

The Texas Commission on Environmental Quality (commission, agency, or TCEQ) adopts the amendment to §101.1.

The amendment to §101.1 is adopted *with changes* to the proposed text as published in the August 27, 2010, issue of the *Texas Register* (35 TexReg 7676) and will be republished.

The amendment to §101.1 will be submitted to the United States Environmental Protection Agency (EPA) as a revision to the state implementation plan (SIP).

Background And Summary Of The Factual Basis For The Rule

The EPA rules implementing the 1997 eight-hour ozone standard did not require regulated entities to continue to use the more stringent major source thresholds and emission offset requirements of the one-hour ozone standard that previously applied to them when implementing New Source Review (NSR) and Title V permitting for the 1997 eight-hour ozone standard. The EPA rule (known as Phase I) was successfully challenged in *South Coast Air Quality Management District v. EPA (South Coast)* 472 F.3d 882 (D.C. Cir. 2006) reh'g denied 489 F.3d 1245 (clarifying that the vacatur was limited to the issues on which the court granted the petitions for review). The EPA has interpreted the court ruling as restoring NSR applicability thresholds and emission offset requirements under the one-hour ozone standard to prevent backsliding. The

South Coast decision was upheld by the Supreme Court on January 14, 2008. TCEQ is adopting concurrent amendments to 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification, to make clear the applicability of the major source thresholds and emission offset requirements.

Additionally, in order to prevent future confusion over designations and classifications and their related applicability thresholds and emissions offset requirements, TCEQ is making changes to the definitions in §101.1(54), concerning maintenance area, and §101.1(70), concerning nonattainment area. Because maintenance and nonattainment areas and their boundaries are subject to change based only on federal actions, this amendment will eliminate references to specific maintenance and nonattainment areas in favor of a more general definition that indicates the federal regulations that define these areas and the federally applicable designations and classifications. In order to ensure that the public has access to up-to-date information regarding the specific descriptions of nonattainment and maintenance areas, the commission regularly posts information regarding the designation process for new National Ambient Air Quality Standard (NAAQS) on the TCEQ public Web site.

Staff has previously presented this rule amendment (Rule Project 2008-030-116-PR) to the commission for consideration. At the February 25, 2010, commissioner's agenda, the commission remanded the rule project to the executive director's staff in

anticipation of additional direction or action by the EPA, because EPA continued to indicate in various federal notices its intent to complete rulemaking regarding NSR anti-backsliding requirements after the *South Coast* decision. EPA's proposed rule to implement the 1997 eight-hour ozone NAAQS revision on subpart 1 reclassification and anti-backsliding provisions under the former one-hour ozone standard was published in the January 16, 2009, *Federal Register*, but has not yet been finalized. This rulemaking removes language regarding the exemptions from nonattainment new source review (NNSR) that were vacated by *South Coast*.

On September 23, 2009, the EPA published notice of the proposed disapproval of past revisions to the Texas NNSR SIP (74 *Federal Register* 48467) that are related to this rule amendment, and finalized this disapproval on September 15, 2010 (75 *Federal Register* 56424). Additionally, on October 20, 2010, EPA published a final rule to approve the redesignation of the Beaumont-Port Arthur (BPA) 1997 eight-hour ozone nonattainment area to attainment, and clarify EPA's previous approval of the El Paso §110(a)(1) maintenance plan for the 1997 eight-hour ozone standard (see 75 *Federal Register* 64675, October 20, 2010). This final rule noted EPA's new position regarding NSR anti-backsliding and whether one-hour ozone major source thresholds and emission offset requirements continue to apply in an area. EPA noted "after final redesignation to attainment for the 1997 eight-hour ozone standard, EPA does not require the continued application of one-hour anti-backsliding nonattainment NSR, if

Texas interprets its SIP as applying prevention of significant deterioration (PSD) to BPA in these circumstances" (*See 75 Federal Register 64675 and 64677, October 20, 2010*).

The EPA also clarified that, with respect to El Paso, "EPA has had further opportunity to consider the applicable statutory and regulatory provisions and the decision in South Coast As a result, we no longer believe that the Clean Air Act requires a separate 110(l) analysis to replace one-hour nonattainment NSR with PSD once an area has been redesignated to attainment for the 1997 eight-hour ozone standard, or has an approved 110(a)(1) maintenance plan for that standard. In sum, we believe that the approach to the nonattainment NSR/PSD transition that we are adopting here with respect to BPA should also be extended to El Paso. Thus, as long as the Texas NSR SIP is clear that the PSD SIP requirements apply to an area such as El Paso, then that is all that is required by EPA" (*See 75 Federal Register 64675, 64677, October 20, 2010*). The commission appreciates this clear statement from EPA, and agrees that the SIP should be clear on this issue. Therefore, as discussed in this preamble, although the Texas SIP has always applied PSD in an area upon redesignation, the commission is concurrently adopting changes to Chapter 116 to make clear that PSD applies once an area has been redesignated to attainment for a particular criteria pollutant. This is an issue of extreme importance to the commission, the regulated community, and the public, and there should be no room for ambiguity or argument. In an effort to ensure that TCEQ regulatory requirements regarding the NNSR permitting program meet the requirements of the Federal Clean Air Act (FCAA) and are approvable into the SIP, the

commission is adopting an amendment to provide clarity and eliminate any deficiencies that would prevent approval of the rule changes.

