The Joint Groundwater Monitoring and Contamination Report was designed and produced by the Texas Groundwater Protection Committee in fulfillment of requirements given in Section 26.406 of the Texas Water Code. The effort was partially funded by the U.S. Environmental Protection Agency. While the information contained in the report represents the contribution of each individual participating agency and group, the report as a whole is the work of the committee and does not necessarily reflect all of the views and policies of each participating organization.

Authorization for use or reproduction of any original material contained in this publication, which is not obtained from other sources, is freely granted. The committee would appreciate acknowledgment.

Published and distributed by the

# SUMMARY

The Texas Groundwater Protection Committee (TGPC) was created by the 71<sup>st</sup> Texas Legislature in 1989 to bridge gaps between existing state groundwater programs and to optimize water-quality protection by improving coordination among agencies involved in groundwater activities. Sections 26.401 through 26.408 of the Texas Water Code (TWC), does the following:

- sets out the state's groundwater protection policy;
- provides legislative recognition for the TGPC;
- requires the TGPC to coordinate the groundwater protection activities of state agencies;
- requires the TGPC to develop and update a comprehensive groundwater protection strategy for the state; and
- requires the TGPC to develop the format for notices of groundwater contamination.

State law requires the TGPC to publish an annual report on groundwater monitoring activities and cases of documented groundwater contamination associated with activities regulated by state agencies. The TGPC is required to prepare this report based on the activities of the Texas Commission on Environmental Quality (TCEQ), the Texas Water Development Board (TWDB), the Railroad Commission of Texas (RCT), the Department of State Health Services (DSHS), the Texas Department of Agriculture (TDA), the Texas State Soil and Water Conservation Board (TSSWCB), the Texas Alliance of Groundwater Districts (TAGD), the Texas AgriLife Research (TAR), the Bureau of Economic Geology of the University of Texas at Austin (BEG), and the Texas Department of Licensing and Regulation (TDLR).

This is the TGPC's twentieth edition of the Joint Groundwater Monitoring and Contamination Report, which was first issued in 1990 for calendar year 1989. Each report is based on data from the previous calendar year.

The report describes the current status of groundwater monitoring programs for each participating agency, and describes 4,729 groundwater contamination cases documented or under enforcement during the 2008 calendar year. The report further describes the enforcement status of each case of groundwater contamination in the accompanying tables.

## Purpose and Scope

The annual report describes the current status of groundwater monitoring activities conducted or required by each agency at regulated facilities or associated with regulated activities. Groundwater monitoring is conducted by members of the TGPC to assure regulatory compliance for groundwater protection, and to assess ambient groundwater quality. The report provides a general overview of groundwater monitoring by participating members on a program-by-program basis.

Additionally, the report provides the status of documented groundwater contamination reasonably suspected of having been caused by activities regulated by

state agencies. The report contains a description of each case of groundwater contamination newly documented during the previous calendar year, along with a description of each case of contamination documented during previous periods for which remedial or enforcement action was incomplete at the time the preceding report was issued. The report tables contain the status of enforcement action for each listed case.

Groundwater contamination is broadly defined in the report as any detrimental alteration of the naturally occurring quality of groundwater. The definition is limited, however, to contamination suspected of being associated with activities under the jurisdiction of the contributing agencies and affecting usable-quality groundwater.

Naturally occurring groundwater conditions, such as a high degree of mineralization that may exceed established standards for public supplies of drinking water, are not included within the definition. The scope of the report is further limited to groundwater contamination that has been documented and to cases that are currently under enforcement action of some kind.

Historical cases of documented contamination have not been included unless enforcement action is still active, open, or ongoing. However, cases that have been included in the reports from 1994 through 2007 as “action completed,” with a notation of “no further action needed,” and those that use institutional or engineering controls where groundwater contamination is still present, are included separately in Appendix 10. For these cases, though no enforcement action is currently active, the appendix provides a record that the groundwater contamination is, or may still be, present.

The report provides technical and administrative agency file numbers and file locations for groundwater contamination cases, field office locations, and agency contacts to assist those who are interested in obtaining or reviewing case-specific data. In addition, the report provides background information on monitoring and regulatory rules and policies of groundwater-related programs for each agency. This information is compiled to assist the public and state policy makers in interpreting the current status of groundwater contamination in the state and the degree of state agency response directed toward the contamination.

The report satisfies the legislative requirement of TWC Section 26.406 to provide the enforcement status of each case. However, the report must be interpreted in light of the specific geographic constraints and the specific enforcement authorities and procedures of each contributing entity. The conclusions on groundwater contamination and the related specific enforcement actions taken by each individual agency are not subject to the review of the TGPC.

## **Notification to Local Officials and Public Information**

This report is compiled and made available to the public to provide the annual status of groundwater monitoring associated with the regulatory, planning, and administrative programs of state agencies and local groundwater conservation districts. The report also gives the annual status of documented groundwater contamination reasonably suspected of having been caused by activities under the

jurisdiction of those programs. Monitoring is discussed in the individual program descriptions.

State law (Section 26.406 TWC) requires the agencies that have groundwater protection responsibilities to maintain a file of all documented cases of groundwater contamination. This information is a matter of public record and is available for public review by arrangement with the respective agency. All groundwater contamination cases documented or under enforcement during 2008 are listed in three tables.

While Section 26.406 TWC requires the report tabulate all cases of groundwater contamination documented or under enforcement for the preceding calendar year, Section 5.236 TWC also requires the TCEQ to provide notice to local officials about groundwater contamination that may affect drinking water supplies in their area. Table 1 identifies these cases with a mark in the column headed “SECTION 5.236”.

A copy of this report or a Web link to access the report is provided to county judges and local public health entities to supply information on potential groundwater impacts to drinking water supplies within the listed counties. The report serves as the TCEQ’s secondary notice to local officials, who should have received letters advising them of new cases as well as newly confirmed cases, meeting the criteria of potential impact to drinking water. The Section 5.236 cases are identified in the report only for the year the case is first determined to be affecting or having the potential to affect a public drinking water supply. There are 32 reported Section 5.236 cases identified in Table 1.

Section 26.408 TWC became effective on September 1, 2003, and requires TCEQ to provide notice of groundwater contamination to owners of private drinking water wells that could be affected by groundwater contamination, and also to affected groundwater conservation districts. This state law requires the TCEQ to provide this notice within 30 days of the date the agency becomes aware of or documents the contamination and requires the TGPC to adopt rules to prescribe the form and content of the required notice. TGPC rules in 31 TAC Section 601.10, effective on November 12, 2003, prescribe the required TCEQ groundwater contamination notice contents (Appendix 4).

## **Groundwater Protection**

Chapter 26 TWC empowers the TCEQ to establish the level of water quality to be maintained and control sources of pollutants that may affect the quality of water in the state, including groundwater. Certain activities requiring the regulatory protection of groundwater are also under the jurisdiction of the RCT, the TDA, the TSSWCB, and the TDLR.

The TAGD, as an organization, has no regulatory or enforcement mandate, but some groundwater conservations districts (GCDs) have limited authority for action on groundwater contamination. The TWDB has certain monitoring responsibilities regarding groundwater characterization and planning, but is not authorized to regulate activities that may contaminate groundwater. The TAR and the BEG conduct research activities related to groundwater.

The state's groundwater protection policy (Section 26.401 TWC, Appendix 2) sets out nondegradation of the state's groundwater resources as the goal for all state programs. The policy recognizes the following principles:

- the variability of the state's aquifers;
- the importance of maintaining water quality for existing and potential uses;
- the protection of the environment, and public health and welfare; and
- the maintenance and enhancement of the long-term economic health of the state.

This goal of nondegradation does not mean zero-contaminant discharge. The use of best professional judgment by the responsible state agencies in attaining the goal and policy is also recognized.

The TGPC identified groundwater classification (Appendix 3) as an important tool to be used in the implementation of the state's groundwater protection policy and developed such a system for use by state agencies. Through classification, the groundwaters in the state can be categorized. Protection or restoration measures can then be specified by member agencies according to the quality and present or potential use of the groundwater. The classification developed by the TGPC is based on water quality criteria supporting present and potential uses.

The state's policy on groundwater contamination is that the quality should be restored if feasible. Recognizing that in some cases, it may not be technically possible or cost-effective to clean groundwater to its original quality, the TGPC recommends an approach that focuses on protection of groundwater for its highest quality use related to human health and the environment, while addressing the costs of available remediation technologies.

## **Groundwater Monitoring**

The groundwater monitoring programs of the participating agencies generally fall within one of three categories:

- regulatory agencies requiring or conducting monitoring to assure compliance with guidelines and regulations for the protection of groundwater from discharges of contaminants;
- agencies or entities conducting monitoring to assess ambient or existing groundwater quality conditions and to track changes in water quality over time; and
- agencies or entities conducting research activities related to groundwater resources and groundwater conservation.

Detailed monitoring program descriptions are given in each agency's or entity's section in the chapter entitled Groundwater Protection Program Descriptions.

Each regulatory agency which requires or conducts groundwater monitoring to assure compliance with guidelines and regulations to protect groundwater from discharges of contaminants has its own monitoring program requirements and procedures. Criteria used to assess the need for groundwater monitoring vary among the regulatory entities.

Data indicate that an estimated 37,000 monitor and water wells are being used for groundwater monitoring purposes at these regulated facilities. The majority of the facilities being monitored (approximately 99 percent) are under the jurisdiction of the TCEQ, with the remainder under the jurisdiction of the RCT and TAGD.

The TWDB and the member districts of the TAGD conduct groundwater monitoring to assess ambient groundwater quality conditions through the assessment of particular constituents to track changes in water quality over time. Monitoring-program activities reported by the TWDB and participating organizations involved over 708 water wells in 2008.

Additionally, some monitoring programs are developed for water-quality assessment studies that target specific geographic areas, specific contaminants or constituents, or specific activities. Contamination cases discovered by these agencies or entities through groundwater studies or groundwater sampling programs are referred to the regulatory agency with appropriate jurisdiction.

The ambient groundwater monitoring network has historic limitations for the parameters that have been analyzed. There are very few historical analyses available for constituents that can generally be attributed to anthropogenic (human-induced) sources.

For example, there are limited analyses available for constituents such as volatile and synthetic organic compounds and certain heavy metals. Ambient monitoring has not traditionally targeted pesticides. Drinking water analyses conducted under the Safe Drinking Water Act (SDWA) include some pesticides in their suite of chemicals, however, this program targets “finished” water, not groundwater specifically. Analyses conducted under the United States Geological Survey (USGS) National Water Quality Assessment (NWQA) program also include pesticides in a wide range of constituents. The TCEQ, TWDB, and members of TAGD have implemented a cooperative program since the year 2000 through which ambient groundwater samples collected by TWDB and groundwater conservation district staff are analyzed by TCEQ staff mainly for Atrazine and Metolachlor.

In general, the waste disposal programs of the TCEQ and the RCT are monitoring existing and permitted facilities. Groundwater monitoring requirements have been established for the petroleum storage tank, industrial and hazardous waste, municipal waste, underground injection control, pollution cleanup, and enforcement programs. Initiatives in the municipal and industrial wastewater permitting program have required groundwater monitoring at facilities where activities pose a higher risk to groundwater quality. Additionally, permits required for surface storage and disposal of oil and gas waste and brine retention ensure the protection of groundwater by requiring pond liners, leak detection systems, groundwater monitoring, or a combination of these methods.

In the drinking water program, public water supply wells are also regulated by the TCEQ’s Office of Permitting and Registration. Public water systems receive sufficient monitoring to ensure that violations of drinking water standards are detected and addressed before water is distributed to consumers.

Currently, there is no state program for monitoring domestic wells, though some GCDs do have programs that routinely monitor private water wells for ambient conditions or suspected contamination. The TDLR is responsible for oversight of licensed water well drillers, responding to complaints and routinely checking compliance with TDLR rules. The TAR provides outreach, continuing education programs, and other educational services on water quality to the people of Texas.

## Groundwater Contamination

The groundwater contamination cases listed in this report have been documented predominantly through regulatory requirements for compliance monitoring. The majority of the cases were identified by release-detection monitoring in the TCEQ's petroleum storage tank program. Other information in this report identifies groundwater contamination cases that have been documented through investigations in response to groundwater contamination complaints, permits, or self reporting. However, groundwater contamination is most commonly detected when site-specific groundwater monitoring is conducted at waste disposal or product storage sites.

Groundwater contamination, as defined by the TGPC for this report, is the detrimental alteration of the naturally occurring physical, thermal, chemical, or biological quality of groundwater reasonably suspected of having been caused by the activities of entities under the jurisdiction of the agencies discussed within this report. The TGPC recognizes that groundwater contamination may result from many sources, including current and past oil and gas production and related practices, agricultural activities, industrial and manufacturing processes, commercial and business endeavors, domestic activities, and natural sources that may be influenced by, or may result from, human activities. The contamination cases identified in this report are primarily those where contaminants have been discharged to the surface, to the shallow subsurface, or directly to groundwater from activities such as the storage, processing, transport, or disposal of products or waste materials.

Documented in this report are 4,729 groundwater contamination cases. These cases are presented in a tabular format in the section entitled "Groundwater Contamination Case Descriptions." Approximately 91.6 percent of the documented cases fall under the jurisdiction of the TCEQ. The remainder of the cases fall under the jurisdiction of the RCT (395 cases, or 8.3 percent), and the groundwater conservation districts which are members of TAGD (1 case, or less than 0.1 percent).

On occasion, a contamination site may be listed more than once for some TCEQ program areas. This occurs because there is more than one occurrence of contamination at the named facility, and each occurrence is being addressed as a separate case. In the case of the Voluntary Cleanup Program (VCP), several parties may be affected by a groundwater contamination plume, and each of these parties is listed as a separate "case" in the VCP program. Every effort has been made to distill cases down to a single, individual occurrence of groundwater contamination.

The most common contaminants reported include gasoline, diesel, and other petroleum products. This reflects the large number of contamination sites (65 percent of the documented cases) reported by the TCEQ's petroleum storage tank program. Less common contaminants include the following: organic compounds, such as phenol, trichloroethylene, carbon tetrachloride, dichloroethylene, and naphthalene;

and pesticides, including alachlor, atrazine, bromacil, dicamba, and prometon; creosote constituents; solvents; heavy metals; and sodium chloride.

The report indicates the status of enforcement action for each case of groundwater contamination. Codes describing the enforcement status and the activity status are given for each contamination case. In general, regulatory programs are structured to achieve the desired degree of environmental protection at the lowest possible level of agency oversight. The enforcement status code represents the level of agency procedural action in pursuing investigation and remediation.

Describing an agency's enforcement actions presents only half the regulatory picture. Enforcement is ineffective if the required corrective actions are not carried out. Therefore, agency activities dealing with contamination incidents are assigned an activity status code. This code represents the current action addressing the assessment and mitigation of the contamination case. These two indicators (the enforcement status and activity status codes) are plotted graphically as a matrix to illustrate their combined effect on the enforcement status of each contamination case. The cumulative number of cases that have been assigned each enforcement status code is found in the enforcement status summary matrix at the end of each agency's groundwater contamination case table. The enforcement status matrix, enforcement status codes, and activity status codes are discussed in detail in the section entitled "User's Guide" on pages 33 through 40. Specific enforcement actions are typically described in each agency's program description.

The total number of groundwater contamination cases documented and identified by the TGPC in this and previous reports is tabulated in Figure 1, along with the activity status for these cases. All of the 4,729 cases listed in the data tables of this report have documented groundwater contamination. The activity status for each case is identified in the tables, and is summarized as follows for calendar year 2008:

- No activity has occurred in 217 reported cases.
- Detection of contamination is confirmed (validated) in 620 cases.
- Investigations are ongoing for the largest number of cases (2,056).
- Corrective action planning is completed in 247 cases.
- Action has been implemented in 807 cases.
- Monitoring action is ongoing in 518 cases.
- No further action is necessary for 687 cases that are designated as "action completed."
- No activity status information was provided for two cases.

Figure 2a is a graph showing the total number of documented contamination cases, the number of new cases of contamination, and the number of sites where enforcement action was completed plotted against the calendar year of the report. Figure 2b is a graph showing the historical activity status of groundwater contamination cases, plotted against the calendar year of the report.

Several general observations can be drawn from the limited data represented in Figures 1, 2a, and 2b. The limitations of the data do not allow for forecasting of probable trends. In addition, the use of the term "trend" may be too definitive, and should only be considered as a general observation of the historic data compiled to date.

The number of new cases had annually decreased up to 1995, but increased in that year and continued to increase through 1998. These increases are chiefly attributed to increased release detection activity in the Texas Natural Resource Conservation Commission's (now the TCEQ's) Petroleum Storage Tank program, as well as to the initiation of milestone deadlines related to detection monitoring and cleanup expense reimbursement. These milestone deadlines required some types of remediation activities to be in place before the end of 1998 to qualify for reimbursement. Consequently, a slight decline in the number of new cases is noted for 1999. Another part of the upward trend in the number of new cases can also be attributed to cases being reported under the Voluntary Cleanup Program of the TCEQ, which was established in 1995.

Historically, the number of new groundwater contamination cases documented each year has been greater than the number of cases in which action was completed during the same year. This was evident in the initial publication of the report in 1989, and continued through the 1999 calendar year. (The elevated number of cases where action had been completed in the initial report was cumulative up to the end of 1989, because this reporting period was open-ended, including historical cases before 1989). Starting in 2000, there has been a decline in the number of new groundwater contamination cases. The number of new cases reported in 2008 decreased by 13 percent from 2007. The number of cases where action was completed fluctuated. The number of completed cases declined in 2008 by 37 percent from the previous year. The number of completed cases for 2008 has again surpassed the number of reported new groundwater contamination cases.

Cases shown as having "contamination confirmed" peaked in 1991 and have fluctuated since then. Cases listed as being under "ongoing investigation" and "corrective action planning" reached a relative plateau in the period from 1992 through 1996. Because groundwater contamination is generally slow moving and time consuming to clean up, the number of cases shown as being under "ongoing investigation" began to rise again in 1996, to peak in 1999 and started to decline since 2000. Cases listed as having "action implemented" reached a relative plateau with an approximate one-year lag behind "corrective action planning," indicating that the cases are moving through the sequence of actions that should ultimately lead to completion. The overall numbers also reflect the maturing of the TCEQ regulatory programs, after adjustment for case increases resulting from major regulatory initiatives.

For all of the agencies and entities over the 18-year period from 1991 through 2008 (Figure 1), action has been reported as complete on a total of 12,711 groundwater contamination cases, and the cases were dropped from each successive annual report. Action was completed on 687 cases in 2008. Action on these cases was considered complete when the desired remedy was achieved or when no further regulatory action was required.

# GROUNDWATER PROTECTION

The following section gives an overview of groundwater protection topics including: the TGPC, the state's groundwater protection policy, the TGPC's recommended groundwater classification system, risk-based cleanup levels for groundwater, the definition of groundwater contamination as it applies to this report, and notification to and from regulatory agencies concerning groundwater contamination. Additional sources of public information are also discussed.

## Texas Groundwater Protection Committee

The Texas Groundwater Protection Committee was created by the 71<sup>st</sup> Texas Legislature in 1989 as a means to bridge gaps between existing state groundwater programs and to optimize water-quality protection by improving coordination among agencies involved in groundwater activities. State law codified in §§26.401 through 26.408 TWC established the TGPC; outlined the TGPC's powers, duties, and responsibilities; and established the state's groundwater protection policy.

The TGPC actively identifies opportunities to improve existing groundwater quality programs and promotes coordination between agencies. The TGPC also strives to improve or identify areas where new or existing programs could be enhanced to provide added protection. Major responsibilities of the TGPC are:

- to improve interagency coordination in the area of groundwater protection;
- to develop and update a comprehensive groundwater protection strategy for the state;
- to study and recommend to the Legislature groundwater protection programs for areas in which groundwater is not protected by current regulation;
- to publish an interagency groundwater monitoring and contamination report;
- to file with the governor, lieutenant governor, and speaker of the House of Representatives a report of the TGPC's activities during the biennium preceding each regular legislative session, including any recommendations for legislation for groundwater protection;
- to advise the TCEQ on the development of agricultural chemical plans to prevent groundwater pollution; and
- develop the form and content of notices of groundwater contamination.

The TGPC's membership is composed of the following individuals or their designated representative:

- the executive director of the Texas Commission on Environmental Quality;
- the executive administrator of the Texas Water Development Board;
- the executive director of the Railroad Commission of Texas;
- the commissioner of Department of State Health Services;
- the deputy commissioner of the Department of Agriculture;
- the executive director of the Texas State Soil and Water Conservation Board;
- a representative selected by the Texas Alliance of Groundwater Districts;
- the director of the Texas AgriLife Research;
- the director of the Bureau of Economic Geology, University of Texas at Austin; and

- a representative of the Water Well Drillers and Water Well Pump Installers Program of the Texas Department of Licensing and Regulation selected by the executive director of the department.

The executive director of the TCEQ serves as the TGPC's chairman. The TCEQ is designated as the lead agency for the TGPC and administers the activities of the TGPC. The executive administrator of the TWDB serves as the TGPC's vice-chairman. TGPC members and their designated representatives are listed in Appendix 1.

### ***Federal Involvement and Coordination***

The TGPC actively coordinates with federal agencies on groundwater protection issues that affect the state. The TGPC has worked with federal agencies on issues related to a comprehensive state groundwater protection program and the development of pesticide management plans for the prevention of groundwater contamination. In addition, the TGPC has regularly provided national level input to federal agencies on groundwater protection and program issues through the Ground Water Protection Council (an association of state groundwater and underground injection control program directors) and the State FIFRA Issues Research Evaluation Group (a group formed by state agricultural regulatory officials and EPA to discuss and evaluate pesticide matters affecting states), and other state and federal stakeholder and regulatory guidance groups.

The TGPC also works closely with the U.S. Geological Survey (USGS), the federal agency with responsibilities that include national level geologic mapping and hydrologic studies. Staff of the USGS has participated in various TGPC-sponsored projects, providing groundwater expertise and opportunities for state input in federally-sponsored research.

In March 1985, the Texas Department of Water Resources, predecessor to the TCEQ and the TWDB, received a grant from the U.S. Environmental Protection Agency (EPA) to improve the coordination of groundwater protection activities undertaken by state agencies. In response to this federal initiative, the interagency Groundwater Protection Committee, predecessor to the Texas Groundwater Protection Committee, was formed. Since that time, the coordination of groundwater protection activities of the various state programs and agencies and the development of a groundwater protection strategy have been guided and funded through EPA grants administered under the Clean Water Act, Section 106.

### ***State Groundwater Protection Strategy***

In evaluating the states' activities under the groundwater protection strategy initiative begun in the early 1980s, the EPA concluded that additional efforts were needed to protect the nation's groundwater, and that groundwater protection programs were a patchwork of federal, state, and local efforts that focus on individual sources of contamination rather than protection of the resource as a whole. During fiscal years 1992 and 1993, the EPA published draft guidance for the development of comprehensive state groundwater protection programs (CSGWPP). The CSGWPP guidance encourages the states to further their efforts in developing existing programs into a more comprehensive approach. The final guidance was published early in 1993.

The TGPC is charged with developing a comprehensive strategy that coordinates the activities of all the participating agencies and documents what needs to be done to protect groundwater in the State of Texas, The TGPC addressed this duty directly in 1988 through the formal publication of the *Texas Ground Water Protection Strategy*. Since that time, there have been several efforts to describe changes to the groundwater protection programs and authorities of state agencies with respect to groundwater, in the *Texas Ground Water Protection Profiles*, 1991, and later in the various editions of the annual *Joint Groundwater Monitoring and Contamination Report*. There have been many changes in agencies and the programs that they administer since 1988. The more recent publications have focused on the water quality aspects of various programs rather than the state strategy for groundwater protection.

Recognizing the changes that have occurred since the state's first groundwater protection strategy was developed, the TGPC decided in January 2001 to begin the process to update it. That process resulted in the document, *Texas Groundwater Protection Strategy*, TCEQ Publication No. AS-188, February 2003. The new *Strategy* is providing a road map for the current activities of the TGPC. The *Strategy* is divided into thematic sections designed to highlight the state's current protection efforts, and importantly, identify any gaps that may need to be filled among those programs.

The *Strategy*:

- details the state's groundwater protection goal as established by the Legislature;
- explains the statewide groundwater classification system and how the state identifies contamination and quantity issues;
- describes the roles and responsibilities of the various state agencies involved in groundwater protection and discusses the TGPC as a coordinating mechanism;
- provides examples of how the various state agencies implement groundwater protection programs through regulatory and non-regulatory models;
- explains how the local, state, and federal agencies coordinate management of groundwater data for the enhancement of groundwater protection;
- discusses the role that research plays in understanding groundwater's importance and the importance of coordinating research efforts;
- provides an overview of the groundwater public education efforts in the state;
- discusses public participation in establishing and implementing groundwater policy;
- lays out a planning process for updating the groundwater Strategy;
- proposes for inclusion in the next strategy an identification and ranking of significant threats to the state's groundwater resource, consideration of the vulnerability of groundwater resources, and a prioritization of actions to address those threats; and
- provides recommendations and possible actions to protect groundwater.

## **Meetings**

The TGPC and most of its subcommittees meet quarterly; meeting times and agendas are published on the TGPC's website at [www.tgpc.state.tx.us](http://www.tgpc.state.tx.us) and in the *Texas Register* on their open meetings website at [www.sos.state.tx.us/texreg/index.shtml](http://www.sos.state.tx.us/texreg/index.shtml). The public is invited to attend all meetings. The TCEQ maintains written records of all TGPC meetings. The TCEQ maintains a mailing list of TGPC members, designated and alternate members, agency staff, and interested parties for meeting notification.

## **Groundwater Protection Policy**

Section 26.401 TWC establishes the state's groundwater protection policy. The policy (see Appendix 2) sets out nondegradation groundwater resources as the goal for all state programs. The policy recognizes the variability of the state's aquifers, the importance of maintaining water quality for existing and potential uses, the protection of the environment and the public health and welfare, and the maintenance and enhancement of the long-term economic health of the state. Further, the policy recognizes that groundwater contamination may result from many sources, including current and past oil and gas production and related practices, agricultural activities, industrial and manufacturing processes, commercial and business endeavors, domestic activities, and natural sources that may be influenced by, or may result from, human activities. The use of the best professional judgment by the responsible state agencies in attaining the goal and policy is also recognized.

The policy states that discharges of pollutants, disposal of wastes, and other regulated activities should be conducted in a manner that will maintain present uses and not impair potential uses of groundwater or pose a public health hazard. The programs of the various state agencies are generally coordinated to attain this goal.

## **Groundwater Classification System**

The TGPC and its member agencies recognize that groundwater classification is an important tool to be used in the implementation of the state's groundwater protection policy. Through classification, the groundwater in the state can be categorized and protection or restoration measures can then be specified by member agencies according to the quality and present or potential use of the groundwater.

The TGPC has developed a Groundwater Classification System for use by state agencies. Four groundwater classes are defined based on quality as determined by total dissolved solids (TDS) content. The names and concentration ranges are based on traditional nomenclature associated with each class. Fresh groundwater is classified as having a TDS concentration range from zero to 1,000 milligrams per liter (mg/l); slightly saline groundwater, a TDS concentration range from 1,000 to 3,000 mg/l; moderately saline groundwater, a TDS concentration range from 3,000 to 10,000 mg/l; and very saline groundwater to brine, a TDS concentration greater than 10,000 mg/l. Quality also determines usability; however, it is implicit in the classification that a water-bearing zone must be able to produce sufficient quantities of water to meet its intended use. Appendix 3 contains the Groundwater Classification System recommended by the TGPC.

The Groundwater Classification System is applicable to all groundwater in the state. In assigning a classification, the member agencies attempt to use the natural quality of the groundwater that is unaffected by discharges of pollutants from human activities. All usable and potentially usable groundwater is subject to the same protection provided by the state's groundwater protection policy. Starting with the nondegradation goal, protection or restoration measures can be varied according to the response level set by the classification so long as the following conditions are met:

- Current groundwater uses are not impaired;
- Potential groundwater uses are not impaired;
- A public health hazard is not created; and
- The quality of groundwater is restored if feasible.

In determining protection or restoration measures, an agency considers all present or potential beneficial uses of groundwater of a given quality. Generally, drinking water for human consumption would require the highest degree of groundwater protection or restoration. Protection for this use will also, arguably, be protective of all other current or potential uses. These considerations facilitated defining two response levels for purposes of assigning protection or restoration measures that are commensurate with the potential to impact human health and the environment.

- Level I response for the fresh, slightly saline and moderately saline classes should be based on the current or potential use as a human drinking water supply.
- Level II response for the very saline to brine class should be based on indirect exposure (i.e., by means other than drinking) or no human consumption.

In specifying a protection or restoration measure, member agencies should apply best professional judgment on a case-by-case basis. Evaluations to be made include, but are not limited to, such factors as productivity, the availability of alternate sources of water, background concentrations of naturally occurring constituents, the effects of constituents on usability, traditional and potential beneficial uses of the water, economic and technical feasibility of treatment, and projected needs for and types of impacts on these groundwaters.

The classification system is intended to be implemented by member agencies as an integral part of their groundwater protection programs. In addition to its response-setting function, the classification system fosters consistency among the various programs.

## **Risk-Based Remediation Programs**

The state's policy on groundwater contamination provides that water quality be restored if feasible (Appendix 2), and consequently requires that groundwater be kept reasonably free of contaminants that would interfere with present uses or impair future uses of groundwater. In response, the TCEQ has developed an approach that focuses on protection of groundwater for high quality uses, including human health. The TCEQ, which has primary jurisdiction for the regulatory protection of

groundwater, has implemented a risk-based approach in setting cleanup levels that is based on sound science, flexibility, and common sense.

There are many ways that risk-based considerations could be incorporated into a groundwater remediation program. Generally, a risk-based approach takes into consideration the current and/or potential future exposure of humans to unprotective concentrations of contaminants. In addition to consideration of exposure pathways, risk-based determinations using dose-response data are used to calculate human health protective concentrations of chemicals in environmental media. The primary exposure pathway for humans to groundwater is through ingestion. However, humans can also be exposed via air inhalation to chemicals that have volatilized from groundwater. Also, humans may be exposed to contaminants by the ingestion of surface water that has been affected by the discharge of contaminated groundwater into the surface water body. Likewise, if fish from such a surface water body are consumed by humans, then the person conducting the assessment would also need to consider this as an additional human exposure pathway when determining cleanup levels for contaminants in groundwater. Since the mid 90's, some agency rules have required risk-based concentration levels to be protective not only of human health but also of ecological receptors. The process for determining ecologically-protective concentration levels has been substantially improved in the last decade.

