COMMENTS: I am concerned about the effects of this run-off back flowing into my wet bottom retention ponds which contain bass, catfish, turtles and is frequented by wildlife for their drinking water. With an exceptional rain, the stormwater may backflow into my ponds and potentially harm their habitat or cause an algae bloom. It may make the fish unfit for consumption. Why can't the owner's obtain nearby vacant land to discharge their wastewater like the other property owners on the street? By this permit, will this have a negative

MWD

effect on our ability to request a similar discharge request? How is it decided on what property owner's should be able to discharge into the storm water system?
