

main plant discharged water over my property filling creeks and my lake on August 10, 1999 and on December 15, 1999. I had the lake water tested and it was abnormally high in the above contaminants. From September, 1999 to May, 2000 pregnant cows were having abnormal calves on this property.

My name and contacts are:

COMMENTS: I own property which adjoins the property Tenaska has proposed to construct a power generation plant and has applied with TCEQ to dispose of discharge waste water from Tenaska's proposed plant into a ditch and creek on my property at a rate of 105,000 gallons per day. The discharged waste water proposed to be dumped from the Tenaska plant into a ditch and creek on my property will have a significant environmental impact to my property. The ditch and creek Tenaska proposes to dump the discharge water will

Handwritten: CW

likely contaminate a lake on my property effecting the environment of the fish within this lake. It will also have a environmental impact on cattle and wildlife raised and sold from the property. The discharged water will contain arsenic, mercury, selenium and other metals over the level acceptable for the environment of cattle and wildlife to drink. I ask TCEQ not allow Tenaska to dump highly contaminated water directly into a ditch and creek effecting the environment of cattle, fish and other animals on my property which will drink the contaminated water and in turn will impact human consumption of those animals.
