CHIEF CLERKS OFFICE

Re: Proposed Permit WQ0015381001
Nantucket Housing LLC proposed project on Huffmeister Rd.

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live approximately ____ miles of this proposed plant. **I request a contested case hearing on this matter.** My concerns are the following:

1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, bike riding or hiking through the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.
2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have been historically high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

William F. Ahlersmeyer

FAX: 7135697204

COMMENTS: I respectfully request for the TCEQ to DENY the permit for Nantucket Housing. The following are my concerns concerning this permit: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens, including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and ATV trails. c. The ability to allow a government subsidized property manage and operate their own waste water treatment system is highly unusual. There are public water systems that they could apply for annexation if so desired. d. Fresh water - Where is the source of fresh water for this property? If they were within the boundaries of a water district, this would not be an issue. I don't believe that permitting of water wells for with the required volume is allowed within the Harris-Galveston Subsidence district. As a taxpayer, I request at least two public meetings be held in our community to hear concerns about this permit application.

COMMENTS: Nantucket Housing is requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water a day via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains have caused severe flooding issues in my neighborhood this past month. This area will flood again and the added stress of additional water flowing in daily will only make the current flooding issue more prominent. Please do NOT permit Nantucket to build this

facility in an area already dealing with flooding. This area of Cypress, Texas already is burdened with sect 8 housing. The infrastructure for this type of housing is not in place, nor can the emergency services agencies take on this additional burden. The Cypress Fairbanks ISD is overcrowded at this point in one of the fastest growing districts in the state. Again, please do not approve this application.

Re: Proposed Permit WQ0015381001
Nantucket Housing LLC proposed project on Huffmeister Rd.

MWD 97954

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live approximately ____ miles of this proposed plant. **I request a contested case hearing on this matter.** My concerns are the following:

1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, bike riding or hiking through the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.
2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have been historically high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Elayne Arnold

CYPRESS TX 77429-6983

PHONE: 7137158279

FAX: 2033041058

COMMENTS: Please deny this permit for the following reasons: . Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The

chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Please hold a public hearing on this permit.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately ____ miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

COMMENTS: In regards to this permit for the private sanitary sewer plant for the Blazer Residential project, I live in the area and Huffmeister does not need another 400 unit of low income housing, nor do we want up to 55,000 gallons per day/week or month dumped in to ditches along the road that empty into Cypress Creek. Therefore, I am highly opposed to this permit and respectfully ask that you consider a full denial. thank you

COMMENTS: I request that the permit referenced above be denied. Cypress Creek is over taxed as it is. Recent flooding proves this. Also treated waste water can change the entire ecosystem of the creek. I request that a public hearing be held on this permit. Many tax payers are not in favor of this proposed development and have a right to be heard.

Re: Proposed Permit WQ0015381001
Nantucket Housing LLC proposed project on Huffmeister Road

Dear Sirs:

My husband and I are very concerned about a proposed project in our community. The proposed development is seeking a permit to provide a well and waste treatment on the property because the local MUD district has declined to annex the property into the MUD. **We are requesting that a contested hearing be set in this matter and the permit be denied.**

I have lived in the Cypress community very close to this property since 1972. My husband has been here since 1996. Over the years we have enjoyed the many aspects of Cypress Creek. There are walking and biking trails, horseback riding trails, water sports including fishing, canoeing, kayaking and skim boarding. I am very concerned about a waste treatment plant that will be discharging into Cypress Creek and potentially harming many, if not all, of these recreational community amenities. There is the real threat of increased pollutants and pharmaceuticals being dumped into the creek. This presents a hazard to our community and the wildlife in this area due to the dumping of bacteria and viruses into our waterways.

It is my understanding that a single use development such as the one proposed here is not in keeping with the stated regionalization policy. There are already a great number of treatment plants discharging into our creek. Any additional treatment plants should be highly scrutinized and held to the utmost high standards.

In addition to the actual harm that is presented to those enjoying the creek there is also the nuisance of the odors from the wastewater plant. This diminishes the quality of life for all the current members of the community.

Sincerely,

Melody and Jeff Braun

It is my understanding that a single use development such as the one proposed here is not in keeping with the stated regionalization policy. There are already a great number of treatment plants discharging into our creek. Any additional treatment plants should be highly scrutinized and held to the utmost high standards.

In addition to the actual harm that is presented to those enjoying the creek there is also the nuisance of the odors from the wastewater plant. This diminishes the quality of life for all the current members of the community.

Sincerely,

Melody and Jeff Braun

Re: Proposed Permit WQ0015381001
Nantucket Housing LLC proposed project on Huffmeister Road

Dear Sirs:

My husband and I are very concerned about a proposed project in our community. The proposed development is seeking a permit to provide a well and waste treatment on the property because the local MUD district has declined to annex the property into the MUD. **We are requesting that a contested hearing be set in this matter and the permit be denied.**

I have lived in the Cypress community very close to this property since 1972. My husband has been here since 1996. Over the years we have enjoyed the many aspects of Cypress Creek. There are walking and biking trails, horseback riding trails, water sports including fishing, canoeing, kayaking and skim boarding. I am very concerned about a waste treatment plant that will be discharging into Cypress Creek and potentially harming many, if not all, of these recreational community amenities. There is the real threat of increased pollutants and pharmaceuticals being dumped into the creek. This presents a hazard to our community and the wildlife in this area due to the dumping of bacteria and viruses into our waterways.

It is my understanding that a single use development such as the one proposed here is not in keeping with the stated regionalization policy. There are already a great number of treatment plants discharging into our creek. Any additional treatment plants should be highly scrutinized and held to the utmost high standards.

In addition to the actual harm that is presented to those enjoying the creek there is also the nuisance of the odors from the wastewater plant. This diminishes the quality of life for all the current members of the community.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 1¼ miles of this proposed plant. ***I request a contested case hearing in this matter***. My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek*. Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Susan Brennan

CYPRESS TX 77429-2644

PHONE: 8322313220

FAX: 8322313220

COMMENTS: i WANT THE PERMIT FOR THIS PROJECT TO BE DENIED FOR THE FOLLOWING REASONS: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella &

protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Additionally, I request that a Public Hearing be scheduled in the near future, so that the interested public may learn more about this proposed project, and voice their concerns.

COMMENTS: PLEASE deny this request from Nantucket Housing! I have listed the reasons below: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being

mw

released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I would kindly ask for a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request. The people trying to build this facility are only doing it so they can build a huge housing facility. They have already been turned down by our water district here, which made them mad! They stated they would build septic tanks if needed, just to build this property. PLEASE do not let them get away with this just so they can make money! Please think of all the harm this waste water facility will do to this community. I'm sure they can find a more suitable place to build than in our community. Our community is already busting at the seams, we just can't take much more. We are at your mercy, please don't let us down. Just listen to our side of the story. Thank you!!! I tried to attach a picture of the flooding that occurs during a hard rain, but it wouldn't post.