Section By Section Discussion

§101.1, Definitions

The commission is amending the definition of maintenance area in §101.1(54). This amendment removes the specific descriptions of maintenance areas within the state in favor of a more general definition that makes clear that these areas are designated by federal action. Similarly, the commission is amending the definition of nonattainment areas in §101.1(70) to remove all references to specific nonattainment areas in §101.1(70)(A) - (G) and retain those parts of the definition that refer to federal regulations and the *Federal Register*. These changes help ensure that when changes are made to maintenance areas and nonattainment areas as a result of federal action, these rules will not be rendered incorrect. Also, for the one-hour ozone NAAQS, the designations and classifications in 40 Code of Federal Regulations (CFR) Part 81 were retained by EPA for purposes of anti-backsliding (See 70 *Federal Register* 44470, August 3, 2005). Upon determination by EPA that any requirement is no longer required for purposes of anti-backsliding, the requirement will no longer apply. The commission is also removing the language "to prevent anti-backsliding" and replacing it with "for the purposes of anti-backsliding" since the intent of the rule is to prevent backsliding and promote anti-backsliding. Any revision to a SIP that could interfere

with or does not comply with the FCAA and the SIP because it has the effect of making the approved SIP less stringent may be considered as "backsliding" from those requirements and would not be approvable by the EPA. Additionally, the definition of reportable quantity contains references to §101.1(70) in §101.1(88)(A)(i)(III)(-a-), (-c-), (-w-), (-pp-), and (-zz-) that would be incorrect based on the amendments to §101.1(70). The commission is amending §101.1(88) to correct these references.

Final Regulatory Impact Analysis

The commission invited public comment regarding the draft regulatory impact analysis determination during the public comment period, but no comments were received. The commission reviewed the rulemaking in light of the regulatory impact analysis requirements of Texas Government Code, §2001.0225, and determined that the rulemaking does not meet the definition of a major environmental rule as defined in that statute, and in addition, if it did meet the definition, would not be subject to the requirement to prepare a regulatory impact analysis.

A major environmental rule means a rule, the specific intent of which is to protect the environment or reduce risks to human health from environmental exposure, and that may adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, or the public health and safety of the state or a sector of the state. The specific intent of the revisions are to add references to

federal regulations in certain definitions that are duplicative with federal regulation that the state has no authority to legally change, and to correct references in the definition of reportable quantity. These changes will not adversely affect the economy, a sector or the economy, productivity, competition, jobs, the environment, or the public health and safety of the state or a sector of the state in a material way because they are administrative in nature.

Additionally, even if the rule met the definition of a major environmental rule, the rulemaking does not meet any of the four applicability criteria for requiring a regulatory impact analysis for a major environmental rule, which are listed in Texas Government Code, §2001.0225(a). Texas Government Code, §2001.0225, applies only to a major environmental rule, the result of which is to: 1) exceed a standard set by federal law, unless the rule is specifically required by state law; 2) exceed an express requirement of state law, unless the rule is specifically required by federal law; 3) exceed a requirement of a delegation agreement or contract between the state and an agency or representative of the federal government to implement a state and federal program; or 4) adopt a rule solely under the general powers of the agency instead of under a specific state law.

The adopted rule would implement requirements of the FCAA. Under 42 United States Code (USC), §7410, each state is required to adopt and implement a SIP containing adequate provisions to implement, attain, maintain, and enforce the NAAQS within the

state. While 42 USC, §7410 generally does not require specific programs, methods, or emission reductions in order to meet the standard, state SIPs must include specific requirements as specified by 42 USC, §7410. The provisions of the FCAA recognize that states are in the best position to determine what programs and controls are necessary or appropriate in order to meet the NAAQS. This flexibility allows states, affected industry, and the public, to collaborate on the best methods for attaining the NAAQS for the specific regions in the state. Even though the FCAA allows states to develop their own programs, this flexibility does not relieve a state from developing a program that meets the requirements of 42 USC, §7410. States are not free to ignore the requirements of 42 USC, §7410, and must develop programs to assure that their SIPs provide for implementation, attainment, maintenance, and enforcement of the NAAQS within the state. One of the requirements of 42 USC, §7410 is for states to revise their plans as necessary to take account revisions of the NAAQS. The rule revisions will align the state rules with federal requirements that the state has no authority to change, since the FCAA reserves all authority concerning designations and classifications for the EPA only, in addition to correcting internal references in the rules

