COMMENTS: As stated during the Public Meeting on March 10, it is my understanding that the EPA requires a full onsite environmental assessment of new construction sites. Whether or not TCEQ abides by the same standard, in order for TCEQ to have a true idea of the impact this plant may have on its surroundings I believe an onsite environmental assessment should be performed since this is a new construction site that is situated in the wintering grounds of Sandhill Cranes and since there are people and livestock and farmlands that also may

mc

be affected at least to some extent. Also, an onsite air quality assessment should be performed for accurate measurements, rather than relying on air samples from other areas, mainly due to the fact that there are many area pollutants -- a chicken processing plant, chicken and turkey houses, and a refinery within a 5-mile radius of this property, in addition to existing and future oil and gas activity.

COMMENTS: As mentioned during the Public Meeting on March 10, there are several creeks in the area of the proposed plant location that flood and will carry pollutants that run off the grounds of the plant to creek beds and surrounding land. Attached is a photo of a section of a creek that usually is completely dry, taken five days

mcu

after rains in the area that I believe averaged 3.5 inches or so. I also have a video clip of the same area taken on March 9, where the water is flowing at a very fast rate.

COMMENTS: (This comment also applies to PSDTX1420.) Several requests for a public meeting have been submitted for this Permit No. 120973 and the linked PSDTX1420, and a date has not yet been set. I understand from a TCEQ representative that it may be two months or more before a meeting can be held due to availability of TCEQ personnel. Thank you in advance for your assistance with the following questions: Question 1: If the public meeting isn't held prior to the 30-day period during which requests for a contested case hearing must be

MW

filed, will that 30-day period be extended to 30 days after the public meeting is held? If so, can we please get an official TCEQ written statement to that effect? Question 2: If the public meeting can't be held prior to the deadline to file a request for a contested case hearing, and if TCEQ cannot grant an extension of time, how has TCEQ handled such situations in the past? Are there other ways for TCEQ to afford the public the resources and time necessary to make a fair evaluation of this matter? Question 3: In the event TCEQ does not typically extend the period to file for a hearing, will the public be allowed to amend any already-submitted requests for a contested case hearing if necessary after obtaining the information from the public meeting? If so, please direct me to information about the procedure for amending those requests. I understand that a request for contested case hearing can be withdrawn at any time by the requester. Question 4: Would TCEQ please request the Applicant to furnish a scanned version of the full permit to post at TCEQ's website? The printed copy at the library is almost 250 pages long according to a library employee, and at 20¢/page would cost about \$50.00 per copy.

RE: State Air Quality Permit #120973 PSD Air Quality Permit # PSDTX1420

Dear Sir or Madam:

Please note the attached public notice. This plant needs to go to a more remote area where it will not be close to our houses, schools, and our stock tanks. This plant will lower the value of our property and cause us financial hardship.

My property is on CR 476, very close to the proposed plant site. Please do not allow this negative environmental event to occur!

Cordially,

PUBLIC NOTICE

30 acre natural gas fired power generation facility proposed in Nixon, Texas

THIS IS NOT A SUBSTATION

The Navasota South Peakers Operating Company has applied to the TCEQ for a State Air Quality Permit Number 129973 issuance of Prevention of Significant Deterioration (PSD) Air Quality Permit Number PSDTX1420, which would authorize construction of this facility at the Union Valley Energy Center.

They are asking to emit the following air contaminants: particulate matter including particulate matter of 10 microns or less and 2.5 microns or less, nitrogen oxide, carbon monoxide, sulfur dioxide, organic compounds, and sulfuric acid mist. An expanded list of the contaminants listed in the actual Application can be viewed at the Wilson County Library in Floresville.

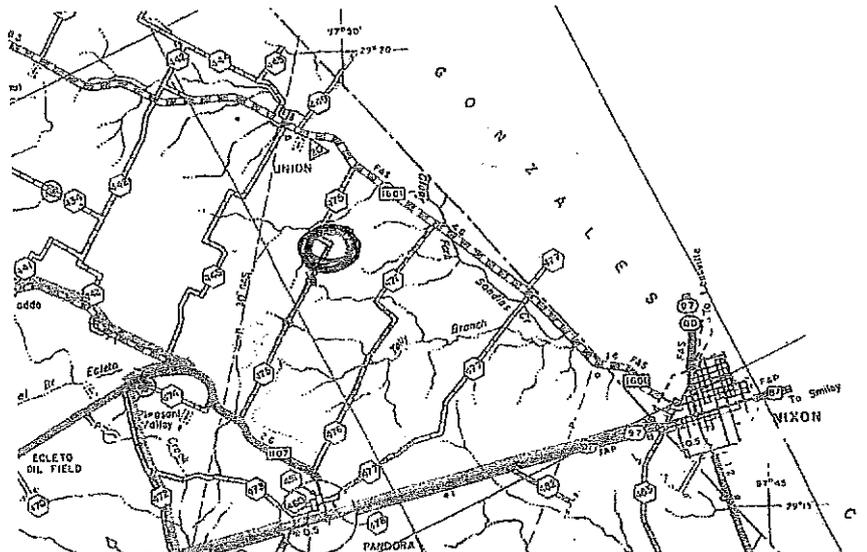

You may submit public comments, a request for a public meeting or request a contested case hearing to the Office of the Chief Clerk at www.tceq.texas.gov/about/comments.html or in writing to Texas Commission on Environmental Quality, Office of the Chief Clerk, MC-105, P.O. Box 13087, Austin, TX 78711-3087. If writing include the applicant's name and permit number. For more information about these permit applications or the permitting process, please call the Public Education Program toll free at 1 800 687 4040.

A public meeting about the application will be held if the executive director determines that there is a significant degree of public interest in the application, if requested by an interested person, or if requested by a local legislator.