COMMENTS: This can not happen! The creek they want to dispose the treated water into is already a flood risk every time it rains! I do not trust the people wanting to build this. They were already turned down for building a low income housing complex and we're not happy about it. It makes me wonder what they are up to, to file on the same property they were denied to build on. Please look into this!! Thank you!

CHIEF CLERKS OFFICE

Re: Proposed Permit WQ0015381001

Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 0 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Jamie Caraway

COMMENTS: I adamantly oppose the construction of a waste water facility in this area as I regularly use Cypress Creek for recreational purposes such as kayaking, walking, bird watching, and generally enjoying nature. I have worked with the Bayou Land Conservancy to plant trees along the waterway in order to enhance

MW

this environment, and am concerned that construction of a waste water treatment plant will degrade it and negatively impact all of the residents in this area who similarly enjoy and partake in all that it has to offer.

COMMENTS: I humbly ask that is permit be denied. Flooding is already a severe problem in this area not taking into account the addition of storm water from this development. Chemicals used from this project will harm the aquatic life and change the water quality so that it isn't safe for man or animal. I am sure you are aware that these chemicals can and will change the entire ecosystem of our Creek that is currently used for not only agriculture but recreation not to mention the wild life. Not only do I request that you deny this permit but if you

are to continue at the very least a Public meeting allowing the citizens who live in Cypress should have the opportunity through a Public Meeting to submit comments and questions re: this permit.

Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately ____ miles of this proposed plant. ***I request a contested case hearing in this matter***. My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek*. Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Brian Collette

Re: Proposed Permit WQ0015381001
Nantucket Housing LLC proposed project on Huffmeister Rd.

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live approximately ____ miles of this proposed plant. **I request a contested case hearing on this matter.** My concerns are the following:

1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, bike riding or hiking through the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.
2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have been historically high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Renee Davis

COMMENTS: I am opposed to this permit. My understanding is that the treated water is released to the storm system which dumps into Cypress Creek. When Cypress Creek floods, the storm system does not drain. So the treated water will back up in the street in front of the Elementry School and maybe on to the school grounds. Please consider this when the permit is discussed.

COMMENTS: This permit should be DENIED. It will more Flooding problems– Cypress Creek already overly burdened and prone to flooding – this permit request would allow the addition of 55,000 gallons of effluent to the creek on a daily basis and does not include the addition of storm water from the developed property. This treated waste water willincreases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the

treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of our creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. If you insist on continuing with this permit application, please schedule a public hearing first!

Sirs, Madams —

① The "treated domestic wastewater at a daily rate of 55,000 gallons" would have serious consequences for the area around & below the portion of Cypress Creek to receive the effluent! In time of heavy rains, that creek tends to flood. 55,000 per day would be awful.

② I live 4.1 miles from the proposed facility — I do not want that 55,000 ± discharged within my home's range.

③ I do not want the increased traffic, crime nor extra people in the school zones this would create.

Please — Texas Commission on Environmental Quality — do NOT pass the project —

Thank you,

Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 2 miles of this proposed plant. ***I request a contested case hearing in this matter***. My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

COMMENTS: I am writing to lodge my objection to this application by The Lodge at Cypress Creek for a permit to build a waste water plant in the area requested. This area is part of the Cypress Creek water shed and highly prone to extensive flooding. In fact during the most recent rain events in the Houston area, this area had extensive flooding. This has continued and will get worse in the coming years as the area grows and develops.

The rain events in the last month were small compared to some of the flooding in the past. The neighborhood adjacent to the area has many of their homes raised on stilts to prevent them from flooding during these rain events. If The Lodge at Cypress Creek were permitted to build a waste water plant at this location the commission will be setting up an ecological disaster in the Cypress Creek area. All it would take is one of these frequent flooding events to cause a release of bacteria and chemicals from the proposed station that would result in severe contamination of Cypress Creek. This is an area that is thriving with aquatic life and is used for hiking and other recreational activities by residents of the area. I have attached a picture from flooding in the proposed area from the most recent rain event in Houston. Again I strongly urge the members of this board to deny this application from The Lodge at Cypress Creek.

COMMENTS: Please deny the permit for Nantucket housing to build a water treatment facility which would dump into cypress creek. The creeks floods periodically and now with the new construction in the area it will get worse, especially if additonal daily flows are allowed from this project. Not to mention the possibility of multiple contaminants potentially going into the creek affecting area and downstream habitats. As a 30 year resident the cypress creek ability to handle necessary run off has become a greater concern, especially if

addition daily discharges are allowed from this Nantucket development. I appeal to the water commisioners to prohibit this project from going forward based on the above and effects it could have on families and children in the community. Please schedule a public hearing so that the cypress residents can voice their concern for maintaining this wonderful area and creek for the future if this project goes forward. Regards, James Ellis

COMMENTS: Please deny this permit! There are many issues with this developer and his overall lack of concern for the community. I have seen them present plans for a set # of units and at the next meeting double that with oh yea, forgot to mention phase 2 at the public meeting. There are many issues with flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from

the developed property. Recent rains have resulted in flooding in the surrounding areas and neighborhoods. More concrete on the ground will make an already bad situation, tenuous. Secondly, effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I would like to request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request. Also please note that the reason this developer was not granted water/sewer through a water district or MUD was public input to deny due to the negative impact it would have on the area immediately surrounding it. Cypress is not underserved in regards to low income housing. Blazer/Nantuket or whatever name they choose to use and the continued name change of the proposed development in my opinion shows contempt for the voice of the people. They continually try to hide the development.

COMMENTS: It is unfortunate, despite public opinion, & the refusal of annexation into various Water Districts and MUDs, that this developer continues to try and skirt the issues and impact to the community that this development will pose. This is already prone to flooding. In fact, recent rains have caused severe flooding issues this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern.

MW

The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding. The developers build and sell - not their problem down the road - it will be a community problem. Please deny the application.

Re: Proposed Permit WQ0015381001
Nantucket Housing LLC proposed project on Huffmeister Rd.