The requirement to provide a fiscal analysis of regulations in the Texas Government Code was amended by Senate Bill (SB) 633 during the 75th Legislature, 1997. The intent of SB 633 was to require agencies to conduct a regulatory impact analysis of extraordinary rules. These are identified in the statutory language as major

environmental rules that will have a material adverse impact and will exceed a requirement of state law, federal law, or a delegated federal program, or are adopted solely under the general powers of the agency. With the understanding that this requirement would seldom apply, the commission provided a cost estimate for SB 633 that concluded "based on an assessment of rules adopted by the agency in the past, it is not anticipated that the bill will have significant fiscal implications for the agency due to its limited application." The commission also noted that the number of rules that would require assessment under the provisions of the bill was not large. This conclusion was based, in part, on the criteria set forth in the bill that exempted rules from the full analysis unless the rule was a major environmental rule that exceeds a federal law.

Because of the ongoing need to meet federal requirements, the commission routinely proposes and adopts rules incorporating or designed to satisfy specific federal requirements. The legislature is presumed to understand this federal scheme. If each rule proposed by the commission to meet a federal requirement was considered to be a major environmental rule that exceeds federal law, then each of those rules would require the full regulatory impact analysis (RIA) contemplated by SB 633. This conclusion is inconsistent with the conclusions reached by the commission in its cost estimate and by the Legislative Budget Board (LBB) in its fiscal notes. Since the legislature is presumed to understand the fiscal impacts of the bills it passes, and that presumption is based on information provided by state agencies and the LBB, the

commission believes that the intent of SB 633 was only to require the full RIA for rules that are extraordinary in nature. While this rule may have a broad impact, that impact is no greater than is necessary or appropriate to meet the requirements of the FCAA, and in fact creates no additional impacts since the rule does not exceed the requirement to attain and maintain the NAAQS. For these reasons, this rule falls under the exception in Texas Government Code, §2001.0225(a), because it is required by, and does not exceed, federal law including the approved SIP. In addition, these rules do not exceed any contract between the state and a federal agency.

The commission has consistently applied this construction to its rules since this statute was enacted in 1997. Since that time, the legislature has revised the Texas Government Code, but left this provision substantially unamended. It is presumed that "when an agency interpretation is in effect at the time the legislature amends the laws without making substantial change in the statute, the legislature is deemed to have accepted the agency's interpretation." (*Central Power & Light Co. v. Sharp*, 919 S.W.2d 485, 489 (Tex. App. Austin 1995), *writ denied with per curiam opinion respecting another issue*, 960 S.W.2d 617 (Tex. 1997); *Bullock v. Marathon Oil Co.*, 798 S.W.2d 353, 357 (Tex. App. Austin 1990, *no writ*). *Cf. Humble Oil & Refining Co. v. Calvert*, 414 S.W.2d 172 (Tex. 1967); *Dudney v. State Farm Mut. Auto Ins. Co.*, 9 S.W.3d 884, 893 (Tex. App. Austin 2000); *Southwestern Life Ins. Co. v. Montemayor*, 24 S.W.3d 581 (Tex. App. Austin 2000, *pet. denied*); and *Coastal Indust. Water Auth. v. Trinity Portland Cement*

Div., 563 S.W.2d 916 (Tex. 1978).)

The commission's interpretation of the RIA requirements is also supported by a change made to the Texas Administrative Procedure Act (APA) by the legislature in 1999. In an attempt to limit the number of rule challenges based upon APA requirements, the legislature clarified that state agencies are required to meet these sections of the APA against the standard of "substantial compliance" (Texas Government Code, §2001.035). The legislature specifically identified Texas Government Code, §2001.0225 as falling under this standard. As discussed in this analysis and elsewhere in this preamble, the commission has substantially complied with the requirements of Texas Government Code, §2001.0225.

The rule implements requirements of the FCAA, specifically 42 USC, §7410. The specific intent of the revisions is to add references to federal regulations in certain definitions that are duplicative with federal regulation that the state has no authority to legally change, and to correct an inadvertent omission in the definition of reportable quantity. The amendment was not developed solely under the general powers of the agency, but is authorized by specific sections of Texas Health and Safety Code, Chapter 382 (also known as the Texas Clean Air Act), and the Texas Water Code, which are cited in the STATUTORY AUTHORITY section of this preamble, including Texas Health and Safety Code, §§382.011, 382.012, and 382.017. Therefore, this rulemaking action is not subject

to the regulatory analysis provisions of Texas Government Code, §2001.0225(b).

No comments were received on the RIA.