Depending on the level of the risk and the current regulatory policies, risk management may involve no-action, engineering solutions such as soil and groundwater remediation or physical controls, or institutional controls such as deed restrictions or limiting access to the site. Thus, risk-based decision-making can be protective of human health and the environment, and offers a scientifically sound and administratively effective way to respond to the pressures for timely action at large numbers of sites and the efficient use of both public and private resources. The TCEQ has incorporated risk-based corrective action into its rules and policies and has made many of the risk management policy decisions up front to streamline and add consistency to the remediation process.

### ***The Texas Risk Reduction Program***

The Texas Risk Reduction Program (TRRP) (TCEQ rules 30 TAC Chapter 350) is the current remediation rule with effective dates for various parts of September 23, 1999; September 1, 2003; and March 19, 2007. TRRP applies, in various manners, to the State Superfund; Industrial and Hazardous Waste; Voluntary Cleanup; Underground Injection Control; Municipal Solid Waste; Spill Prevention and Control; Composting; Radioactive Substance; and Wastewater Treatment programs. Section 350.2 (Applicability) describes the manner in which the TRRP rule is applicable to these various TCEQ program areas. Figure 3 summarizes the numerous guidance documents that the TCEQ has prepared to implement the TRRP rules. During 2008, Leaking Petroleum Storage Tank (LPST) sites were regulated under Chapter 334 of the agency's rules, but were also required to comply with the Chapter 350 requirements for assessment, response actions, and post-response action care. In 2008, in response to House Bill 3554 of the 80<sup>th</sup> Legislature, the TCEQ conducted rulemaking activities to determine the appropriate manner to address releases of regulated substances from underground and aboveground storage tanks.

TRRP-34	Facility Operations Areas

These TRRP guidance documents have been completed. However, the guidance documents marked with an \* are being updated and are temporarily unavailable. Other guidance documents are in various stages of completion. Please refer to <http://www.tceq.state.tx.us/remediation/trrp/guidance.html> for a current list of available TRRP guidance documents

Specifically, the agency considered whether it was appropriate to remove the text from its rules that required releases from LPSTs to be compliant with Chapter 350 and to reinstate use of the Chapter 334 risk-based corrective action provisions to such releases. Refer to <http://www.tceq.state.tx.us/nav/cleanups/pst.html> for current information regarding the remediation of LPST sites in Texas.

TRRP is a risk-based rule in the sense that many of the cleanup levels for the various environmental media are determined through use of risk-based calculations. However, other risk-related factors, such as the location of human points of exposure (POEs) to environmental media and the response objectives for soil and groundwater, are prescribed in the rule for application to all sites rather than being determined on a site-specific basis.

Cleanup levels for chemicals of concern (COCs) under TRRP are referred to as protective concentration levels (PCLs). Whenever a maximum contaminant level (MCL) is available for a COC, it is used as a groundwater PCL. If a federally-promulgated MCL is not available for a COC, then a risk-based calculation is used to define the PCL. The PCL for a carcinogenic COC is set such that the risk level from exposure to that COC in groundwater would not exceed  $1 \times 10^{-5}$  (1 in 100,000) and such that the cumulative risk level from exposure to multiple carcinogenic COCs does not exceed  $1 \times 10^{-4}$  (1 in 10,000). The PCL for a noncarcinogenic COC in groundwater is set such that its hazard quotient does not exceed 1 and such that the hazard index from exposure to multiple noncarcinogens does not exceed 10.

TRRP also establishes a groundwater resource classification process that provides criteria to define whether a groundwater-bearing unit containing potentially usable groundwater is a Class 1, 2, or 3 groundwater resource. A groundwater-bearing unit is described as a saturated geologic formation, group of formations, or part of a formation which has a hydraulic conductivity equal to or greater than  $1 \times 10^{-5}$  centimeters/second. Class 1, 2, and 3 resources are defined as follows:

- A Class 1 groundwater resource must meet at least one of the following conditions:
  - (a) any groundwater-bearing unit within 1/2 mile of an existing well used to supply drinking water to a public water system and that groundwater-bearing unit can contribute COCs to the groundwater production zone of the well;
  - (b) a groundwater-bearing unit which is the only reliable source of water not more than 800 feet below the land surface that is capable of producing groundwater with a naturally occurring total dissolved solids content of less than 1,000 milligrams per liter (mg/l) and at a sustainable rate greater than 5,000 gallons per day to a well with a four inch diameter casing; or
  - (c) a groundwater-bearing unit capable of yielding groundwater with less than or equal to a naturally occurring total dissolved solids content of 3,000 mg/l and at a sustainable rate greater than or equal to 144,000 gallons per day to a well with a 12 inch diameter casing.
  
- A Class 2 groundwater resource includes:
  - (a) any groundwater-bearing unit which is a groundwater production zone for an existing well located within 1/2 mile of the affected property and which is used to supply groundwater for human consumption, agricultural purposes, or any purpose which could result in exposure to human or ecological receptors; or
  - (b) any groundwater-bearing unit which is capable of producing waters with a naturally occurring total dissolved solids content of

less than 10,000 mg/l and at a sustainable rate greater than 150 gallons per day to a well with a four inch diameter casing.

- A Class 3 groundwater resource includes any groundwater-bearing unit which produces water with a naturally occurring total dissolved solids content of greater than 10,000 mg/l or at a sustainable rate less than 150 gallons per day to a well with a four inch diameter casing.

The standard groundwater response objectives do not apply typically to those stratigraphic units that do not contain enough groundwater to be considered a groundwater-bearing unit (that is, a non-groundwater bearing unit). The PCLs for COCs in Class 1 and 2 groundwater are determined as described above. The PCL for a COC in Class 3 groundwater is 100 times greater than the PCL for that COC in Class 1 or 2 groundwater. All of the groundwater with COC concentrations that exceed the applicable PCL are described as the protective concentration level exceedence (PCLE) zone. Lower cleanup levels than those based upon groundwater ingestion may be necessary to also be protective for cross-media exposure pathways such as groundwater-to-air and groundwater-to-surface water.

The POE under TRRP is the location within an environmental medium where a receptor (human or ecological) will be assumed to have a reasonable potential to come into contact with COCs. For Class 1 and 2 groundwater resources, the prescribed POE to groundwater is a well which may be completed at all locations throughout the groundwater PCLE zone. For Class 3 groundwater, the prescribed POE to groundwater is set at all locations throughout the groundwater PCLE zone. Provided the person is authorized by the TCEQ to establish a plume management zone (PMZ) in Class 2 or 3 groundwater, the person may establish an alternate human health POE to groundwater. A PMZ is an exposure prevention approach. In other words, the person is not required to “cleanup” the contaminated groundwater, but is required to manage it and to indefinitely prevent its use. If a PMZ is approved, the person may move the POE from throughout the groundwater PCLE zone to the hydraulically downgradient limit of the PMZ. Alternate POEs and PMZs are discussed thoroughly in the TCEQ guidance document entitled Soil and Groundwater Response Objectives (RG-366/TRRP-29).

If PCLs are exceeded in the groundwater, a person may choose to conduct a response action so as to achieve the objectives of either Remedy Standard A or Remedy Standard B. Remedy Standard A is a pollution cleanup remedy in that all PCLE zones in surface and subsurface soils, groundwater, and other environmental media must be removed and/or decontaminated to the extent that COC concentrations are less than the applicable PCLs. Physical controls are not allowed as a response action under Remedy Standard A. In contrast, Remedy Standard B, when appropriate, allows exposure prevention response actions (that is, use of physical controls). A response action under either of these remedy standards must be completed within a reasonable time frame.

Under Remedy Standard B, unless a person demonstrates that an affected property meets the qualifying criteria for a modified groundwater response approach, he must use either an active restoration approach or monitored natural attenuation to reduce the concentration of the COCs to the applicable PCLs throughout the groundwater PCLE zone within a reasonable time frame.

Modified groundwater response approaches that may be approved for use under Remedy Standard B include: waste control unit (WCU); technical impracticability; and PMZ. A WCU is a landfill with a liner system and an engineered cap. In the circumstance where an existing or planned WCU overlies an existing groundwater PCLE zone, the TCEQ may approve the exclusion of that portion of the groundwater PCLE zone which directly underlies the WCU from the previously described groundwater response objectives. To use a technical impracticability approach, a person must demonstrate that it is not feasible from a physical perspective using currently available remediation technologies due either to hydrogeologic or chemical-specific factors to reduce the concentration of COCs throughout all or a portion of the groundwater PCLE zone to the applicable groundwater PCLs within a reasonable time frame. The use of PMZs as a potential alternative approach to the general groundwater response objectives has been discussed previously.

For any releases reported prior to September 1, 2003, the Petroleum Storage Tank Program also uses a risk-based approach to corrective action, combining an exposure potential evaluation with risk-based cleanup levels to determine appropriate actions at LPST sites. The risk-based rules, effective as of November 8, 1995 are found in Title 30 TAC Chapter 334, Subchapter G (Target Concentration Criteria). Numerous guidance documents and memos provide supporting information.

The adoption of the original Risk Reduction Rules in 1993, the PST risk-based rules in 1995 and the rules for the Texas Risk Reduction Program initially issued in 1999 and revised in 2007 substantiate the TCEQ's philosophy that risk-based cleanups are an acceptable remedial response to affected environmental media. Risk-based corrective action ensures protection of human health and the environment while making response actions more economically feasible than complete, or background cleanups.

### ***Municipal Setting Designations***

In May 2003, the Texas Legislature passed H.B. 3152, providing the TCEQ with the authority to establish Municipal Setting Designations (MSDs), i.e., properties within which the production of groundwater for potable use (e.g., drinking, showering, bathing, cooking, or food crop irrigation) will be restricted and environmental response actions for protection of potable water use will no longer be required. The goal of this law is to reduce corrective action requirements and associated costs for groundwater-bearing units that are not presently used as a potable supply and are not likely to be used as a potable supply in the future. This law took effect on September 1, 2003, and is codified in the Texas Health and Safety Code, Chapter 361, Subchapter W. Additional information regarding the program is available on the TCEQ's web page at <http://www.tceq.state.tx.us/remediation/msd.html>.

Corrective action sites subject to TCEQ jurisdiction can apply for an MSD subject to the following requirements:

- **Municipal Area Location.** The corrective action site must be located within the corporate limits or extra-territorial jurisdiction of a municipality. The 80<sup>th</sup> Texas Legislature, effective May 25, 2007, removed the requirement that a municipality have a population of

- 20,000 or more.
- **Public Water Supply Available.** A public drinking water supply must be presently provided or could be provided to the proposed MSD property and to properties within 0.5 miles of the MSD property.
- **Groundwater Use Restriction.** Potable use of groundwater within the proposed MSD must be restricted subject to an ordinance issued by the local municipality or subject to a restrictive covenant that is supported by a resolution passed by the local city council.

As of the end of calendar year 2008, 80 MSD applications had been certified. The status of individual MSD applications can be monitored on the MSD web page. Maps of the MSD sites are also provided on the web page. Specific information on individual MSD applications can also be obtained from the status information.

### ***Railroad Commission of Texas Cleanup Fund Program***

The Site Remediation Section of the Railroad Commission of Texas (RCT) is responsible for the state-funded cleanup of abandoned oil field pollution sites through the Oil-field Cleanup Program, which is described elsewhere in this report. With a combination of these programs, the remediation of groundwater contamination as a result of oil and gas exploration and production activities has become proactive to the point that historic pollution is diminishing and response to new releases is quicker and more effective.

Cleanup options available for these sites include:

- cleanup to background constituent levels;
- cleanup to conservative risk-based levels (for example, TRRP Tier 1, Texas Surface Water Quality Standards, Federal Drinking Water Standards, and EPA Soil Screening Criteria); and
- risk-assessment-driven cleanup using site-specific consideration and data.

Regardless of ultimate closure options, when groundwater is contaminated, free-phase hydrocarbons are expected to be removed, and full delineation of contamination in all directions is to be performed. For the purpose of establishing consistency, the RCT staff may use as guidance the TRRP groundwater resource classification system. This system is based on the Texas Groundwater Protection Committee's classification (Appendix 3), with an additional consideration of low-yielding formations from which windmill pumps are able to provide water for stock.

### **Groundwater Contamination**

The definition of groundwater contamination adopted by the TGPC (Title 31, Texas Administrative Code, §601.3) for use in this report is given in Appendix 4, Texas Groundwater Protection Committee Rules, and is paraphrased as follows:

Groundwater Contamination - The detrimental alteration of the naturally occurring physical, thermal, chemical, or biological quality of groundwater. Further, groundwater contamination, for purposes of inclusion of cases in the public files and the joint groundwater monitoring and contamination report, shall be limited to contamination reasonably suspected of having been caused by activities of entities under the jurisdiction of the agencies identified in the

Texas Water Code §26.406, TGPC rules, and subsequent legislative amendments. Reported contamination cases are generally limited to those affecting usable quality groundwater (less than 10,000 milligrams per liter of dissolved solids).

The first sentence of the definition is based upon the definition of pollution given in §26.001 TWC, and suggests that in identifying contamination, the quality of groundwater must be altered detrimentally. The definition implies that a comparison can be made between known background or natural water-quality conditions and a sampling event that indicates the presence of a contaminant not occurring naturally, or a naturally occurring constituent in amounts or a concentration greater than its naturally occurring concentration. The definition then limits the scope of contamination to activities of entities under the jurisdiction of the agencies participating in the preparation of this report. This limitation excludes naturally occurring saline or highly mineralized water and the intrusion of these waters into usable quality groundwater resources. The contamination cases identified in this report are primarily those where contaminants have been discharged to the surface, to the shallow subsurface, or directly to groundwater from activities such as the storage, processing, transport, or disposal of products or waste materials.

Texas Water Code, §26.406, requires the listing and description of documented cases of groundwater contamination reasonably suspected of having been caused by activities under the jurisdiction of state agencies with groundwater protection programs. While the definition of groundwater contamination is broadly interpreted to encompass a large universe of identified cases, the documentation of groundwater contamination should be considered more carefully in order to assure accuracy and fairness in reporting impacts to groundwater resources. Documentation of contamination requires an evaluation of the significance of the data, the reliability of the data, and proper interpretation of the data.

Information and analyses of groundwater conditions should be representative of the actual conditions at the site. The data must be adequate to justify conclusions or further actions with regard to documenting contamination. Conditions that should be considered include whether a well is completed in more than one aquifer, whether a contaminant is present in the aquifer, or whether a contaminant has been introduced into the well from the surface. These factors are regarded as necessary and are incorporated into the design of monitoring programs and sampling procedures for each regulatory program. These factors are also important for ambient groundwater monitoring program design.

Groundwater information, especially analytical data, must be of reliable quality. A groundwater sample is subject to inadvertent alteration at many points from its removal at the well to its final laboratory analysis. It is important that reliable, verifiable procedures be used for sampling, handling, and laboratory analysis. Verification of analytical results is often desirable before concluding that contamination has occurred. Verification procedures include resampling and splitting samples with other entities for comparison of analytical results.

Proper interpretation of information and analytical data is essential to the goal of documenting groundwater contamination. Comparing sample results to known background water quality is often necessary to determine if contamination has

occurred. Some compounds, such as refined gasoline or synthetic organic compounds are not naturally occurring and their presence in detrimental amounts constitutes contamination. Other constituents such as sodium, chloride, and nitrate are naturally occurring and a comparison to known background water quality is necessary to determine whether contamination has occurred.

As noted earlier, the occurrence of highly mineralized groundwater or the reporting of significant concentrations of dissolved solids and certain other naturally occurring constituents from groundwater monitoring programs does not, of itself, constitute groundwater contamination. Many aquifers contain water categorized as slightly saline to very saline, ranging from 1,000 milligrams per liter (mg/l) of dissolved solids to 10,000 mg/l and greater. Mineralized waters are the result of natural hydrogeologic processes involving restricted circulation, chemical reactivity, and residence time. These conditions exist in many areas of the state and wells producing poor quality water are common.

### ***Reporting of Groundwater Contamination***

Water-quality monitoring and reporting requirements addressing unauthorized discharges are generally described in rules specific to the activity being regulated. Program-specific groundwater monitoring requirements are discussed further under each of the agency or program headings in the section entitled Groundwater Protection Program Descriptions.

Unauthorized discharges to water in the state, including groundwater, from regulated activities under the TCEQ's jurisdiction are prohibited (Texas Water Code, §26.121). Numerous state and federal laws either, 1) require monitoring of groundwater quality and notification to regulatory entities when such monitoring indicates an unauthorized discharge has impacted groundwater or, 2) direct the TCEQ to adopt requirements for monitoring and notification.

### ***Reporting Unauthorized Discharges and Spills***

The TCEQ is the state's lead response agency for all hazardous substance discharges or spills, discharges or spills of other substances, and certain inland oil discharges or spills that may cause pollution. This authority is derived from §26.039 and §§26.261 through 26.268 TWC (Texas Hazardous Substances Spill Prevention and Control Act). Pursuant to §26.039 (b), whenever an accidental discharge or spill occurs at or from any activity or facility which causes or may cause pollution, the individual operating, in charge of, or responsible for the activity or facility shall notify the TCEQ as soon as possible and not later than 24 hours after the occurrence. Section 26.039 (a) defines an accidental discharge as an act or omission through which waste or other substances are inadvertently discharged into water in the state. The law further defines a spill as an act or omission in which waste or other substances are deposited where, unless controlled or removed, they will drain, seep, run, or otherwise enter water in the state, including groundwater. These provisions require that the TCEQ must be notified when contamination of soil or groundwater is discovered.

The TCEQ has adopted Spill Prevention and Control Rules (30 TAC Chapter 327). A reportable discharge or spill is an unauthorized or accidental discharge or spill of oil, petroleum product, used oil, hazardous waste, industrial solid waste, or other

substances into the environment in a quantity equal to or greater than a reportable quantity as defined in the rules. Upon the determination that a reportable discharge or spill has occurred, the responsible person must notify the TCEQ as soon as possible but no later than 24 hours after its discovery. A summary of the TCEQ's Spill Prevention and Control Rules is given in Appendix 5.

The Railroad Commission of Texas (RCT) is generally the response agency for discharges or spills from activities associated with the exploration, development, or production, including storage or transportation, of oil, gas, and geothermal resources (Texas Natural Resources Code, §§85.042, 91.101, and 91.601). Discharges or spills from brine mining or surface mining are also under the jurisdiction of the RCT. The official rules of the RCT are found in the Texas Administrative Code (TAC), Title 16, Part 1, Chapters 1 through 20 and are available online at <http://www.rrc.state.tx.us/rules/index>.

In general, the RCT has jurisdiction over discharges or spills associated with the transportation of crude oil prior to refining of the oil, and of natural gas prior to its use in a manufacturing process or as a residential or industrial fuel. As a result, discharges or spills from crude oil or natural gas pipelines are under the jurisdiction of the RCT. However, discharges or spills from pipelines transporting refined products such as gasoline, diesel, or other fuel oils fall under the regulatory jurisdiction of the TCEQ, and the Spill Prevention and Control Rules should be followed. As specified under the *State of Texas Oil and Hazardous Substances Spill Contingency Plan*, the TCEQ serves as the lead agency in directing and approving the response for the discharge or spill of a harmful quantity of crude oil (defined as five or more barrels discharged or spilled on the ground or any quantity discharged or spilled into water) during highway or rail transportation.

### **Notification to Local Officials**

Section 5.236 TWC requires the TCEQ to provide notice to local officials regarding groundwater contamination which may affect drinking water supplies in their area. Notification is provided to county judges and public health officials to supply information on groundwater impacts to drinking water supplies within the county. These cases are identified in the report only during the year the case was reported as new.

The identified cases requiring notification under §5.236 are indicated in the field "SECTION 5.236" in the TCEQ's groundwater contamination case table (Table 1). There are 32 §5.236 cases listed in this report. In previous reports prepared by the TGPC, a total of 943 §5.236 cases have been identified (listed as HB 938 cases prior to 1994); 24 in 2007, 26 in 2006, 29 in 2005, 24 in 2004, 39 in 2003, 50 in 2002, 32 in 2001, 22 in 2000, 28 in 1999, 13 in 1998, 20 in 1997, 16 in 1996, 15 in 1995, 42 in 1994, 15 in 1993, 41 in 1992, and 507 in 1991. The large number of §5.236 cases listed in the 1991 report included all such cases identified up to March 31, 1992.

### **Notification to Private Water Well Owners**

Passage of House Bill 3030, 78<sup>th</sup> Regular Legislative Session (2003), resulted in new Texas Water Code (TWC) §26.408. The statute requires that when the TCEQ receives notice from another agency or when TCEQ independently documents a case of groundwater contamination, the TCEQ must make every effort to provide notice,

via first class mail, to each owner of a private drinking water well that may be affected by the contamination. The notice must be provided within 30 days of the determination (or receipt of information from another agency). Additionally, notice must also be provided to any applicable groundwater conservation district.

The TGPC adopted rules as required by the statute to “prescribe the form and content of notice” provided by the TCEQ. New 31 TAC §601.10 became effective on November 12, 2003 (Appendix 4). The TCEQ Executive Director sent letters to other members of the TGPC to alert them of the statute and their need to inform TCEQ of new cases of contamination. Since the statute became effective on September 1, 2003, TCEQ staff has implemented various activities resulting in mailed notice to well owners within the mandated timeframe. 42 new cases of contamination during calendar year 2008 required notice to private drinking water well owners and are listed in the Figure 4.

**Figure 4. Private Water Well Owner Notifications in Calendar Year 2008**

## Public Information

The purpose of this document is to compile and make available to the public an annual report that provides the status of groundwater monitoring associated with the activities regulated by the contributing state agencies. The report further provides an annual status of documented groundwater contamination, including new cases and previous cases still undergoing enforcement actions, reasonably suspected of having been caused by activities regulated by the state agencies. Tables 1 through 3 provide a summarized tabulation of all groundwater contamination cases documented during 2008. Limited information pertaining to specific contamination cases listed in this report may be available by contacting appropriate agency personnel as listed in Appendix 7.

Each agency, or in some cases, individual programs within an agency, may be required by law, rule, or policy to provide notification of groundwater contamination once it has been confirmed through groundwater studies or validation of analyses. A program may require that a notice be provided to identified groups that may include local officials and health officers; public water suppliers; water well drillers; complainants; and/or affected or potentially affected parties. Such requirements are commonly based on the need to minimize potential adverse impacts to public health.

## State Agencies' Files

Texas Water Code, §26.406 requires that the state agencies identified as having groundwater protection responsibilities maintain a public file of all documented cases of groundwater contamination. Each state agency has its own location and specific procedures for maintenance and accessibility of information related to groundwater contamination cases. Each regulatory program within an agency may have a unique system for maintenance and identification of information related to contamination cases. Information on agency files for each program with groundwater contamination cases tabulated within this report is provided in Appendix 8 (Central Records Locations of Agencies). Contamination case information is a matter of public record and is available for public review by arrangement with each agency. In some situations, the availability of information for certain enforcement actions may be limited or subject to specific access procedures. In addition, RCT district and TCEQ regional office locations are given in Appendix 6 and agency and groundwater conservation district contacts are listed in Appendix 7.

## ***Other Reports and Publications***

There are numerous water-agency publications that address groundwater contamination in the state. These publications provide a different focus or perspective on groundwater quality conditions and present information not contained within this report. Other publications provide information on statewide groundwater protection efforts and specific protection programs. Brief descriptions of several of these publications are provided in Appendix 9.

There are nineteen prior annual editions of this *Joint Groundwater Monitoring and Contamination Report*. These reports, which cover calendar years 1989 through 2007, were produced annually by the TGPC and published by the TCEQ (and its predecessor agencies, the Texas Natural Resources Conservation Commission and the Texas Water Commission). These reports provide a background on the evolution of the state's groundwater protection programs. The reports may also provide insight to historical cases of contamination (cases that are no longer listed).

The *State of Texas Water Quality Inventory, 2008 - 19th Edition* (TCEQ, 2008) describes the conditions of the state's surface and groundwater quality. The state's groundwater protection program is described and the major documented and potential sources of groundwater contamination are identified. The report can be found at <http://www.tceq.state.tx.us/compliance/monitoring/water/quality/data/08twqi/twqi08.html>.

The TWDB has historic groundwater numbered reports, bulletins and publications; drought and water condition information; and publication catalogs posted on their web site at: <http://www.twdb.state.tx.us/publications/reports/SGWReports.asp>

*Water for Texas - 2007* (TWDB, 2007) is the second state water plan to be adopted by the TWDB since the passage of Senate Bill 1 during the 1997 Texas Legislature. The publication incorporates the 16 approved regional water plans and describes how local government entities throughout the state will address their water supply needs for the next 50 years.

*National Water Quality Monitoring Council* (Council): The Council provides an opportunity for the monitoring community to develop consensus-based approaches and tools for monitoring and reporting on water quality. The Council promotes partnerships that foster collaboration, advance the science, and improve management of our water resources. For better information about the Council's latest conference proceedings, you can visit at <http://acwi.gov/monitoring>.

*Texas Water Monitoring Council* (TWMC). The TWMC serves as a broad-based collaborative body to help achieve effective and efficient collection, interpretation, and dissemination of basic data and processed information for use in addressing issues, policies, and management of Texas waters. The Council addresses the full range of water resources including ground and surface water, freshwater, and estuarine environments. The TWMC convenes in a biennial water resources monitoring conference (or Congress) to address statewide water resource monitoring needs in the fall of even numbered years and prepare reports on the overall status of water resource monitoring in Texas with recommendations for improvements. <http://www.txwmc.org/>

# USER'S GUIDE

The remaining portion of the report is divided into two sections. The first section, Groundwater Protection Program Descriptions, provides a narrative, program-specific overview for each contributing agency or organization. The second section, Groundwater Contamination Case Descriptions, contains a tabular listing of individual contamination cases which were documented for calendar year 2008. Appendices are included at the end of the report, providing more detailed information supporting or supplementing the body of the report.

**Groundwater Protection Program Descriptions.** In this section, the specific regulatory programs of each agency are described in terms of the activity or activities regulated, the standards and approvals required, monitoring of regulated entities' compliance with the conditions of approval, monitoring of groundwater to detect problems, and actions required if groundwater contamination is discovered at a site or facility.

The status of each program's required groundwater monitoring is described and includes comments on quality assurance policies and procedures and the number of facilities that are required to perform monitoring. The status of groundwater contamination is described, and the information contained in the case description table is summarized. Finally, special notes or comments specific to each program may be included for additional clarification.

**Groundwater Contamination Case Descriptions.** This section contains the individual groundwater contamination case descriptions for each contributing agency with regulatory groundwater protection authority. Each agency's table lists contamination cases by county and contains several fields (columns) of data specific to each case.

## Rules and Definitions Related to Report Compilation

Texas Water Code, §26.406, authorized the TGPC to adopt rules defining the conditions that constitute groundwater contamination for the purpose of inclusion of cases in its annual monitoring and contamination report (Appendix 4). The TGPC adopted rules (Title 31, Texas Administrative Code, §§601.1 through 601.5) on March 5, 1991, defining certain terms and conditions that constitute groundwater contamination for the purpose of the report. The TGPC adopted revised rules with minor clarifying amendments on August 13, 1998, which became effective September 13, 1998. The rules were amended to add Subchapter B - Notice of Groundwater Contamination, 31 TAC §601.10, in response to passage of HB 3030 (78<sup>th</sup> Legislature, 2003), TWC 26.408, effective November 12, 2003.

In the rules groundwater, groundwater contamination and enforcement action are defined in broad terms so that the varying jurisdictional abilities and programs of the contributing agencies could be compiled in similar formats and compared. Broad definitions also enable the report to include the largest possible universe of documented contamination from man-induced activities.

- Groundwater is defined as water existing below the land surface in a zone of saturation, that is, the water which completely fills the interconnected pore spaces of the rock or sediment.
- Groundwater contamination is defined as any detrimental alteration of the naturally occurring quality of groundwater. It is limited, however, to contamination suspected of being associated with activities under the jurisdiction of the contributing agencies and affecting usable quality groundwater.
- Enforcement action is defined very broadly to include any action of an agency which accomplishes or requires the identification, documentation, monitoring, assessment, or remediation of groundwater contamination.

## Using the Contamination Case Description Tables

Groundwater contamination case descriptions are presented in a tabular format for contributing agencies with enforcement authority over current groundwater contamination cases. The regulatory protection of groundwater is primarily the responsibility of the TCEQ. Certain activities requiring the regulatory protection of groundwater are under the jurisdiction of the RCT, the TDA, the TSSWCB, and the TDLR. The TAGD has no regulatory or enforcement authority as an organization, but individual groundwater conservation districts may have limited authority for action with regard to groundwater contamination.

Groundwater contamination case descriptions for the TCEQ, RCT, and member districts of the TAGD are listed in Table 1 through Table 3, respectively. No contamination cases were reported by the DSHS, TSSWCB, TDLR, TDA, TWDB, TAR, or BEG for 2008.

### ***Data Fields***

The first page of each agency's table contains a legend of the column headings and a brief description of each heading. The legend describes attributes that may be unique to that particular table; however, some of the heading descriptions repeat the field definitions given in this section. There are eight fields (columns) of data (nine for TCEQ) in the tables used to describe the groundwater contamination cases. The contamination cases are grouped according to the county in which the contamination site is located, with a secondary grouping according to division or specific regulatory program within an agency. The data fields are described in Figure 5.