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live approximately ____ miles of this proposed plant. **I request a contested case hearing on this matter.** My concerns are the following:

1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, bike riding or hiking through the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.
2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have been historically high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 4 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Renate Hardaway

COMMENTS: We have lived here in Cypress now for 20 years. With all the subdivisions, outlet malls, strip centers having been built we have are getting flooded out at least once a year. It used to take a direct hit of a hurricane but now all it takes is a weekend of what used to be regular rain fall. The cypress creek cannot handle this water treatment plant and the 55,000 of water to be dumped into it on a daily basis. Allot of properties along the creek will suffer. The green belt of riding and jogging trails will be ruined. PLEASE DO NOT allow

this water treatment plant to be built in our little community. We cannot handle anymor building and "development ". Please do not destroy our nature along the cypress creek. Please host a town hall meeting to let the residents speak about this project. Thank you for reading this plea. Jena Heap

COMMENTS: I am completely against the water treatment plant. It will cause more flooding. Destroy the natural wildlife and plants with the poison that will be spilled out. I want a town hall meeting to share my opposition. I have grown up along the creek. Have wonderful memories swimming, skim boarding, riding my horse, hiking and just enjoying the wildlife along the creek. I am opposed to this water treatment plant. It will also negatively affect my property values of my neighborhood, Ravensway.

COMMENTS: I am asking that Permit #WQ0015381001 be denied for the following reasons: 1. Flooding - Cypress Creek is already overly burdened and prone to flooding. This permit request is to allow the addition of 55,000 gallons of effluent into the creek on a DAILY basis. This doesn't even include the additional amount of storm water from the developed property. 2. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being

released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I am requesting that a public meeting be held allowing the opportunity to submit comments and ask questions regarding this permit request.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 6 miles of this proposed plant. ***I request a contested case hearing in this matter***. My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek*. Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely, Mary Ihfe

COMMENTS: Please deny this permit. I have two major concerns: 1. Flooding – Cypress Creek is already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. 2. The Effluent increases the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment

process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Please schedule a public meeting allowing an opportunity to submit comments and ask questions regarding this permit request.

COMMENTS: This area is prone to flooding. In fact, recent rains have caused severe flooding issues this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is

currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

Re: Hearing Requests and Comments on Application of Nantucket Housing for TPDES Permit No. WQ0015381001.

Hearing Requests

These comments are submitted on behalf of Mr. Charles Bertani, Mr. Philip Neisel, and Mr. Clayton Terry regarding Nantucket Housing, LLC's application for a new Texas Pollutant Discharge Elimination System Permit No. WQ0015381001.

Mr. Clayton Terry's address is 12502 Cypress Circle, Cypress, Texas 77429. His phone number is 281-236-3676. Mr. Terry's property is located directly north of, and adjacent to the Nantucket Housing development site and less than 1000 feet from the wastewater treatment plant site. He will be particularly injured by the proposed plant and discharged effluent. Any nuisance impacts from the site, including, but not limited to, odor impacts, will affect his property. Mr. Terry requests a contested case hearing.

Mr. Charles Bertani's address is 14146 Bertani Lane, Cypress, Texas 77429. His phone number is 832-237-2014. Mr. Bertani's approximately 16 acre property is directly adjacent to the Nantucket Housing development site and location of the wastewater treatment plant, and he is approximately one-quarter mile from the point of discharge. He will be particularly injured by any nuisance impacts. Mr. Bertani requests a contested case hearing.

Mr. Philip Neisel's address is 14203 Cypress Creek Boulevard, Cypress, Texas 77429. His phone number is 713-256-2695. Mr. Neisel's property is approximately 1,100 feet north of the proposed wastewater treatment plant and approximately 360 feet from the property line of Nantucket Housing. Mr. Neisel's property is adjacent to and contiguous with the Borgstedt Cemetery. There is no fence between Mr. Neisel's property and the Cemetery, and in fact Mr. Neisel maintains the Cemetery by regular mowing and other landscaping. Borgstedt Cemetery is directly adjacent to the property line of Nantucket Housing. In comments submitted on June 27, 2015, Mr. Neisel described particularized injuries that will result from the proposed discharge. In addition, prevailing winds from the south would transmit any odors to Mr. Neisel's property. Mr. Neisel requests a contested case hearing.

In addition to the concerns just identified, Mr. Charles Bertani, Mr. Philip Neisel, and Mr. Clayton Terry (together, the "Requestors") raise the following concerns:

Comments

1. **The discharged wastewater will degrade or otherwise adversely affect surface water quality.**

Requestors are concerned that the proposed discharge will degrade or otherwise adversely affect downstream surface water quality.

If approved, Nantucket Housing, LLC's wastewater treatment plant will discharge up to 55,000 gallons per day of wastewater with the following effluent limitations: 10 mg/l Biochemical Oxygen Demand; 15 mg/l Total Suspended Solids; 3 mg/L Ammonia Nitrogen; and 5 mg/l Dissolved Oxygen. There is no proposed limit for Total Phosphorus. These limitations are not sufficient to ensure that the discharge will meet the Texas Surface Water Quality Standards (TSWQS) found in 30 Texas Administrative Code 307.

Among other things, Requestors are concerned that nutrient loading from the discharge will: violate the aesthetic parameters found in the TSWQS by and through production of algal growth, odors, suspended solids, settleable solids that change flow characteristics, changes from ambient conditions of turbidity and color, and other aesthetically unattractive conditions; interfere with existing uses of the discharge route; and result in bacterial degradation of downstream water quality.

These impacts will interfere with Requestors' use and enjoyment of their property. Mr. Neisel, for example, owns property approximately 1,100 feet north (*i.e.*, downwind) of the proposed wastewater treatment plant and approximately 360 feet from the property line of the service area. Mr. Neisel's home is an historic German farmhouse that he restored at its current location. The windows are in their original condition, with custom wooden screens, for the sole purpose of allowing him to have the windows and doors open as much time as possible. The odors from the proposed treatment plant will directly harm his property and is enjoyment thereof. Additionally, violations of the TSWQS could result in additional odors, as well as aesthetic changes to the discharge route.

These impacts will also adversely affect Requestors' health. As the application notes, the discharge route is initially a dry channel; the effluent, therefore, will be undiluted under normal conditions. Protestants are particularly concerned with impacts to their health resulting from bacterial loading in Cypress Creek. Approximately one-half mile downstream from the outfall location, the discharge will enter a segment of Cypress Creek that is impaired for bacteria (*E. coli*). Spatial analyses of Cypress Creek show that the bacteria counts exceed geometric mean criteria in many assessment units, and these counts tend to increase as one moves downstream. A 2008 data review and analysis by James Miertschin & Associates found that the Cypress Creek had 101 permitted facilities with a total permitted flow of 75 MGD (and total actual flow of 29 MGD). These numbers have gone up over the past seven years. Further bacterial loading of this creek will pose a serious health risk to people who swim in, wade in, or otherwise use these waters recreationally. Already there are organized events along Cypress Creek just downstream

of the discharge point that involve contract recreation. The ongoing Cypress Creek Greenway Project is a collaboration between public and private entities seeking to improve and increase the connectivity, and the educational and recreational uses of the bayous and green spaces along Cypress Creek. Kayaking and canoeing are two contact uses that will increase as additional facilities are installed along the Greenway. Requestors request that the permit be denied or that the applicant be required to impose stricter bacteria limits for its effluent.

