

SIP: Texas, January 26, 1972

This page contains the complete text of the first Texas State Implementation Plan (SIP).

Summary of the SIP

Adoption Date: 01/26/1972

EPA Approval Date (Partial): 05/31/1972 (37 FR 10895)

Background: Texas's first SIP introduced the Texas Air Control Board (TACB) and its programs, the 12 air control regions, and classifications for each criteria pollutant by region. It also provided public hearing, U.S. Environmental Protection Agency (EPA) review, and legal authority details along with a control strategy for each of the criteria pollutants. Also included were compliance schedules and plans, plans for an emergency episode and for augmenting and upgrading the air quality monitoring network, a description of the state's permitting program, a plan for direct source monitoring, a description of resources available, and intergovernmental cooperation details.

The TACB submitted supplemental information for this SIP on February 25, May 2, and May 3, 1972. On May 31, 1972, the EPA approved portions of Texas's SIP, while disapproving others (37 FR 10895).