**Figure 5. Contamination Case Descriptions—Data Fields**

Data Field Name	Data Field Description
New Cases	An asterisk denotes each case that was not listed in the previous year's report.
File Name	Consists of: company names, cities, persons, or other entities considered potentially responsible parties or otherwise associated with the case. File names may also consist of geographic location names or well numbers.
File Number	Identification number assigned to the case by the numbering system used by the agency or program with jurisdiction for the case. <sup>1</sup>
Location	Location references. Most location descriptions refer to cities and addresses, others are geographic locations using distances from known points.
Contamination Description	Consists of a listing of contaminants or general group of contaminants (such as "gasoline" or "creosote constituents"). Abbreviations, explained at the beginning of each table, may also be used.
Date	The earliest date of contamination confirmation at the site by the jurisdictional agency or program. More detail on the significance of this field is given at the beginning of each table if the date represents something other than the above definition.
Enforcement Status	A two-to-four character code representing the status of the case with respect to agency enforcement action and contamination site activity. <sup>2</sup>
Data Quality	A code (up to 6 characters) describing the reliability of analytical data used by each regulatory agency to analyze the case. Addresses field and laboratory quality assurance procedures and data reliability and quality in determining conclusions for each case.
Section 5.236 (TCEQ Table Only)	Included in Table 1 only to distinguish cases subject to notification requirements under §5.236 TWC. A "Y" code identifies cases in which contamination has or may potentially affect a public drinking water supply. <sup>3</sup> The "Y" code appears only in the report for the year in which the case is listed as a new case (cases requiring such notification identified in previous reports are not duplicated in this report).

<sup>1</sup> File numbers can be used to access the files of the regulating agency to obtain data on each groundwater contamination case listed in Tables 1 through 4. Cases without file numbers may be accessed in the regulating agencies' files with the case file name.

<sup>2</sup> The regulatory agencies reporting the contamination cases have procedures and internal structures that differ from agency to agency. Definitions and descriptions for enforcement or activity status have been generalized to account for these differences. A more detailed explanation is given in the following section entitled Enforcement Status Matrix.

<sup>3</sup> An entry in this field constitutes secondary notification from the TCEQ to local officials for cases reported since the publication of the previous report.

### **Locating Specific Cases**

To find a specific contamination case, locate the county of interest in the far left portion of the table. For that agency, all documented contamination cases for that county are listed under the respective division or regulatory program heading that has jurisdiction over that case. Under each program heading, contamination case descriptions are listed in alphabetical order according to file names. Check each division or regulatory program heading for the desired contamination case description. Also, check the other agency tables for the desired contamination case descriptions for the county of interest. A location reference is provided in the tables under the field heading *LOCATION* and can be used to locate a specific case if the file name is unknown.

## ***Enforcement Status Matrix***

This report is required by §26.406 TWC to indicate the status of enforcement action for each case of groundwater contamination. For purposes of this report, enforcement action includes any agency action that accomplishes or requires the identification, documentation, monitoring, assessing, or remediation of groundwater contamination. However, the objectives of enforcement action and the means by which enforcement is conducted vary among the regulatory programs.

To describe only an agency's enforcement action presents a minimal observance of the regulatory undertaking. Enforcement is ineffective if required actions to address the assessment and mitigation of the contamination cases are not carried out. Therefore, agency actions dealing with contamination events are also placed in context of the activities necessary to address the events. This comparison of the level of agency action and the status or level of contamination assessment and mitigation is presented in the enforcement status matrix (Figure 6).

The enforcement status matrix allows a one-to-one correspondence between an agency's response and the completion of the discrete phases in the progression of contamination investigation and clean up. The vertical (Y) axis of the matrix gives the level of agency response (enforcement status), and corresponds to the first number given in the *ENFORCEMENT STATUS* field in the table. The horizontal (X) axis gives the level or status of contamination site activity (activity status), and corresponds to the second number in the *ENFORCEMENT STATUS* field in the table.

Different circumstances at the same level of agency response or the same level of contamination site activity can be indicated using an alphabetical code associated with each of the two numerical codes. These codes (YA,XA), presenting the enforcement status, followed by the activity status, are tabulated for each contamination case listed in this report.

Once familiar with the matrix, a reader should be able to quickly discern the status of a case and relate its progress in the respective regulatory program to all other cases. The matrix can also summarize the status of all cases by showing how many occur in each grid of the matrix. Each agency table is followed by an *Enforcement Status Summary*, which consists of an enforcement status matrix summarizing the number of cases in each gridspace. In addition, each table is accompanied by a statewide map showing the number of groundwater contamination cases, by county.

## Enforcement Status Codes

In general, regulatory programs are structured to achieve the desired degree of environmental protection and mitigation with the lowest possible level of agency oversight. Routine monitoring is an example of this type of oversight activity. When monitoring or other activities indicate that greater agency involvement is necessary to address a contamination case, the agency may take enforcement action. Enforcement status codes are described in Figure 7. The enforcement status codes are ordered to reflect the progression of enforcement actions available to most of the agencies.

**Figure 7. Enforcement Status Matrix—Enforcement Status Codes**

Code	Enforcement	Description
0	Voluntary Action	An entity addresses the contamination incident, without being compelled to do so by enforcement action and either A) reports its actions to the agency, or B) enters into an agency's voluntary cleanup program.
1	Staff Discovery	The agency confirms identification of a contamination incident through its activities, such as: A) inspections, B) reviews of self-reported data, C) complaints received, or D) referrals received from other agencies.
2	Staff Action	The agency initiates an action to address a contamination incident, such as: A) an information request of the entity, B) approval of a work plan (e.g., assessment, corrective action, etc.), C) sending a notice of contamination to affected parties, or D) referring the incident to another agency with jurisdiction.
3	Executive Action	Action at the highest level of the agency, such as: A) issuing a permit with corrective action provisions; B) issuing an administrative order; C) other executive level action such as letter of approval or revocation, or conditional or final release of liability; or, D) referral to federal authorities such as U.S. EPA.
4	Court or Federal Agency Action	When other options fail or do not apply, an agency can: A) seek legal representation by the Texas Attorney General before the courts, or B) let federal agencies seek resolution according to federal laws or programs.
5	State or Federal Funds	The agency, by utilizing special federal (option A) or state (option B) funds, finances the cost of addressing contamination incidents. Examples are the federal and state "superfunds" for abandoned waste sites, and the state fund for plugging oil and gas wells.

**Note:**

Enforcement action includes any agency action which accomplishes or requires the identification, documentation, monitoring, assessing, or remediation of groundwater contamination. The achievements of these objectives vary among the regulatory programs. Not all agencies or programs within an agency will follow all of this sequence: for example, the Superfund program of the TCEQ starts at Status Code 5.

## Activity Status Codes

Once groundwater contamination has been confirmed, either the regulated entity or an agency will address the groundwater contamination case. Confirmed cases of contamination are generally addressed by following a prescribed sequence of actions until it is concluded that no further actions are necessary or required. Once contamination has been detected or is suspected, initial actions consist of validation of sampling results or quality assurance controls to confirm contamination has occurred and is man-induced. An investigation to study the extent, composition, and circumstances of the contamination follows the confirmation of contamination.

Additional actions may or may not be required based on the investigation findings. If the investigation finds that further actions are required, the planning of corrective action measures to address the contamination and source are initiated. Following the development of the corrective action plan, actions are taken to implement the plan and physically address the removal, mitigation or treatment of contamination and source. The effectiveness of the corrective action measures is generally monitored during and after the implementation of the plan. Ultimately, the corrective action measures are considered completed when the site has been remediated, the source has been removed, or when no further actions are required. The activity status codes are further described in Figure 8.

**Figure 8. Enforcement Status Matrix—Activity Status Codes**

Code	Activity	Description
0	No Activity	No actions have been conducted at the incident site. The code is also given to cases that did not have any activity in the reported calendar year, mainly used by the Voluntary Cleanup Program of the TCEQ.
1	Contamination Confirmed	Contamination is being verified through resampling or data quality validation, etc. Options are to: A) take action and investigate further if validated or required, or B) not take action based on confirmation findings.
2	Investigation	The incident is being studied to determine the extent, composition, and/or other properties and circumstances of the contamination. Additional action A) may or B) may not be required based on investigation findings.
3	Corrective Action Planning	A remedy (corrective action plan) for the contamination is being developed (based on the investigation findings). General examples include plans to: remove the source of contamination, remediate impacted groundwater, disinfect or replace wells, etc.
4	Implement Action	The planned remedy (corrective action plan) is being carried out. Actions to address the contamination are being conducted.
5	Monitor Action	The effectiveness of the remedy is being monitored. This can be a long- or short-term action and can be performed during and after implementation.
6	Action Completed	The remedy is considered complete when the desired result has been achieved. Options include: A) remediation efforts were completed (contaminants reduced to health based levels); B) the contaminant source was removed and the impact addressed; C) no further regulatory action required; D) agency action final, however, contamination still exists under institutional controls (deed records noting contamination; use and exposure restrictions; required maintenance of engineering controls, etc.); or, E) agency action final, however, contamination still exists under required engineered controls.

# DESCRIPTIONS OF GROUNDWATER PROTECTION PROGRAMS

## Texas Commission on Environmental Quality

The Texas Commission on Environmental Quality (TCEQ) conducts regulatory groundwater protection programs that focus on both the prevention of contamination and the identification, assessment, and remediation of existing problems. The TCEQ implements these programs through education, voluntary action assistance, permitting, and enforcement. As the state lead agency for water quality protection, the TCEQ administers both state and federally mandated programs. Federal programs administered by the TCEQ include the Resource Conservation and Recovery Act (RCRA); the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA); the Clean Water Act (CWA); the Safe Drinking Water Act (SDWA); and the development of state management plans for prevention of pesticide contamination of groundwater under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA).

The Waste Permits Division, Office of Permitting and Registration (OPR), is responsible for permitting facilities that store, process, and/or dispose of hazardous and nonhazardous industrial waste and municipal solid waste.

The Water Supply Division, OPR, has responsibility for monitoring public water systems for compliance with state drinking water standards and conducting the Source Water Protection Program. The division is responsible for providing technical support to promote effective and coordinated management of water resources in the state. In addition, the Groundwater Planning and Assessment Team of the division is responsible for providing assistance to the Texas Groundwater Protection Committee.

The Water Quality Division, OPR, is responsible for the issuance of wastewater permits under the Texas Pollutant Discharge Elimination System and implementation of the Texas Surface Water Quality Standards.

The Water Quality Planning Division, Chief Engineer's Office, is responsible for the implementation of surface water quality management programs and the development of Texas Water Quality Standards. The Texas Non-Point Source (NPS) Pollution Management program, authorized by Section 319 of the Clean Water Act, is also implemented within this division.

The Remediation Division, Office of Compliance and Enforcement (OCE), is responsible for overseeing the investigation and cleanup of hazardous waste and pollutants released into the environment, including the regulatory programs governing petroleum storage tanks (PSTs), hazardous and nonhazardous industrial waste sites, voluntary cleanups, innocent owner/operator certification, state brownfields initiatives, and Superfund activities.

Within the OCE, the Field Operations Division is responsible for the field investigation of contamination complaints and the inspection of permitted and non-

permitted facilities. In addition, primary responsibility for the Edwards Aquifer Protection Program is in this division. The OCE is also responsible for professional licensing and the on-site wastewater program. The Enforcement Division, OCE, is responsible for ensuring that groundwater resources are protected during enforcement activities related to municipal solid waste, hazardous, and nonhazardous waste, petroleum storage tanks, agricultural and watershed management, water utilities, and public water supply programs.

The Radioactive Material Division, Office of Permitting and Registration, addresses questions pertaining to disposal of low-level radioactive wastes and by-product material waste; recovery of uranium; and the commercial processing and treatment of radioactive substances. Currently, the Radioactive Material Division consists of the Radioactive Material Licensing and the Uranium and Technical Assessments Sections.

### ***Compliance Support Division***

The Compliance Support Division (CSD) within the Office of Compliance and Enforcement (OCE) contributes to the protection of the state's groundwater resources by functioning as a licensing entity. The CSD licenses those environmental professionals who design, construct, install, remove, operate, and maintain environmentally sensitive equipment, facilities, and systems that provide commercial and residential irrigation, water and petroleum storage, drinking water protection and treatment, wastewater processing, on-site sewage facilities, and waste disposal services.

The Compliance Support Division issues 10 different types of licenses lending protection to the groundwater resources of Texas. During 2008, the CSD maintained 50,405 licensed environmental professionals, issued 22,010 new and renewal certifications, administered 11,681 examinations, and responded to 76 complaints.

The CSD also contributes to protection of groundwater by the timely processing and accurate review of licensing applications to include all education, training, experience and examination qualification requirements; the administration and validation of licensing examinations; the development and approval of training courses and instructors; the efficient issuance of new and renewal licenses; the investigation and resolution of competency reviews and enforcement cases; and the establishment and maintenance of licensing rules and standards.

#### **On-Site Sewage Facilities Program.**

**Program Description.** The Compliance Support Division administers the regulation of on-site sewage treatment facility (OSSF) construction as authorized in Chapter 366, Texas Health and Safety Code and guided by Chapter 285, Texas Administrative Code. The Texas Department of State Health Services (DSHS) began the permitting and regulation of OSSFs in counties without approved waste control orders on September 1, 1989. On March 1, 1990, installers and inspectors had to be trained and tested, and installers were required to be certified. On March 1, 1992, all duties and obligations of DSHS relating to OSSFs were transferred to the TCEQ. The On-Site Wastewater Installer Program was moved to the Field Operations Division on September 1, 1994. Subsequently, it was again moved to the

Compliance Support Division on July 1, 1997, in an effort to consolidate professional certification programs within the TCEQ. This final move coincided with the publishing of revised rules on February 5, 1997, for OSSFs and the implementation of a certification program of On-Site Sewage Facilities Installers, Apprentices, Designated Representatives, and Site Evaluators, that had been approved on December 18, 1996. Final implementation of the OSSF training program was completed on October 1, 1998. All certifications required by the rule were in place effective August 1, 1998.

The regulations require that new OSSFs be designed and constructed, using current technology, and that older failing systems be brought up to current standards. Additionally, continuing education training is a requirement for OSSF professionals to maintain their annual state certification. The program also performs compliance reviews of local regulating entities to evaluate their enforcement of the state's minimum requirements. The 1997 rules resulted in considerable improvement in installation of OSSFs statewide. The improvements are due to increased requirements for proper site evaluations and planning materials. Rule revisions that became effective June 13, 2001, provided the TCEQ and its local regulating entities more enforcement tools to ensure that the proper systems are being installed, inspected, operated, and maintained. Rule revisions that became effective August 29, 2002, provides the TCEQ with the authority to charge a fee up to \$500 per permit if the local permitting entity gives back the program or the entity's program is revoked by the TCEQ. Rule revisions that became effective September 11, 2003, were administrative in nature in an effort to clarify requirements for issuing and renewing licenses and to achieve consistency with other legislation (Professional Geoscientists Practice Act). Rule revisions that became effective April 28, 2004, addressed the disposal of water softener discharge and rules that became effective January 6, 2005 addressed the disposal of graywater. Rule revisions that became effective August 3, 2006, addressed aerobic system maintenance, the registration of maintenance companies, requirements for homeowners who choose to maintain their aerobic system without a contract with a maintenance company, and a change in definition of subdivision and in the direction for design of mound and soil substitution disposal options. Rule revisions which became effective on September 11, 2008 addressed the training of individuals servicing wastewater treatment devices and increased the treatment capacity of devices commonly used in OSSFs.

**Status of Groundwater Monitoring Programs.** The Compliance Support Division's contamination investigation program is generally a complaint response program. The programs in the division do not involve the monitoring of groundwater in association with a regulated activity in order to detect contamination. When appropriate during certain remediation or enforcement activities involving groundwater contamination, the TCEQ may perform or require groundwater monitoring to evaluate remediation progress or success.

**Status of Groundwater Contamination.** The Compliance Support Division provided technical assistance on more than 5,500 inquiries during 2008. No current case involves monitoring for groundwater contamination. Construction of an OSSF treatment and disposal system must be isolated from certain areas such as water wells, lakes, roads, and other objects subject to contamination from the OSSF or that may prevent the proper operation of the system. Additionally, no individual may

install, construct, alter, extend, or repair an OSSF unless the individual holds a valid certification issued by the executive director of the TCEQ or has a valid exemption.

## ***Enforcement Division***

**Program Description.** The Enforcement Division drafts formal agreements to resolve compliance issues discovered at facilities regulated by the TCEQ. Enforcement actions that involve groundwater contamination are resolved primarily through administrative Agreed Orders that require investigation, monitoring, and remediation activities in accordance with state and federal rules and regulations.

**Status of Groundwater Contamination.** Four Enforcement cases are listed in this report under the division heading “ENF”. Notification under §5.236 of the Texas Water Code was not required for any case during the current reporting period. No new sites were added during 2008.

## ***Field Operations Division***

**Program Description.** Field Operations Division personnel are generally the first responders to complaints, spills, or various other situations that may result in groundwater contamination. Reports of alleged groundwater contamination received from citizens or referred from other agencies or entities are assigned for investigation to Field Operations. Regulated activities may include industrial and municipal wastewater discharges, industrial hazardous and solid waste storage and disposal, municipal solid waste transfer and disposal, and petroleum storage tanks. After the investigation is completed and contamination is confirmed, field personnel will refer the case to the appropriate division for coordination.

Information is gathered about the contamination through site investigation, well inventories, and/or water quality sampling. The information is analyzed and efforts are made to effect remediation or initiate enforcement as necessary. Reports are maintained in investigation files for complaint sites or spill sites in the TCEQ's Central Records.

In addition, the Field Operations Division administers the Edwards Aquifer Protection Program rules consisting of review and approval of water pollution abatement plans, sewage collection system plans, and static hydrocarbon and hazardous substance storage facility plans. Rules for the protection of the Edwards Aquifer (Title 30, Texas Administrative Code, Chapter 213) were amended and expanded, becoming effective in September 2005.

**Status of Groundwater Monitoring Programs.** Investigation of groundwater contamination is essentially a response program. The program does not involve monitoring of groundwater in association with a regulated activity in order to detect contamination. However, during certain remediation activities of identified groundwater contamination, the TCEQ may perform or require groundwater monitoring to evaluate remediation progress or success.

**Status of Groundwater Contamination.** Two cases of groundwater contamination are listed, by county, in Table 1 under the division heading “FOD.” The two cases are found in Tom Green and Val Verde counties. No new cases are reported in FY 08.

## ***Radioactive Materials Division***

The Radioactive Materials Division addresses questions pertaining to disposal of low-level radioactive wastes and by-product material waste; recovery of uranium; and the commercial processing and treatment of radioactive substances. Currently, the Radioactive Material Division consists of the Radioactive Material Licensing Section and the Uranium and Technical Assessments Section.

### **Radioactive Material Licensing Section**

**Program Description.** The disposal of radioactive substances, including low-level radioactive wastes or non-oil and gas naturally occurring radioactive materials, is regulated by the radioactive material licensing program. The program is overseen by the U.S. Nuclear Regulatory Commission. Currently, no commercial low-level radioactive waste or naturally occurring radioactive material disposal sites are licensed in the state of Texas.

**Status of the Groundwater Monitoring Program.** One non-commercial licensed facility and one non-commercial unlicensed facility are included in the radioactive materials licensing program of the TCEQ. Groundwater monitoring is currently being conducted by the licensee at one of the facilities, by the unlicensed facility and, at times during routine investigation, by the TCEQ at these facilities. The unlicensed facility is also a Municipal Solid Waste (MSW) facility.

**Status of Groundwater Contamination.** The licensed non-commercial facility contains radionuclide groundwater contamination from tritium (H-3) in four out of eight wells and uranium-238 (U-238) in one out of eight monitoring wells. The unlicensed facility contains radionuclide groundwater contamination from americium-241 (Am-241) above background in two out of ten wells and chlorobenzene above Protective Concentration Limits (PCLs) in one out of ten wells.

### **Uranium and Technical Assessments Section**

**Program Description.** The Uranium and Technical Assessments Section (UTA), is responsible for licensing and technical reviews in the areas of uranium recovery, byproduct waste disposal, and low-level radioactive waste processing and storage. UTA staff evaluates scientific and engineering topics as required by the radiation control regulations and health physics topics related to operational health and safety. UTA staff also evaluates the decommissioning and reclamation of historic tailings impoundments at former commercial uranium mill sites (UMTRCA Title II sites) and review groundwater monitoring results associated with these sites. These sites will eventually be transferred to the control of the Department of Energy. UTA staff also evaluates in situ uranium recovery sites for radioactive materials licensure, to ensure that their operation conforms to all pertinent environmental regulations.

**Status of Groundwater Monitoring Programs.** Licensees currently monitor groundwater for general water-quality, radionuclides, and other specified hazardous and potentially-hazardous constituents, as defined in their respective radioactive materials licenses, on a routine basis. Licensed facilities currently include 3 UMTRCA Title II sites and a low-level radioactive-waste processing and storage site. It is expected that additional wells will be installed at the Conoco (a Title II site) site.

The three Title II sites will all require approval of alternative concentration limits by the TCEQ and the Nuclear Regulatory Commission for final closure completion and transfer to the Department of Energy.

**Status of Groundwater Contamination.** The groundwater around the UMTRCA Title II sites contains contaminants which have seeped from old, pre-regulation unlined impoundments. All are located within areas where uranium and associated metals are common, which compounds the situation. Historically, one site has been considered as contaminated for purposes of this survey, namely, Conoco Conquista. At Conquista, the 6 wells in the uppermost sand unit (Dubose), had one or more of the following contaminants in excess of regulatory amounts; arsenic, cadmium, molybdenum, selenium, uranium, gross alpha, or radium. Of the contaminated wells in the lower sand unit (Deweeseville), 9 wells, including the background well, exhibited values of one or more of the following contaminants in excess of regulatory amounts; cadmium, selenium, uranium, or radium. Additional wells were planned in 2008 to determine the extent of contamination, prior to applying for Alternate Concentration Limits.

Exactly how the historical contamination is treated may change once the DSHS rules are fully incorporated into the TCEQ rules.

## ***Remediation Division***

The Remediation Division is responsible for overseeing the investigation and cleanup of hazardous waste and pollutants released into the environment. The regulatory programs addressed by this division include petroleum storage tank sites, hazardous and nonhazardous industrial waste sites, voluntary cleanups, innocent owner/operator certification, state brownfields initiatives, dry cleaner remediation and Superfund activities. With the exception of the Innocent Owner/Operator Program (IOP), the goal of these programs is to remediate soil and groundwater contamination. The IOP does not require innocent owners or operators to investigate or remediate contamination. Ideally, soil and groundwater contamination reported at IOP sites is being or will be remediated under another program. The following Programs of the Remediation Division regulate sites with known groundwater contamination.

### **Voluntary Cleanup Program.**

**Program Description.** The Voluntary Cleanup Program was created by amendment to the Texas Solid Waste Disposal Act and became effective on September 1, 1995. The purpose of the Texas Voluntary Cleanup Program is to provide a streamlined, incentive-based process for persons to pursue cleanup of contaminated properties. The Voluntary Cleanup Law provides the TCEQ's administrative and technical requirements and conditions necessary for persons to voluntarily clean up sites within this program. The following attributes of the Law encourage lenders, developers, and prospective purchasers to clean up abandoned or under-utilized properties: non-binding voluntary cleanup agreements with the TCEQ, agreement by the TCEQ not to pursue enforcement action on sites that are being voluntarily remediated, and a release to non-responsible parties from liability to the State of Texas for cleanup of existing contamination in areas covered by the Certificate of Completion.

Similar to the State Superfund Program, sites are investigated to determine if groundwater impacts have occurred. If groundwater contamination is verified, then the persons conducting the voluntary cleanup propose response actions to address the contamination. The TCEQ assesses their proposal to ensure that the proposed remedy is capable of achieving the goals of the groundwater cleanup. Due to the voluntary nature of the program, some sites may withdraw from the program prior to completing restoration of the groundwater. These sites are indicated with an activity status of "0." Only sites that pose an imminent threat to human health or the environment and withdraw prior to completion of the response action are referred for potential enforcement action to compel the completion of any necessary response actions.

**Status of Groundwater Monitoring.** There are an estimated 9,516 monitor wells in place under the Voluntary Cleanup Program regulatory program. During 2008, approximately 10,705 groundwater samples were collected from 740 sites. Approximately 1,586 of these samples showed groundwater contamination.

**Status of Groundwater Contamination.** For 2008, 771 cases are listed by county in Table 1 under the division heading "RMD/VC." Of these, only two cases required notification to local officials under TWC §5.236. There were 88 new cases of groundwater contamination identified. A total of 38 cases were deleted from the 2007 report when action was completed (activity status 6).

#### **Voluntary Cleanup/ Innocent Owner/Operator.**

**Program Description.** The Innocent Owner/Operator Program was created by amendment to the Texas Solid Waste Disposal Act and became effective on September 1, 1997. The program is handled administratively through the Voluntary Cleanup Program. The purpose of the legislative amendment is to provide liability relief for owners or operators of property that has become contaminated as a result of a release or migration of contaminants from a source or sources not located on or at the owner's/operator's property. Also, a person, who, after appropriate inquiry consistent with good commercial or customary practice, did not know or have reason to know of contamination on their property at the time the person acquired the property is released from liability to the State. The program reviews the site investigation report to confirm, through the issuance of a certificate, that the person is an innocent owner or operator.

Due to the fact that sites reported under the Innocent Owner/Operator Program are not subject to remediation by the "innocent owners," most of these sites are not currently being remediated. These sites are indicated with an activity status of "0" and an enforcement status of "0."

**Status of Groundwater Monitoring.** There are an estimated 795 monitor wells in place under the Voluntary Cleanup/Innocent Owner/Operator regulatory program. During 2008, approximately 397 groundwater samples were collected from 265 sites. Approximately 380 of these samples showed groundwater contamination.

**Status of Groundwater Contamination.** For 2008, 264 cases are listed by county in Table 1 under the division heading "RMD/VCIO." Of these, none required notification to local officials under TWC §5.236. Of the 264 cases, 47 are new cases

of groundwater contamination identified and added in 2008. 23 cases were deleted from the 2007 report due to action completed (activity status 6).

### **Brownfields Site Assessments**

**Program Description.** In Texas, many former industrial properties lie dormant or underutilized due to liability associated with real or perceived contamination. These properties are broadly referred to as brownfields. The TCEQ, in close partnership with the U.S. Environmental Protection Agency (EPA) and other federal, state, and local redevelopment agencies, and stakeholders, is facilitating cleanup, transferability, and revitalization of brownfields through the development of regulatory, tax, and technical assistance tools. In addition to the specific programs mentioned here, the TCEQ is available at no cost to local governments and will provide technical advice, education, and project partnering for brownfields redevelopment projects.

Brownfields Site Assessment (BSA) program applicants and co-applicants included seven municipalities, three non-profit organizations and federal government agencies (GSA and U.S. Army Corps of Engineers). Preliminary redevelopment plans included a civic center expansion, light industrial redevelopment, an eco-industrial park, upgrading and preserving a historical train display in a municipal park, home for a youth track club, a food bank warehouse, and a homeless shelter for women and children.

Although redevelopment has not yet been fully realized, the TCEQ has been very encouraged by the number of brownfields stakeholders entering the BSA program.

**Status of Groundwater Monitoring.** There are an estimated 6 monitor wells in place under the BSA program. During 2008, approximately 8 groundwater samples were collected from one site, and approximately 4 of these samples showed groundwater contamination. For 2008, 4 cases are listed by county in Table 1 under the division heading "RMD/VCBSA."

### **Corrective Action Program**

**Program Description.** The Corrective Action Program oversees remediation activities for many sites under the TCEQ's jurisdiction. These sites include 1) facilities with industrial and hazardous waste permits which have released hazardous contaminants to environmental media from RCRA-regulated units; 2) facilities with contamination caused by releases from the Solid Waste Management Units (HSWA Corrective Action); 3) facilities closing RCRA and non-RCRA Solid Waste Management Units; 4) RCRA and non-RCRA facilities which conduct corrective action through Enforcement Orders; 5) facilities which self-implement the cleanup regulations of 30 TAC 335 and 350; and 6) federal facilities which may include all the five (5) items listed above.

**Status of Groundwater Monitoring.** There are more than 8,437 monitor wells in place under the Corrective Action Program. During 2008, an estimated 13,499 groundwater samples were collected and approximately 5,062 of these samples showed groundwater contamination.

**Status of Groundwater Contamination.** For 2008, 600 cases are listed by county in Table 1 under the division heading "RMD/CA.". One of these cases required notification to local officials under TWC §5.23. The Corrective Action Program identified 34 new cases of groundwater contamination in the 2008 report. Remediation activities were completed for 10 cases of groundwater contamination in 2007 and were dropped from the 2008 report.

### **Dry Cleaner Remediation Program**

**Program Description.** The Dry Cleaner Remediation Program was created when House Bill (HB) 1366 amended Subtitle B, Title 5, Health and Safety Code by adding Chapter 374 Dry Cleaner Response. With its implementation, the Dry Cleaning Remediation Program was created when the law became effective on September 1, 2003. This law established new environmental standards for dry cleaners and a remediation fund to assist with remediation of contamination caused by dry cleaning solvents. The law also required the TCEQ to set up an Advisory Committee to assist in the development of rules to implement the new law.

HB 1366 requires all dry cleaning drop stations and facilities to register with the TCEQ. Many of these dry cleaners will be required to pay an annual registration fee, solvent fee and implement new performance standards at their facilities. Funds collected from the registration and solvent fees are used to perform corrective action at eligible contaminated dry cleaning facilities and/or drop stations.

Interested parties may submit an Application for Ranking to the DCRP. Complete applications are ranked and accepted to the program within 90 days of receipt. If the site is currently participating in the Voluntary Cleanup Program (VCP), then a signed Program Participation Election Form (PPEF) must be submitted, within 45 days, stating the applicant terminates their participation in the VCP before they are accepted into the DCRP.

Chapter 374 of the Health and Safety Code was amended when the 79<sup>th</sup> Texas Legislature passed and the Governor signed HB 2376 and SB 444. HB 2376, which became effective September 1, 2005, removed the 5-year ownership requirement for landowner eligibility, revised fee structures, extended the deadline for opting out of the DCRP fund, and limited the applicability of some performance standards. SB 444, which became effective on passage of legislation, extended the deadline for opting out of the fund to February 28, 2006, and allows some opt-out dry cleaners to receive credit for previously paid fees.