2. The discharge route is regularly used for recreational purposes that will be impaired by the proposed discharge.

The TSWQS require that existing, designated, presumed, and attainable uses be maintained and protected. The permit application fails to accurately represent the existing uses of the discharge route.

The segment of Cypress Creek downstream of the outfall location is regularly used by local landowners and the public for agriculture, fishing, kayaking, and swimming, as well as other recreational activities that can and do result in public contact and pose a significant risk of ingestion. These uses, which will be impaired by the proposed discharge, are not accurately or adequately captured in the application's technical report.

Many children of young ages play in Cypress Creek and there are numerous community events centered around direct use of Cypress Creek for the children. This must be adequately considered.

3. The proposed facility does not comply with the TCEQ's regionalization policy.

The TCEQ is required to implement the state policy to encourage and promote the development and use of regional and area-wide waste collection, treatment, and disposal systems. This regionalization policy helps prevent pollution and maintain and enhance water quality in the state. The proposed facility does not comply with this regionalization policy.

As an initial matter, Nantucket Housing has been attempting to build a multi-family housing project at 12321 Huffmeister for several years; the former project name was "The Lodge at Huffmeister." The capital budgets and operational forecasts developed in furtherance of this project were based on the assumption that the development would connect to a water district. As a result, there were initially no budgeted costs to build the proposed wastewater treatment plant. As up-front costs have significantly increased, ongoing costs have likely increased as well, likely resulting in additional pressure on project management to cut operational expenses. Protestants are concerned that as less money is available for adequate operation of the proposed treatment plant, the system will be unable to provide sanitation service that meets the regulatory requirements. As the TCEQ recognizes, "Only a system with adequate financial, managerial, and technical capacity can reliably provide . . . basic sanitation service that meets regulatory requirements." The Houston – Galveston Area Council Community & Environmental Planning Department, in a white paper on the regional approach to wastewater infrastructure planning, similarly noted that smaller plants do not possess the treatment capabilities and financial resources of larger, regional plants. Smaller plants are less often manned, increasing the likelihood that spills will go undetected for longer periods of time. And smaller plants have

greater chas flow issues when it comes to repair and replacement of infrastructure. Protestants are concerned that this project lacks assurances that it will be run by an entity with sufficient funds and expertise to provide high-quality service.

Furthermore, this project is exactly the kind of scenario justifying the use of a regional system. This is a permit application for a single development. At 55,000 GD, it is classified as a smaller plant. It will be discharging into a dry area, meaning that these areas will be effluent dominated. The plant is in a region with a very large number of domestic wastewater treatment facilities, including greater than 100 plants in Cypress Creek alone. The data review and analysis performed by James Miertschin & Associates suggests that much of the permitted flow is not actually being used by many of these plants: in 2008, approximately one-third of the permitted flow was being "used". Finally, as the application recognizes, there are a number of existing plants already located within a three-mile radius of the proposed project and water districts that serve or could serve this area.

Despite this fact, it is unclear if the project actually meets the regionalization requirements found in the application forms. The domestic technical report asks the applicant to identify any permitted wastewater treatment facilities located within a three-mile radius of the facility. In this case, there are at least four facilities within this area. But an applicant must request of these permitted facilities not only whether they have the capacity, but also whether they are willing to expand, to accept the volume of wastewater proposed in the permit application. Based on attachments to its application, it is unclear if Nantucket Housing met this obligation. For this reason, the proposed facility does not comply with the TCEQ's regionalization policy.

4. Nuisance conditions will result to neighboring landowners.

All of Mr. Charles Bertani, Mr. Philip Neisel, and Mr. Clayton Terry are concerned with the nuisance impacts created by this proposed facility, including but not limited to odor, visibility of the plant, overage of treated sewage excess during times of heavy rain, impacts to their property, impacts to their groundwater among others. These concerns should be heard in a contested case.

5. The proposed site will cause odor problems and will contaminate groundwater wells in the area, in violation of Chapter 309.

Given the proximity of the three Requestors here, they are concerned with forthcoming problems related to the use and enjoyment of their property, such as odor and others. Additionally they are concerned that the discharge will seep and contaminate their groundwater wells. These would be violations of the siting requirements of 30 T.A.C. Chapter 309.

6. The discharge route is mischaracterized.

The application states that the effluent will be discharged into a "roadside ditch" on Huffmeister Road. The applicant represented that this ditch is dry and covered with grass, and that there was "no noticeable water movement or pooling in the grassy areas of the ditch." Based on the photographs included in the application, as well as personal observations of Requestors, the proposed discharge has been mischaracterized in the application.

As a factual matter, Requestors dispute that the area immediately "downstream" from the discharge point has a defined bed and banks or has other characteristics that would produce a flow of water that would recur regularly. The area is a grassy swale covered in native grass. There is no current of water or permanent source of supply along this portion of the route.

A TPDES discharge permit may not be issued if it would allow an applicant to discharge effluent as diffuse surface water over a piece of property. Protestants dispute that the discharge route has the physical features sufficient to constitute a water in the state. This being the case, the TCEQ lacks authority to issue the proposed permit.

Sincerely,

Irvine & Conner, PLLC

COMMENTS: I would like to strongly encourage that the permit requested by Nantucket Housing, LLC be DENIED. An additional 55,000 gallons per day of effluent and additional storm water will likely burden the already heavily taxed Cypress Creek system making flooding even more likely. The effluent itself contains waterborne pathogens that will harm the ecosystem and severely worsen the water quality of the creek.

Additionally I would like to request that a public hearing be held whereby questions could be asked that will address these and any other particular concerns of the community. Thank you for your consideration.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 2 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

COMMENTS: PLEASE DENY THIS PERMIT! Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, state representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. Please do not

allow this as this area is prone to flooding. In fact, recent rains have caused severe flooding issues in nearby neighborhoods this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. DO NOT PERMIT Nantucket to build this facility in an area already dealing with flooding.