Taking Impact Assessment

Under Texas Government Code, §2007.002(5), taking means a governmental action that affects private real property, in whole or in part or temporarily or permanently, in a manner that requires the governmental entity to compensate the private real property owner as provided by the Fifth and Fourteenth Amendments to the United States Constitution or §17 or §19, Article I, Texas Constitution; or a governmental action that affects an owner's private real property that is the subject of the governmental action, in whole or in part or temporarily or permanently, in a manner that restricts or limits the owner's right to the property that would otherwise exist in the absence of the governmental action; and is the producing cause of a reduction of at least 25% in the market value of the affected private real property, determined by comparing the market value of the property as if the governmental action is not in effect and the market value of the property determined as if the governmental action is in effect.

The commission completed a takings impact analysis for the rulemaking action under Texas Government Code, §2007.043. The primary purpose of this rulemaking action, as discussed elsewhere in this preamble, is to add references to federal regulations in

certain definitions that are duplicative with federal regulation that the state has no authority to legally change, and to correct an inadvertent omission in the definition of reportable quantity. The rule will not create any additional burden on private real property. The rule will not affect private real property in a manner that would require compensation to private real property owners under the United States Constitution or the Texas Constitution. This rule also will not affect private real property in a manner that restricts or limits an owner's right to the property that would otherwise exist in the absence of the governmental action. Therefore, the rulemaking will not cause a taking under Texas Government Code, Chapter 2007.

Consistency With The Coastal Management Program

The commission determined that this rulemaking action relates to an action or actions subject to the Texas Coastal Management Program (CMP) in accordance with the Coastal Coordination Act of 1991, as amended (Texas Natural Resources Code, §§33.201 *et seq.*), and commission rules in 30 TAC Chapter 281, Subchapter B, concerning Consistency with the Texas Coastal Management Plan. As required by §281.45(a)(3) and 31 TAC §505.11(b)(2), relating to Actions and Rules Subject to the CMP, commission rules governing air pollutant emissions must be consistent with the applicable goals and policies of the CMP. The commission reviewed this action for consistency with the CMP goals and policies in accordance with the rules of the Coastal Coordination Council, and determined that the action is consistent with the applicable CMP goals and policies.

The CMP goal applicable to this rulemaking action is the goal to protect, preserve, and enhance the diversity, quality, quantity, functions, and values of coastal natural resource areas (31 TAC §501.12(l)). The amendment replaces existing definitions with references to federal regulations that the state has no authority to change and correct an inadvertent omission in the definition of reportable quantity. The CMP policy applicable to this rulemaking action is the policy that commission rules comply with federal regulations in 40 CFR, to protect and enhance air quality in the coastal areas (31 TAC §501.32). Therefore, in accordance with 31 TAC §505.22(e), the commission affirms that this rulemaking action is consistent with CMP goals and policies.

Effect On Sites Subject To The Federal Operating Permits Program

Chapter 101, Subchapter A is an applicable requirement of 30 TAC Chapter 122, Federal Operating Permits Program, in that the definitions in Subchapter A are relevant in defining and understanding other applicable requirements and applicability generally. Owners or operators subject to the federal operating permit program must, consistent with the revision process in Chapter 122, upon the effective date of the adopted rulemaking, revise their operating permit to include any new requirements or address applicability related to the new Chapter 101 requirements.

Public Comment

The commission held a public hearing on September 20, 2010, in Austin and no comments were submitted at the hearing. The comment period closed on September 27, 2010. The commission received written comments from the Texas Industry Project (TIP) and Zephyr Environmental Corp. (ZEC).

Response To Comments

TIP commented that this rulemaking was unnecessary to ensure anti-backsliding for any Texas ozone nonattainment area, because it would be superseded by a pending EPA rulemaking, and because it would create an undue hardship for businesses.

The commission respectfully disagrees with the comments. Due to EPA's inconsistent positions on anti-backsliding requirements and failure to complete rulemaking to fully implement the D.C. Circuit's opinion in *South Coast v. EPA*, as discussed earlier in this preamble, there has been confusion and concern regarding anti-backsliding requirements, as reflected in other comments received on this rulemaking. This rulemaking is necessary to remove prior adopted rule language that conflicted with then-applicable EPA guidance regarding applicability of major source thresholds and emission offset requirements. The commission constantly strives for clarity in its rules, in order for all interested persons to both

understand and implement commission rules appropriately under state law. As discussed earlier in this preamble, EPA has issued a final rule redesignating the BPA area as attainment for the 1997 eight-hour ozone standard, and discussing NSR requirements that apply in the BPA area as of October 20, 2010, (75 *Federal Register* 64675). While this final rule provides additional guidance regarding EPA's opinions concerning anti-backsliding requirements, this rule does not have general applicability, and therefore, does not resolve these issues statewide, as assumed by the commenter. Regarding the commenter's concern that the rule, if adopted, would create an undue hardship for business, the commenter provided no information to support either the type or scope of hardship. No changes were made to the rule in response to these comments.

Zephyr commented that removal of specific definitions and referencing federal regulations would not accomplish the stated goal of reducing confusion over nonattainment area designations and classifications and their related applicability thresholds and emission offset requirements.