**Status of Groundwater Monitoring.** By the end of 2008 there were approximately 1,510 regulatory monitor wells located at 151 Dry Cleaner Remediation Program sites subject to groundwater monitoring. Approximately 906 of the monitor wells have been affected by contamination. During 2008, approximately 3,020 groundwater samples were collected from these DCRP sites. Approximately 1,812 of these samples have been affected by contamination.

**Status of Groundwater Contamination.** 151 DCRP sites were reported as having groundwater contamination in 2008. During 2008, there was one groundwater contamination case required notification to local officials under TWC § 5.236.

Additionally, there were two private water well owners to notify under §26.408 in 2008.

### **Superfund**

**Overall Program Description.** In 1980 the United States Congress passed the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), commonly known as the "Superfund" law. The purpose of the federal Superfund legislation was to protect public health and the environment from hazardous substances by authorizing federal action in response to releases into the environment from abandoned hazardous waste sites. Potentially contaminated sites that are referred to the Remediation Division (RMD) by the TCEQ's district offices, the EPA, local government entities, and individuals are evaluated and ranked according to the degree of hazard presented to the public health and the environment. High ranking sites are referred to the EPA for placement on the National Priorities List (NPL). When sites are listed on the NPL, the TCEQ staff petitions EPA for federal funds for planning, site investigation, feasibility studies, design work, remediation, and operation and maintenance of the site.

The Texas State Superfund Program was created in 1985 by amendment to the Texas Solid Waste Disposal Act to address those sites not eligible for funding under the Federal Superfund Program. The State Superfund Program follows the same step-by-step process, from corrective action planning to remediation, as described for the federal program. The Act requires that sites placed on the State Superfund Registry first seek funding for site cleanup from responsible parties, then federal resources, and lastly state resources.

Groundwater monitoring activities occur throughout the Superfund process, from planning through remediation and operation and maintenance phase. Residential, public and industrial wells near a potential site, in addition to existing or newly installed site monitoring wells, would typically be sampled to help determine whether a site warrants placement on the NPL. If not, the site would be evaluated for possible inclusion on the Texas Superfund State Registry of Hazardous Substances Sites for remediation under the State Superfund Program. Once placed on either the NPL or state registry, the potentially responsible parties (PRPs) are provided the opportunity to enter into an enforceable administrative order to conduct all aspects of site investigation and remediation. If the PRPs are unwilling to enter into an enforceable order, the state proceeds with this work.

A site investigation is conducted to characterize the type and volume of contaminants at a site, the media (such as soil or groundwater) contaminated, the lateral and vertical extent of contamination, the risk the site poses to human health and the environment, and to allow the selection of a remediation technology during the feasibility study or presumptive remedy study. Groundwater monitoring wells are installed during the site investigation to determine the effect, if any, a site has had or may have on local groundwater resources, and to select alternatives that could be used to solve the problems at the site. The remediation technology selected is highly site-specific but may involve actions to control the source of the contamination and/or to remove contaminants from a groundwater bearing zone. If the remedy involves the pumping and treatment of contaminated groundwater, additional monitoring wells are generally installed and hydrogeologic data collected during the

remediation. In addition, after the remediation is complete, groundwater monitoring may occur as a part of the operation and maintenance phase until the remediation goal is reached.

### **Superfund Cleanup Program**

**Program Description.** Superfund includes the Superfund Site Discovery and Assessment and Cleanup Programs. Superfund Site Discovery and Assessment is the first step in evaluating a site to determine if it is eligible for listing on either the state Superfund registry or the federal National Priorities List (NPL). In fulfillment of its role, the Superfund Cleanup Program ensures that all Superfund activities are completed in a timely and efficient manner, and in accordance with all applicable state and federal laws and rules. The Superfund process and the role of Superfund Cleanup Program vary between the state and federal Superfund Programs as illustrated below:

Potentially Responsible Party Lead Sites - Under Chapter 361, Texas Health and Safety Code, Solid Waste Disposal Act, §361.185, eligible state sites that do not qualify for the federal Superfund program must first be addressed by potentially responsible parties (PRP). Within the PRP lead remedial process, there are milestones that mark progress in relation to the various phases of the cleanup project as stated in an administrative order.

State Lead Sites - If PRPs are not available or forthcoming, the program may then utilize the Hazardous & Solid Waste Remediation Fee Account as a funding source for state-conducted remediation activities. Within the state lead remedial process, there are milestones that mark progress in relation to the various phases of the cleanup project.

Federal Sites - In general, after the state refers a site to the EPA, and it is accepted for the NPL, the state either takes the lead or provides management assistance to EPA's CERCLA program. The state assists EPA or takes the lead in the project management of the remedial investigation, feasibility study, remedial design, remedial action and operations and maintenance phases.

**Status of Groundwater Monitoring.** The Superfund Site Discovery and Assessment Program reported sampling occurred at approximately 200 wells in 2008, with 50 of those showing contamination. The Superfund Cleanup Program reported sampling occurred at more than 1,600 wells from 105 sites in 2008 (for the State Lead Section).

**Status of Groundwater Contamination.** For 2008, 20 cases are listed for the Superfund Site Discovery and Assessment Program, and 80 cases are listed for the Superfund Cleanup Program (for the State Lead and Federal Sites). These are labeled in Table 1 under the Division heading "RMD/SSDA" and "RMD/SC", respectively. Of these, four ground-water contamination cases required notification to local officials under TWC § 5.236 and three cases required notification to private water well owners under §26.408.

## **Petroleum Storage Tank Program**

**Program Description.** The Petroleum Storage Tank (PST) program regulates underground and aboveground product storage tanks as authorized by the federal Solid Waste Disposal Act of 1970, as amended by the Resource Conservation and Recovery Act of 1976, and empowered by Subchapter I, Chapter 26 of the Texas Water Code. Approximately 95 percent of the regulated storage tanks contain petroleum products with the remainder containing regulated hazardous substances.

At regulated facilities where a product release has impacted groundwater, groundwater monitoring is required in conjunction with any necessary remedial activities. Groundwater monitoring is required until contaminant concentrations reach acceptable levels determined by the PST staff on a site-by-site basis.

**Status of Groundwater Monitoring.** There are an estimated 16,408 monitor wells in place under the PST program. In 2008 the PST program received monitoring reports from 792 leaking petroleum storage tank (LPST) sites which contain approximately 5,103 monitor wells. Of these, approximately 3,645 monitor wells have contamination to groundwater. During 2008, approximately 6,853 groundwater samples were collected from the 792 LPST sites. Approximately 4,895 of these samples showed groundwater contamination.

**Status of Groundwater Contamination.** To date, a total of approximately 13,761 groundwater contamination incidents have been documented by the PST Program. There have been 10,902 cases deleted due to completed action from this and previous reports. For 2008, 2,344 cases are listed by county in Table 1 under the division heading "RMD/PST." Of these, there are 14 cases that required notification to local officials under §5.236 of the Texas Water Code since the previous report's publication. There were 237 cases added in 2008 of which 231 were newly identified cases of groundwater contamination. A total of 947 cases were deleted from the 2007 report of which action was completed (activity status 6) on 631 cases. The great majority of the cases involve groundwater with documented contamination problems. A small percentage are cases where groundwater is imminently threatened.

### **Summary**

The Remediation Division has a total of 4,234 groundwater contamination case descriptions listed by county in Table 1. 22 of the Division's cases required notification to local officials under TWC §5.236 in 2008. The TCEQ Remediation Division staff again worked throughout the reporting period to eliminate the "double counting" of cases, except in the Voluntary Cleanup Program, where multiple "cases" or reported groundwater contamination occurrences may be the result of a single contamination plume that affects many different individual land parcels. The Voluntary Cleanup Program recognizes these individual parcels as distinct participants in their program; hence there is inherently some duplication that will continue.

## **Waste Permits Division**

The Waste Permits Division consists of the Municipal Solid Waste Permits Section and the Industrial and Hazardous Waste Permits Section. The Industrial and Hazardous Waste Permits Section includes the Underground Injection Control Program.

### **Municipal Solid Waste Permits Section.**

**Program Description.** The Municipal Solid Waste (MSW) Permits Section regulates the collection, handling, storage, processing, and disposal of municipal solid waste and the commercial disposal of non-hazardous industrial solid waste in Texas under the authority of the Texas Solid Waste Disposal Act, as amended (Chapter 361, Texas Health and Safety Code), and under federal authority of the Resource Conservation and Recovery Act (RCRA), Subtitle D, as amended. These statutes are implemented in state regulations in Title 30 Texas Administrative Code (30 TAC), Chapter 330, and in federal regulations in Title 40 Code of Federal Regulations (40 CFR), Parts 257 and 258.

The MSW Permits Section audits groundwater monitoring results from permitted municipal solid waste landfills and commercial industrial non-hazardous waste landfills, and reviews corrective action plans and remedial activities if groundwater contamination occurs. MSW Type I landfills (which may receive putrescible waste and household waste) are required to have groundwater monitoring systems, monitor groundwater quality, and evaluate the results statistically in accordance with 40 CFR Part 258, Subpart E, and 30 TAC Chapter 330, Subchapter J, unless they meet arid exemption requirements or obtain a groundwater monitoring suspension. Under state rules in 30 TAC §330.417, MSW Type IV landfills (limited to brush, construction and demolition waste, and other rubbish free of putrescible waste and free of household waste) may be required to conduct groundwater monitoring, but are not required to statistically evaluate the data. Sites that closed prior to the implementation of RCRA Subtitle D may continue to follow pre-Subtitle D groundwater monitoring requirements during their post-closure care maintenance periods.

**Status of the Groundwater Monitoring Program.** In calendar year 2008, there were 244 municipal solid waste landfills permitted to accept waste (184 Type I landfills and 60 Type IV landfills). Of these 244, 130 conducted groundwater monitoring during 2008. The remainder did not monitor because they: (a) were arid exempt or had a groundwater monitoring suspension, and were not required to monitor (75); or (b) were not yet constructed or not active (39). The MSW program also regulates 2 active commercial industrial non-hazardous waste landfills that conducted groundwater monitoring, and 18 closed landfills that conducted groundwater monitoring during 2008.

The 150 facilities that conducted groundwater monitoring in 2008 account for a total of approximately 1,890 groundwater monitor wells. Approximately 1,660 of the wells were sampled in 2008.

If groundwater analyses indicate an increase from background or historical levels for any constituent, the owner or operator must initiate assessment monitoring unless it is

demonstrated that a source other than the landfill caused the increase, or that the increase resulted from natural variation in groundwater quality, or an error in sampling, analysis, or statistical evaluation. During assessment monitoring, if one or more constituents are detected at statistically significant levels above groundwater protection standards (which may be maximum contaminant levels, background concentrations, or health-based concentrations), the facility owner or operator must characterize the nature and extent of the release, notify persons that own or occupy the land that directly overlies any part of the plume of contamination, assess potential corrective measures, and implement corrective action.

**Status of Groundwater Contamination.** Approximately 3,260 groundwater samples were collected from MSW groundwater monitor wells sampled in 2008. Approximately 230 monitor wells in the regulatory program were not sampled in 2008 because they were dry or did not yield enough water for sampling, or were inaccessible due to damage. Groundwater contamination has been confirmed at 51 MSW landfills listed by county in Table 1 under the heading “MSW.” Contamination was reported in approximately 380 samples from an estimated 190 monitor wells at those sites. Five of the 51 contamination cases are new. None of the new cases is known to have created a potential public health hazard or threatened a public or private drinking water supply, or resulted in point-of-use impacts. Therefore none of the new cases required notification to local officials under Texas Water Code (TWC), Chapter 5, Section 5.236, or notification to private drinking water well owners under TWC §26.408.

At the end of 2008, confirmation of contamination or some form of investigation was under way at 20 sites (activity status codes 1 and 2). During 2008, corrective action and/or remediation (activity status codes 3, 4, and 5) took place at 31 sites. No further action was required for 9 sites (Activity Status code 6C) in 2008.

### **Industrial and Hazardous Waste Permits Section.**

**Industrial and Hazardous Waste Program Description.** The Industrial and Hazardous Waste (IHW) Program permits the treatment, storage and disposal of hazardous solid waste and the commercial treatment and storage of non-hazardous industrial solid waste under the authority of the Texas Solid Waste Disposal Act, as amended (Chapter 361, Texas Health and Safety Code), and under federal authorization to administer the federal Resource Conservation and Recovery Act (RCRA), as amended. In addition to operating federally-authorized programs, the IHW Permits Program also refers cases to the Office of Compliance and Enforcement when they involve violations of TWC §26.121, which prohibits unauthorized discharges into or adjacent to waters in the state, including groundwater.

Under RCRA authorization, the IHW Permits Program regulates approximately 179 industrial facilities, of which 83 industrial facilities have land disposal units. Of these, approximately 50 facilities conduct groundwater detection monitoring programs. Land disposal units subject to regulation include landfills, surface impoundments, land treatment units, and waste piles.

Once permitted, an operator continues to monitor the waste units according to provisions in the facility's permit. A permitted detection monitoring program is specified for units for which no release has been indicated. The sampling program is

based on hazardous constituents specific to the waste being disposed. Should a release occur, the operator implements a compliance monitoring program wherein the monitor well system is sampled for all hazardous constituents, a concentration limit is established for each detected constituent. Should this value be exceeded in subsequent sampling events, the operator must implement a corrective action program. Compliance monitoring and the corrective action program are administered by the Remediation Division.

**Status of the Groundwater Monitoring Program.** The IHW Permits Program monitoring program relies upon approximately 50 operators to correctly sample, analyze, interpret, and report the significance of groundwater quality at their facilities. The TCEQ inspectors and staff check the compliance status of operators annually and perform periodic in-depth reviews, including agency sampling of monitor wells for all RCRA regulated facilities. Similar actions are performed for non-RCRA sites as the situation dictates. The TCEQ analyses are compared to the facility's reported results, sampling procedure, data quality, and interpretations in order to determine the validity of the self-reported data.

**Status of Groundwater Contamination.** The Remediation Division is responsible for addressing groundwater monitoring and corrective action at industrial and hazardous waste facilities that have had a release to groundwater. Only detection monitoring is addressed by the IHW Permits Program. No new confirmed incidents of groundwater contamination in detection monitoring wells occurred in 2008.

Of the six facilities listed in the 2007 report, three facilities were issued Compliance Plans in 2008 and have been removed from the 2008 Waste Permits Report. These three facilities are being tracked by the Remediation Division.

The fourth facility has been referred to the Remediation Division but a Compliance Plan has not been issued as of this date. Therefore, it is still listed as having reported contamination.

The fifth facility had an incident of apparent groundwater contamination that was not confirmed and therefore the wells have been returned to the detection monitoring program. This action was dropped from the 2008 report because it had an Enforcement status of "6 - Action Completed" on the 2007 report.

The sixth facility had an incident of apparent groundwater contamination that was not confirmed and therefore the wells have been returned to the detection monitoring program. This action will be dropped from the 2009 report because it has an Enforcement status of "6 - Action Completed".

There are two other facilities that are no longer listed on the Groundwater Detection Monitoring List. The first transferred their remaining detection monitoring wells to the existing Compliance Plan even though there were no reports of contamination in these wells. In the process of transferring the wells, they have changed the purpose of the wells from detection monitoring to one associated with corrective action.

The second facility completed the required groundwater monitoring of a land-based unit and will no longer be performing such monitoring.

One facility has been added to the Groundwater Detection Monitoring List. This facility, which previously did not have any land-based units (and therefore no groundwater detection monitoring wells) added a land-based unit and groundwater detection monitoring wells to monitor for releases.

**Underground Injection Control Program Description.** The Underground Injection Control (UIC) Program, administered under the authority of the federal Safe Drinking Water Act and the Texas Injection Well Act, regulates a wide range of activities using injection wells. The specific injection wells regulated by the commission include Class I industrial and municipal waste disposal injection wells, Class III injection wells for in situ mining of subsurface mineral deposits, and Class V (miscellaneous, mostly shallow) injection wells.

Class I injection wells are used to inject hazardous and non-hazardous liquid industrial waste below the lowermost underground source of drinking water (USDW). There are approximately 106 Class I injection wells permitted and operating in Texas. Approximately half of the wells are permitted to inject both hazardous and non-hazardous waste, with the other half being permitted to inject only non-hazardous waste. Nine Class I injection wells are authorized for commercial disposal of off-site generated waste; all other Class I wells in the state are limited to disposal of on-site generated waste.

Applications for Class I injection wells must demonstrate that the location is geologically suitable and that the injection zone and confining zone are free of transmissive faults, fractures, and unplugged abandoned wells that could act as conduits for leakage of waste from the injection zone. The most important and most common forms of monitoring required for Class I wells consist of (1) continuous monitoring of wells for leaks and annual mechanical integrity tests, (2) annual surveys of the area for newly constructed wells, and (3) annual measurement of injection zone pressure. Of particular note, continuous monitoring of wells for leaks coupled with annual mechanical integrity tests enables small leaks within a well to be quickly identified and repaired before any waste can escape from the injection zone and migrate into sources of drinking water. Also notable, in a few cases, the TCEQ has required pressure monitor wells completed in the injection zone at particular locations offset from the injection well.

As described above, Class III injection wells are used for in situ mining of minerals. In this process, water is injected underground into ore deposits to dissolve (or in the case of Frasch sulfur mining, to melt) the target mineral so it may be recovered in a dissolved (or molten) state in groundwater pumped to the land surface through a production well. The injected solution used for in situ mining by dissolution of minerals is typically water with the addition of sodium bicarbonate and oxygen; in Frasch sulfur mining, the injected fluid is super-heated water.

Producible minerals at a Class III injection site are generally found in or above an underground source of drinking water (USDW). Therefore, as an essential part of the UIC program, permits require monitoring of groundwater before, during, and after mining occurs at a Class III injection well project.

Since 1975, when the first Class III injection well permit was issued, 36 sites have been permitted for uranium mining, six for Frasch sulfur mining, and three for

sodium sulfate mining. Groundwater monitoring varies for each of the three types of mining. The three sites which mined sodium sulfate and all six of the Frasch sulfur mining sites have plugged their wells in response to unfavorable economic conditions. In particular, off-site contamination from the sulfur mining sites is highly unlikely since sulfur must be super-heated to a liquid state in order for it to flow. Any movement away from the mine area would cause the sulfur to cool and harden.

The most extensive groundwater monitoring occurs at uranium mining sites. At the uranium Class III sites, groundwater samples must be analyzed prior to any injection into a Class III well in order to determine background or pre-mining values. In many cases, the natural background values for radium and uranium may exceed EPA drinking water standards because of the existence of the ore body itself. During the mining, groundwater restoration, or stand-by phases of the in situ mining process, the mining companies are required to submit quarterly monitoring reports for review and approval. The reports contain groundwater analyses from within the zone being mined as well as groundwater from aquifers overlying and underlying the mined zone. Analyses include conductivity, uranium, chloride, and in some cases sulfate or alkalinity. These control parameters are used to detect movements of mining fluids, including excursions out of the mine area and into the monitor wells. If an excursion is detected, additional monitoring is required and steps must be taken by the company to control the location of the mining fluid. A company's failure to conduct such monitoring and control the movement of the mining fluid is a violation of the permit, which will result in appropriate enforcement action by the TCEQ.

When mining is completed, the affected groundwater must be restored to levels consistent with baseline values and with previous groundwater use. Groundwater quality must remain stable for a six-month period before the area can be declared restored and the monitor wells can be plugged. To ensure the aquifer is restored to levels approved by the TCEQ, groundwater samples (stability samples) are taken by the company at a minimum of thirty (30) day intervals for a minimum of three sample sets. The TCEQ may split samples with the company for verification purposes. Samples are analyzed by separate laboratories.

The UIC program also regulates Class V (miscellaneous) injection wells under the federal Safe Drinking Water Act and the Texas Injection Well Act. Class V injection wells include all injection wells not in the other four injection well classes. Class V wells are generally shallow, with injection into or above underground sources of drinking water (USDW). As with the other four classes of injection wells, Class V wells must provide adequate protection of ground and surface fresh water from pollution. Examples of Class V wells include agricultural drainage wells, domestic wastewater disposal wells, aquifer storage and retrieval wells, aquifer remediation wells, and closed-loop wells for air conditioning and heating. Possible pollutants that must be considered and assessed in regulation of Class V wells include pesticides, fertilizers, pathogens, metals, and salts. Class V injection wells are generally authorized by rule. However, operators are required to submit well inventory information and obtain written approval before construction and operation of a Class V well.

**Status of the Groundwater Monitoring Program.** The six in-situ uranium mining facilities are monitored for groundwater quality through the self-reporting process overseen by the TCEQ and through groundwater samples taken to verify compliance.

Each uranium mining site has one or more production areas. All of these areas are required to have groundwater monitoring. The total number of groundwater samples collected in 2008 increased from 10,500 to 11,726. The number of samples increased because permittees are required to sample monitor wells twice a month during uranium production (vs quarterly sampling when uranium is not produced) and production areas were added in 2008.

The Class III UIC program has no confirmed cases of groundwater contamination beyond the permit facility boundaries. Furthermore, there is no case of contamination of drinking water supplies from the Class I UIC program, nor from the Class V UIC program.

## ***Water Quality Division***

The Water Quality Division, OPR, is responsible for the issuance of wastewater permits under the Texas Pollutant Discharge Elimination System and implementation of the Texas Surface Water Quality Standards.

The division is subdivided into three sections, Wastewater Permitting, Customer Information & Application Processing, and Water Quality Assessment. The Water Quality Assessment Team of the Water Quality Assessment Section actively monitors and reports cases of groundwater contamination.

### **Water Quality Assessment Section.**

**Program Description.** The Water Quality Assessment Team evaluates permit applications for municipal and industrial wastewater treatment facilities, concentrated animal feeding operations, sludge disposal, and wastewater land application sites for their potential to impact groundwater, and provides recommended permit provisions to the Wastewater Permitting Section that will aid in the protection of groundwater quality. Permit applications are reviewed for their compliance with applicable portions of Texas Administrative Code, Texas Water Code, and the Code of Federal Regulations.

**Status of Groundwater Monitoring Programs.** Groundwater monitoring is required by rule for certain wastewater facilities, and the Water Quality Assessment Team may recommend groundwater monitoring for additional facilities in order to be protective of groundwater quality. Information submitted in accordance with groundwater monitoring and other permit provisions, and TCEQ enforcement order requirements are routinely reviewed and evaluated. Any noncompliance may be referred to the Enforcement Division/Water Section for coordination of appropriate enforcement action.

There are approximately 3,464 municipal, industrial, CAFO, and sludge permits under programs of the Water Quality Division. Of those facilities, approximately 60 are currently required to conduct groundwater monitoring. Due to the nature of monitoring and reporting requirements, an exact number of monitor wells cannot be ascertained, however it is believed that 200-400 wells are monitored regularly by permit holders.

**Status of Groundwater Contamination.** The Water Quality Assessment Team has a total of 13 groundwater contamination cases listed in Table 1. The cases are listed by county under the division heading "WQD/WQAS." There were no new cases added.

## ***Water Quality Planning Division***

**Total Maximum Daily Loads (TMDLs).** A TMDL, or Total Maximum Daily Load, is a tool for improving water quality. TMDLs are based on the relationship between pollution sources and in-stream water quality conditions. TMDLs are developed to provide a basis for planning and implementing pollution controls, land management practices, and restoration projects needed to protect and restore water quality. The TMDL establishes the allowable loadings for a water body and thereby provides the basis to establish water quality-based controls. These controls provide the pollution reduction necessary for a water body to meet water quality standards.

A surface water body is considered impaired if it does not meet the criteria for support of one or more of its beneficial uses, as defined in the Texas Surface Water Quality Standards. The federal Clean Water Act requires all states to identify the water bodies in their jurisdiction that do not meet water quality standards. This list of "impaired" water bodies, called the 303(d) list, is developed in Texas by the TCEQ using water quality data from various sources.

As part of the TMDL process, the TCEQ may conduct additional monitoring and data collection to better understand the water quality concerns. This information is used to further analyze the water bodies in question for point source and nonpoint source pollution. For the purpose of the Joint Groundwater Monitoring and Contamination Report, groundwater contamination cases are or may be contributing to some of the impaired stream segments in the 303(d) list. The discharge to some of the impaired streams include suspected groundwater sources from industrial and wastewater facility contaminated releases and dewatering from a mine site. Naturally occurring salt beds, especially in west Texas, can contribute to an elevated salinity when a river crosses these beds. Oil and gas exploration activities can also cause the discharge of naturally occurring mineralized groundwater to nearby surface water sources.

Whether the source of contamination is point source or nonpoint source in the TMDL process, the TCEQ develops an implementation plan with the participation of local stakeholders, describing the voluntary and regulatory measures needed to achieve the pollution reduction detailed in the TMDL. The Plan may address reduction in point source pollutants through adjustments to wastewater discharge permits. Pollution from nonpoint source pollution may be addressed through measures called "best management practices." The TMDL and implementation plan together constitute a watershed action plan.

**Non-Point Source Pollution Management Program.** The Texas Non-Point Source (NPS) Pollution Management program, authorized by Section 319 of the Clean Water Act, is also implemented within this division. The Division has responsibility for coordinating and updating the NPS assessment report and the NPS management plan, including the groundwater portions of the report. Priority activities involve oversight of grants and data collection, outreach activities, and development of watershed action plans. The NPS Program coordinates its activities with the basin management

cycle through the Clean Rivers Program. While continuing its ongoing programs, the NPS program focuses new assessment and §319(h) funds in various watersheds in support of TMDL program activities addressing listed impaired water bodies.

The NPS Program produces the NPS Assessment Report and the NPS Management Program every five years, and provides annual assessment and management program updates as necessary. The program also administers §319(h) grants for the implementation and demonstration of best management practices for controlling nonpoint source pollution. Grant administration includes such activities as publication of requests for proposals, conducting workshops for grant applicants to explain the process and format for applications, reading and ranking project proposals, and making program recommendations to EPA. After award of a grant, intergovernmental/interlocal agreements must be executed, and contract administrative activities carried out, such as preparing progress reports, processing vouchers, and making site visits.

A statewide program to educate people in urban areas about nonpoint source pollution is a major commitment of the TCEQ NPS Program. Public awareness is necessary for developing the climate needed to address the water quality problems posed by nonpoint source pollution. The NPS Program works with the Small Business and Environment Assistance Division to implement outreach and education activities through brochures, pamphlets, mass mailings, and videos; newsprint, radio, and television media coverage; and state and regional workshops.

## ***Water Supply Division***

The Water Supply Division (WSD) is responsible for the quality, quantity, and availability of water in Texas. The division oversees public drinking water protection by implementation of the Safe Drinking Water Act; provides source water assessment and protection for drinking water; provides oversight of water utilities and water districts; issues water rights permits; provides support to interstate water compacts; develops Water Availability Models for the river basins of Texas; evaluates water conservation plans and drought contingency plans; and issues permits and licenses for weather modification projects.

The division is subdivided into three sections, Public Drinking Water, Utilities and Districts, and Water Rights Permitting and Availability. Of these sections, Public Drinking Water and Groundwater Planning and Assessment Team of the Water Rights Permitting and Availability sections actively monitor and report cases of chemical groundwater contamination.

**Technical Assistance.** The WSD provides technical assistance related to groundwater quality issues to all divisions within the Office Permitting, Remediation and Registration and to other Offices and agencies as required. The WSD implements groundwater protection programs that emphasize prevention of contamination through the use of best management practices. The WSD also provides administrative support for the Texas Groundwater Protection Committee (TGPC). The TGPC has the responsibility of coordinating the state's groundwater quality protection activities under the authority of TWC §26.403. Mandated responsibilities of the TGPC, as chaired by and administered by the Water Supply Division, Water Rights Permitting and Availability Section, include the compilation of the groundwater portion of

Texas' contribution to the biennial National Water Quality Inventory (305(b)) report to EPA, the development and implementation of the *Texas Groundwater Protection Strategy*, compilation and publication of the annual *Joint Groundwater Monitoring and Contamination Report*, the biennial report to the Legislature on the TGPC's activities, and the development of the *Texas State Management Plan for the Prevention of Pesticide Contamination of Groundwater*. The WSD is also the TCEQ program contact for the Texas Water Code (TWC) §26.408 cases identified by other agencies.

The Division provides technical expertise in the evaluation and designation of groundwater management areas, priority groundwater management areas (PGMA) and the creation of groundwater districts in response to landowner petitions. As the point-of-contact for the TCEQ, the WSD reviews legislation that creates groundwater conservation districts or alters groundwater conservation district law. The WSD also provides technical support to groundwater districts and those interested in the creation of groundwater districts.

Under authority of Chapter 36 of the Water Code, the WSD tracks specific groundwater conservation district activities and initiates agency enforcement actions. These enforcement actions are initiated if a groundwater district fails to submit a new or revised management plan, fails to have their plan approved by the TWDB, or receives an unfavorable audit for management plan implementation from the State Auditor's Office.

### **Water Rights Permitting and Availability Section**

**Status of Groundwater Monitoring Programs.** The Water Rights Permitting and Availability Section compiles and maintains the Interagency Pesticide Database (IPD). The database contains the results of groundwater monitoring for pesticides collected from various agencies and other entities that sample groundwater. The database is part of an interagency effort of the TGPC to assess groundwater impacts from the label-specified use of agricultural chemicals. Analyses of approximately 8,294 samples from approximately 5,204 different wells are described in the database. There are a total of 218 confirmed pesticide detections in the database. These include 89 confirmed detections of atrazine, 34 of triazine metabolites, 21 of simazine, 18 of prometon, 12 of propazine, six of metolachlor, five of 2,4-D, five of diazinon, four of carbaryl, four of fipronil, three of metribuzin, three of terbacil, two of 1,2-Dichloropropane, two of imidacloprid, and one each of bromacil, chlorpyrifos, 1,3-Dichloropropene, endrin, heptachlor epoxide, hexazinone, imazaquin, naphthalene, tebuthiuron, and p,p'-DDE.