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately .5 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Bealy Kriegl

FAX:

COMMENTS: I would like to comment on the pending permit for the proposed water treatment plant at 12321 Huffmeister Rd. Cypress, TX 77429 in Harris County, TX. In lieu of the unprecedented catastrophic flooding of Cypress Creek on April 19, 2016 that caused major flood damage to thousands of homes in the area, I am very much opposed to the approval of the permit for the waste water treatment plant and request reconsideration by TCEQ. This plant, about 1 mile from my home, will discharge waste water into Cypress Creek which runs

behind my property, less than 200 feet from our house. During the latest flood, our garage was flooded with about 2 feet of said polluted creek water, and my adjoining neighbors had 3 to 5 feet of this same water inside their homes. Our yards and streets were totally flooded, with no way in or out of the area except by boat. To say the least, we are concerned for our health, safety, welfare, and property. Additionally, I have fruit trees on my property, and I am concerned that the fruit this year will be inedible due to pollution from this water. Although TCEQ is not responsible for flood regulations, I do feel that they have the responsibility to seriously consider the dire consequences if this proposed treatment plant were to fail during a flood, especially given the fact that it is located in such close proximity to the 100-year flood plain. Homeowners in our neighborhood who were also outside the 100-year flood plain and less than 1 mile from the proposed treatment plant, experienced flooding of their homes for the first time ever, and Huffmeister Rd. at the Cypress Creek bridge (the proposed site of dumping waste water into the creek)was under water and closed to traffic for several days. Many close-by neighborhoods along Cypress Creek were also, sadly, flooded. I strongly believe that the amount of waste water proposed to be dumped into the Cypress Creek from the waste water treatment plant is very much underestimated. The proposed apartments, conveniently located across from Millsap Elementary School, will most likely attract families, rather than couples, and thus will house 4 to 5 members, not the 2.7 stated by the developer. Therefore, the amount of waste water would be double what the developer is proposing and just add more to our flooding problems and potential danger to life if the system failed, especially during a flood. The developer has already requested an additional permit to build a Senior Unit on the same property as the Blazer Apartments. Although this was recently denied, who's to say whether or not he will still find a way to do build it in the future. Sadly, this would exponentially impact our area. To summarize, TCEQ had a responsibility to protect the safety of the people, animals, and environment affected by this waste water plant, so please take into consider my comments. A faulty or failed system, which needs to be considered, would not only endanger adjoining neighborhoods, but also the people of the Blazer Apartment Complex themselves. We all are counting on your expertise and foresight to keep this water treatment plant from harming any and all citizens under current or future unforeseen circumstances.

RE: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our subdivision, Ravensway/Saracen Park, and other nearby subdivisions are concerned about the wastewater treatment plant proposed by Nantucket Houston on Huffmeister Rd. I live just a little over 1 mile from this proposed plant. The waste water that will originate from it will flow down Cypress Creek, which is directly behind my property and within 200 ft. of my house. I request a contested case hearing in this matter, as I am very concerned about the safety of myself and my family. Reasons for my concern include the following:

- Bacteria, pollutants and odors from the wastewater treatment plant will be a nuisance and possibly a health hazard, especially during bypass events. This will affect me, my family, and neighbors as this creek water, during heavy rains, floods our yards, homes, and streets. Teenagers and young adults from the surrounding areas routinely engage in swimming, skimming, and riding ATV's and horses in this section of Cypress Creek, and young children play in parks adjacent to the creek. Flooding also causes an increase in mosquitoes, which could carry diseases originating from these pollutants. It would be a health and safety hazard to all of these people who would be exposed to the bacteria and pollutants discharged into Cypress Creek.

- This would cause an increase of pollutant loading into Cypress Creek. Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue to be concerned about. Although the draft permit has not yet been issued, we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which can negatively affect humans and aquatic life. The package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

- The proposed plant will violate the TCEQ's regionalization policy. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. This proposed plant by this permit will violate the TCEQ's regionalization policy.

- The characterization of the discharge route is in question. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

- Siting requirements are questionable. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to insure that the distance requirements are met for odors and well protection.

COMMENTS: Please deny the proposed Permit WQ0015381001 that Nantucket Housing, LLC. Is requesting for a waste water treatment plant. The waste water from this plant, that would be taken from a proposed apartment complex (Meadows at Cypress Creek, 12321 Huffmeister), would directly affect my home and property as well as many other homes in my neighborhood. When the creek overflows during heavy rains, my property, being in the floodway and backed up to Cypress Creek, would be flooded with this waste water which

MWD

could carry pathogens, viruses, chemicals, etc. It would also flood our streets and neighbors' homes, which have already flooded numberous times over the last 30 years. This waste water could pose health and safety problems for people as well as the wildlife along the creek. Another concern is who would monitor and oversee this treatment plant to make sure that it remains in compliance of the health codes. Our water treatment plant in our own subdivision is tax based, thus has ample money to support it and to insure proper operation. However, I would be very concerned that the Nantucket Housing, LLC. treatment plant may not fall under the same strict supervision, especially after a few years have passed and the property has been sold to other investors. For these reasons I request a public meeting be held to allow homeowners to submit questions and comments in order to get clarification on concerned matters. I strongly oppose the proposed treatment plant and request denial of Permit WQoo015381001 for health and safety reasons.

COMMENTS: I am against the Meadows of Cypress Creek being built with a water treatment plant that will dump sewage water into the ditch that then dumps into Cypress Creek, because I live on property that backs up to this creek. I will be adversely affected when the creek overflows from heavy rainfall because this sewage water will flood my backyard, streets, my neighbors yards and their homes. Many homes in my subdivision have flooded several times in the last 30 years that my husband and I have lived here. This additional water

from the proposed plant will add extra water to the creek that is already past it's limit. The thought of this is terrifying and unsanitary. Please deny this permit for health and safety reasons.

Re: Proposed Permit WQ0015381001
Nantucket Housing LLC proposed project on Huffmeister Rd.

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live approximately ____ miles of this proposed plant. **I request a contested case hearing on this matter.** My concerns are the following:

1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, bike riding or hiking through the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.
2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have been historically high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Anna Laughlin

COMMENTS: I strongly request the permit be denied a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. My house is already in danger of flooding from Cypress Creek so I have a very personal interest in issues pertaining to the water management of the area b. Effluent is treated waste water which increases the possibility of numerous

MW

waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. c. I am also a local business owner of a business on Huffmeister and strongly feel this will decrease the value of my business and the Cypress community as a whole. There is not sufficient transportation, public services, there is already overcrowding in the schools in the area. I would strongly request that this permit be denied, but at the very least request that a public hearing be scheduled to hear public input on the issue

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately ____ miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

COMMENTS: This complex would create environmental waste water that would over burden the creek, which floods during any significant rain event. This is the last thing that is needed here. We live near the creek and flood periodically. Polluted water flowing through the streets and stinking up the neighborhood is not welcomed. Please do not allow this builder permission to wreck our neighborhood. Thanks

COMMENTS: I request reconsideration of the executive director's decision. All the specific data that people listed at the last meeting were changed into vague comments in the packet. So many important points we raised in the hours before the taped meeting that people had to leave because it was so late. Many valid complaints about the outdated info used to measure pollution in the creek and so many other issues were eliminated. While the high school is too crowded to change classes in the building and hundreds of house OUTSIDE the 500-yr.