The commission appreciates the comments, and notes that the removal of the specific definitions to reference the applicable federal regulation is only one element of the commission's proposed strategy for clarity regarding

anti-backsliding requirements. As stated elsewhere in this preamble, the commission is adopting rule changes to both Chapters 101 and 116 to provide clarity regarding the applicability thresholds and emission offset provisions.

Zephyr also commented that the current TCEQ Web site postings were inadequate to prevent confusion over nonattainment area designations and classifications, requested that the TCEQ specify in this response to comments additional items related to nonattainment issues that would be included on the website, and requested specific items, such as "links to all documents establishing air quality permitting requirements."

The commission appreciates the comment, and will consider how to better provide information on these issues to the public.

SUBCHAPTER A: GENERAL RULES

§101.1

Statutory Authority

The amendment is adopted under Texas Water Code, §5.102, concerning General Powers; §5.103, concerning Rules; and §5.105 concerning General Policy, which authorize the commission to adopt rules as necessary to carry out its power and duties under the Texas Water Code and under Texas Health and Safety Code, §382.017, which provides the commission with the authority to adopt rules consistent with the policy and purposes of the Texas Clean Air Act , §382.011, concerning General Powers and Duties, which authorizes the commission to control the quality of the state's air; and §382.012, concerning State Air Control Plan, which authorizes the commission to prepare and develop a comprehensive plan for the proper control of the state's air.

The adopted amendment implements Texas Water Code, §5.103; and Texas Health and Safety Code, §382.017 and §382.012.

§101.1. Definitions.

Unless specifically defined in the Texas Clean Air Act (TCAA) or in the rules of the commission, the terms used by the commission have the meanings commonly ascribed to them in the field of air pollution control. In addition to the terms that are defined by the TCAA, the following terms, when used in the air quality rules in this title, have the following meanings, unless the context clearly indicates otherwise.

(1) Account--For those sources required to be permitted under Chapter 122 of this title (relating to Federal Operating Permits Program), all sources that are aggregated as a site. For all other sources, any combination of sources under common ownership or control and located on one or more contiguous properties, or properties contiguous except for intervening roads, railroads, rights-of-way, waterways, or similar divisions.

(2) Acid gas flare--A flare used exclusively for the incineration of hydrogen sulfide and other acidic gases derived from natural gas sweetening processes.

(3) Agency established facility identification number--For the purposes of Subchapter F of this chapter (relating to Emissions Events and Scheduled Maintenance, Startup, and Shutdown Activities), a unique alphanumeric code required to be assigned by the owner or operator of a regulated entity that the emission inventory reporting

requirements of §101.10 of this title (relating to Emissions Inventory Requirements) are applicable to each facility at that regulated entity.

(4) Ambient air--That portion of the atmosphere, external to buildings, to which the general public has access.

(5) Background--Background concentration, the level of air contaminants that cannot be reduced by controlling emissions from man-made sources. It is determined by measuring levels in non-urban areas.

(6) Boiler--Any combustion equipment fired with solid, liquid, and/or gaseous fuel used to produce steam or to heat water.

(7) Capture system--All equipment (including, but not limited to, hoods, ducts, fans, booths, ovens, dryers, etc.) that contains, collects, and transports an air pollutant to a control device.

(8) Captured facility--A manufacturing or production facility that generates an industrial solid waste or hazardous waste that is routinely stored, processed, or disposed of on a shared basis in an integrated waste management unit owned, operated by, and located within a contiguous manufacturing complex.

(9) Carbon adsorber--An add-on control device that uses activated carbon to adsorb volatile organic compounds from a gas stream.

(10) Carbon adsorption system--A carbon adsorber with an inlet and outlet for exhaust gases and a system to regenerate the saturated adsorbent.

(11) Coating--A material applied onto or impregnated into a substrate for protective, decorative, or functional purposes. Such materials include, but are not limited to, paints, varnishes, sealants, adhesives, thinners, diluents, inks, maskants, and temporary protective coatings.

(12) Cold solvent cleaning--A batch process that uses liquid solvent to remove soils from the surfaces of parts or to dry the parts by spraying, brushing, flushing, and/or immersion while maintaining the solvent below its boiling point. Wipe cleaning (hand cleaning) is not included in this definition.

(13) Combustion unit--Any boiler plant, furnace, incinerator, flare, engine, or other device or system used to oxidize solid, liquid, or gaseous fuels, but excluding motors and engines used in propelling land, water, and air vehicles.

(14) Combustion turbine--Any gas turbine system that is gas and/or liquid fuel fired with or without power augmentation. This unit is either attached to a foundation or is portable equipment operated at a specific minor or major source for more than 90 days in any 12-month period. Two or more gas turbines powering one shaft will be treated as one unit.

(15) Commercial hazardous waste management facility--Any hazardous waste management facility that accepts hazardous waste or polychlorinated biphenyl compounds for a charge, except a captured facility that disposes only waste generated on-site or a facility that accepts waste only from other facilities owned or effectively controlled by the same person.