The section conducts its agricultural chemical monitoring programs as outlined in the *Texas State Management Plan for Prevention of Pesticide Contamination of Groundwater* (PMP). The monitoring represents ambient screening for atrazine and other constituents depending on location, funding, and specific immediate concerns. As necessary, monitoring also addresses initial efforts at contamination response and enforcement for the PMP. During the fiscal year 2008 monitoring, 109 wells, 22 springs, and two entry points (POEs) were sampled in the urban areas of Austin, San Antonio, and Houston. All the sites were sampled for immunoassay analysis (IA), and a subset of the sites were also sampled for laboratory analysis. Using IA, samples were analyzed from 107 wells for atrazine, 90 for chlorpyrifos, 95 for

diazinon, 109 for 2,4-D, and sixteen for organophosphates/carbamate (OP/C). Also, using IA, samples from 22 springs were analyzed for atrazine, chlorpyrifos, diazinon, and 2,4-D, and samples from nine springs were analyzed for OP/C. Samples from both POEs sampled were analyzed for atrazine, chlorpyrifos, diazinon, 2,4-D, and OP/C, using IA.

Samples from a subset of twelve wells and five springs were sent to the laboratory to be analyzed for atrazine, simazine, metolachlor, alachlor, propazine, prometon, AZM, diazinon, chlorpyrifos, malathion, 2,4-D, Picloram, and Dicamba and others, using laboratory methods 525.2, 515.1, and 622.

Samples obtained through Cooperative Monitoring were also analyzed using IA. Through a cooperative arrangement the TWDB during their normal sampling activities, at each of their sampling sites, obtains an additional sample which they send to TCEQ to be analyzed using IA. From time to time Water Conservation Districts also participate in Cooperative Monitoring, but in FY2008 the TWDB was the only participant. TWDB in FY2008 provided 213 samples to TCEQ through the Cooperative Monitoring program. 213 of these well samples were analyzed for atrazine, 32 for 2,4-D, 11 for chlorpyrifos, and 3 for organophosphates/carbamate.

**Status of Groundwater Contamination.** Cases of confirmed groundwater contamination that may not fall under the jurisdiction of an individual division or agency are tracked by the Water Supply Division. These cases include contamination that has not been directly linked to a single activity or source; historic enforcement cases where groundwater contamination is known to exist, but where no further regulatory action is required by law, rule, or order; existing cases that are outside the current regulatory scope; and cases that are confirmed in the Interagency Pesticide Database that do not require regulatory action. Out of the total five groundwater contamination cases listed in Table 1 under the heading “WSD”, one case is pesticide related. No cases required notification to local officials in 2008 under §5.236 TWC.

### **Public Drinking Water Section**

**Status of Groundwater Monitoring Programs** - In 2008 the Public Drinking Water Section of the Water Supply Division monitored 6,851 public water supply systems in its regulatory program. Of these public water systems, 5,604 use groundwater as a primary or secondary source of drinking water. These systems have 7,840 entry points supplying groundwater from 12,283 public water supply wells whose usage is classified as operational or demand. An additional 4,003 other wells are classified as emergency, proposed, plugged, abandoned or capped. Community and non-transient/non-community systems routinely monitor for regulated and unregulated inorganic and volatile organic chemicals at least once every three years, or every six years with reduced monitoring which is available for systems who meet waiver criteria. All transient/non-community systems monitor for most of the required inorganic chemicals once every three years. Only vulnerable groundwater systems monitor for required synthetic organic chemicals once every three years and annually for volatile organic chemicals. Technically defensible source water assessments determine well and geologic vulnerability. The monitoring for source water contaminants is expected to change as source water assessments are advanced and refined. In addition, regulations are changing to increase monitoring for disinfection by-products in distribution.

Most chemical monitoring for source water contaminants of public drinking water is performed at the entry point where the water enters into the distribution system after all treatment has been applied. Distribution sampling is not addressed here. For many entry point samples, the water analyzed is a blend of water from more than one water well, underground spring, and/or surface water intake. Monitoring of untreated groundwater is conducted when a new public water supply well is constructed, where groundwater is highly vulnerable to microbiological contamination, or when groundwater contamination is suspected. In 2008, 21,714 samples were collected from 11,377 groundwater sources represented by 5,248 entry points and 179 wells. The chemical groups included were minerals, metals, nitrates, radio-chemicals, volatile organic chemicals, and synthetic organic chemicals. 70 samples showed contamination from wells or entry points served by wells that have confirmed contamination. In 2008, there were many samples with detections of volatile organic chemicals (attributed to tank coatings, artifacts, etc.), but only 9 wells and 1 spring showed new groundwater contaminations for volatile organic chemicals. Of these, four were contaminations of assorted natural gases, three were contaminations of MTBE, one was a contamination of 1,2-dichloroethane, one was a contamination of several hydrocarbons including naphthalene, and one was a contamination that included several chlorinated solvents. Most inorganic and radiochemical contaminants are not assessed for man-made chemical contamination at this time. The potential natural occurrence or the long history of man-made chemical use of some contaminants such as nitrates and arsenic makes the assessment difficult.

Currently, all EPA certified drinking water chemical analyses under this program are performed by the Texas Department of State Health Services Bureau of Laboratories or the Lower Colorado River Authority Environmental Laboratory Services.

Microbial monitoring may also find contaminated wells. Water systems conduct monthly bacterial (coliform) testing in distribution. Though systems are required to maintain a disinfectant residual, sometimes contaminated wells (usually groundwater under the influence of surface water - GUI) are discovered. Additional well testing before treatment is conducted. Public drinking water maintains this database of GUIs. Microbiological analyses are conducted by laboratories that have been certified by the TCEQ.

**Status of Groundwater Contamination** - Nine new groundwater contamination cases resulting from organic chemicals were listed in the 2007 report. For the 2008 report, 9 wells and 1 spring are listed in the report, which includes 9 new wells and 1 new spring. All ten new contaminations required notification of local officials under TWC §5.236 (HB 938), and six of these new cases required notification of private well owners under §26.408 (HB 3030). A total of 171 current or former public water supply wells are still considered to be contaminated. This number includes only contaminations where actual well water was sampled and found to be contaminated. Groundwater contamination will no longer be inferred from entry point sampling alone. A detection of a contaminant in raw water collected directly from a well is now required to confirm contamination. The public drinking water program does not have authority over remediation of a groundwater contamination. Compliance with public drinking water rules and regulations is based on the ability to provide water that meets the standards, therefore, a water system can stop using a well, blend the water, treat the water, or use the water as long the drinking water produced meets the

standards. In addition, at this time few of the contaminations initiate activities for remediation in other Texas programs. Currently, the Public Drinking Water Section will not remove contamination cases from the list unless the contamination is known to have undergone remediation.

## Texas Water Development Board

**Program Description.** The Texas Water Development Board (TWDB) conducts an active groundwater resource assessment program. TWDB personnel have identified boundaries and various characteristics for all of the state's major and minor aquifers including geologic information, water availability, and recharge. In addition, TWDB has identified the major entities using groundwater within each river basin, the aquifer(s) from which they pump, the quality of water being developed, and the quantity of water needed for a 50-year planning period. To accomplish this, TWDB has been collecting data on the occurrence, availability, quality, and quantity of groundwater present and the current and projected demands on groundwater resources. The statewide groundwater level measurement program, groundwater quality sampling program, and groundwater studies are vital to the state's regional water planning efforts.

The purpose of the ambient groundwater quality sampling program is to collect data to: 1) monitor changes, if any, in the quality of groundwater over time and 2) establish, as accurately as possible, the baseline quality of groundwater occurring naturally in the state's aquifers. TWDB conducts the groundwater quality monitoring program in accordance with procedures established in its *Field Manual for Ground Water Sampling*. It also obtains data collected by other entities that follow these and similar procedures, such as groundwater conservation districts, the U.S. Geological Survey, and other state and federal agencies.

TWDB personnel process and store collected data by state well number in the TWDB groundwater database, which also contains indicators of sample reliability, collecting entity, and analytical laboratory along with sample results. Using the geographical coordinates stored in TWDB's groundwater database, statewide water quality data are analyzed using geographical information systems software. These data are available on the TWDB's Water, Information, Integration, and Dissemination (WIID) internet-based mapping application ([http://wiid.twdb.state.tx.us/ims/wwm\\_drl/viewer.htm](http://wiid.twdb.state.tx.us/ims/wwm_drl/viewer.htm)). They are also available as text files, scanned image report files, and in a zipped.mdb copy of the entire database at: ([http://www.twdb.state.tx.us/publications/reports/GroundWaterReports/GWDatabase Reports/GWdatabaserpt.htm](http://www.twdb.state.tx.us/publications/reports/GroundWaterReports/GWDatabaseReports/GWdatabaserpt.htm)).

**Status of Groundwater Monitoring Programs.** The TWDB sampled 708 sites (wells and springs) in 2008. TWDB's collection of these samples and analysis of additional samples from cooperative entities comprise the ambient groundwater quality sampling program. TWDB enters water-quality data collected under this program in its groundwater database, scans accompanying images for an image-file database, also available through the WIID, and files them in their Located Well Data file room at the TWDB agency's office in Austin. The sites have accurate latitude and longitude data for use with geographic information systems.

Figure 9 tabulates the 708 samples collected by the TWDB and analyzed by a contracted lab that contained selected constituents in excess of their primary and secondary standards, or Maximum Contaminant Levels (MCLs).

**Figure 9. Texas Water Development Board Results of Analyses - 2008**

Category	Constituent	MCL	Number greater than MCL
Primary MCLs	Antimony	6 µg/l	0
	Arsenic	10 µg/l	117
	Barium	2 mg/l	0
	Beryllium	4 µg/l	0
	Cadmium	5 µg/l	0
	Chromium	100 µg/l	0
	Fluoride	4 mg/l	80
	Gross Alpha	15 pCi/L	8
	Gross Beta	50 pCi/L	N/A
	Lead	Any detection	71
	Mercury	2 µg/l	0
	NO <sub>2</sub> + NO <sub>3</sub> (N)	10 mg/l	360
	Radium <sup>226 + 228</sup>	5 pCi/L	N/A
	Selenium	50 µg/l	19
	Thallium	2 µg/l	0
	Uranium	30 µg/l	21
	Secondary MCLs	Aluminum	50-200 µg/l
Chloride		300 mg/l	89
Copper		1 mg/l	0
Fluoride *		2 mg/l	231
Iron		0.3 mg/l	106
Manganese		50 µg/l	17
pH		<7.0	121
Sulfate		300 mg/l	112
Dissolved Solids		1000 mg/l	156
Zinc		5 mg/l	0

\* Greater than 2.0 mg/l and less than 4.0 mg/l

MCL = Maximum Contaminant Level  
 mg/l = milligrams per liter  
 µg/L = micrograms per liter  
 N/A = not applicable (not analyzed)  
 pCi/L = picocuries per liter

TWDB contracts with analytical laboratories to measure the concentrations of major ions, selected trace elements, and, on occasion, the isotopic content of groundwater samples. During 2008, TWDB concentrated its sampling in one major aquifer - 486 sites in the Ogallala and in several minor aquifers including the Dockum, Hickory (36), Ellenburger-San Saba (27), Pecos Valley (18), Rita Blanca (7), Capitan Reef (4), and one each in the Marble Falls and Cambrian. Sampling begun in 2008 in the Gulf Coast aquifer at 16 sites will be completed in 2009. Three cooperating groundwater conservation districts, following TWDB procedures, also collected samples from the Edwards (Balcones Fault Zone), Trinity, Edwards Trinity Plateau, and Ellenburger-San Saba aquifers for the TWDB's ambient water-quality program in 2008.

The TWDB is not a regulatory agency and has no groundwater protection regulatory programs. Consequently, the TWDB does not have regulatory jurisdiction over contamination cases detected by the agency. Any detection of contamination is referred to the proper regulatory agency. The accompanying map (Figure 10) shows the location of the 708 sites sampled by the TWDB in 2008.

**Figure 10. Texas Water Development Board Sampling Locations – 2008**

# Railroad Commission of Texas

## *Oil and Gas Division*

**Class II Underground Injection Control Program Description.** The Railroad Commission of Texas (RCT) regulates the disposal of oil and gas wastes by injection (Statewide Rule 9), the injection of fluid for enhanced oil recovery (Statewide Rule 46), and the underground storage of hydrocarbons (Statewide Rules 95, 96, and 97). As of December 31, 2008, the inventory of active wells in these categories was 31,879 out of 51,521 currently permitted wells. The RCT's Underground Injection Control Program for these categories of wells (Class II) is administered under authority issued by EPA under the Safe Drinking Water Act. The focus of the program is the protection of underground sources of drinking water. Class II wells must meet permitting standards and be tested and monitored to demonstrate mechanical integrity.

**Class III Brine Mining Injection Well Program Description.** Brine mining injection wells (Class III) are typical of solution mining wells. The RCT Class III Brine Mining Injection Well Program was approved on March 29, 2004. Since then, all active brine-mining facilities were re-permitted per the provisions of Statewide Rule 81. Currently, 74 brine mining injection facilities with a total of 98 active brine mining injection wells are operating in Texas. A majority of brine mining facilities are required to monitor groundwater quality and submit groundwater-monitoring reports from 69 total monitoring wells for sampling. Groundwater monitoring is not conducted at facilities where usable quality groundwater is not present, typically located on salt domes along the Gulf Coast.

**Statewide Rule 8 Water Protection and Chapter 4, Subchapter B Commercial Recycling Program Description.** Through the Statewide Rule 8 Water Protection and Chapter 4, Subchapter B Recycling Program, the RCT regulates the surface storage and disposal of oil and gas wastes; brine retention facilities associated with brine mining and underground hydrocarbon storage; and commercial recycling of oil and gas waste. Rule 8 requires permits for pits and disposal methods that are not specifically authorized by the rule. Chapter 4, Subchapter B requires permits for commercial recycling facilities. There are currently 23 commercial facilities permitted for disposal of oil and gas waste and 4,000 pits permitted for storage or disposal of oil and gas wastes or retention of brine. Of the 4,000 permits, approximately 48 percent authorize pits to be used for short-term storage (48-72 hours) of produced water during emergency situations. The remaining permits are for various categories of pits, including saltwater disposal pits, collecting pits, skimming pits, brine pits, brine mining pits, and drilling fluid and gas plant evaporation/retention pits. Many of the pit permits require liners and leak detection systems. There are currently 8 permits issued for the commercial recycling of oil and gas waste. Rule 8 and Chapter 4, Subchapter B permits may also contain groundwater monitoring requirements in certain circumstances. The RCT monitors 170 wells associated with facilities permitted under Rule 8 and Chapter 4, Subchapter B. Four monitoring wells at one location were determined to be affected by contamination in 2008. The RCT also responds to citizen complaints regarding alleged groundwater contamination or alleged unauthorized activities that may endanger groundwater. RCT response may include investigation and sampling by the appropriate district office.

**Oil field Cleanup Program Description.** Oil-field cleanup activities fall under the jurisdiction of the RCT and are subject to regulations under Statewide Rule 8, Statewide Rule 20, Statewide Rule 91, and RCT Special Orders. Other jurisdictional rules that regulate oil-field protection and cleanup activities include: SWR 13 (well completion requirements), SWR 14 (plugging requirements), SWR 9 (injection [disposal] into a non-productive zone), SWR 46 (injection into a productive zone), SWR 57 (reclamation plants), SWR 93 (water quality certification), SWR 98 (standards for management of hazardous oil and gas waste), and 16 TAC §4.601-4.632 (disposal of oil and gas NORM waste). Through SWR 30 (Memorandum of Understanding) the RCT maintains jurisdiction over natural gas plants and compressor stations.

If groundwater contamination occurs at a site, the responsible party is required to remediate to acceptable levels. Responsible parties may volunteer remedial action or cleanup may be required by legal action (Operator Cleanup Program). Operators, developers, or individuals who are not responsible for the contamination may participate in the Voluntary Cleanup Program. When investigation and research cannot locate a responsible party, the Site Remediation Section of the Oil and Gas Division will oversee the remediation of the groundwater contamination with state funds (State Funded Cleanup Program).

Monitoring wells are associated with all cases involving groundwater contamination. The number of monitoring wells at a site depends on the severity of the impact, the expanse of the plume, the toxicity of the contaminants of concern, and the sensitivity of the site. Most of the confirmed groundwater cases listed in this report under Railroad Commission Jurisdiction are under the purview of the Site Remediation Section of the Oil and Gas Division. There are 312 Operator Cleanup Program (OCP) sites, ten (10) Volunteer Cleanup Program (VCP) sites, one (1) Brownfields Response Program (BRP) and twenty-four (24) State Funded Cleanup (CU) sites in the 2008 Annual Joint Groundwater Contamination Report. Complaints, nonpoint source grant investigations, District Office managed sites, and sites managed by other sections of the Oil and Gas Division of the TRC comprise the remaining listings on the TRC portion of the report (47 in number). In addition, the Rule 8 Section manages one (1) land farm (LF) remediation site where groundwater has been contaminated. The site is listed in Montague County.

**Status of Groundwater Contamination.** There are 395 groundwater contamination cases, listed by county, in table 2 under the heading RCT. The 395 cases are located in 121 counties. There are 42 new cases including one (1) LF case (no new VCP projects and no new BRP projects) under RCT regulations that have been added to the report in 2008. Activities were completed on 15 cases that are listed on the 2008 report. A total of 20 cases were removed, two (2) of which were removed as duplications. In 2008 one (1) case was referred to the RCT from another agency; and one (1) case was referred to another agency by the RCT. The 54 new cases were due to self-reporting, complaints, routine investigations, investigations from nonpoint source grants, and participation in the VCP and the BRP. For the 2008 report, the status of enforcement and/or activity has changed in 58 cases from the cases reported in the 2007 report.

## **Surface Mining and Reclamation Division**

**Program Description.** The Surface Mining and Reclamation Division (SMRD) of the Railroad Commission of Texas (Commission) is authorized to enforce State laws and regulations consistent with the Texas Surface Coal Mining and Reclamation Act (Vernon's Texas Codes Annotated, Ch. 134, Texas Natural Resources Code) and the Texas Uranium Surface Mining and Reclamation Act (----, Ch. 131). As part of the groundwater information required in the Regulations, determination of the quality of subsurface water includes the analysis of common inorganic groundwater constituents plus certain trace metals. Monitoring plans for pre-mining, mining, and post-mining conditions are required, normally on a three-month basis, in order to track variations in water-quality parameters.

Six (6) different companies at 14 permitted sites are presently mining coal, mostly lignite. Four (4) permittees have mines that are under reclamation operations and two (2) companies have permitted mines but have not commenced activities. Seven (7) different companies are conducting uranium exploration activities at 19 permitted sites. Groundwater monitoring, both sampling for water-quality analysis and measurement of water level, is required for one year on a quarterly basis for the baseline information that is submitted with the initial permit application. In addition, the mining companies are required to submit plans for quarterly groundwater monitoring during mining and post-mining reclamation activities for Commission review and approval. Monitoring is done by or on behalf of the mining companies, which are required to submit the analytical results to the Commission on a quarterly basis, usually for the following parameters, in milligrams per liter (mg/L):

Calcium	Bicarbonate
Magnesium	Carbonate
Sodium	Sulfate
Potassium	Chloride
Iron (Total and Dissolved)	Fluoride
Manganese (Total and Dissolved)	Nitrate, as Nitrogen
Total Dissolved Solids	

Typically, an annual sample is also analyzed in a subset of these wells (spoils wells) for the following trace metals, in milligrams per liter:

Aluminum	Boron	Copper	Molybdenum
Arsenic	Cadmium	Lead	Selenium
Barium	Chromium	Mercury	Zinc

Continued quarterly samples during the entire permit period (mining and reclamation) include the chemical analysis of at least the following parameters:

Sulfate	Electrical Conductivity and Temperature
Chloride	Iron (Dissolved)
Total Dissolved Solids	Manganese (Dissolved)

Monitoring by the Commission is generally conducted only during investigations for some specific reason, such as water-quality complaints. The Commission no longer maintains a laboratory, and chemical and physical analysis of samples collected by enforcement personnel are sent to a commercial laboratory under contract with the Division. Typically between 5 and 15 water-quality and quantity complaints are investigated annually by Commission field personnel. To date, investigations have not borne out any confirmed contamination cases.

**Status of Groundwater Monitoring Programs.** All of the above-mentioned mining facilities, including those under reclamation operations, are subject to groundwater monitoring. Staff estimates that about 460 wells are being sampled four times per year (approximately 1,840 samples and >5,600 analyses). To date, results of the sampling program do not indicate that any contamination attributable to mining and reclamation activities has occurred.

Various commercial laboratories perform chemical analyses for the mining companies and some have in-house laboratories. The Commission has no control over the actual sampling and sample preparation procedures, except to recommend generally accepted procedures (USEPA, USGS, etc.). Therefore, the Commission has no direct control over the quality of the chemical analyses reported by the companies. Methods for evaluating the results of chemical analyses (ionic balance) are being exercised by the mining companies and the Commission.

**Status of Groundwater Contamination.** There have been no confirmed contamination cases in the Surface Mining and Reclamation Program. Groundwater impacts related to the initial and current mining activities are almost totally associated with aquifer head drawdowns and declines. It may take years to decades for the spoils areas to become re-saturated and the groundwater contributions from the spoils areas to start affecting adjacent aquifers and stream base-flow. At that time, the preventive nature of the Commission permitting and enforcement activities should minimize the type of groundwater contamination expected from the spoils areas.

## Department of State Health Services

**Program Description.** The Department of State Health Services (DSHS) has limited involvement in groundwater protection, although it does provide services that are related to groundwater safety and public health concerns. With regard to groundwater issues, the Community Hygiene Group in the Division of Regulatory Services acts primarily in a non-regulatory manner and serves in an advisory or public service role. If and when public health is impacted by groundwater contamination, the agency's response would focus on providing advice and assistance to the population affected. Since DSHS involvement in groundwater issues is primarily advisory, the agency assists in determining the problem and providing help to the affected public. Regulatory aspects and remediation requirements would, however, be the responsibility of other state and federal agencies, as appropriate.

Although there are no direct programs that relate to groundwater protection, DSHS does have programs that indirectly provide protection to the state's water resources. Under the Regulatory Licensing Unit, the Chemical Reporting Group administers and enforces Tier II reporting of hazardous substances. The Policy Standards and Quality Assurance Unit oversee programs for youth camps, childcare centers and investigate public health nuisance complaints.

The DSHS Laboratory Services Section performs chemical and microbiological analyses for any program at DSHS that needs water quality testing for its samples. For example, the laboratory routinely performs PCB analyses of surface and groundwater samples for the federal PCB program. The Laboratory Services Section also accepts water samples for routine microbiological analysis from the public for a fee

DSHS offers support on an as-needed basis when issues arise regarding the potential contamination of drinking water, including drinking water that is produced from a groundwater source. In such cases, DSHS may provide analytical, toxicological and epidemiological support for the purpose of protecting the public health.

## Texas Department of Agriculture

The Texas Department of Agriculture (TDA) has lead authority for the regulation of pesticides in Texas. The TDA recognizes certain pesticides as having the potential to contaminate groundwater and has primary responsibility in preventing unreasonable risk to human health and the environment from the use of pesticides. On Sept. 1, 2007 the Structural Pest Control Board became the Structural Pest Control Service (SPCS), under the authority of the Texas Department of Agriculture. The bill that abolished the Board and brought the Service into TDA is H.B. 2458. The Structural Pest Control Service is responsible for the regulation and licensing of persons engaged in the business of structural pest control. SPCS continues to provide exceptional customer service to the public and the industry, while enhancing the educational and professional standards of license holders and ensuring the health, safety and welfare of the public.

The agency conducts a variety of activities designed in part or entirely to reduce the potential of groundwater contamination by pesticides:

- *Pesticide Applicator Training* - All prospective users of restricted-use or state-limited-use pesticides are required to obtain an applicator's license. This process includes training in the proper and legal use of pesticides, applicator testing, and continuing education.
- *Product Registration* - All pesticide products sold and used in Texas must be registered with the TDA. This process ensures these products have met all EPA requirements for use.
- *Pesticide Label Compliance and Enforcement* - The agency has responsibility and authority under the Texas Agricultural Code to enforce pesticide labels, which include use directions and precautions that directly or indirectly reduce the potential of groundwater contamination.
- *Risk Assessment* - The TDA maintains a program to assess the potential impacts of agricultural chemicals on human health and the environment, including groundwater quality. This program directs pesticide-related water quality issues.
- *Pesticide Management Plan for Prevention of Pesticide Contamination of Groundwater (PMP)* - TDA serves as co-chair of the PMP Task Force, under the authority of the Texas Groundwater Protection Committee (TGPC), which is charged with prioritizing pesticides of interest and concern for developing the generic and pesticide-specific PMPs for Texas. These activities are conducted to ensure compliance with federal and state laws and regulations relating to the use of pesticides and the protection of groundwater resources. Additionally, the TDA provides support and assistance in all state environmental projects where agricultural and structural pesticide use and regulation are of concern. Although TDA does not normally conduct groundwater monitoring for pesticides, the agency maintains a fully equipped laboratory located on the campus of Texas A&M University in College Station. The lab regularly conducts pesticide residue analysis and pesticide product formulation analysis primarily to monitor product labeling, and to assist the department's efforts in enforcing state and federal pesticide laws and regulations.

The Texas Legislature established the Prescribed Burning Board (PBB) and directed its administration through the Texas Department of Agriculture. The PBB sets standards for prescribed burning; coordinates training, certification, and recertification of burn managers; and sets minimum insurance requirements for prescribed burn managers. Prescribed burning is a standardized, accepted rangeland management practice. The controlled application of fire is utilized to meet a variety of objectives. An important use is to conserve water resources by mitigating the undesirable impact of vegetation requiring intensive water consumption. These mandated programs are augmented by TDA's initiatives in riparian invasive species control efforts. Staff addresses regulatory issues; provides technical expertise on human health, environmental, endangered species as well as other non-target effects by pesticides; and facilitate coordination of invasive species control projects.

## Texas State Soil and Water Conservation Board

The Texas State Soil and Water Conservation Board (TSSWCB) was created in 1939 by the Texas Legislature to organize the State into soil and water conservation districts (SWCDs) and to serve as a centralized agency for communicating with other state and federal entities as well as the Texas Legislature. Headquartered in Temple, Texas, the TSSWCB offers technical assistance to the states' 217 SWCDs and maintains regional offices in strategic locations in the State to help carry out the agency's water quality responsibilities. The TSSWCB is governed by a seven-member board composed of two Governor appointees and five landowners elected throughout Texas by more than 1,000 SWCD directors.

The TSSWCB is the lead agency for the planning, management and abatement of agricultural and silvicultural nonpoint source pollution, and administers the Texas Brush Control Program. The TSSWCB has no statutory authority in the area of point source pollution, including misuse or accidents involving agricultural chemicals that are defined as point source pollution. The Board cooperates with the TDA and TCEQ in instances of point source agricultural chemical pollution. The TSSWCB also works with other state and federal agencies on NPS issues as they relate to Water Quality Standards and Criteria, Total Maximum Daily Loads, and Coastal Zone Protection. The TSSWCB works to ensure SWCDs and local landowners are adequately represented in these matters that could have a significant impact on future conservation and utilization of natural resources.

The TSSWCB has authority to establish water quality management plans in areas that have developed, or have the potential to develop, agricultural or silvicultural nonpoint source water quality problems. This program provides, through local soil and water conservation districts, development, supervision and monitoring of individual water quality management plans for agricultural and silvicultural lands.

Besides their involvement in the abatement of nonpoint source pollution, the Board also helps to preserve groundwater resources with its Cost Share Program and Brush Control Program. The Cost Share Program funds up to 75 percent of the implementation costs for a Water Quality Management Plan which is developed and approved by the Board. This plan represents a commitment by the landowner to use the best management practices for their land uses available, as laid out in the plan, in order to protect their land and water resources from erosion, pesticide contamination, and over use. The Brush Control Program also protects groundwater resources by controlling invasive brush species which use large amounts of water. By controlling the brush in an area and restoring the native grasses, more water is available to recharge the aquifer below.

The TSSWCB continues to participate with the Agricultural Chemicals Subcommittee of the Texas Groundwater Protection Committee in the development of site-specific monitoring plans for atrazine as needed, sits on the Public Outreach and Education, Research, and Data Management subcommittees, participates in the Pesticide Management Plan Task Force and co-chairs the NPS Task Force of the Texas Groundwater Protection Committee.

## Texas Alliance of Groundwater Districts

**Program Description (General).** The Texas Alliance of Groundwater Districts (TAGD), formerly the Texas Groundwater Conservation Districts Association, was formed on May 12, 1988. Its membership is restricted to groundwater conservation districts in Texas who have the powers and duties to manage groundwater as defined in Chapter 36 TWC. TAGD is organized exclusively for charitable, educational, or scientific purposes within the meaning of Section 501 (c) (3) of the Internal Revenue Code. As such it can accept tax exempt donations and use these donations to educate the public to the growing need for water conservation and groundwater protection.

The purpose of TAGD is to educate the public and further groundwater conservation and protection activities, and to provide a means of communication for the exchange of information between individual districts as well as the general public. The TAGD maintains contact with members of the private sector and various local, state, and federal officials and their agencies in order to obtain timely information on activities and issues relevant to groundwater districts. To date, there are 77 district members of the Texas Alliance of Groundwater Districts, and 2 temporary, non-voting member districts. A map and legend showing groundwater conservation district members of the TAGD are included in Appendix 6. Contacts for the groundwater conservation districts are listed in Appendix 7.

The districts are created by the Legislature or by the TCEQ with the purpose and responsibility of preserving and protecting groundwater. Groundwater districts can be created by one of three procedures: (1) special water districts can be established through action of the legislature; (2) districts can be created through a petitioning process filed with the TCEQ by property owners based on Section 36.013 TWC; and (3) districts can be created in priority groundwater management areas through procedures initiated by the TCEQ. In the last case, extensive local participation is included through management advisory committees. Districts are local or regional in their jurisdiction and have, for the most part, elected boards of directors. Among their legislatively granted authorities is the power to monitor groundwater quality. A number of districts also have the authority to bring civil court proceedings for injunctive relief against an entity causing groundwater contamination.

**Status of Groundwater Monitoring Programs (General).** District groundwater monitoring programs are primarily of a reconnaissance nature. Most programs are designed to track water quality trends and identify possible contaminants with minimal expenditure of resources. Generally the sampling and analytical procedures and equipment employed are less sophisticated and accurate than the sampling and laboratory procedures required to document or prove contamination. However, some districts have monitoring programs with highly accurate and sophisticated sampling and laboratory procedures similar to those of the TWDB. These districts are monitoring any changes in ambient or natural water quality conditions on a long-term basis. Groundwater studies of specific areas, contaminants, or constituents are also conducted by some districts. District groundwater quality monitoring can be used to identify problems that may then be referred to appropriate state agencies for more detailed investigation and analysis.