MW

floodplain just flooded without a tropical storm or hurricane, you are letting this developer cause even more MAJOR problems. Air pollution (I smelled it at a high school with a water treatment next to it) next to an elementary school. WHERE IS THE DETENTION pond? Mr. Darrell Hahn, Harris County engineer said there is a detention pond. I do NOT see it on the plot. I will be consulting with Ms. Jan Soifer of Austin. She has already beaten Community Health and Wal-Mart. Also, at least one TV station will be looking into this. Bribery and unethical actions have already taken a great physical, financial, and emotional toll on thousands of people. If Harris County had bought the land and put a huge detention pond on it, then they would have saved money in the long run. They should have built something like the Addicks Dam for this area knowing that they were building on rice paddy fields and low swampy areas upstream. Thank you and the Harris County Make Us Flood More Control for RUINING our environment and our biggest investments (our homes). Almost everything I predicted several years has happened when they started developing in this area without adding detention ponds. I asked why we are letting all the new subdivisions have lakes, but not detention ponds. Just what we need - MORE water. This total lack of planning has ruined our schools, homes, environment, etc.. Why is the government allowing this to happen when it is obvious to the general population. You can't undo the damage to the environment. How are they allowed to build WITHOUT A PERMIT? WHERE IS THE DETENTION POND? We are watching...Your Point of Discharge already made it flood where it never flooded before, and the apartments aren't even built. But they elevated the apartments so they can flood the elementary school and pour nasty runoff into the street. Drone footage clearly shows the runoff pouring off the property WITHOUT the Water Treatment Plant. TRULY SAD...

COMMENTS: Please deny permit. The developer is estimating 55,000 gallons of water discharged per day, but they said the complex would be older people. It is not so I believe they are drastically underestimating the amount of water that will discharged. Letting another plant discharge water into the creek where the government has already added many houses to the floodplain in this area, is a recipe for disaster. The houses at the back of the subdivision do no build on the bottom floor. What will happen to rest of us? When we got 13

MW

inches during Allison, the whole subdivision almost flooded. Since then many more areas have been developed around here. With only 6 inches in my rain gauge last year, it started to flood. But it was a brief rain. So at least 55,000 gallons per day when people are watching the water rise could be the difference between ruining everyone's home and not. The idea od letting a company discharge water in an area prone to flooding in a subdivision which sits between two creeks goes against common sense. We are also concerned about pollution being discharged into Cypress Creek. The creek is used by so many kids and adults for fishing, swimming, kayaking, etc.. The wildlife will be affected and the whole ecosystem will be negatively impacted. It saddens me that the state seems so unconcerned about pollution where kids and adults play, fish, etc.. To allow a "smaller" water treatment plant to basically police themselves with little regulation is a recipe for disaster. Please do not let them withdrawal groundwater. Letting a high-density development pump water out where we are already sinking and flooding will make us ALL FLOOD. Harris County is spenting billions of dollars because we are all sinking and flooding. Allowing the developer to increase the likelihood of flooding in this area will cause the government to buy everyone out because we will all flood repeatedly. PLEASE deny this development a water permit so we all don't end up flooded by dirty, polluted water.

COMMENTS: We are very disappointed that the TCEQ is considering allowing up to 55,000 gallons into a creek where we are already so vulnerable to flooding. Several hundred houses flooded here during Allison and many other houses have flooded with very minor rainstorms recently. We have not had a major rainfall amount here since many new subdivisions in the area have been built. The new subdivisions are elevated, but the older subdivisions are going to be even more at risk if this apartment complex gets built. I find it almost impossible to

MWD

believe that thousands of gallons every day will not make us even more susceptible to flooding. I can't believe that any reasonable person would allow this water treatment plant in a neighborhood that is in the middle of two major creeks and has experienced so many flooding problems. Also, how could this water not majorly contribute to pollution when it will have chemicals added to take away bacteria, viruses, nitrates, prescription pill contaminates from urine, etc.. And if it doesn't have a high level of chlorine, etc., then it has bacteria. Many studies have proven how destructive the chemicals are to the environment not too mention the bacteria and viruses which will kill and/or sicken water life, etc.. The greedy developer doesn't care that they will be ruining our entire neighboring, destroying our environment, and our houses. They have many other places to build. By the time anyone notices that they have polluted the creek and caused hundreds of homes to flood, it WILL BE TOO LATE. Please reconsider this permit. I know the TQEC is only concerned with the creek, but the schools are already so crowded that the kids have to change classes outside. There are no sidewalks, no mass transit, etc.. The income numbers are an average which includes a couple very affluent areas, but most of us cannot afford to move now. What will happen when we all flood? The government will be out tax money and WE WILL NOT HAVE A HOUSE!

COMMENTS: Please do not make us more prone to flooding. The flooding was bad, but after the townhouses by Millsap Elem. were built and two other subdivisions were built we won't have a chance. The back of the street in the back of the subdiv. was flooded after 6 inches of rain. Plus, the pollution will ruin the creek. Little by little we'll be in a giant cesspool.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 5 miles of this proposed plant. ***I request a contested case hearing in this matter***. My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek*. Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely, Robert L. Mahan

COMMENTS: Please DENY the permit request. Over the past couple of years the area has experienced significant growth. Many new stores, shops and housing has been developed. This has added to the to the flooding. The flooding was especially noticeable with the extremely raining April and May. I am requesting a public meeting / hearing to discuss this issue.

COMMENTS: Please do not allow this to happen. We live in Lake Cypress Estates, some people on nextdoor.com are referring to it as Kluge Lake. Our neighborhood already has flooding issue since we are in a flood plain. If you allow more water, 55,000 gallons a day to be dumped into our creek, you could be causing devastating effects for the people who already live in this community. I beg of you, please do not allow this to happen. Let alone all the other issues that will come form this project.

COMMENTS: Behind Nantucket Housing, LLC Blazer building Inc. is attempting to construct an apartment complex (Meadows@ Cypress Creek 12321 Huffmeister rd.) that has already been denied by local water districts, State Representatives and protested by community members and organizations. They are requesting a permit to build a waste water treatment plant and dispose of the up to 55,000 gallons of treated water via a storm sewer that will subsequently end up in Cypress Creek. This area is prone to flooding. In fact, recent rains

have caused severe flooding issues in my neighborhood this past month. When this area floods again the possibility of numerous waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. Do NOT permit Nantucket to build this facility in an area already dealing with flooding.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 1 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Lauri McDonald

FAX:

COMMENTS: My name, address and phone number: Philip Neisel 14203 Cypress Creek Blvd. Cypress, TX 77429 713-256-2695 Applicant: Nantucket Housing, LLC Permit # WQ0015381001 (EPA I.D. No. TX0136433) I request a contested case hearing. I am an affected landowner. My property is approximately 1,100 feet north (downwind) of the proposed wastewater treatment plant ("WWTP") and approximately 360 feet from the property line of the Meadows service area. My house is an historic German farmhouse that I

moved from nearby Telge Road and restored at its current location. I invested significant personal funds, time and effort to ensure that the house was completely restored. The windows are in original condition, with custom wooden screens, for the sole purpose of enabling me to have the windows and doors open as much as possible. The odors from the proposed WWTP will directly harm my property and two years of restoration effort. Below are my specific concerns: 1. Smell – As stated above, I invested significant time and money to have the farmhouse windows and doors open as much as possible and especially to be able to sleep with the windows open year-round. This will be almost impossible if I am subject to the whims of the prevailing southerly winds bringing the smell of sewage into my house at any moment. Nantucket's application does not identify any specific or exceptional odor control measures. The wind rose provided by Nantucket clearly identifies the prevailing southerly winds. The chart demonstrates that close to 25% of the time (and possibly much more) the prevailing winds will bring the WWTP's odor in the direction of my house. In fact, the development will leave all the land between the WWTP and my property open, separated only by a detention pond. This is especially concerning, because ongoing maintenance and operational expertise will be required to minimize odor – and as discussed below, Nantucket is not economically incentivized to prioritize such activities. 2. Cost and Quality of WWTP Operations and Maintenance – As you may know, Nantucket has been trying to build a multi-family housing project at 12321 Huffmeister for several years – its former project name was "The Lodge at Huffmeister". All of its capital budgets and operational forecasts were originally developed with the assumption that the development would connect to a water district, thus, there were no budgeted costs to build the WWTP, and the operational forecasts did not include any funds for the ongoing operation and maintenance of its own WWTP. So up-front costs have significantly increased, ongoing costs have likely increased (compared to MUD fees), and the dedication of time and resources for the ultimate operator have also significantly increased over the original projections – but no corresponding market events would appear to warrant higher rents in the area. As discussed below, these changes will likely put undue pressure on project management to cut operational expenses. The proposed development is a low-income multi-family development planned to operate with a thin profit margin to begin with, and there will be significant incentive to cut operational costs as much as possible. This will leave dollars for competent (much less best-in-class) operation of the WWTP at extreme risk for reallocation (if they are even budgeted in the first place). As stated by the TCEQ, "only a system with adequate financial, managerial, and technical capacity can reliably provide . . . basic sanitation service that meets regulatory standards." Given that this system will be small and management will have incentives to cut costs to the bone, the TCEQ's concerns about per person regulatory compliance costs are warranted in this situation. A poorly run WWTP will exponentially increase odor and water pollution for me and my neighbors, and will also unduly pollute an already over-polluted Cypress Creek. Even if Nantucket were making extravagant promises about responsible stewardship of the WWTP (which, notably, it is not), such promises should be viewed with extreme skepticism - Nantucket is the developer – and will probably not be the ultimate owner/operator of the finished project. Nantucket has strong financial incentives to downplay the WWTP's unique capital needs. 3. Flooding – access to my property is via Borgstedt Cemetery Road ("BCR"). The ditch running along BCR regularly backs up even during moderately heavy rains and water even turns the corner backing up toward my house in more sustained storms. With Nantucket's regular sewage flow through the storm drain system, the flooding will be even more pronounced and have the added insult of containing sewage effluent. Additionally, the WWTP as designed has no buffer storage tanks, so even during heavy rain events, the WWTP will be contributing over 2,000 gallons of sewage effluent per hour to the roadside ditch along Huffmeister – a ditch that (like BCR) floods and backs up with even moderately heavy rain. 4. Regionalization Policy – although it is true that this development does not have access to a local water district, the TCEQ's policy on plant regionalization should still prevent approval of the proposed WWTP. As discussed above, Nantucket is proposing the WWTP only as an afterthought after being rejected from the water districts. We have no assurance that the project will ultimately be run by an entity that has the funds, expertise or the financial incentive to provide for high-quality ongoing maintenance for this relatively small WWTP. This is precisely the type of small plant that could find itself "unable to sustain the financial, managerial, and technical capabilities necessary to provide continuous and adequate service." As stated above, a poorly operated and maintained WWTP will significantly and disproportionately impact me and my neighbors.

COMMENTS: I am requesting that you deny Nantucket Housing, LLC's request for a permit. Cypress Creek is already overly burdened and floods (as we've seen during the recent rains). Sending 55,000 gallons of waste water into the creek would be detrimental to the area, not just because of the flood risk, but because of the harm it could do to the ecosystem as well. The chemicals used to treat the waste water, in addition to the waterborne pathogens in the water, will have a negative impact on the creek and the ecosystem; the creek that my family

MW

and I currently fish in it, skim board in and hike along. Please schedule a public hearing on this matter to allow residents to submit comments and ask questions regarding this permit request.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately one miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek*. Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

John Parker

COMMENTS: I request that this permit be denied. Additional drainage into Cypress Creek will be a burden that increases flooding risk in a neighborhood that already experiences significant flooding. The added risk of water quality problems from this unnecessary new development is also unwelcome. This is an addendum to an earlier comment I made on this permit. I would further request, if the permit is not denied outright, that there be

a public hearing on the matter, so that those of us who would be adversely affected by this project can ensure that our opposition, and the reasons for it, are clearly understood.

COMMENTS: I object to the granting of this permit because the development it's designed to support is not only unnecessary (the area is already fully served by rental housing), but also will place undesirable strain on the resources of the area, most particularly schools, roadways, and policing resources. As I understand it, the developer has requested inclusion in the local MUD plan and has been denied due to overwhelming opposition from the community which would be adversely affected by the development, and is seeking approval of the

referenced permit as a way to force the development on that unwilling community. I join my neighbors in requesting the denial of this permit.

Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, bike riding or hiking through the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.
2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have been historically high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

LAWRENCE PETRU

Re: Proposed Permit WQ0015381001

Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 0 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

COMMENTS: This permit needs to be denied because: A. flooding is already a problem in the Cypress area- this permit request to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. B. Effluent is treated waste water which increases the possibility of numerous waterborne pathogens, including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can

harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking , biking and atv trails. I request that a Public Meeting be held to allow the opportunity to submit comments and ask questions regarding this permit request.

Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, bike riding or hiking through the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.
2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have been historically high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.
3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.
4) *The characterization of the discharge route.* We want to make sure the 'uses' of the discharge route are properly characterized to achieve the most stringent treatment levels possible.
5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely, Christine Royer

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately ____ miles of this proposed plant. ***I request a contested case hearing in this matter***. My concerns include the following:

(1) *Nuisance conditions*. Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek*. Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy*. There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route*. We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements*. Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

COMMENTS: I am voting to deny the water plant facility across from Millsap Elementary. I can't imagine anyone approving to dump waste water into a place children play in and fish in. Who knows what the side affect will be 20 years from now. No matter what the studies say now, they can't predict the long term affects of this. We have seen it happen everywhere. It was safe at the time but not it isn't. Let's put the lives of people and animals first before money. We owe it to the next generation.