Should a facility of this nature be built right in the middle of two school districts and less than 2 miles from the Union Valley Church School? How will these emissions affect those with asthma, COPD, and compromised immune systems? What about the stock tanks in the immediate area?

This company has also applied for a well permit from the Evergreen Underground Water Conservation District. The amount of water they are asking to pump doesn't match up to what they say in their promotional material and the permit has been tabled and will not be brought back up for consideration unless or until the TCEQ permit is approved.

Which way does the wind blow at your house?

The Nixon City Council has included this subject on their agenda for the next meeting August 12 at 6:30 pm.

MARK POTTER / LOCAL 142

AT PUBLIC MEETING

DETAILED CONCERNS OF LOCAL 142

SELECTIVE CATALYTIC REDUCTION (SCR) WOULD PROVIDE ADDITIONAL NO_x CONTROLS

This plant will emit oxides of nitrogen at 9 parts per million. It will not have SCR installed on it, to reduce the pollution. SCR would reduce the pollution from 9 to less than 3 parts per million.

The permit application materials that were available on-line stated that since Navasota was a peaker plant and would not run 24/7, it would not need SCR to reduce its air pollution. We disagree, and we have found examples where other peaker plants have indeed installed SCR, namely the Mariposa peaker plant.

LOW NO_x BURNERS CAN CONTROL POLLUTION MORE EFFICIENTLY THAN WHAT THIS PERMIT REQUIRES

Instead the plant will use low NO_x burners to hold its pollution down to 9 parts per million. But low NO_x burners have operated on similar power plants for years and controlled NO_x pollution to well below 9 parts per million. Low NO_x burners routinely control NO_x pollution to 6 parts per million or even lower.

For instance Low-NO_x burners on the Gilroy power plant, which is also a GE Frame 7 turbine, are permitted to emit only 5 parts per million of NO_x. A 2009 power industry study found that the GE DLN+1 low NO_x burners, at that time, had over 160,000 hours of operation controlling NO_x to below 5 parts per million, and over 60,000 hours of operating experience at eight different power plants, with NO_x emissions below 3 parts per million and carbon monoxide emissions also around 2 parts per million. In the six years since that study, the new generation of low NO_x burners has demonstrated additional hours of operations with very low NO_x and CO emissions levels.

The Navasota peaker permit should require at least this level of control of 3 to 5 parts per million from its own low NO_x burners. Nine parts per million is too high and is not justified.

THE POWER PLANT SHOULD REDUCE ITS POLLUTION BECAUSE THE AIR IS ALREADY DIRTY

We believe Texas should require more stringent pollution controls here, because of the plant's location near areas where air quality is already unhealthy such as Bexar County. Governor Perry's 2009 letter to the Federal EPA stated that Bexar County's air quality failed to meet the Ozone standards of .75 parts per million. http://www.epa.gov/ozonedesignations/2008standards/rec/letters/06_TX_rec.pdf

Likewise, published accounts stated that "...ozone readings in 2012, in the north of the county were at 76 parts per billion, just over the EPA limit of 75 ppb."

The area's local governments, through their Air Improvement Resources Executive Committee, published Ozone monitor readings at Table 2.3 which continued to show Ozone exceedances in 2013 and 2014 at certain monitoring stations. <http://www.epa.gov/ozoneadvance/pdfs/sanantonioupdate2014.pdf>

MW

While the 2012 Federal Register notice listed Bexar County as “unclassifiable/attainment), we are still concerned by the air quality analysis for the Navasota permit, which stated the plant’s emissions, added to the existing Ozone levels, would produce an Ozone concentration of .0727 parts per million (72.7 parts per billion) which would barely comply with the Ozone standard (NAAQS) of 75 parts per billion.

We ask that the response to comments address in detail the recent Ozone compliance history of Bexar County, and if Bexar County was ever considered a “non-attainment” area for Ozone as Governor Perry’s letter suggested.

Even if Bexar County is in bare compliance with the Ozone standard, the Navasota emissions will consume more than half of the remaining “buffer” between the ambient Ozone levels and the Ozone standard. For this reason we believe the permit should require more stringent NOx concentrations. The permit should either require catalytic controls, or mandate that the Low NOx burners operate at their achievable and lower emissions rates of 3 to 5 parts per million, as observed in practice for the last several years on other single cycle facilities.

MW

3-10-15

My name is Georgina Schwartz.

I live at 3006 BELVOIR DR. in San Antonio 78230

Today, I represent San Antonio Audubon Society
a breeding, education, and conservation club since
1954.

I am particularly concerned about the destruction
of the wintering habitat for sandhill cranes
which will be impacted by the construction and
~~the~~ continued operation of this plant.

At the very least the construction should take place
while the cranes are not present - that is during
spring and summer.

Thank you for this meeting and your presentation.

Georgina Schwartz

COMMENTS: I along with my family and neighbors are extremely disappointed that Navasota Energy is going ahead with this project at this location. The site is clearly unsuitable to meet the terms of the permit. The tranquility and suitability to raise families and livestock will definitely be negatively impacted. My primary concern is the water usage rates from wells are drastically underestimated. What are the consequences to Nav.Energy when they have exceeded initial pumping rates? A major fire drill that sufficiently tests the system

mu

and normal cooling use will take a tremendous toll on our feeble water table. How are the families pumping from the same depth going to continue living on their ranches? Second concern is noise pollution. If you have been to the area, you will soon find out that ambient noise levels are wind blowing and coyotes yelping. The plant cannot possibly stay under that noise level. These are not our only concerns but all I will list here. Very disappointed that Nav. Energy has chosen to come to our area to take advantage of my family and neighbors.