**Status of Groundwater Contamination (General).** There is one case of groundwater contamination reported by the members of TAGD listed in Table 3 under the appropriate heading to indicate the individual district. The Evergreen Underground Water Conservation District (EUWCD) has documented one groundwater contamination case in FY 08.

### ***Barton Springs/Edwards Aquifer Conservation District***

**Program Description.** The Barton Springs/Edwards Aquifer Conservation District monitors the status of the Barton Springs segment of the Edwards Aquifer. The jurisdiction of the District covers parts of four counties including southern Travis, northern Hays, and minor portions of western Bastrop, and Caldwell counties. Routine tasks include monitoring pumping volumes from permittees, measuring water levels, collecting water samples, and performing water-quality analysis on existing and newly drilled wells within the District. Field parameters of pH, conductivity, and temperature are measured using a Eureka Manta water-quality probe. A small laboratory has been equipped by the District to measure the presence or absence of coliform bacteria, to count the number of indicator coliform colonies, and to measure levels of various basic water constituents such as nitrate, iron, chloride, fluoride, and sulfate using a Hach DR 2010 spectrophotometer. Several wells are equipped with continuous temperature/electrical conductivity probes to indicate changes in water quality.

The District has been involved in a joint groundwater study with the Texas Water Development Board (TWDB) since 1998. As part of this study, sampling is conducted for about 20 wells and springs for field parameters, nutrients, and trace metals. Additionally, the District has received grant funding from the TWDB for a more comprehensive list of groundwater parameters in 1990, 1993 and 1994 including pesticides, trace metals, radionuclides, petroleum hydrocarbons, and organics. A comprehensive list of parameters was analyzed from 28 wells and six springs in 2001. This study was part of an EPA 319h grant administered by the TCEQ to study non-point source pollution. The results of that study indicate that groundwater contaminant levels in most of the sampled wells and springs are low compared to EPA MCLs. Nine parameters were detected at levels above the TCEQ Surface Water Standards. However, samples were collected under one set of flow conditions and contaminant concentrations could vary significantly under different flow conditions. Additionally, lower levels of contaminants may be present in some samples that could not be detected due to limitations of laboratory Method Detection Levels. The District maintains a list of wells and springs "of concern" with regards to contamination on which to focus future sampling events or analyses.

Between 1996 and 2000 the District conducted groundwater dye tracing studies funded by a 319(h) grant from the Environmental Protection Agency and administered through the TCEQ. The results of this investigation were submitted to the TCEQ in August 2001. The results of this study indicate rapid groundwater velocities from recharge features to wells and springs within this karst system. The rapid travel rates and direct hydraulic connection of recharge areas to wells and springs make this aquifer extremely susceptible to contamination from a variety of sources. For example, there are periodic occurrences of increased bacteria levels in wells and springs after rainfall and subsequent recharge events.

The District conducts continuous monitoring of water levels in about 28 wells throughout the Edwards and Trinity aquifers. One of these wells (Lovely monitor well, 58-50-301), plus discharge from Barton Springs, are used for drought declarations. A multiport monitor well was installed in Hays County in February 2008 that is capable of monitoring 14 zones within the Edwards, and upper and middle Trinity aquifers. The total depth of this well is 1,120 ft. Water levels and hydraulic conductivity can be measured in each zone, and samples can be collected from each zone. The District has produced potentiometric maps of the Barton Springs segment of the Edwards Aquifer during different aquifer conditions. The most recent of these comprehensive synoptic water-level measuring events was conducted in August 2006 under moderately low groundwater level conditions. The District published the results of the study in a report titled "Potentiometric Maps for Low to High Flow Conditions, Barton Springs Segment of the Edwards Aquifer, Central Texas", BSEACD Report of Investigations 2007-1201.

### ***Panhandle Groundwater Conservation District***

**Program Description.** The Panhandle Groundwater Conservation District serves all or parts of Armstrong, Carson, Donley, Gray, Hutchinson, Potter, Roberts, and Wheeler counties. The office is centrally located in White Deer, Texas. The District monitors water levels and water quality in wells completed in the Ogallala, Blaine, Dockum, Whitehorse, and Seymour aquifers.

The District's water quality program includes the following:

- Operation of an in-house water analysis lab
- Annual sampling and analysis from selected wells
- Analysis of individual wells on a request basis
- Preparation of water quality maps
- Monitoring water quality samples and analysis results collected by other agencies operating within the District
- Participation in water quality studies with other agencies.

The District collected over 1100 annual water level measurements during 2005. Monthly water level measurements were collected from 43 wells located near or within large municipal water supply projects. The District is currently analyzing the effects of water withdrawals by this project on water quality using the information collected by these measurement programs. Along with our monthly measurements, four data recorders and four real time recorders have been installed on strategic monitoring wells near the Roberts County project and throughout the District.

According to the 2006 Water Quality Season, some wells exceeded drinking water standards in mineral content. Based on the state's secondary drinking standards, of the 233 samples collected by the District, 18 were high in iron, 22 high in sulfate, 7 high in chloride, 0 high in nitrate, and 2 high in fluoride. Of the high-iron samples, 9, or 50%, were windmills. Windmills have a tendency to be higher in iron content due to rusting discharge pipes.

The District tested total of 321 samples in the 2006 Water Quality Season, including 88 samples which were brought to the office by individuals to be analyzed.

Since it was an even-numbered year, (i.e. 2006), samples were taken from even-numbered state wells along with the state wells that have a history of high mineral concentration. This year, samples were collected over a two and a half month period. During this period, a total of 641 hours were spent gathering samples, analyzing samples in the laboratory and entering data. We continue to keep the cost as low as possible.

## Texas AgriLife Research

**Regulatory Programs.** The Texas AgriLife Research has no regulatory authority and does no regulatory monitoring. Groundwater samples may be collected and analyzed in connection with the conduct of research investigations.

**Program Description.** AgriLife Research is the official agricultural research agency in Texas. Headquartered at Texas A&M University, AgriLife Research promotes food and fiber production that emphasizes water conservation and the protection of natural resources. AgriLife Research operates a system of 13 research centers which are located in the major land and natural resource regions of Texas. The Texas Water Resource Institute is an administrative unit of the AGRILIFE RESEARCH that guides internal water-related research.

Broad goals of the AgriLife Research groundwater research program are to protect, preserve, and efficiently use water resources, and to develop sustainable agricultural production systems. Groundwater programs of AgriLife Research stress the development of management strategies, technologies, and educational programs to support sustainable agriculture.

The AgriLife Research groundwater quality research focuses on reductions in chemical use; the control, fate, and transport of agricultural chemicals; and the remediation of contaminated groundwaters.

Major efforts are underway to develop strategies to manage brush species on rangelands to increase water yields and protect water quality; to manage livestock wastes from concentrated animal feeding operations to prevent water contamination; and to develop crop production technologies that produce high yields while minimizing the loss of pesticides, chemicals and nutrients into ground and surface waters.

The following examples are of recent AgriLife Research groundwater related research activities:

- The fate and transport of atrazine in and through soils are under study in the Brazos River Basin. These soils are intensively farmed and may provide pathways for chemical transport to shallow alluvial aquifers;
- Rice water management strategies are being developed that lower pesticide needs, increase recycling and water conservation, and reduce risks of surface and groundwater contamination;
- Researchers are utilizing genetic engineering to identify genes in bacteria and fungi that have the potential to degrade groundwater contaminants;
- Research activities on animal waste management are now directed toward development of technologies to reduce phosphorus loading to soils and surface waters,
- Computer simulation models are being used to assess the impact of agricultural practices on the environment. For example, such models are now being used to identify cropping and chemical management strategies that may be appropriate for environmentally sensitive areas like the Seymour aquifer and the Texas Coastal Bend;

- Future professionals are trained through undergraduate and graduate education and research programs at Texas A&M University and other System Institutions. Many of AgriLife Research scientists at Texas A&M University in College Station also hold teaching appointments, thus providing the latest research results to students;
- AgriLife research efforts are complimented by the programs of the Texas AgriLife Extension Service. For example, AgriLife Extension specialists produce easy-to-read fact sheets and other publications for specific clientele, including agricultural producers. Other AgriLife Extension activities include field demonstrations and educational programs for youth and adults, and;
- AgriLife Extension specialists are providing leadership in development of a video tape and education program on plugging abandoned wells to protect groundwater quality. Specialists are also providing technical leadership for development of pesticide-specific management plans for the state.

**Status of Groundwater Monitoring Programs.** AgriLife Research has no regulatory monitoring authority. AgriLife Extension operates soil and water testing laboratories in College Station. The facilities provide information on potential groundwater quality problems to thousands of rural Texans. Results from the water tests are available in a database format so that water-quality trends can be identified.

## Bureau of Economic Geology

**Program Description.** The Bureau of Economic Geology, established in 1909, is a research entity of the University of Texas at Austin and functions as the State Geological Survey. The Bureau recently became part of the Jackson School of Geosciences. The Bureau conducts basic and applied research projects, including environmental site assessment and investigations of groundwater resources and groundwater quality, in support of other State agency missions. The Bureau's hydrogeologic and environmental efforts during 2008 continue to emphasis on hydrogeologic study of issues related to naturally occurring contaminants such as arsenic and groundwater recharge.

**Status of Groundwater Monitoring Programs.** As part of sponsored-research projects, Bureau staff measure groundwater quality and water levels in selected public and private wells. These projects cover many different parts of Texas. Most water quality data collected in these studies consist of pH, temperature, conductivity, major and minor inorganic ions, total organic carbon, isotopes, and other constituents of interest. Data are used to interpret rates and modes of hydrologic processes and the source and movement of groundwater. Project-specific data are collected in data reports or topical reports. Periodically, the digitized data are compiled for inclusion in the TNRIS data system.

**Status of Groundwater Contamination.** The Bureau of Economic Geology is not a regulatory agency and has no groundwater protection regulatory programs. Consequently, the Bureau does not have regulatory jurisdiction over contamination cases that might be detected in the course of its hydrogeologic investigations. Any detection of contamination is referred to the proper regulating or sponsoring agency.

# Texas Department of Licensing and Regulation

**Program Description.** Water Well Drillers/Pump Installers. The need for identification and protection of the state's groundwater resources was recognized by the Legislature through the creation of the Water Well Drillers Board (Board) in 1965. In 1991, the 72nd Legislature expanded the Board's functions to include licensing and regulation of water well pump installers.

Senate Bill 1955 (75th Legislature, 1997) transferred the Water Well Driller Advisory Council and the Water Well Driller/Pump Installer Section from the Texas Natural Resource Conservation Commission to the Texas Department of Licensing and Regulation (TDLR) effective September 1, 1997.

The Water Well Driller/Pump Installer Section maintains communications with the Council, industry, various state agencies, and groundwater conservation districts and investigates all alleged violations of Chapters 1901 and 1902 of the Texas Occupations Code and 16 Texas Administrative Code Chapter 76 (Rules). The Section also investigates consumer complaints filed against water well drillers, pump installers, and performs compliance investigations of water, monitor, injection, and dewatering wells to insure compliance with well construction standards.

Investigations include, but are not limited to, surface completions, depth of annular cement, regulated distances from contamination sources and property lines, abandoned and deteriorated water wells, and licensing requirements. In addition, rules requiring isolation of zones containing undesirable or poor quality water are enforced to prevent commingling with and degradation of fresh water zones.

The TDLR's Water Well Driller/Pump Installer Section staff also administers the Abandoned Well Notification Program. Chapters 1901 and 1902 of the Texas Occupations Code authorize this function. Investigations are conducted and landowners are notified that within one-hundred eighty (180) days of notification, the abandoned and/or deteriorated water well must be plugged, completed, or capped in accordance with 16 Texas Administrative Code Chapter 76 specifications.

Violations of Chapters 1901 and 1902 of the Texas Occupations Code and the Rules are enforced by the TDLR's Enforcement Division through TDLR orders requiring administrative penalties and corrective actions or referral to the Office of the Attorney General. Investigations that involve groundwater contamination are referred to the appropriate state agency with jurisdiction for the activity believed to be the cause of the contamination.

**Status of Groundwater Monitoring Programs.** The Water Well Driller/Pump Installer Section does not conduct or require groundwater monitoring. At the end of December 2008, there were 2,402 licensed professionals including drillers, pump installers, and apprentices regulated by the TDLR/Water Well Driller/Pump Installer Section.

During 2007, there were 304 investigations conducted by Water Well Driller/Pump Installer Program, Field Office, or Enforcement Division staff with all documented

violations either remediated or in the enforcement process. Investigations refer to the information gathering activities conducted in response to complaints received by the TDLR. Compliance investigations refer to on-site inspections of wells that are randomly chosen from the State of Texas Well Reports that are submitted to the TDLR.

26 abandoned wells were reported in 2007, 7 have been plugged and 19 are in various stages of notification, investigation.

Section, Field Office, and/or Enforcement Division staff collected 160 water well (groundwater) samples in response to complaints received in 2007.

**Texas Commission on Environmental Quality**  
**Groundwater Contamination Case**  
**Description Table**

TABLE 1  
GROUNDWATER CONTAMINATION CASE DESCRIPTION BY COUNTY  
TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

EXPLANATIONS OF FIELDS

COUNTY: THE COUNTY NAME IS THE FIRST ENTRY IN THE LEFT PORTION OF THE TABLE. IT IS LISTED ONLY ONCE FOR EACH OF THE CASES IN THAT COUNTY.

DIVISION: DIVISIONS ARE LISTED ONLY ONCE WITH THEIR RESPECTIVE CASES FOR EACH COUNTY.  
 ENF - ENFORCEMENT DIVISION  
 FOD - FIELD OPERATIONS DIVISION  
 RAD/RML - RADIOACTIVE MATERIALS DIVISION/ RADIOACTIVE MATERIAL LICENSING  
 RAD/UTA - RADIOACTIVE MATERIALS DIVISION/ URANIUM AND TECHNICAL ASSESSMENTS  
 RMD/CA - REMEDIATION DIVISION/CORRECTIVE ACTION SECTION  
 RMD/DCRP - REMEDIATION DIVISION/ DRY CLEANERS REMEDIATION PROGRAM  
 RMD/PST - REMEDIATION DIVISION/ PETROLEUM STORAGE TANK PROGRAM  
 RMD/SC - REMEDIATION DIVISION/ SUPERFUND CLEANUP PROGRAM  
 RMD/SSDAT - REMEDIATION DIVISION/SUPERFUND SITE DISCOVERY AND ASSESSMENT  
 RMD/VC - REMEDIATION DIVISION/VOLUNTARY CLEAN UP  
 RMD/VCIO - REMEDIATION DIVISION/VOLUNTARY CLEAN UP/INNOCENT OWNER  
 RMD/VCBSA - REMEDIATION DIVISION/VOLUNTARY CLEANUP/BROWNFIELDS SITE ASSESSMENT  
 WPD/IHW - INDUSTRIAL AND HAZARDOUS WASTE  
 WPD/MSW - WASTE PERMITS DIVISION/MUNICIPAL SOLID WASTE SECTION  
 WQD/WQAS - WATER QUALITY DIVISION /WATER QUALITY ASSESSMENT SECTION  
 WSD/WRP&A - WATER SUPPLY DIVISION /WATER RIGHTS PERMITTING AND AVAILABILITY SECTION  
 WSD/PDW - WATER SUPPLY DIVISION /PUBLIC DRINKING WATER SECTION

NEW CASES: AN ASTERISK (\*) IS PLACED IN EACH RECORD THAT IS REPORTED AS NEW FOR THE YEAR.

FILE NAME: FILE NAMES REFLECT RESPONSIBLE PARTIES OR GEOGRAPHIC LOCATION

FILE NUMBER: FILE NUMBERS ARE ASSIGNED ACCORDING TO THE RESPECTIVE DIVISION NUMBERING SYSTEM. FILE NUMBER IS USED TO LOCATE FILE IN THE TCEQ RECORDS.

LOCATION: LOCATIONS ARE GIVEN AS ADDRESSES OR GEOGRAPHIC LOCATIONS DESCRIPTIONS.

CONTAMINATION DESCRIPTION: AS- ARSENIC, CR - CHROMIUM, PB - LEAD, NO3 - NITRATE, SO4 - SULFATE, VOC- VOLATILE ORGANIC COMPOUNDS, ORG. - ORGANIC CHEMICALS, TOC- TOTAL ORGANIC COMPOUNDS, TDS- TOTAL DISSOLVED SOLIDS, TCE- TRICHLOROETHENE, MEK - METHYL ETHYL KETONE, CARBON TET - CARBON TETRACHLORIDE, PCP - POLYCHLORINATED PHENYLS, PCB - POLYCHLORINATED BIPHENYLS, TPH - TOTAL PETROLEUM HYDROCARBONS, BTEX - BENZENE - TOLUENE-ETHYLBENZENE-XYLENE, MTBE - METHYL-TERTIARY-BUTYL-ETHER. THE MAJORITY OF CASES INVOLVE PETROLEUM CONTAMINATION.

DATE: DATE OF EARLIEST KNOWN CONTAMINATION CONFIRMATION.

ENFORCEMENT STATUS: THE FIRST ENTRY IN THIS FIELD INDICATES THE LEVEL OF AGENCY RESPONSE, THE SECOND INDICATES THE SITE ACTIVITY STATUS. SOME CASES DO NOT HAVE COMPLETE ENFORCEMENT STATUS CODES BECAUSE OF INSUFFICIENT DATA. STATUS CODES MAY BE BORDER-LINE BETWEEN TWO LEVELS ON THE ENFORCEMENT STATUS MATRIX AND ARE ENTERED AS A COMBINATION OF ENFORCEMENT STATUS CODES, I.E.:3A,B OR 4,5. SEE PAGES 33-40 FOR A DESCRIPTION OF THESE CODES.

DATA QUALITY: E - EPA APPROVED ANALYTICAL PROCEDURES,  
 Q - QUALITY CONTROL PROGRAM ESTABLISHED FOR SAMPLING PROCEDURES,  
 V- VERIFICATION OF CONTAMINATION THROUGH PROCEDURES LISTED BELOW:  
 1. SPLITTING SAMPLES WITH REGULATED ENTITY OR OTHER AGENCY FOR COMPARISON OF ANALYSIS RESULTS  
 2. RESAMPLING FOR VERIFICATION ANALYSIS RESULTS  
 3. SUPERVISORY OR COMMITTEE REVIEW OF SAMPLING PROCEDURES AND ANALYSIS RESULTS

SECTION 5.236: AN ENTRY IN THIS FIELD CONSTITUTES NOTIFICATION UNDER TEXAS WATER CODE SECTION 5.236 TO LOCAL OFFICIALS FOR CASES REPORTED UP TO DEC. 31, 2008 THAT WERE NOT INCLUDED IN THE REPORT THE PREVIOUS YEAR. A "Y" CODE IN THIS FIELD MARKS THOSE CASES IN WHICH CONTAMINATION MAY POTENTIALLY AFFECT A PUBLIC DRINKING WATER SUPPLY OR HAS RESULTED IN POINT -OF-USE IMPACTS. TEXAS WATER CODE SECTION 5.236 REQUIRES THAT TCEQ NOTIFY COUNTY JUDGES AND LOCAL PUBLIC HEALTH OFFICIALS OF CONTAMINATION. INCLUSION IN THIS REPORT SERVES AS A "BACK-UP" TO STANDARD NOTIFICATION PROCEDURES.

**Description Table**

TABLE 2  
GROUNDWATER CONTAMINATION CASE DESCRIPTION BY COUNTY  
RAILROAD COMMISSION OF TEXAS

EXPLANATIONS OF FIELDS

COUNTY:	THE COUNTY NAME IS THE FIRST ENTRY IN THE LEFT PORTION OF THE TABLE. IT IS LISTED ONLY ONCE FOR EACH OF THE CASES IN THAT COUNTY.
DIVISION:	THESE ARE THE SPECIFIC REGULATORY PROGRAMS WITHIN THE RAILROAD COMMISSION. DIVISIONS ARE LISTED ONLY ONCE FOR THEIR RESPECTIVE CASES IN EACH COUNTY. SEE ACRONYM LIST (PAGE III) FOR AGENCY DIVISION ABBREVIATIONS.
NEW CASES:	AN ASTERISK (*) IS PLACED IN EACH RECORD THAT IS REPORTED AS NEW FOR THE YEAR.
FILE NAME:	FILE NAMES REFLECT RESPONSIBLE PARTIES OR GEOGRAPHIC LOCATION
FILE NUMBER:	FILE NUMBERS ARE ASSIGNED ACCORDING TO RCT DISTRICT COMPLIANT NUMBERING SYSTEMS. SOME DISTRICTS INCLUDE THE YEAR IN THE COMPLIANT NUMBER. SOME CASES HAVE NO NUMBERS BECAUSE THE CASE WAS INITIATED BY INSPECTION OR SOME OTHER MANNER. A FEW CASES ARE CODED ACCORDING TO RCT HEARING DOCKET NUMBER.
DISTRICTS:	RAILROAD COMMISSION OF TEXAS – OIL AND GAS DISTRICTS
LOCATION:	LOCATION DESCRIPTIONS VARY DEPENDING ON THE SCOPE OF THE INVESTIGATION AND WHETHER OR NOT THE COMPLAINANT'S PROPERTY IS ON AN OIL AND GAS LEASE. THE INVESTIGATIONS THAT ARE NARROWER IN GEOGRAPHIC SCOPE ARE DESCRIBED BY LATITUDE AND LONGITUDE.
CONTAMINATION:	CL- CHLORIDE, BA - BARIUM, BTEX - BENZENE, TOLUENE, ETHYLBENZENE, AND XYLENE, HCL - HYDROCHLORIDE ACID, GW - GROUNDWATER, NACL- SODIUM CHLORIDE, NG- NATURAL GAS, PSH - PHASE SEPARATED HYDROCARBONS, TDS- TOTAL DISSOLVED SOLIDS, SW - SURFACE WATER. MOST CASES SITE SODIUM CHLORIDE AS CONTAMINATION. SOME CASES INVOLVE REFINED HYDROCARBONS, OTHERS CITE CHLORIDE BECAUSE CATIONS OTHER THAN SODIUM MAY BE PRESENT IN HIGH CONCENTRATION.
ENFORCEMENT STATUS:	ACTIONS AND NOTICES OF VIOLATIONS ARE TAKEN AT STAFF LEVEL AND MAY BE CONCURRENT. THE CLOSURE OR SHUT-IN OF FACILITIES AND PLUGGING OF WELLS MAY ALSO BE DIRECTED AT STAFF LEVEL. STAFF DIRECTIVES ARE IDENTIFIED AS ENFORCEMENT STATUS 2. ACTIONS MAY BE STEPPED UP TO A FORMAL ENFORCEMENT LEVEL WHICH CAN BE CATEGORIZED AS EXECUTIVE ACTION AND INCLUDE ADMINISTRATIVE PENALTIES AND ORDERS. IN SOME CASES, GROUNDWATER CONTAMINATION MAY BE DOCUMENTED BUT SPECIFIC SOURCE OR AN ACTUAL RESPONSIBLE PARTY CANNOT BE IDENTIFIED. ENFORCEMENT STATUS WOULD BE CATEGORIZED AS STAFF DISCOVERY. ACTIONS OF RESPONSIBLE PARTIES WHO DISCOVER AND REPORT GROUNDWATER CONTAMINATION ARE CATEGORIZED AS VOLUNTARY ACTIONS EVEN THOUGH INVESTIGATIVE OR REMEDIAL PLANS ARE REVIEWED AND APPROVED BY THE OIL AND GAS DIVISION.
DATA QUALITY:	E - EPA APPROVED ANALYTICAL PROCEDURES, Q - QUALITY CONTROL PROGRAM ESTABLISHED FOR SAMPLING PROCEDURES, V - VERIFICATION OF CONTAMINATION THROUGH PROCEDURES LISTED BELOW: 1. SPLITTING SAMPLES WITH REGULATED ENTITY OR OTHER AGENCY FOR COMPARISON OF ANALYSIS RESULTS 2. RESAMPLING FOR VERIFICATION ANALYSIS RESULTS 3. SUPERVISORY OR COMMITTEE REVIEW OF SAMPLING PROCEDURES AND ANALYSIS RESULTS

**Description Table**

TABLE 3  
GROUNDWATER CONTAMINATION CASE DESCRIPTION BY COUNTY  
TEXAS ALLIANCE OF GROUNDWATER DISTRICTS

EXPLANATION OF FIELDS

---

COUNTY:	THE COUNTY NAME IS THE FIRST ENTRY IN THE LEFT PORTION OF THE TABLE. IT IS LISTED ONLY ONCE FOR EACH OF THE CASES IN THAT COUNTY.
DISTRICT:	THE SECOND ENTRY FROM THE LEFT IS THE DISTRICT NAME. IT IS LISTED ONLY ONCE FOR EACH COUNTY. DISTRICT ABBREVIATIONS: EUWCD - EVERGREEN UNDERGROUND WATER CONSERVATION DISTRICT.
NEW CASES:	AN ASTERISK (*) IS PLACED IN EACH RECORD THAT IS REPORTED AS NEW FOR THE YEAR.
FILE NAME:	FILE NAMES REFLECT RESPONSIBLE PARTIES OR GEOGRAPHIC LOCATION
FILE NUMBER:	FILE NUMBERS ARE ASSIGNED ACCORDING TO THE RESPECTIVE DIVISION NUMBERING SYSTEM. FILE NUMBER IS USED TO LOCATE FILE IN TCEQ RECORDS.
LOCATION:	LOCATIONS ARE GIVEN AS ADDRESSES OR GEOGRAPHIC LOCATIONS DESCRIPTIONS.
CONTAMINATION DESCRIPTION:	AL - ALUMINUM, CU - COPPER, ZN - ZINC
DATE:	DATE INVESTIGATION WAS BEGUN
ENFORCEMENT STATUS:	ENFORCEMENT STATUS CODES ARE COMPLETED BY THE DISTRICTS. SEE PAGES 33-40 FOR A COMPLETE DESCRIPTION OF THESE CODES.
DATA QUALITY:	E - EPA APPROVED ANALYTICAL PROCEDURES, Q - QUALITY CONTROL PROGRAM ESTABLISHED FOR SAMPLING PROCEDURES, V- VERIFICATION OF CONTAMINATION THROUGH PROCEDURES LISTED BELOW: 1. SPLITTING SAMPLES WITH REGULATED ENTITY OR OTHER AGENCY FOR COMPARISON OF ANALYSIS RESULTS 2. RESAMPLING FOR VERIFICATION ANALYSIS RESULTS 3. SUPERVISORY OR COMMITTEE REVIEW OF SAMPLING PROCEDURES AND ANALYSIS RESULTS

## **Appendix 1. Members and Representatives of the Texas Groundwater Protection Committee**

### **Chairman - Texas Commission on Environmental Quality**

Mark R. Vickery, P.G., Executive Director  
Texas Commission on Environmental Quality  
Building F, Room 4210, MC 109  
P. O. Box 13087  
Austin TX 78711-3087  
Telephone: (512) 239-3900      FAX: (512) 239-3939

#### **Designated Chairman**

Cary Betz, P.G., Groundwater Technical Specialist  
Water Supply Division  
Texas Commission on Environmental Quality  
Building F, Room 3101, MC 154  
P. O. Box 13087  
Austin TX 78711-3087  
Telephone: (512) 239-4506      FAX: (512) 239-6145  
cbetz@tceq.state.tx.us

### **Vice-Chairman- Texas Water Development Board**

Kevin Ward, Executive Administrator  
Texas Water Development Board  
P. O. Box 13231  
Austin TX 78711-3231  
Telephone: (512) 463-7850      FAX: (512) 475-2053

#### **Designated Vice-Chairman**

Dr. Robert Mace, P.G., Director  
Texas Water Development Board  
P. O. Box 13231  
Austin TX 78711-3231  
Telephone: (512) 936-0861      FAX: (512) 936-0889  
Robert.mace@twdb.st.tx.us

## **Members**

### **Railroad Commission of Texas**

John Tintera, Executive Director  
Railroad Commission of Texas  
P. O. Box 12967  
Austin TX 78711-2967  
Telephone: (512) 463-7068      FAX: (512) 936-7000

#### **Designated Representative**

Leslie Savage  
Railroad Commission of Texas  
P. O. Box 12967  
Austin TX 78711-2967  
Telephone: (512) 463-3296      FAX: (512) 463-6780  
leslie.savage@rrc.state.tx.us

### **Texas State Soil and Water Conservation Board**

Rex Isom, Executive Director  
Texas State Soil and Water Conservation Board  
P. O. Box 658  
Temple TX 76503-0658  
Telephone: (254) 773-2250      FAX: (254) 773-3311

#### **Designated Representative**

Donna Long  
Texas State Soil and Water Conservation Board  
P. O. Box 658  
Temple TX 76503-0658  
Telephone: (254) 773-2250      FAX: (254) 773-3311  
dlong@tsswcb.state.tx.us

**Texas Department of Agriculture**

Todd Staples, Commissioner  
Texas Department of Agriculture  
P. O. Box 12847  
Austin TX 78711-8247  
Telephone: (512) 463-7567      FAX: (512) 463-1104

**Designated Alternate**

Ambrose Charles, Pesticide Risk Assessment and  
Toxicology Program  
Texas Department of Agriculture  
P. O. Box 12847  
Austin TX 78711-8247  
Telephone: (512) 463-7497      FAX: (512) 475-1618  
acharles@agr.state.tx.us

**Department of State Health Services**

David L. Lakey, MD., Commissioner  
Department of State Health Services  
1100 West 49th Street  
Austin TX 78756  
Telephone: (512) 458-7375      FAX: (512) 458-7477

**Designated Representative**

Ken Ofunrein  
Department of State Health Services  
1100 West 49th Street  
Austin TX 78756  
Telephone: (512) 834-6770, ext 2451  
FAX: (512) 834-6644  
Ken.ofunrein@dshs.state.tx.us

## **Texas Department of Licensing and Regulation**

### **Designated Representative**

David Gunn  
Texas Department of Licensing and Regulation  
Water Well Drillers and Pump Installers Program  
P. O. Box 12157  
Austin TX 78711-2157  
Telephone: (512) 463-8876      FAX: (512) 475-2874  
david@license.state.tx.us

## **Texas Alliance of Groundwater Conservation Districts**

Mr. Gregory M. Ellis, President, Texas Alliance of Groundwater Districts  
2104 Midway Court  
League City, TX 77573  
Telephone: (713) 705-4861  
tagdexec@texasgroundwater.org

### **Designated Representative**

Mr. David A Van Dresar, Fayettee County GCD  
P. O. Box 625  
La Grange, TX 78945  
Telephone: (979) 968-3135      FAX: (979) 968-3194  
fcgcd@verison.net

## **Texas AgriLife Research**

Dr. William A. Dugas, Director, Texas AgriLife Research  
The Texas A&M University System  
2118 TAMU  
College Station TX 77843-2118  
Telephone: (979) 845-4747      FAX: (979) 862-1637

### **Designated Representative**

Dr. B. L. Harris, Director, Texas Water Resource  
Institute  
2118 TAMU  
College Station TX 77843-2118

## Appendix 2. Texas Groundwater Protection Policy

### Texas Water Code, Section 26.401

- (a) The legislature finds that:
  - (1) in order to safeguard present and future groundwater supplies, usable and potentially usable groundwater must be protected and maintained;
  - (2) protection of the environment and public health and welfare requires that groundwater be kept reasonably free of contaminants that interfere with present and potential uses of groundwater;
  - (3) groundwater contamination may result from many sources, including current and past oil and gas production and related practices, agricultural activities, industrial and manufacturing processes, commercial and business endeavors, domestic activities, and natural sources that may be influenced by or may result from human activities;
  - (4) the various existing and potential uses are important to the state economy; and,
  - (5) aquifers vary both in their potential for beneficial use and in their susceptibility to contamination.
  
