEXAS  
COMMISSION  
ON ENVIRONMENTAL  
QUALITY

- Re: Freeport LNG Development, LP – Liquefaction Project:
- 1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and N170 PSDTX1302
  - 2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Commissioners:

Thank you for your leadership for Texas. Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities, identified above, are being duly considered by the TCEQ and I urge your strong consideration for approval following their complete and timely review by agency staff. The construction of this important project will improve the economic vitality of the state.

It is my understanding there has been significant design and siting issues that have been worked through to ensure this project to deliver clean, domestically-produced natural gas to the export market is able to move forward in partnership with the surrounding community. The project will employ more than 3,500 workers during the construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. The project will also have significant indirect job growth primarily in Texas and the Gulf Coast region and is projected to have a total economic stimulus for the region estimated between \$4.3 billion and \$6.2 billion per year.

Prompt review and your consideration for approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project. I support this project and urge you to ensure the processing of these applications is completed as soon as possible. Thank you for your consideration.

Sincerely,

- 2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Chairman Shaw and Commissioners Baker and Covar:

This letter is sent in support of Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process, working with concerned citizens to move the location of the Pretreatment Facility, at a considerable expense to Freeport LNG and designing a state of the art facility. I am confident they will continue to be responsible neighbors in the years ahead.

I urge you to complete the processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards.

As you know, there is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Sincerely,

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Sincerely,

- Re: Freeport LNG Development, LP – Liquefaction Project: 104840
- 1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
  - 2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I respectfully request that the TCEQ act on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter.

With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities.

MS

It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between \$4.3 billion and \$6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. There is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I support this project and request you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Best regards,

Dear Commissioners:

I urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above.

With the construction of this project, Freeport LNG will have a positive impact to the local and Texas economy through job creation and benefits to the major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford. The project also has the potential to positively impact revenues to the Permanent School Fund, which benefits K-12 education in Texas.

I support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Sincerely,

Re: Freeport LNG Development, LP – Liquefaction Project: 104840  
1) Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit  
PSDTX1302 No. PSDTX1284, and Nonattainment Permit Number N152; and N170  
2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No.  
PSDTX1282, and Nonattainment Permit No. N150

Dear Commissioners:

I urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while maintaining its commitment to environmental stewardship. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

A significant number of workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. In addition to jobs directly associated with the project, it is expected that many more will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant number of jobs that stand to be created, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between \$4.3 billion and \$6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

[Handwritten initials]

Given the competition for the development of LNG export terminals from other states, approval of the air quality permits will move this project forward, helping further expand the Texas economy.

I urge you to ensure that the processing and review of these applications is completed as soon as possible. Thank you for your consideration.

Sincerely,

A handwritten signature in black ink, appearing to read "Joe Straus". The signature is written in a cursive style with a large, looping initial "J".

RE: Freeport LNG Development, LP – Liquefaction Project:

104840

1. Pretreatment Facility: Proposed State Air Quality Permit No. 100129, PSD Permit No. 1302-PSDTX1284, and Nonattainment Permit Number N152; and 170
2. Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Mr. Covar:

I am writing in regards to the air quality permit applications identified above for Freeport LNG's liquefaction and pretreatment facilities.

As you may know, Freeport LNG's liquefaction project is a major private investment in Quintana, Texas to construct natural gas pretreatment, liquefaction, and export facilities at an existing natural gas terminal. The project includes a state-of-the-art facility that incorporates electric motors to drive liquefaction, and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. Freeport LNG has worked with the local community and concerned citizens on the location of the pretreatment facility, and I am confident that the company will continue to be engaged with the local community throughout the permitting and construction process.

This project is critical to our economy and would create nearly 200 permanent jobs at the facility, 3,500 temporary jobs during the construction phase, and perhaps as many as 25,000 long-term jobs to support production of natural gas supplies to the facility. Ultimately, this project represents between \$4.3 and \$6.2 billion per year in total economic benefit to our nation's economy, including over \$150 million in direct benefits to Brazoria County. Timely approval of the air quality permits by TCEQ will help keep this project on schedule and enable Texans to quickly realize the economic benefits of this important project.

Given the positive benefits of Freeport LNG's liquefaction project for my constituents and our state, I am very interested in seeing TCEQ move forward with the above referenced permit applications. I would appreciate your assistance in facilitating completion of TCEQ's processing and review of these applications as soon as possible. Thank you for your kind attention to this matter.

Sincerely,

A handwritten signature in black ink that reads "Randy K. Weber". The signature is written in a cursive, flowing style.

Re: Freeport LNG Development, LP – Liquefaction Project:

- 1) Pretreatment Facility: Proposed State Air Quality Permit No. 104840, PSD Permit No. PSDTX1284, and Nonattainment Permit Number N152; and
- 2) Liquefaction Plant: Proposed State Air Quality Permit No. 100114, PSD Permit No. PSDTX1282, and Nonattainment Permit No. N150

Dear Commissioners:

I strongly urge you to act swiftly on Freeport LNG's air quality permit applications for the LNG liquefaction and pretreatment facilities identified above. Freeport LNG has demonstrated corporate and social awareness throughout the permitting process. As you know, they were responsive to citizens' concerns expressed over the initial selected site for the Pretreatment Facility. Freeport LNG worked with the concerned citizens and ultimately moved the location of the Pretreatment Facility, at a considerable expense to Freeport LNG. Freeport LNG designed a state of the art facility that incorporates electric motors to drive liquefaction and a modularization of the pretreatment units and liquefaction trains so that energy efficiency is achieved notwithstanding the varying throughputs the project may encounter. I am confident they will continue to be responsible neighbors in the years ahead.

The processing of the air quality permit applications for the LNG Pretreatment and Liquefaction Facilities should be completed as soon as possible. With the construction of this project, Freeport LNG will drastically impact the economic vitality of the area while also being good environmental stewards. The sooner the processing of these applications can be completed, the sooner they can be presented to the Commissioners for final approval and so that construction of this vital project can commence.

More than 3,500 workers will be employed during the four- to five-year construction period and over 160 new full-time employees will be hired to manage, operate and maintain the new facilities. It is also estimated that between 20,000 and 25,000 new jobs will be created to produce, process and transport the natural gas that the project will require, primarily in Texas and the Gulf Coast region.

In addition to the significant job creation, the total economic stimulus of the Freeport LNG liquefaction project is estimated to be between \$4.3 billion and \$6.2 billion per year. Much of the benefits would accrue within Texas and the Gulf Coast region, where major shale gas deposits, such as the Barnett, Haynesville and Eagle Ford, are located.

There is considerable competition for the development of LNG export terminals from other states, primarily Louisiana. Moreover, there is competition for the funds from which these projects can be developed as well as worldwide competition to secure LNG supplies from the countries which produce it. Prompt approval of the air quality permits will help keep Freeport LNG on a timeline that supports the successful development of its liquefaction project.

I strongly support this project and urge you to ensure the processing and review of these applications is completed as soon as possible. In light of the ongoing crisis with Russia, the Freeport LNG project is now a matter of national importance. Thank you for your consideration.

Best regards,

Gene Wu  
State Representative
