**COMMENTS:** I searched the enter-net and found out cement contaminants in the environment can harm a person's health if they are present in media (such as air, water, soil, dust) and if people come in contact with the contaminants. Also, one report said people in the surrounding community might be exposed to contaminants or dust through two exposure pathways such as an air pathway and a settled dust pathway. I also read that the air in the surrounding community may contain contaminants from the cement plant. People living, working or

*ME*

attending school nearby may be exposed by breathing the contaminants. We already have one cement plant that I know of on Holmes road and the big trucks keep that road torn up and congested. We don't need another cement plant in our area.