- (b) The legislature determines that consistent with the protection of the public health and welfare, the propagation and protection of terrestrial and aquatic life, the protection of the environment, the operation of existing industries, and the maintenance and enhancement of the long-term economic health of the state, it is the goal of groundwater policy in this state that the existing quality of groundwater not be degraded. This goal of nondegradation does not mean zero-contaminant discharge.
  
- (c) It is the policy of this state that:
  - (1) discharges of pollutants, disposal of wastes, or other activities subject to regulation by state agencies be conducted in a manner that will maintain present uses and not impair potential uses of groundwater or pose a public health hazard; and
  - (2) the quality of groundwater be restored if feasible.
  
- (d) The legislature recognizes the important role of the use of the best professional judgment of the responsible state agencies in attaining the groundwater goal and policy of this state.

### Appendix 3. Groundwater Classification System

**Purpose** The Texas Groundwater Protection Committee and its member agencies recognize that groundwater classification is an important tool to be used in the implementation of the groundwater policy contained in Section 26.401 of the Texas Water Code. Through classification, the groundwaters in the state can be categorized and protection or restoration measures can then be specified by member agencies according to the quality and present or potential use of the groundwater.

**Basis** Four classes are defined based on quality as determined by total dissolved solids content (Figure 19). The names and concentration ranges are based on traditional nomenclature associated with each class. Quality also determines usability, however, it is implicit in this classification that a water-bearing zone must be able to produce sufficient quantities of water to meet its intended use. The examples of use are intended to describe some of the common uses of these classes and are not meant to be exclusive of other uses which might arise due to unusual circumstances or application of new technology such as desalinization.

**Application** This groundwater classification system applies to all groundwaters in the state. In assigning a classification, the member agencies shall endeavor to use the natural quality of the groundwater that is unaffected by discharges of pollutants from human activities.

All usable and potentially usable groundwaters are subject to the same protection afforded the nondegradation policy goal of the Texas Water Code in Section 26.401. This section further states that nondegradation does not mean zero-contaminant discharge. Starting with this nondegradation policy goal, protection or restoration measures can be varied according to the response level set by the classification and guidance of this narrative so long as the following conditions are met:

- a) Current groundwater uses are not impaired;
- b) Potential groundwater uses are not impaired;
- c) A public health hazard is not created; and
- d) The quality of groundwater is restored if feasible.

In determining protection or restoration measures, the member agencies should consider all beneficial uses to which groundwater of a given quality can currently or potentially be put. Generally, the use of groundwater requiring the highest degree of protection or restoration is human consumption as drinking water. Protection for this use will also be protective of all other current or potential uses in almost all

circumstances. The suitability of a zone for use as a human drinking water supply can be based on the quality and quantity of the water it contains as well as its ability to produce enough water to meet its intended use. These considerations facilitate defining two response levels for purposes of assigning protection or restoration measures that are commensurate with the potential to impact human health and the environment.

- . Level I response for the fresh, slightly saline and moderately saline classes should be based on the current or potential use as a human drinking water supply.
- . Level II response for the very saline to brine class should be based on indirect exposure (i.e., by means other than drinking) or no human consumption.

Evaluations In specifying a protection or restoration measure, member agencies must apply best professional judgement on a case-by-case basis. Evaluations to be made include but are not limited to such factors as yield, the availability of alternate sources of water, any background concentrations of naturally occurring constituents, the effects of constituents on usability, traditional and potential beneficial uses of the water, economic and technical feasibility of treatment and projected needs for and types of impacts on these groundwaters. In instances where there is a likelihood of hydrologic interconnection with resultant potential for contaminant movement from a given groundwater zone to a surface water body or other groundwater zones, protection and restoration measures for that zone should be determined by the quality and current and potential use of the receiving waters.

Additional Function This classification system is intended to be implemented by member agencies as an integral part of their groundwater quality programs. In addition to its response setting function, the classification system can also serve as a common basis among the various programs to foster consistency. It can also be used as a mapping tool to delineate specific areas in need of more detailed groundwater quality management. Towards this end, the Committee recognizes the important contributions of all agencies that compile such data and supports the continuing efforts to enhance the statewide database.

**Figure 17. Groundwater Classification System of the Texas Groundwater Protection Committee**

CLASS	QUALITY*	EXAMPLES OF USE	AGENCY RESPONSE
Fresh	Zero to 1,000	Drinking and all other uses.	<b>Level I Response:</b> Protection or restoration measures based on current use as a human drinking water supply.
Slightly Saline	More than 1,000 to 3,000	Drinking if fresh water is unavailable, livestock watering, irrigation, industrial, mineral extraction, oil and gas production.	
Moderately Saline	More than 3,000 to 10,000	Potential/future drinking and limited livestock watering and irrigation if fresh or slightly saline water is unavailable; industrial, mineral extraction, oil and gas production.	
Very Saline to Brine	More than 10,000	Mineral extraction, oil and gas production.	<b>Level II Response:</b> Protection or restoration measures based on indirect exposure or no human consumption.

\* Concentration range of Total Dissolved Solids in milligrams per liter.

## **Appendix 4. Rules of the Texas Groundwater Protection Committee**

Title 31. NATURAL RESOURCES AND CONSERVATION  
Part XVIII. TEXAS GROUNDWATER PROTECTION COMMITTEE  
Chapter 601. GROUNDWATER CONTAMINATION REPORT  
Subchapter A. GENERAL PROVISIONS RELATING TO PUBLIC FILES AND  
JOINT REPORT

### **§601.1. Purposes of Rules.**

The purpose of these sections is to implement duties and responsibilities assigned to the committee under the Texas Water Code, §26.406, concerning the maintenance by certain state agencies of public files containing documented cases of groundwater contamination and the publication by the committee, in conjunction with the commission, of annual groundwater monitoring and contamination reports and to establish general policies of the committee to guide such implementation.

### **§601.2. Applicability.**

These rules specifically apply to each state agency or organization having membership on the committee. The committee is composed of the Texas Natural Resource Conservation Commission (or effective September 1, 2002, the Texas Commission on Environmental Quality), the Texas Department of Health, the Texas Department of Agriculture, the Railroad Commission of Texas, the Texas Water Development Board, the Texas Alliance of Groundwater Districts, the Texas Agricultural Experiment Station, the Bureau of Economic Geology of the University of Texas at Austin, the State Soil and Water Conservation Board, and the Water Well Drillers and Water Well Pump Installers Program of the Texas Department of Licensing and Regulation.

### **§601.3. Definitions.**

The following words and terms, when used in this chapter, shall have the following meanings unless the context clearly indicates otherwise.

- (1) Act--House Bill 1458 (71st Session) codified as Texas Water Code §§26.401-26.407.
- (2) Commission--Texas Natural Resource Conservation Commission (or effective September 1, 2002, the Texas Commission on Environmental Quality).
- (3) Committee--Texas Groundwater Protection Committee.
- (4) Documented groundwater contamination--A case of groundwater contamination where an agency has an established procedure for making a determination based on the quality of groundwater and the information pertinent to making the determination is maintained by the agency under §601.4 (b) of this title (relating to Public Files).
- (5) Enforcement action--Any action of the agencies, identified in §601.2 of this title (relating to Applicability), which accomplishes or requires the identification, documentation, monitoring, assessing, or remediation of groundwater contamination.
- (6) Groundwater--Water below the land surface in a zone of saturation.
- (7) Groundwater contamination--The detrimental alteration of the naturally

occurring physical, thermal, chemical, or biological quality of groundwater. Furthermore, groundwater contamination, for purposes of inclusion of cases in the public files and the joint groundwater monitoring and contamination report, shall be limited to contamination reasonably suspected of having been caused by activities or by entities under the jurisdiction of the agencies identified in §601.4 (b) of this title (relating to Public Files), except in the case of an underground source of drinking water granted an aquifer exemption by the commission with concurrence from the United States Environmental Protection Agency in accordance with 40 Code of Federal Regulations, Parts 144, 145, and 146, and 30 TAC Chapter 331 (relating to Underground Injection Control); and affecting groundwater which contains a concentration of:

- (A) less than or equal to 10,000 milligrams per liter (mg/liter) of dissolved solids; or
- (B) greater than 10,000 mg/liter if it is:
  - (i) currently extracted for beneficial use such as domestic, industrial, or agricultural purposes; or
  - (ii) hydrologically connected with, and with the potential for contaminant movement to, a surface water body or another zone of groundwater which has a concentration of less than or equal to 10,000 mg/liter of dissolved solids.

#### **§601.4. Public Files.**

(a) Subject to the limitations provided by the Texas Water Code, §§26.401-26.407 (the Act), and the Open Records Act, Texas Civil Statutes, Article 6252-17a, information collected, assembled, or maintained by the committee and the agencies having responsibilities related to protection of groundwater under the Act is public record open to inspection and copying during regular business hours.

(b) Each agency having the responsibilities related to the protection of groundwater under the Act shall maintain a public file of all documented cases of groundwater contamination that are reasonably suspected of having been caused by activities regulated by the agency.

#### **§601.5. Joint Groundwater Monitoring and Contamination Report.**

In conjunction with the Texas Commission on Environmental Quality, the committee shall publish not later than April 1 of each year a joint groundwater monitoring and contamination report covering the activities and findings of the committee made during the previous calendar year. The report must:

- (1) describe the current status of groundwater monitoring programs conducted by or required by each committee agency or organization at regulated facilities or in connection with regulated facilities;
- (2) contain a description of each case of groundwater contamination documented during the previous calendar year and of each case of groundwater contamination documented during previous years for which enforcement action was incomplete at the time of issuance of the preceding report; and
- (3) indicate the status of enforcement action for each case of groundwater contamination that is included in the report.

Title 31. NATURAL RESOURCES AND CONSERVATION  
Part XVIII. TEXAS GROUNDWATER PROTECTION COMMITTEE  
Chapter 601. GROUNDWATER CONTAMINATION REPORT  
Subchapter B. NOTICE OF GROUNDWATER CONTAMINATION

**§601.10. Form and Content of Groundwater Contamination Notice.**

When notice of groundwater contamination, as defined in §601.3(7) of this title (relating to Definitions), is provided under Texas Water Code, §26.408 to the owner of a private drinking water well that may be affected by the contamination and to each applicable groundwater conservation district, the notice shall:

- (1) be in writing; and
- (2) contain, at a minimum, the following information:
  - (A) the name of the contaminant or contaminants;
  - (B) the range of analytical results for the contaminant or contaminants measured in the area or well to date;
  - (C) possible health effects of the contaminant or contaminants;
  - (D) possible source or sources for this type of contamination;
  - (E) suggested actions and precautions potentially impacted well owners could take; and
  - (F) who to contact for more information.

## Appendix 5. TCEQ Rules on Spill Prevention and Control

The TCEQ adopted Title 30, Texas Administrative Code, §§327.1-327.5 (Spill Prevention and Control Rules), which became effective May 23, 1996. A reportable discharge or spill is an unauthorized accidental discharge or spill of oil, petroleum product, used oil, hazardous waste, industrial solid waste, or other substances into the environment in a quantity equal to or greater than a reportable quantity listed in Figure 18.

**Figure 18. Spill Response Reportable Quantities (RQ)**

	Released Onto Land	Released Into Water
Hazardous substances	final RQ in Table 302.4 in 40 CFR <sup>1</sup> §302.4	final RQ in Table 302.4 in 40 CFR §302.4; except where final RQ is >100 pounds, in which case the RQ is 100 pounds
Crude oil and oil other than that defined as petroleum product or used oil	210 gallons (five barrels)	quantity sufficient to create a sheen
Petroleum product and used oil	25 gallons; 210 gallons (five barrels) for petroleum storage tank exempted facilities	quantity sufficient to create a sheen
Industrial solid waste or other substances	---	100 pounds

<sup>1</sup> CFR: Code of Federal Regulations

Upon the determination that a reportable discharge or spill has occurred, the responsible person must notify the TCEQ as soon as possible but no later than 24 hours after its discovery. The responsible person must notify either:

- (1) the State Emergency Response Center at 1-800-832-8224;
- (2) during normal business hours, the TCEQ Regional Office in which the discharge or spill occurred (TCEQ's Regional Office telephone numbers are included in Appendix 6); or
- (3) the TCEQ's 24-hour spill reporting hotline at 1-800-832-8224; or
- (4) the Texas Railroad Commission, for petroleum industry spills at (512) 463-6765.

The responsible person's initial notification must contain, to the extent known, the following information:

- the name, address, and telephone number of the person making the telephone report;
- the date, time, and location of the discharge or spill; a specific description or identification of the substances discharged or spilled;
- an estimate of the quantity discharged or spilled;
- the duration of the incident;
- the name of the surface water or a description of the waters in the state affected or threatened by the discharge or spill;

- the source of the discharge or spill;
- a description of the extent of actual or potential water pollution or harmful impacts to the environment and an indication of any environmentally sensitive areas or natural resources at risk;
- if other than the person making the telephone report, the names, addresses, and telephone numbers of the responsible person and the contact person at the location of the discharge or spill;
- a description of any actions that have been taken, are being taken, and will be taken to contain and respond to the discharge or spill;
- any known or anticipated health risks;
- the identity of any governmental representatives, including local authorities or third parties, responding to the discharge or spill; and
- any other information that may be significant to the response action.

If the discharge or spill creates an imminent health threat, the responsible person must immediately notify and cooperate with local emergency authorities (fire department, fire marshal, law enforcement authority, health authority, or Local Emergency Planning Committee as appropriate). The responsible person must cooperate with the local emergency authority in providing support to implement appropriate notification and response actions. The local emergency authority, as necessary, must implement its emergency management plan, which may include notifying and evacuating affected persons. In the absence of a local emergency authority, the responsible person must take reasonable measures to notify potentially affected persons of the imminent health threat.

The responsible person must immediately abate and contain the discharge or spill and cooperate fully with the TCEQ and the local emergency authority. The responsible person must also begin reasonable response actions which may include, but are not limited to, the following actions:

- arrival of the responsible party or response personnel hired by the responsible person at the site of the discharge or spill;
- initiating efforts to stop the discharge or spill;
- minimizing the impact to the public health and the environment;
- neutralizing the effects of the incident;
- removing the discharged or spilled substances; and
- managing the wastes.

The responsible person must submit written information describing the details of the discharge or spill and supporting the adequacy of the response action, to the appropriate TCEQ Regional Manager within 30 working days of the discovery of the discharge or spill. A report is not required for spills occurring during the normal course of transportation which are reported to the U.S. Department of Transportation under 49 Code of Federal Regulations §171.16. If a spill cannot be cleaned up within 180 days of the date it was reported, the responsible person is required to clean up the spill in accordance with the TCEQ's risk-based corrective action rules.

The TCEQ's Spill Prevention and Control Rules apply to discharges or spills that result in a release to the environment within the territorial limits of the state, including the coastal waters of the state. The Spill Prevention and Control Rules do not apply to the following.

- Discharges or spills of oil that enter or threaten to enter the coastal waters of the state. Except for spills of oil of 240 barrels or less for which the Railroad Commission of Texas is the on-scene coordinator, such discharges or spills are regulated by the Texas General Land Office under the Oil Spill Prevention and Response Act of 1991, the Texas Natural Resources Code, Chapter 40, Subchapters C, D, E, F, and G.
- Discharges or spills from activities subject to the jurisdiction of the Railroad Commission of Texas under §26.131, Texas Water Code.
- Releases only to air.
- The lawful placement of waste or accidental discharge of material into a solid waste management unit registered or permitted under Title 30, Texas Administrative Code, Chapter 335, Subchapter A (relating to Industrial Solid Waste and Municipal Hazardous Waste in General).
- Units and activities regulated under the authority of the Texas Water Code, Chapter 26, Subchapter I (relating to Underground and Aboveground Storage Tanks).
- The lawful application of materials, including but not limited to fertilizers and pesticides, to land or water.
- Discharges that are authorized by a permit, order, or rule issued under federal law or any other law of the state, provided, however, that discharges not so authorized shall be reported under the Spill Prevention and Control Rules unless the permit, order, or another TCEQ rule provides an applicable reporting requirement.
- Discharges or spills that are continuous and stable in nature, and are reported to the U.S. Environmental Protection Agency under 40 Code of Federal Regulations (CFR) §302.8.
- Discharges or spills occurring during the normal course of rail transportation about which carriers are required to give notice and report in accordance with 49 CFR §171.15 and §171.16.

Additionally, the TCEQ adopted Title 30, Texas Administrative Code, §§302.1-302.3 (Public Notice of Spills or Accidental Discharges from Wastewater Facilities Owned or Operated by Local Governments), which became effective December 30, 1999. These rules require:

(a) The owner of a facility must designate a responsible individual to comply with this subchapter.

(b) In addition to the noncompliance notification to the commission required by §305.125(9) of this title (relating to Standard Permit Conditions) and any notification required under Chapter 327 of this title (relating to Spill Prevention and Control), the owner of a facility, through its responsible individual, must notify appropriate local government officials and the local media whenever one of the following types of spills occurs from the facility:

- (1) a spill, regardless of volume, that the facility owner knows or has reason to know, will adversely affect a public or private source of drinking water;
- (2) a spill with a volume of 50,000 gallons or more where one or more of the following conditions also exists:

- (A) the spill enters water in the state within ½-mile of a public source of drinking water that has been assessed by the commission as vulnerable to contamination;
- (B) the spill enters water in the state within ½-mile of a private source of drinking water located within ½-mile of a public source of drinking water that has been assessed by the commission as vulnerable to contamination;
- (C) the spill enters water in the state within ½-mile up-gradient of a public or private source of drinking water surface water intake;
- (D) the spill occurs in an active groundwater recharge area;
- (E) the spill occurs up-gradient and within ½-mile of a karst terrain or shallow alluvial well that is a source of drinking water;

(3) a spill of 100,000 gallons or more.

(c) The responsible individual must issue the notice using the form in §319.303 of this title (relating to Form of the Notice to Local Officials and Local Media) as quickly as possible, but not later than 24 hours after becoming aware of the spill. The notice must be delivered in an expeditious manner. It may be hand-delivered, sent by facsimile, e-mail, or by phone with follow-up written notice.

(d) Immediately after giving of notice to appropriate local government officials and local media, the responsible individual must report to the commission regional office in whose region the spill occurred that this notice was given.

## Railroad Commission of Texas District Offices

District: 1 & 2  
Director: Tom Melville  
Telephone: 210-227-1313  
FAX: 210-227-4822  
Address: 115 E Travis St Ste 1610  
City, Zip Code: San Antonio 78205-1689

District: 3  
Director: Guy Grossman  
Telephone: 713-869-5001  
FAX: 713-869-9621  
Address: 1706 Seamist Dr Ste 501  
City, Zip Code: Houston 77008-3135

District: 4  
Director: Fermin Munoz, Jr.  
Telephone: 361-242-3113  
FAX: 361-242-9613  
Address: P O Box 10307  
City, Zip Code: Corpus Christi 78460-0307

District: 5 & 6  
Director: Michael O'Quinn  
Telephone: 903-984-3026  
FAX: 903-983-3413  
Address: 619 Henderson Blvd  
City, Zip Code: Kilgore 75662-5998

District: 7B  
Director: Joe Cress  
Telephone: 325-677-3545  
FAX: 325-677-7122  
Address: 3444 N. First St., Ste. 600  
City, Zip Code: Abilene 79603

District: 7C  
Director: Don Horner  
Telephone: 325-657-7450  
FAX: 325-657-7455  
Address: 622 S. Oakes St., Ste. J  
City, Zip Code: San Angelo 76903

District: 8 & 8A  
Director: Mark Henkhaus  
Telephone: 432-684-5581  
FAX: 432-684-6005  
Address: Conoco Towers  
10 Desta Dr. Suite 500E  
City, Zip Code: Midland 79705

District: 9  
Director: Walter Gwyn  
Telephone: 940-723-2153  
FAX: 940-723-5088  
Address: 901 Indiana Ave, Ste 600  
City, Zip Code: Wichita Falls 76301-6798

District: 10  
Director: Lindsay Patterson  
Telephone: 806-665-1653  
FAX: 806-665-4217  
Address: P O Box 941  
City, Zip Code: Pampa 79066-0941

## Groundwater Conservation Districts

- |  |   |
|--|---|
| 1 High Plains UWCD No.1 - 9/29/1951                | 53 Fayette County GCD - 11/6/2001           |
| 2 North Plains GCD - 1/2/1955                      | 54 Goliad County GCD - 11/6/2001            |
| 3 Panhandle GCD - 1/21/1956                        | 55 Lone Star GCD - 11/6/2001                |
| 4 Hudspeth County UWCD No. 1 - 10/5/1957           | 56 McMullen GCD - 11/6/2001                 |
| 5 Real-Edwards C and R District - 5/30/1959        | 57 Neches & Trinity Valleys GCD - 11/6/2001 |
| 6 Evergreen UWCD - 8/30/1965                       | 58 Pecan Valley GCD - 11/6/2001             |
| 7 Plateau UWC and Supply District - 3/4/1974       | 59 Pineywoods GCD - 11/6/2001               |
| 8 Harris-Galveston Subsidence District - 4/23/1975 | 60 Refugio GCD - 11/6/2001                  |
| 9 Glasscock GCD - 8/22/1981                        | 61 Texana GCD - 11/6/2001                   |
| 10 Hickory UWCD No. 1 - 8/14/1982                  | 62 Kinney County GCD - 1/12/2002            |
| 11 Irion County WCD - 8/2/1985                     | 63 Lone Wolf GCD - 2/2/2002                 |
| 12 Permian Basin UWCD - 9/21/1985                  | 64 Kimble County GCD - 5/3/2002             |
| 13 Fox Crossing Water District - 4/4/1986          | 65 Gateway GCD - 5/3/2002                   |
| 14 Sutton County UWCD - 4/5/1986                   | 66 Middle Trinity GCD - 5/4/2002            |
| 15 Coke County UWCD - 11/4/1986                    | 67 Bluebonnet GCD - 11/5/2002               |
| 16 Mesquite GCD - 11/4/1986                        | 68 Brazos Valley GCD - 11/5/2002            |
| 17 Hill Country UWCD - 8/8/1987                    | 69 Clear Fork GCD - 11/5/2002               |
| 18 Barton Springs/Edwards Aquifer CD - 8/13/1987   | 70 Cow Creek GCD - 11/5/2002                |
| 19 Anderson County UWCD - 10/17/1987               | 71 Lost Pines GCD - 11/5/2002               |
| 20 Lipan-Kickapoo WCD - 11/3/1987                  | 72 Mid-East Texas GCD - 11/5/2002           |
| 21 Sterling County UWCD - 11/3/1987                | 73 Middle Pecos GCD - 11/5/2002             |
| 22 Santa Rita UWCD - 8/19/1989                     | 74 Post Oak Savannah GCD - 11/5/2002        |
| 23 Fort Bend Subsidence District - 8/28/1989       | 75 Red Sands GCD - 11/5/2002                |
| 24 Bandera County RA & GWD - 11/7/1989             | 76 Trinity Glen Rose GCD - 11/5/2002        |
| 25 Live Oak UWCD - 11/7/1989                       | 77 Wes-Tex GCD - 11/5/2002                  |
| 26 Sandy Land UWCD - 11/7/1989                     | 78 Hays Trinity GCD - 5/3/2003              |
| 27 Saratoga UWCD - 11/7/1989                       | 79 Rusk County GCD - 6/5/2004               |
| 28 Mesa UWCD - 1/20/1990                           | 80 Kenedy County GCD - 11/2/2004            |
| 29 Crockett County GCD - 1/26/1991                 | 81 Southeast Texas GCD - 11/2/2004          |
| 30 Medina County GCD - 8/26/1991                   | 82 Corpus Christi ASRCD - 6/17/2005         |
| 31 Headwaters UWCD - 11/5/1991                     | 83 Victoria County GCD - 8/5/2005           |
| 32 South Plains UWCD - 2/8/1992                    | 84 Central Texas GCD - 9/24/2005            |
| 33 Plum Creek CD - 5/1/1993                        | 85 Brazoria County GCD - 11/8/2005          |
| 34 Uvalde County UWCD - 9/1/1993                   | 86 Lower Trinity GCD - 11/7/2006            |
| 35 Jeff Davis County UWCD - 11/2/1993              | 87 Starr County GCD - 1/6/2007              |
| 36 Gonzales County UWCD - 11/2/1994                | 88 San Patricio County GCD - 5/12/2007      |
| 37 Edwards Aquifer Authority - 7/28/1996           | 89 Northern Trinity GCD - 5/15/2007         |
| 38 Garza County UWCD - 11/5/1996                   | 90 Colorado County GCD - 11/6/2007          |
| 39 Hemphill County UWCD - 11/4/1997                | 91 Panola County GCD - 11/6/2007            |
| 40 Wintergarden GCD - 1/17/1998                    | 92 Upper Trinity GCD - 11/6/2007            |
| 41 Culberson County GCD - 5/2/1998                 | 93 Southern Trinity GCD - 6/19/2009         |
| 42 Llano Estacado UWCD - 11/3/1998                 | 94 Duval County GCD - 7/25/2009             |
| 43 Rolling Plains GCD - 1/26/1999                  | 95 Prairielands GCD - 9/1/2009              |
| 44 Menard County UWCD - 8/14/1999                  | 96 Red River GCD - 9/1/2009                 |
| 45 Clearwater UWCD - 8/21/1999                     |   |
| 46 Presidio County UWCD - 8/31/1999                |   |
| 47 Guadalupe County GCD - 11/14/1999               |   |
| 48 Bee GCD - 1/20/2001                             |   |
| 49 Blanco-Pedernales GCD - 1/23/2001               |   |
| 50 Brewster County GCD - 11/6/2001                 |   |
| 51 Coastal Bend GCD - 11/6/2001                    |   |
| 52 Coastal Plains GCD - 11/6/2001                  |   |

### Pending Confirmation

- A - Lavaca County GCD
- B - Brush Country GCD
- C - North Texas GCD
- D - Harrison County GCD

# Texas Groundwater Conservation Districts (August 2009)

## Texas Commission on Environmental Quality

This map was prepared by the TCEQ for display purposes only. No claims are made to the accuracy or completeness of the information shown herein nor is this map suitable for any other use. The scale and location of mapped data are approximate. The groundwater conservation district boundaries are not land survey data and may not accurately depict legal descriptions. For more information about this map, please contact TCEQ - Water Supply Division, Groundwater Planning & Assessment Team at (512) 239-4691.

Date indicates date established by law or by election.

- ASRCD - Aquifer Storage and Recovery Conservation District
- CD - Conservation District
- CRD - Conservation and Reclamation District
- GCD - Groundwater Conservation District
- RA & GWD - River Authority & Ground Water District
- UWCD - Underground Water Conservation & Supply District
- UFWCD - Underground and Fresh Water Conservation District
- UWCD - Underground Water Conservation District
- WD - Water District
- WCD - Water Conservation District

- Established by law and election
- Created, but pending local confirmation

## Appendix 7. Contacts for Agencies and Districts

The following persons may be contacted for further information regarding individual programs or for guidance related to specific groundwater contamination cases which are listed under their program's jurisdiction.