(16) Commercial incinerator--An incinerator used to dispose of waste material from retail and wholesale trade establishments.

(17) Commercial medical waste incinerator--A facility that accepts for incineration medical waste generated outside the property boundaries of the facility.

(18) Component--A piece of equipment, including, but not limited to, pumps, valves, compressors, and pressure relief valves that has the potential to leak volatile organic compounds.

(19) Condensate--Liquids that result from the cooling and/or pressure changes of produced natural gas. Once these liquids are processed at gas plants or refineries or in any other manner, they are no longer considered condensates.

(20) Construction-demolition waste--Waste resulting from construction or demolition projects.

(21) Control system or control device--Any part, chemical, machine, equipment, contrivance, or combination of same, used to destroy, eliminate, reduce, or control the emission of air contaminants to the atmosphere.

(22) Conveyorized degreasing--A solvent cleaning process that uses an automated parts handling system, typically a conveyor, to automatically provide a continuous supply of parts to be cleaned or dried using either cold solvent or vaporized solvent. A conveyorized degreasing process is fully enclosed except for the conveyor inlet and exit portals.

(23) Criteria pollutant or standard--Any pollutant for which there is a national ambient air quality standard established under 40 Code of Federal Regulations Part 50.

(24) Custody transfer--The transfer of produced crude oil and/or condensate, after processing and/or treating in the producing operations, from storage tanks or automatic transfer facilities to pipelines or any other forms of transportation.

(25) *De minimis* impact--A change in ground level concentration of an air contaminant as a result of the operation of any new major stationary source or of the operation of any existing source that has undergone a major modification that does not exceed the following specified amounts.

Figure: 30 TAC §101.1(25) (No change.)

AIR CONTAMINANT	ANNUAL	24-HOUR	8-HOUR	3-HOUR	1-HOUR
Inhalable Particulate Matter (PM ₁₀)	1.0 µg/m ³	5 µg/m ³			
Sulfur Dioxide	1.0 µg/m ³	5 µg/m ³		25 µg/m ³	
Nitrogen Dioxide	1.0 µg/m ³				
Carbon Monoxide			0.5 mg/m ³		2 mg/m ³

(26) Domestic wastes--The garbage and rubbish normally resulting from the functions of life within a residence.

(27) Emissions banking--A system for recording emissions reduction credits so they may be used or transferred for future use.

(28) Emissions event--Any upset event or unscheduled maintenance, startup, or shutdown activity, from a common cause that results in unauthorized emissions of air contaminants from one or more emissions points at a regulated entity.

(29) Emissions reduction credit--Any stationary source emissions reduction that has been banked in accordance with Chapter 101, Subchapter H, Division 1 of this title (relating to Emission Credit Banking and Trading).

(30) Emissions reduction credit certificate--The certificate issued by the executive director that indicates the amount of qualified reduction available for use as offsets and the length of time the reduction is eligible for use.

(31) Emissions unit--Any part of a stationary source that emits, or would have the potential to emit, any pollutant subject to regulation under the Federal Clean Air Act.

(32) Excess opacity event--When an opacity reading is equal to or exceeds 15 additional percentage points above an applicable opacity limit, averaged over a six-minute period.

(33) Exempt solvent--Those carbon compounds or mixtures of carbon compounds used as solvents that have been excluded from the definition of volatile organic compound.

(34) External floating roof--A cover or roof in an open top tank that rests upon or is floated upon the liquid being contained and is equipped with a single or double seal to close the space between the roof edge and tank shell. A double seal consists of two complete and separate closure seals, one above the other, containing an enclosed space between them.

(35) Federal motor vehicle regulation--Control of Air Pollution from Motor Vehicles and Motor Vehicle Engines, 40 Code of Federal Regulations Part 85.

(36) Federally enforceable--All limitations and conditions that are enforceable by the United States Environmental Protection Agency administrator, including those requirements developed under 40 Code of Federal Regulations (CFR) Parts 60 and 61; requirements within any applicable state implementation plan (SIP); and any permit requirements established under 40 CFR §52.21 or under regulations approved under 40 CFR Part 51, Subpart 1, including operating permits issued under the approved program that is incorporated into the SIP and that expressly requires adherence to any permit issued under such program.

(37) Flare--An open combustion unit (i.e., lacking an enclosed combustion chamber) whose combustion air is provided by uncontrolled ambient air around the flame, and that is used as a control device. A flare may be equipped with a radiant heat shield (with or without a refractory lining), but is not equipped with a flame air control damping system to control the air/fuel mixture. In addition, a flare may also use auxiliary fuel. The combustion flame may be elevated or at ground level. A vapor combustor, as defined in this section, is not considered a flare.

