COMMENTS: Please find an alternative location to release daily waste water. The current projected location is prone to flooding. Releasing 9,000,000 plus gallons of water daily will present an undue flooding burden on the affected neighborhoods.

COMMENTS: RE: TCEQ letter concerning the Decision of the Executive Director, DEC 2, 2014 On page 4, Response 1, it is stated "According to the application, the proposed wastewater treatment plant site is located above the 100-year flood plain." The site in question is NOT above the 100 year flood plain or anywhere close to it. Our entire subdivision is in the 100 year flood plain and parts of the subdivision are considerably higher elevation than the site in question. If the proposed site is not in a floodway, it is very close.

COMMENTS: After further review of this situation I would like to REQUEST A PUBLIC MEETING to understand how the current overgrown condition of Mayde Creek has been addressed in the flood control calculations. Furthermore, discuss the location of the proposed treatment plant, odor that could be emitted, as compared to normal prevailing winds.

COMMENTS: To whom it concerns, I am a resident of Mayde Creek Estates and recieved a letter advising of the request for the permit above. I am very appriciative of the need for the waste treatment facility. My concern is the the flooding that has occured in recent years, and the negitive affect the additional waste water being added to Mayde Creek will have during heavy rains. My property borders directly to Mayde Creek. Since purchasing this lot, almost 19 years ago, Mayde Creek has become overgrown and the flow of water restricted

MWD

downstream of my lot. My hope is that the calculations for flood control has considered the restricted nature of Mayde Creek so that having a water treatment facility upstream of my does not further exaserbate the challenges that exist.

COMMENTS: We are concerned residents of Mayde Creek Estates, located in the 23,000 block of Stockdick School Rd and Porter Rd. Our neighborhood is in the 100 Flood Plain and drains directly into South Mayde Creek. We don't have storm drains in this part of Harris County, the nearest concrete storm drain is 2 miles away, and we rely on drainage ditches from our neighborhood for water to flow directly into South Mayde Creek. South Mayde Creek is still in a natural state with heavy underbrush and silt. The creek can go from being

MWD

dry and empty with no water, to overflowing its banks during a mild to heavy rain. It is common for the creek to overflow its banks and for water to rise across the Peek road bridge and along Stockdick School and Porter roads. The overflow backs up standing water on our properties for days, sometimes as high as 1 foot. Harris County sends out road maintenance crews on a regular basis to put up "HIGH WATER" signs. Pulte Homes has applied for a permit to build their sewage plant only a couple hundred feet from our homes. We are concerned that the 900,000 gallon a day discharge, will backup water draining from our homes and cause our properties to flood. In the summer when the creek is dry, the discharge will sit still and the smell will impact our quality of life. We ask that you reject Pulte Homes application to build their sewage plant next to our homes. Thank you.