### **TEXAS COMMISSION ON ENVIRONMENTAL QUALITY**

#### **Office of Compliance and Enforcement**

**Enforcement Division** Thomas Greimel  
(512) 239-5690

**Field Operations Division (Water Program)** Pete Weiner  
(512) 239-4133

**Compliance Support Division** James McCain  
(512) 239-4777

**Remediation Division** David Hastings  
(512) 239-2030

#### **Office of Permitting and Registration**

**Waste Permits Division** Kari Bourland  
(512) 239-6137

**Water Quality Division**  
Water Quality Assessment Section April Hoh  
(512) 239-3567

**Water Supply Division**  
Public Drinking Water Section Gary Regner  
(512) 239-6040

Water Rights Permitting and Availability Section Abiy Berehe  
(512) 239-5480

**Radioactive Materials Division**  
Radioactive Materials Licensing Section Brad Broussard  
(512) 239-6380

Uranium & Technical Assessment Section Kan Tu  
(512) 239-6380

#### **Chief Engineer's Office**

Water Quality Planning Division Katherine Nelson  
(512) 239-6622

**BUREAU OF ECONOMIC GEOLOGY** Bridget Scanlon  
(512) 471-8241

**DEPARTMENT OF STATE HEALTH SERVICES**

Environmental & Consumer Safety Section

Ken Ofunrein  
(512) 834-6770  
Ext. 2451

**RAILROAD COMMISSION OF TEXAS**

Surface Mining and Reclamation Division

Tim Walter  
(512) 463-6900

Oil and Gas Division

Bill Renfro  
(512) 463-6812

**TEXAS DEPARTMENT OF AGRICULTURE**

Pesticide Risk Assessment and Toxicology Program

Dr. Ambrose Charles  
(512) 463-7497

**TEXAS AGRILIFE RESEARCH**

Dr. B. L. Harris  
(979) 845-1851

**TEXAS STATE SOIL AND WATER  
CONSERVATION BOARD**

Donna Long  
(254) 773-2250

**TEXAS WATER DEVELOPMENT BOARD**

Janie Hopkins  
(512) 936-0841

**TEXAS ALLIANCE OF GROUNDWATER DISTRICTS**

Gregory Ellis  
(713) 705-4861

Bandera County River Authority and Ground  
Water District

David Jeffery  
(830) 796-7260

Barton Springs- Edwards Aquifer Conservation  
District

Kirk Holland  
(512) 282-8441

Bee Groundwater Conservation District

Lonnie Stewart  
(361) 358-2244

Blanco-Pedernales Groundwater Conservation  
District

Ron Fieseler  
(830) 868-9196

Bluebonnet Groundwater Conservation District

Lloyd Behm  
(936) 825-7303

Brazos Valley Groundwater Conservation District	Bill Riley (979) 279-9350
Brewster County Groundwater Conservation District	Conrad Arrila (432) 837-6235
Central Texas GCD	Richard Bowers (512) 756-4900
Clear Fork Groundwater Conservation District	Belynda Rains (325) 776-2730
Clearwater Underground Water Conservation District	Cheryl Maxwell (254) 933-0120
Coastal Bend Groundwater Conservation District	Neil Hudgins (979) 531-1412
Coastal Plains Groundwater Conservation District	Neil Hudgins (979) 245-1708
Coke County Underground Water Conservation District	Winton Milliff (325) 453-2232
Colorado County Groundwater Conservation District	Jim Brasher (979) 732-5572
Cow Creek Groundwater Conservation District	Micah Voulgaries (830) 816-2504
Crockett County Groundwater Conservation District	Slate Williams (325) 392-5156
Culberson County Groundwater Conservation District	John Jones (432) 283-1548
Edwards Aquifer Authority	Velma R. Danielson (210) 222-2204
Evergreen Underground Water Conservation District	Mike Mahoney (830) 569-4186
Fayette County Groundwater Conservation District	David A Van Dresar (979) 968-3135
Fox Crossing Water District	Rodney Carlisle (325) 648-2222
Garza County Underground & Fresh Water Conservation District	Ferrel Wheeler (806) 495-4425
Gateway Groundwater Conservation District	Jack Campsey (940) 663-5722
Glasscock Groundwater Conservation District	Ricky Harston (432) 354-2430

Goliad County Groundwater Conservation District	Barbara Smith (361) 645-1716
Gonzales County Underground Water Conservation District	Greg Sengelmann (830) 672-1047
Guadalupe County Groundwater Conservation District	Ron Naumann (880) 379-5969
Hays Trinity Groundwater Conservation District	Dana Carmean (512) 858-9253
Headwaters Groundwater Conservation District	Gene Williams (830) 896-4110
Hemphill Underground Water Conservation District	Janet Guthrie (806) 323-8350
Hickory Underground Water Conservation District #1	David Huie (325) 597-2785
High Plains Underground Water Conservation District #1	Jim Conkwright (806) 762-0181
Hill Country Underground Water Conservation District	Paul Tybor (830) 997-4472
Hudspeth County Underground Water Conservation District #1	Randy Barker (915) 964-2932
Irion County Water Conservation District	Scott Holland (325) 835-2015
Jeff Davis County Underground Water Conservation District	Janet Adams (432) 426-3441
Kenedy County Groundwater Conservation District	Leo Villareal (361) 592-9347
Kimble County Groundwater Conservation District	Jerry Kirby (325) 446-4826
Kinney County Groundwater Conservation District	Diana Ward (830) 563-9699
Lavaca County Groundwater Conservation District**	Larry A Svetlik (361) 798-1219
Live Oak Underground Water Conservation District	Lonnie Stewart (361) 449-1151
Llano Estacado Underground Water Conservation District	Lori Barnes (432) 758-1127

Lone Star Groundwater Conservation District	Kathy Jones (936) 494-3436
Lone Wolf Groundwater Conservation District	Ms. Sue Young (325) 728-2027
Lost Pines Groundwater Conservation District	Joe Cooper (512) 360-5088
McMullen Groundwater Conservation District	Lonnie Stewart (361) 274-3365
Medina County Groundwater Conservation District	Luana Buckner (830) 741-3162
Menard County Underground Water District	Caroline Runge (325) 396-3670
Mesa Underground Water Conservation District	Harvey Everheart (806) 872-9205
Mesquite Groundwater Conservation District	Kendal Harris (806) 447-2800
Middle Pecos Groundwater Conservation District	Paul Weatherby (432) 336-0698
Middle Trinity Groundwater Conservation District	Joe B. Cooper (254) 965-6705
Mid-East Texas Groundwater Conservation District	Robert Gresham (979) 536-2805
Neches and Trinity Valleys Groundwater Conservation District	Roy J Rodgers (903) 541-4845
North Plains Groundwater Conservation District #2	Steven Walthour (806) 935-6401
Panhandle Groundwater Conservation District	C. E. Williams (806) 883-2501
Panola County Groundwater Conservation District**	J Clayton LaGrone (903) 690-0143
Pecan Valley Groundwater Conservation District	Kay Wild (361) 275-8188
Permian Basin Underground Water Conservation District	Leatrice Adams (432) 756-2136
Pineywoods Groundwater Conservation District	David Alford (936) -630-0582
Plateau Underground Water Conservation & Supply District	Jon Cartwright (325) 853-2121

Plum Creek Conservation District	Johnie Halliburton (512) 398-2383
Post Oak Savannah Groundwater Conservation District	Gary Westbrook (512) 455-9900
Presidio County UWCD	Janet Adams (432) 426-3441
Real-Edwards Conservation & Reclamation District	Lee Sweeten (830) 234-3158
Refugio Groundwater Conservation District	Garrett Engelking (361) 526-1483
Rolling Plains Groundwater Conservation District	Mike McGuire (940) 422-1095
Rusk County GCD	Len Luscomb (903) 657-1900
Sandy Land Underground Water Conservation District	Gary L Walker (806) 456-2155
San Patricio Groundwater Conservation District**	Lynne Drawe (361) 364-2643
Santa Rita Underground Water Conservation District	Cindy Weatherby (325) 884-2893
Saratoga Underground Water Conservation District	Randy McGuire (512) 556-8271
Southeast Texas Groundwater Conservation District	John M Martin (409) 383-1577
South Plains Underground Water Conservation District	Jason Coleman (806) 891-2983
Sterling County Underground Water Conservation District	Scott Holland (325) 378-2704
Sutton County Underground Water Conservation District	Greta Ramsdell (325) 387-2369
Uvalde County Water Conservation District	Vic Hilderbran (830) 278-8242
Victoria Groundwater Conservation District	Tim Andruss (361) 579-6863
Wes-Tex Groundwater Conservation District	Becky Stewart (325) 236-6033

Wintergarden Groundwater Conservation  
District

Ed Walker  
(830) 876-3801

\*\*Article 4.0C 2 Non-Voting member. This membership is limited to new districts, from a period to begin upon the date of enactment of the District's enabling legislation until the date one 1 year after the District's successful confirmation election or at which time the District's enabling legislation expires. After the successful confirmation, new districts may choose to be a voting member by meeting the requirements of Article 4 Section C 1. Non-voting members may not hold an office in the Alliance.

## Appendix 8. Central Records Locations for Agencies

The following addresses and phone numbers are provided for agency central records locations. Further information concerning the groundwater contamination cases listed in Tables 1 through 4 may be accessed at these locations.

## Appendix 9. Other Reports and Publications

There are numerous water-agency publications addressing the state's groundwater resources, groundwater quality, groundwater protection, and groundwater contamination. These reports provide a different focus or perspective on groundwater quality conditions and present information not contained within this report. Other publications of these agencies provide information on statewide groundwater protection efforts and specific protection programs.

### Texas Groundwater Protection Committee Publications

Publications of the Texas Groundwater Committee can be accessed at the following Web site address:

[www.tgpc.state.tx.us/Publications.html](http://www.tgpc.state.tx.us/Publications.html)

There are nineteen annual predecessors to this report as produced annually by the Texas Groundwater Protection Committee and published by the Texas Water Commission/Texas Natural Resource Conservation Commission/Texas Commission on Environmental. Report Z 94, the initial report, contains information on the groundwater contamination cases documented or under enforcement during 1989. Each successive report presents information on the groundwater contamination cases documented or under enforcement for the calendar year as titled. The nineteen preceding reports are:

Texas Groundwater Protection Committee, 1990, *Joint Groundwater Monitoring and Contamination Report*, Texas Water Commission (TWC) Publication No. Z 94, April 1990.

\_\_\_, 1991, *Joint Groundwater Monitoring and Contamination Report - 1990*, TWC Publication No. Z 104, April 1991.

\_\_\_, 1992, *Joint Groundwater Monitoring and Contamination Report - 1991*, TWC Publication No. R 92-02, May 1992.

\_\_\_, 1993, *Joint Groundwater Monitoring and Contamination Report - 1992*, TNRCC Publication No. SFR-1, November 1993.

\_\_\_, 1994, *Joint Groundwater Monitoring and Contamination Report - 1993*, TNRCC Publication No. SFR-6, May 1994.

\_\_\_, 1995, *Joint Groundwater Monitoring and Contamination Report - 1994*, TNRCC Publication No. SFR-20, April 1995.

\_\_\_, 1996, *Joint Groundwater Monitoring and Contamination Report - 1995*, TNRCC Publication No. SFR-36, April 1996.

\_\_\_, 1997, *Joint Groundwater Monitoring and Contamination Report - 1996*, TNRCC Publication No. SFR-56, June 1997.

\_\_\_, 1998, *Joint Groundwater Monitoring and Contamination Report - 1997*, TNRCC Publication No. SFR-56/97, June 1998.

\_\_, 1999, *Joint Groundwater Monitoring and Contamination Report - 1998*, TNRCC Publication No. SFR-56/98, October 1999.

\_\_, 2000, *Joint Groundwater Monitoring and Contamination Report - 1999*, TNRCC Publication No. SFR-56/99, December 2000.

\_\_, 2001, *Joint Groundwater Monitoring and Contamination Report - 2000*, TNRCC Publication No. SFR-56/00, April 2001.

\_\_, 2002, *Joint Groundwater Monitoring and Contamination Report - 2001*, TNRCC Publication No. SFR-56/01, August 2002.

\_\_, 2003, *Joint Groundwater Monitoring and Contamination Report - 2002*, TCEQ Publication No. SFR-56/02, June 2003.

\_\_, 2004, *Joint Groundwater Monitoring and Contamination Report - 2003*, TCEQ Publication No. SFR-56/03, June 2004.

\_\_, 2005, *Joint Groundwater Monitoring and Contamination Report - 2004*, TCEQ Publication No. SFR-56/04, June 2005.

\_\_, 2006, *Joint Groundwater Monitoring and Contamination Report - 2005*, TCEQ Publication No. SFR-56/05, July 2006.

\_\_, 2007, *Joint Groundwater Monitoring and Contamination Report - 2006*, TCEQ Publication No. SFR-56/06, July 2007.

\_\_, 2008, *Joint Groundwater Monitoring and Contamination Report - 2007*, TCEQ Publication No. SFR-56/07, June 2008.

Five other publications prepared by the Texas Groundwater Protection Committee address the issues of the state's complex set of groundwater protection programs and address the coordination and improvement of these various programs to best protect the state's groundwater resources.

*Texas Ground Water Protection Strategy*, February 2003, TCEQ Publication No. AS-188, offers a guide for developing new programs and improving cooperation and coordination among agencies and programs. Goals for new programs and improvements are set out in a number of important groundwater program areas. This publication updates and supercedes *Texas Ground Water Protection Strategy*, January 1988.

*Texas Ground-Water Data Dictionary*, August, 1996, describes a standardized framework for collecting and storing information on groundwater in Texas. The production and development of the data dictionary took a proactive approach to consider data sharing and data quality in view of three recent technological advances: distributed computing, geographic information systems, and widespread data exchange via the Internet. Use of 135 data elements contained in the dictionary will make it easier to share information stored in various computer programs and operating systems, and will facilitate processing of information in a geographic information system (GIS).

*Landowners Guide to Plugging Abandoned Water Wells*, RG-347, March 2006. Prepared by the Texas Agricultural Extension Service, along with a video detailing the

procedure and purpose behind properly plugging abandoned water wells.

*Activities of the Texas Groundwater Protection Committee - Report to the 81<sup>st</sup> Legislature*, SFR-047/08, January 2009. Biennial report of activities of the committee to the legislature, prepared prior to each Legislative session.

*Texas State Management Plan for Prevention of Pesticide Contamination of Groundwater*, TCEQ Publication No. SFR-070/01, January 2001, describes the general policies and regulatory approaches the state will use in order to protect groundwater resources from risk of contamination by pesticides. The document describes a generic coordinating mechanism between all responsible and participating agencies during the implementation of the plan, and provides for specific actions and responses necessary to prevent or manage pesticide contamination of groundwater, as the need arises.

**Texas Commission on Environmental Quality/ Texas Water Commission/ Texas Natural Resource Conservation Commission Publications**

Texas Commission on Environmental Quality, 2006, TCEQ Publications Catalog, PD-001, April 2006. Electronic version and search capability available at:

[http://www.tceq.state.tx.us/comm\\_exec/forms\\_pubs/search\\_pubs.html](http://www.tceq.state.tx.us/comm_exec/forms_pubs/search_pubs.html)

Presented within this bibliography is a partially annotated list of all works published by the Texas Commission on Environmental Quality,

Texas Water Commission, 1989, *Ground-Water Quality of Texas - An Overview of Natural and Man-Affected Conditions*, TWC Publication No. 89-01, March 1989.

This out-of-print publication provides an overview of groundwater quality conditions in the state based on a review of the available data from many sources. Water quality, as expressed by the concentration of total dissolved solids, is mapped for seven major aquifers and 17 minor aquifers in the state. The concentrations of other important constituents, such as nitrates, iron, and sulfates, are mapped for the affected major aquifers. A basic discussion of hydrogeology, the chemistry and evolution of water quality, and the potential impact of man's activities is provided. The affect of man's activities is assessed in terms of its impact on the state's groundwater resources. The report also discusses aquifer vulnerability mapping and DRASTIC. Two DRASTIC vulnerability maps are presented depicting the relative sensitivity of the state's groundwater resources to surface sources of contamination. The report concludes that the greatest impact on the quality of the state's groundwater is from naturally occurring sources of more saline water. The report further concludes that, in terms of water quality, probably less than one percent of the state's groundwater is affected by man's activities and the effects are centered in areas of large population and industrial development.

Texas Natural Resource Conservation Commission, 1994, *Risk-Based Corrective Action for Leaking Storage Tank Sites*, TCEQ Publication No. RG-36, January 1994. Includes inserts, "Corrective Action Plans for LPST Sites", RG-041, November, 1996, and "Am I Regulated" RG-042, November, 1996.

This document describes, in detail, the application of risk assessment to prioritize leaking storage tank sites, develop site-specific, risk-based cleanup levels, and determine the level of remediation required at each site.

Texas Natural Resource Conservation Commission, 1996, *Groundwater Monitoring and Reporting* (for LPST sites), RG-043, September, 1996.

This document describes, in detail, the monitoring and reporting of groundwater samples at LPST sites.

Texas Natural Resource Conservation Commission, 1994, *Guidance Manual for Risk Assessment Contaminant Fate and Transport Modeling*, TCEQ Publication RG-91, May 1994.

This document is a guide designed to provide a basic understanding of how contaminants behave when released from a storage tank system. The document offers a general explanation of contaminant fate and transport processes and contaminant fate and transport models and modeling practices. It also provides some direction on how to address certain situations that may be encountered.

Texas Natural Resource Conservation Commission, 1995, *Guidance for Risk-Based Assessments at LPST Sites in Texas: Emphasizing Initial Investigations and Plan A Evaluations*, TCEQ Publication No. RG-175, October 1995.

This document defines site assessment protocol and requirements which should be followed at newly confirmed and existing leaking petroleum storage tank (LPST) sites. This new risk-based assessment process and reporting (Assessment Report Form, TCEQ-0562) replaces the Limited Site Assessment guidance and report form.

Texas Natural Resource Conservation Commission, 2000, *An Introduction to the Texas Risk Reduction Program*, TCEQ Publication No. RG-366/TRRP-1, February 2000.

First in a series of 34 guidance documents under the overall number of RG-366, this document introduces the Texas Risk Reduction Program, and is intended for the general public, regulated community, and environmental professionals. Nine more in the series are also available at this time, with the remainder targeted for availability before the end of calendar year 2001.

Texas Natural Resource Conservation Commission, 1996, *The State of Texas Water Quality Inventory -13th Edition*, TCEQ Publication No. SFR-50, December 1996.

This publication describes the conditions of the state's surface and groundwater quality. The state's groundwater protection program is described and the major documented and potential sources of groundwater contamination are identified. Ambient groundwater quality conditions and documented cases of groundwater contamination are assessed for selected aquifers.

Texas Natural Resource Conservation Commission, 2000, *The State of Texas Water Quality Inventory -15th Edition*, TCEQ Publication in review, SFR-50/00, April 2002.

Texas Natural Resource Conservation Commission, 1997, *State of Texas Oil and Hazardous Substances Spill Contingency Plan - 1996*, TCEQ Publication No. RG-290, November 1997.

This publication provides general guidance for a coordinated response to oil and hazardous substance spills and outlines notification procedures by which spills shall be reported to state and federal agencies. The publication represents the cooperative efforts of the TCEQ, the Texas General Land Office, and the Railroad Commission of Texas.

Texas Natural Resource Conservation Commission, 2009, TRRP: Soil and Groundwater Response Objectives, RG-366/TRRP-29.

This publication describes for environmental consultants the extent to which contaminants must be removed from or isolated in soil and groundwater at a site in order to achieve Remedy Standards A and B under the Texas Risk Reduction Program (TRRP).

Texas Natural Resource Conservation Commission, 2001, Private Well Disinfection and Water Sampling, GI-005.

This publication provides information on how to conduct private well disinfection and water sampling.

### **Texas Water Development Board Publications**

Texas Water Development Board, 1976, *Annotated Bibliography of Texas Water Resources Reports of the Texas Water Development Board and the United States Geological Survey through August 1974*, TWDB Report 199, February 1976.

This bibliography of state and federal agency water related publications contains a listing, with a brief summary, of reports addressing groundwater contamination investigations.

Texas Water Development Board, 1992, *Texas Water Development Board Publications Catalog*, TWDB Publication Catalog, June 1992. Electronic version, updated through 2000, available at: [www.twdb.state.tx.us/publications/pub.htm](http://www.twdb.state.tx.us/publications/pub.htm)

Presented within this bibliography is a partially annotated list of all works published by the Texas Department of Water Resources (the predecessor agency to the TWDB and the Texas Water Commission) and its predecessor agencies through August 1985. It also provides a completely annotated list of works published by the TWDB since September 1, 1985. A county index for the publications noted above are included in this bibliography.

Texas Water Development Board, 1990, *A Field Manual for Ground Water Sampling*, TWDB Users Manual UM-51, May 1990, Revised September 1991.

This users manual describes the Board's standardized procedures for the ambient groundwater sampling program. It explains sample collection and chemical characterization procedure guidelines followed by TWDB personnel during field sampling events.

Texas Water Development Board, 1990, *Water for Texas: Today and Tomorrow*. (Texas Water Plan), TWDB Document No. GP 5-1, December 1990.

\_\_\_, 1992, *Water for Texas: Today and Tomorrow. Recommendations for the 1992*

*Update of the Texas Water Plan*, TWDB Document No. GP 6-1, December 1992.

\_\_\_, 1997, *Water for Texas. A Consensus-Based Update to the State Water Plan*, TWDB in Conjunction with the TCEQ and Texas Parks and Wildlife Department, TWDB Document No. EP-6-2, August 1997.

\_\_\_, 2002, *Water for Texas - 2002*. TWDB Document No. EP-7-1, January 2002.

\_\_\_, 2007, *Water for Texas - 2007*. TWDB Document No. EP-7-1, January 2007.

The 2007 State Water Plan is the second plan adopted that incorporates regional water plans developed under Texas Water Code, Section 16.053 between January 2001 and January 2005. The report includes statewide water resources information and the Texas Water Development's Board's legislative policy recommendations. The report also includes details of the state's planning process, the 2006 Regional Water Plans, and other water resources information.

Texas Water Development Board, 1991, *Delineation Criteria for the Major and Minor Aquifer Maps of Texas*, TWDB Limited Publication 212, June 1991.

This report documents the criteria and sources used by the TWDB to delineate each of the nine major and 20 minor aquifers in the state. The report includes a major aquifer and minor aquifer map.

Texas Water Development Board, 1995, *Aquifers of Texas*, TWDB Report 345, November 1995.

*Aquifers of Texas* provides general information pertaining to location, geology, quality, yield, common use, and specific problems of the state's aquifers; and an aquifer specific bibliography follows each aquifer description.

Texas Water Development Board, 2000, *Aquifers of West Texas*, TWDB Report 356, December 2001.

Texas Water Development Board, 2008, *Changes in Water Levels in Texas 1990 - 2000*, TWDB Report 371, December 2008.

### **Texas Department of Health Publication**

*Texas Department of Health Strategic Plan 2001-2005*, 2000, gives the vision and mission statement for the Texas Department of Health. The role of public health in protecting the health of citizens of the state cuts across many subjects and programs, including preserving the state's environment and ensuring wise, productive use of the state's natural resources.

### **Bureau of Economic Geology Publications**

The Bureau of Economic Geology is a research bureau of the University of Texas at Austin. The Bureau conducts basic and applied research projects in coastal processes, energy and mineral resources, and in hydrogeology, groundwater resources, and environmental site assessment and remediation. The Bureau publishes major reports in the University of Texas Publication series. The Bureau's List of Publications is updated annually. The List of Publications can be obtained by contacting the Bureau's Publication Sales office at 1-888-839-4365.

Mace, R.E., Fisher, R.S., Welch, D.M., and Parra, S.P., 1997, *Extent, Mass, and Duration of Hydrocarbon Plumes from Leaking Petroleum Storage Tank Sites in Texas*, Bureau of Economic Geology, University of Texas at Austin Geologic Circular 97-1, 1997.

This study consisted of compiling and summarizing leaking petroleum storage tank site information and quantifying the size, mass, and duration of dissolved benzene plumes in Texas in order to determine dimensions of the plumes, predictability of plume concentrations and lengths, rates at which plumes self-remediate, and classification of plume behavior to assist in exposure assessments. The study is the first attempt to quantify the general site, soil, hydrogeologic, and plume characteristics throughout Texas and in different regions of the state.

## Appendix 10. Closed Cases

The following table lists 895 cases from the 1994 through 2007 Joint Groundwater Monitoring and Contamination Reports that have been closed by a program area or agency, and have been listed in previous reports with an Activity Status Code of "6C - No further regulatory action is required", "6D - agency action final, however, contamination still exists under institutional controls" or "6E - agency action final, however, contamination still exists under required engineering controls."

While enforcement actions may be closed on these cases, the Activity Status Code descriptions allow that groundwater contamination may still be present at the site, and may therefore be of interest to regulatory agencies and the general public. This list is not a comprehensive inventory. The Activity Status Codes "6D" and "6E" were first implemented in 1995, which is the primary reason that closed case data prior to 1994 has not been included in this table. Additionally, an agency or agency program area may have closed an enforcement case in any previous report without providing details on the closure, and groundwater local to the site may still be impacted by contamination. Instances of sites where groundwater was determined to have been impacted, but analysis indicated that the contamination was below regulatory action levels and the case was "closed" in the investigation stage, also will not be reflected in this table.

The codes used in this table are the same as those in the three main agency tables, however a code indicating the agency originally responsible for the case is included. "TCEQ" is the Texas Commission on Environmental Quality or predecessor agencies; "RCT" is the Railroad Commission of Texas; and "TAGD" is the Texas Alliance of Groundwater Conservation Districts. A field showing the calendar year of the last report in which the cases were listed is also included.

Additional information regarding these cases may be obtained from the agencies listed in the table. Contact information for agency staff members can be found in Appendix 7.

**Table 4**

**Historical Groundwater Contamination Case  
Description Table  
All Agencies, 1994-2007**

TABLE 4 (APPENDIX 10)  
 HISTORIC GROUNDWATER CONTAMINATION CASE DESCRIPTION BY COUNTY  
 ALL AGENCIES, 1994-2007

EXPLANATIONS OF FIELDS

COUNTY: THE COUNTY NAME IS THE FIRST ENTRY IN THE LEFT PORTION OF THE TABLE. IT IS LISTED ONLY ONCE FOR EACH OF THE CASES IN THAT COUNTY.

AGENCY: TCEQ – TEXAS COMMISSION ON ENVIRONMENTAL QUALITY, OR PREDECESSOR AGENCIES  
 RCT - RAILROAD COMMISSION OF TEXAS  
 TAGD - TEXAS ALLIANCE OF GROUNDWATER DISTRICTS

DIVISION: DIVISIONS ARE LISTED ONLY ONCE WITH THEIR RESPECTIVE CASES FOR EACH COUNTY.

- ENF - ENFORCEMENT DIVISION, TCEQ
- FOD - FIELD OPERATIONS DIVISION, TCEQ
- RAD/RML- RADIOACTIVE MATERIALS DIVISION/ RADIOACTIVE MATERIALS LICENSING, TCEQ
- RAD/UTA - RADIOACTIVE MATERIALS DIVISION/ URANIUM AND TECHNICAL ASSESSMENTS, TCEQ
- RMD/CA - REMEDIATION DIVISION/CORRECTIVE ACTION SECTION, TCEQ
- RMD/DCRP - REMEDIATION DIVISION/ DRY CLEARNERS PROGRAM, TCEQ
- RMD/PST - REMEDIATION DIVISION/ PETROLEUM STORAGE TANK PROGRAM, TCEQ
- RMD/SC - REMEDIATION DIVISION/ SUPERFUND CLEANUP PROGRAM, TCEQ
- RMD/SSDAT - REMEDIATION DIVISION/SUPERFUND SITE DISCOVERY AND ASSESSMENT, TCEQ
- RMD/VC - REMEDIATIONDIVISION/VOLUNTARY CLEANUP PROGRAM, TCEQ
- RMD/VCIO - REMEDIATION DIVISION/VOLUNTARY CLEAN UP/INNOCENT OWNER, TCEQ
- RMD/VCBSA - REMEDIATION DIVISION/VOLUNTARY CLEANUP/BROWNFIELDS SITE ASSESSMENT, TCEQ
- WPD/MSW - WASTE PERMITS DIVISON/MUNICIPAL SOLID WASTE SECTION, TCEQ
- WPD/IHW - WASTE PERMITS DIVISION/ INDUSTRIAL AND HAZARDOUS WASTE SECTION, TCEQ
- WQD/WQAS - WATER QUALITY DIVISION /WATER QUALITY ASSESSMENT SECTION, TCEQ
- WSD/PDW - WATER SUPPLY DIVISION /PUBLIC DRINKING WATER SECTION, TCEQ
- WSD/WRPA - WATER SUPPLY DIVISION/ WATER RIGHTS PERMITTING AND AVAILABILITY, TCEQ
- OIL & GAS - OIL AND GAS DIVISION, RCT
- SLUWCD - SANDYLAND UNDERGROUND WATER CONSERVATION DISTRICT, MEMBER OF TAGD

SECTION: PROGRAM AREA WITHIN DIVISION OF AGENCY RESPONSIBLE FOR CASE, IF APPLICABLE

FILE NAME: FILE NAMES REFLECT RESPONSIBLE PARTIES OR GEOGRAPHIC LOCATION

FILE NUMBER: FILE NUMBERS ARE ASSIGNED ACCORDING TO THE RESPECTIVE DIVISION NUMBERING SYSTEM. FILE NUMBER IS USED TO LOCATE FILE IN TCEQ RECORDS.

LOCATION: LOCATIONS ARE GIVEN AS ADDRESSES OR GEOGRAPHIC LOCATIONS DESCRIPTIONS.

CONTAMINATION DESCRIPTION: AS- ARSENIC, CR - CHROMIUM, PB - LEAD, NO3 - NITRATE, SO4 - SULFATE, VOC- VOLATILE ORGANIC COMPOUNDS, ORG.- ORGANIC CHEMICALS, TOC- TOTAL ORGANIC COMPOUNDS, TDS- TOTAL DISSOLVED SOLIDS, TCE- TRICHLOROETHENE, MEK - METHYL ETHYL KEYTONE, CARBON TET - CARBON TETRACHLORIDE, PCP - POLYCHLORINATED PHENYLS, PCB - PLOYCHLORINATED BIPHENYLS, TPH - TOTAL PETROLEUM HYDROCARBONS, BTEX - BENZENE - TOLUENE-ETHYLBENZENE-XYLENE, MTBE - METHYL-TERTIARY-BUTYL-ETHER. THE MAJORITY OF CASES INVOLVE PETROLEUM CONTAMINATION.

YEAR: YEAR CASE WAS DROPPED FROM THE REPORT

ENFORCEMENT STATUS: THE FIRST ENTRY IN THIS FIELD INDICATES THE LEVEL OF AGENCY RESPONSE, THE SECOND INDICATES THE SITE ACTIVITY STATUS. SOME CASES DO NOT HAVE COMPLETE ENFORCEMENT STATUS CODES BECAUSE OF INSUFFICIENT DATA. STATUS CODES MAY BE BORDER-LINE BETWEEN TWO LEVELS ON THE ENFORCEMENT STATUS MATRIX AND ARE ENTERED AS A COMBINATION OF ENFORCEMENT STATUS CODES, I.E.:3A,B OR 4,5. SEE PAGES 33-40 FOR A DESCRIPTION OF THESE CODES.