COMMENTS: I am writing to please deny this permit. It affects not only the people in the community but the people that will live in this facility. The school is this are is already at 52% economically disadvantage and growing ever year. There is not enough support in this area to help these low income children. Adding more low income families does not help anyone. Low income families need to be placed in areas where their needs can be met not brought down even further. Building this facility will bring down the kids that are already here and the

kids to come.Why would anyone do that on purpose? We need to help everyone. Also this is already a flood zone. I can't imagine adding more water problems to an area that already has problems. It just can't all be about money. Someone in the company needs to stand up and do the right thing.

HOUSTON TX 77065-2305

PHONE: 2815435388

FAX: 2815435388

COMMENTS: I request that the permit be DENIED. I believe that there will be the following: a. Flooding – Cypress Creek already overly burdened and prone to flooding – this permit request is to allow the addition of 55,000 gallons of effluent to the creek on a daily basis. This does not include the addition of storm water from the developed property. b. Effluent is treated waste water which increases the possibility of numerous

MWD

waterborne pathogens , including but not limited to viruses, bacteria, salmonella & protozoa, being released is a substantial concern. The chemicals used in the treatment process can harm the aquatic life that resides in Cypress Creek and change the water quality. The potential for eutrophication because of these chemicals can change the entire ecosystem of a creek that is currently used for agriculture, fishing, kayaking and swimming as well as walking, biking and atv trails. I wish to specifically request that a Public Meeting be held allowing an opportunity to submit comments and ask questions regarding this permit request. We have rights as homeowners to get the facts regarding building in our area. We should be informed in a timely manner. Thank you and look forward to the hearing!! Barbara P. Smith

COMMENTS: I request that you DENY this permit. I live in the subdivision immediately downstream of where this waste water will be dumped. We already have issues with street flooding in my area of the subdivision when we get heavy rain and more water being dumped just upstream will surely ensure that the street flooding will be worse and could endanger my home. The attached picture shows flooding a couple of

years ago and the water is only 2 houses away from my home. The water stays up for several days and does not recede quickly. My other concern is that there will be additional on-going erosion to the creek. This creek is also used for recreational use by many of our kids who swim and skim less than a 1/2 mile from where this additional water will be dumped. I would like to request a PUBLIC HEARING be held regarding this permit.

COMMENTS: An additional 55,000 gallons of treated water into Cypress Creek causes me great concern as I live one row of houses away from this creek. Whenever we have a day or two of hard rain, our street drainage backs up and we get street flooding in my part of Ravensway subdivision. Any additional water will make the creek more susceptible to flood and my home could be in danger.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 4 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

COMMENTS: DENY THIS PERMIT!Cypress Creek is already overburdened and does flood.Additional 55,000 gallons of effluent(including chemicals used to treat the waste water) from Nantucket Housing's proposed plant is devastating for the creek.I'm sure you know the chemicals will harm the creek's aquatic life as well as increase viruses,harmful bacteria,salmonella and other harmful waterborne pathogens.This beautiful creek is used for agriculture,fishing,kayaking and swimming as well as hiking and biking trails.It is a

beautiful,natural area.Do not doom it to death as many waterways in Houston have done.At the very least,allow a public meeting so that those who care about this area and Cypress Creek can comment and ask questions!Please, please DENY THIS PERMIT!

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately 1 miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Budget A. Talero

MW

TCEQ,

The narrow scope of your mission is not consistent with the overall public good. The overall approval of a total project including a building and a sewage plant is most appropriate with overall public good.

I found it quite disappointing that the developer chose to not attend the meeting. Citizens have a right to listen to and talk with those who have a significant

Given the number of concerns addressed during the meeting about flooding, pollution, the entire project receiving fresh water, fertilizer, 100 year flood plain, greenbelt development, and similar, I request the commissioners refer to a hearing ~~to~~ to determine the overall effect of this project.

Thank you,

William C. Wilson

Presentations.....Applicant & TCEQ

Informal Discussion Period

Questions & Answers.....Public

Members of the public may ask questions during this time period. TCEQ staff and the Applicant will respond to questions. This time period is for discussion purposes and for obtaining information from TCEQ staff and the Applicant. **Questions and/or comments made during this period will not be considered formal comment, and will not go to the Commissioners. Additionally, no written response will be prepared for comments made during this period.**

Formal Comment Period

Formal Comments.....Public

During the formal comment period members of the public may voice concerns or comments. **Neither the Applicant nor TCEQ staff will respond during the formal comment period.** After the close of all comment periods, the Executive Director will summarize the formal comments and prepare a written response to comments (RTC). This RTC will be made available to the public and will also be mailed to those who submitted written comments or formal comments at a public meeting.

Everyone who wishes to comment will have the opportunity to do so, however, we may ask that each commentor limit their time so that everyone will have time to speak.

Closing Remarks/Adjournment.....TCEQ

Please Note: Written comments may be submitted anytime during the evening.

Re: **Proposed Permit WQ0015381001**
Nantucket Housing LLC proposed project on Huffmeister Road

Dear TCEQ:

Our community is concerned about the wastewater treatment plant proposed by Nantucket Housing on Huffmeister Road. I live within approximately ____ miles of this proposed plant. ***I request a contested case hearing in this matter.*** My concerns include the following:

(1) *Nuisance conditions.* Odors and pollutants will come from the wastewater treatment plant, and will be worse during bypass events. Also, my family recreates around Cypress Creek, and from time to time may go swimming in the creek, or enjoy other activities in parks near the creek. I do not want bacteria and other pollutants being discharged into Cypress Creek.

(2) *An increase of pollutant loading into Cypress Creek.* Bacteria levels have historically been high in Cypress Creek, and contact recreation is an issue. The draft permit has not yet been issued, but we believe the new plant will cause high pollutant levels and will interfere with existing recreational and other uses of the creek. Also, the package plant will not remove pharmaceuticals, which have negative effects on human and aquatic life. Overall, the package plant will further degrade the receiving waters and may violate the Texas Surface Water Quality Standards.

(3) *The proposed plant and the TCEQ's regionalization policy.* There are already more than 150 small treatment plants in the Cypress watershed feeding into Cypress Creek. This is an additional wastewater plant for a SINGLE development. The plant proposed by this permit will violate the TCEQ's regionalization policy.

(4) *The characterization of the discharge route.* We want to make sure the "uses" of the discharge route are properly characterized to achieve the most stringent treatment levels possible.

(5) *Siting requirements.* Some residents in the area have groundwater wells, and we want to make sure residents are protected. We want to make sure the distance requirements are met for odors and well protection.

Sincerely,

Ann Wohn Ann Wohn