(38) Fuel oil--Any oil meeting the American Society for Testing and Materials (ASTM) specifications for fuel oil in ASTM D396-01, Standard Specifications for Fuel Oils, revised 2001. This includes fuel oil grades 1, 1 (Low Sulfur), 2, 2 (Low Sulfur), 4 (Light), 4, 5 (Light), 5 (Heavy), and 6.

(39) Fugitive emission--Any gaseous or particulate contaminant entering the atmosphere that could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening designed to direct or control its flow.

(40) Garbage--Solid waste consisting of putrescible animal and vegetable waste materials resulting from the handling, preparation, cooking, and consumption of food, including waste materials from markets, storage facilities, and handling and sale of produce and other food products.

(41) Gasoline--Any petroleum distillate having a Reid vapor pressure of four pounds per square inch (27.6 kilopascals) or greater that is produced for use as a motor fuel, and is commonly called gasoline.

(42) Hazardous wastes--Any solid waste identified or listed as a hazardous waste by the administrator of the United States Environmental Protection Agency under the federal Solid Waste Disposal Act, as amended by Resource Conservation and Recovery Act, 42 United States Code, §§6901 *et seq.*, as amended.

(43) Heatset (used in offset lithographic printing)--Any operation where heat is required to evaporate ink oil from the printing ink. Hot air dryers are used to deliver the heat.

(44) High-bake coatings--Coatings designed to cure at temperatures above 194 degrees Fahrenheit.

(45) High-volume low-pressure spray guns--Equipment used to apply coatings by means of a spray gun that operates between 0.1 and 10.0 pounds per square inch gauge air pressure measured at the air cap.

(46) Incinerator--An enclosed combustion apparatus and attachments that is used in the process of burning wastes for the primary purpose of reducing its volume and weight by removing the combustibles of the waste and is equipped with a flue for conducting products of combustion to the atmosphere. Any combustion device that burns 10% or more of solid waste on a total British thermal unit (Btu) heat input basis averaged over any one-hour period is considered to be an incinerator. A combustion device without instrumentation or methodology to determine hourly flow rates of solid waste and burning 1.0% or more of solid waste on a total Btu heat input basis averaged annually is also considered to be an incinerator. An open-trench type (with closed ends) combustion unit may be considered an incinerator when approved by the executive

director. Devices burning untreated wood scraps, waste wood, or sludge from the treatment of wastewater from the process mills as a primary fuel for heat recovery are not included under this definition. Combustion devices permitted under this title as combustion devices other than incinerators will not be considered incinerators for application of any rule within this title provided they are installed and operated in compliance with the condition of all applicable permits.

(47) Industrial boiler--A boiler located on the site of a facility engaged in a manufacturing process where substances are transformed into new products, including the component parts of products, by mechanical or chemical processes.

(48) Industrial furnace--Cement kilns; lime kilns; aggregate kilns; phosphate kilns; coke ovens; blast furnaces; smelting, melting, or refining furnaces, including pyrometallurgical devices such as cupolas, reverberator furnaces, sintering machines, roasters, or foundry furnaces; titanium dioxide chloride process oxidation reactors; methane reforming furnaces; pulping recovery furnaces; combustion devices used in the recovery of sulfur values from spent sulfuric acid; and other devices the commission may list.

(49) Industrial solid waste--Solid waste resulting from, or incidental to, any process of industry or manufacturing, or mining or agricultural operations, classified as follows.

(A) Class 1 industrial solid waste or Class 1 waste is any industrial solid waste designated as Class 1 by the executive director as any industrial solid waste or mixture of industrial solid wastes that because of its concentration or physical or chemical characteristics is toxic, corrosive, flammable, a strong sensitizer or irritant, a generator of sudden pressure by decomposition, heat, or other means, and may pose a substantial present or potential danger to human health or the environment when improperly processed, stored, transported, or otherwise managed, including hazardous industrial waste, as defined in §335.1 and §335.505 of this title (relating to Definitions and Class 1 Waste Determination).

(B) Class 2 industrial solid waste is any individual solid waste or combination of industrial solid wastes that cannot be described as Class 1 or Class 3, as defined in §335.506 of this title (relating to Class 2 Waste Determination).

(C) Class 3 industrial solid waste is any inert and essentially insoluble industrial solid waste, including materials such as rock, brick, glass, dirt, and

certain plastics and rubber, etc., that are not readily decomposable as defined in §335.507 of this title (relating to Class 3 Waste Determination).

(50) Internal floating cover--A cover or floating roof in a fixed roof tank that rests upon or is floated upon the liquid being contained, and is equipped with a closure seal or seals to close the space between the cover edge and tank shell.

(51) Leak--A volatile organic compound concentration greater than 10,000 parts per million by volume or the amount specified by applicable rule, whichever is lower; or the dripping or exuding of process fluid based on sight, smell, or sound.

(52) Liquid fuel--A liquid combustible mixture, not derived from hazardous waste, with a heating value of at least 5,000 British thermal units per pound.

