

Regarding the Texas Commission on Environmental Quality (TCEQ) Permit No. WQ0015320001, to authorize the disposal of treated domestic wastewater via surface irrigation of 40 acres of public access open areas with trails; we, the residents of Vintage Oaks at the Vineyard subdivision, oppose locating the wastewater treatment facility and disposal site in the Vintage Oaks at the Vineyard subdivision.

- The prevailing winds blow north and northwest through the valley of Little Bear Creek to many homes in the Vintage Oaks Subdivision. These winds will be coming directly from the proposed wastewater treatment site, carrying all the unpleasant odors and pathogens that adversely affect the human condition.

Sales literature, current plat information and designs and future development designs and information presented to current Vintage Oaks at the Vineyard lot owners did not include any plans or information regarding the wastewater treatment facility and surface discharge.

Vintage Oaks at the Vineyard sales information and advertisement states all lots in the development will be one acre or larger.

A wastewater treatment facility with a forty-acre discharge zone inside the VOATV \* development will negatively impact the property values of homes and property already developed in VOATV.

- Wastewater via surface irrigation on forty acres of public access open areas with trails is a potential health hazard for anyone using the open areas or trails.
- Underground drip irrigation should be used instead of surface irrigation. Any concerns regarding extra cost for an underground drip irrigation system is moot.

We ask the TCEQ to deny TCEQ Permit No. WQ0015320001 and any subsequent permit for a wastewater treatment facility and disposal site located in the Vintage Oaks at the Vineyard subdivision.

- Sales literature, current plat information and designs and future development designs and information presented to current VOATV lot owners prior to the purchase of their property, did not include any plans or information regarding the wastewater treatment facility and surface discharge.
- VOATV sales information and advertisement states all lots in the development will be one acre or larger.
- A wastewater treatment facility with a forty-acre discharge zone inside the VOATV development will negatively impact the property values of homes and property already developed in VOATV.
- Wastewater via surface irrigation on forty acres of public access open areas with trails is a potential health hazard for anyone using the open areas or trails.
- Underground drip irrigation should be used instead of surface irrigation. Any concerns regarding extra cost for an underground drip irrigation system is moot.

Vintage Oaks at the Vineyard Residents Petition Opposing the Texas Commission on Environmental Quality (TCEQ) Permit No. WQ0015320001.

Regarding the Texas Commission on Environmental Quality (TCEQ) Permit No. WQ0015320001, to authorize the disposal of treated domestic wastewater via surface irrigation of 40 acres of public access open areas with trails; we, the residents of Vintage Oaks at the Vineyard (VOATV) subdivision, oppose locating the wastewater treatment facility and disposal site anywhere in the VOATV property.

- The prevailing winds blow north and northwest through the valley of Little Bear Creek directly to many homes in VOATV. These winds will be coming directly from the proposed wastewater treatment site, carrying all the unpleasant odors and pathogens that adversely affect the human condition.
- Sales literature, current plat information and designs and future development designs and information presented to current VOATV lot owners prior to the purchase of their property, did not include any plans or information regarding the wastewater treatment facility and surface discharge.
- VOATV sales information and advertisement states all lots in the development will be one acre or larger.
- A wastewater treatment facility with a forty-acre discharge zone inside the VOATV development will negatively impact the property values of homes and property already developed in VOATV.
- Wastewater via surface irrigation on forty acres of public access open areas with trails is a potential health hazard for anyone using the open areas or trails.
- Underground drip irrigation should be used instead of surface irrigation. Any concerns regarding extra cost for an underground drip irrigation system is moot.

We ask the TCEQ to deny TCEQ Permit No. WQ0015320001 and any subsequent permit for a wastewater treatment facility and disposal site located in the Vintage Oaks at the Vineyard property.
