TEXAS
COMMISSION
ON ENVIRONMENTAL
QUALITY

Chief Clerk:

I received the notice for the application of renewal for permit No. WQ0014649001 issued December 18, 2014 and would like to offer the following concerns regarding the distribution of this domestic waste water onto the 170 acres of golf course.

As I stated previously the run off from the golf course flows directly into Lake Travis and my concern is the contamination of the Lake from the discharge of this waste water onto all areas of the golf course.

The second question is can the waste water from this facility be dispersed onto private residential property or public roadway in the development? The current irrigation system for the golf course and the adjacent development is serviced from the same holding pond. If the domestic waste water is dispersed into this pond then waste water would be sprinkled directly on private residential property.

The current golf course irrigation system often disperses water onto the roads and private lots, would the requirements necessitate the control of any distribution of waste water to the roads and private residential lots?

I would appreciate your consideration of these concerns in the review of this renewal application.

Sincerely,

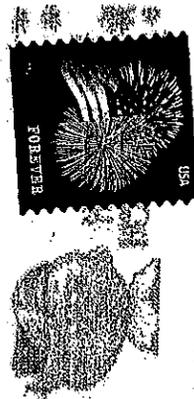

Brad Krall