(53) Liquid-mounted seal--A primary seal mounted in continuous contact with the liquid between the tank wall and the floating roof around the circumference of the tank.

(54) Maintenance area--A geographic region of the state previously designated nonattainment under the Federal Clean Air Act Amendments of 1990 and subsequently redesignated to attainment subject to the requirement to develop a

maintenance plan under 42 United States Code, §7505a, as described in 40 Code of Federal Regulations Part 81 and in pertinent *Federal Register* notices. [The following are the maintenance areas within the state:]

[(A) Victoria Ozone Maintenance Area 60 (Federal Register (FR) 12453) - Victoria County; and]

[(B) Collin County Lead Maintenance Area (64 FR 55421) - Portion of Collin County. Eastside: Starting at the intersection of South Fifth Street and the fence line approximately 1,000 feet south of the Exide property line going north to the intersection of South Fifth Street and Eubanks Street; Northside: Proceeding west on Eubanks to the Burlington Railroad tracks; Westside: Along the Burlington Railroad tracks to the fence line approximately 1,000 feet south of the Exide property line; Southside: Fence line approximately 1,000 feet south of the Exide property line.]

(55) Maintenance plan--A revision to the applicable state implementation plan, meeting the requirements of 42 United States Code, §7505a.

(56) Marine vessel--Any watercraft used, or capable of being used, as a means of transportation on water, and that is constructed or adapted to carry, or that carries, oil, gasoline, or other volatile organic liquid in bulk as a cargo or cargo residue.

(57) Mechanical shoe seal--A metal sheet that is held vertically against the storage tank wall by springs or weighted levers and is connected by braces to the floating roof. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.

(58) Medical waste--Waste materials identified by the Department of State Health Services as "special waste from health care-related facilities" and those waste materials commingled and discarded with special waste from health care-related facilities.

(59) Metropolitan Planning Organization--That organization designated as being responsible, together with the state, for conducting the continuing, cooperative, and comprehensive planning process under 23 United States Code (USC), §134 and 49 USC, §1607.

(60) Mobile emissions reduction credit--The credit obtained from an enforceable, permanent, quantifiable, and surplus (to other federal and state rules) emissions reduction generated by a mobile source as set forth in Chapter 114, Subchapter F of this title (relating to Vehicle Retirement and Mobile Emission

Reduction Credits), and that has been banked in accordance with Subchapter H, Division 1 of this chapter.

(61) Motor vehicle--A self-propelled vehicle designed for transporting persons or property on a street or highway.

(62) Motor vehicle fuel dispensing facility--Any site where gasoline is dispensed to motor vehicle fuel tanks from stationary storage tanks.

(63) Municipal solid waste--Solid waste resulting from, or incidental to, municipal, community, commercial, institutional, and recreational activities, including garbage, rubbish, ashes, street cleanings, dead animals, abandoned automobiles, and all other solid waste except industrial solid waste.

(64) Municipal solid waste facility--All contiguous land, structures, other appurtenances, and improvements on the land used for processing, storing, or disposing of solid waste. A facility may be publicly or privately owned and may consist of several processing, storage, or disposal operational units, e.g., one or more landfills, surface impoundments, or combinations of them.

(65) Municipal solid waste landfill--A discrete area of land or an excavation that receives household waste and that is not a land application unit, surface impoundment, injection well, or waste pile, as those terms are defined under 40 Code of Federal Regulations §257.2. A municipal solid waste landfill (MSWLF) unit also may receive other types of Resource Conservation and Recovery Act Subtitle D wastes, such as commercial solid waste, nonhazardous sludge, conditionally exempt small-quantity generator waste, and industrial solid waste. Such a landfill may be publicly or privately owned. An MSWLF unit may be a new MSWLF unit, an existing MSWLF unit, or a lateral expansion.

(66) National ambient air quality standard--Those standards established under 42 United States Code, §7409, including standards for carbon monoxide, lead, nitrogen dioxide, ozone, inhalable particulate matter, and sulfur dioxide.

(67) Net ground-level concentration--The concentration of an air contaminant as measured at or beyond the property boundary minus the representative concentration flowing onto a property as measured at any point. Where there is no expected influence of the air contaminant flowing onto a property from other sources, the net ground level concentration may be determined by a measurement at or beyond the property boundary.

(68) New source--Any stationary source, the construction or modification of which was commenced after March 5, 1972.

(69) Nitrogen oxides (NO_x)--The sum of the nitric oxide and nitrogen dioxide in the flue gas or emission point, collectively expressed as nitrogen dioxide.

(70) Nonattainment area--A defined region within the state that is designated by the United States Environmental Protection Agency (EPA) as failing to meet the national ambient air quality standard (NAAQS or standard) for a pollutant for which a standard exists. The EPA will designate the area as nonattainment under the provisions of 42 United States Code, §7407(d). For the official list and boundaries of nonattainment areas, see 40 Code of Federal Regulations (CFR) Part 81 and pertinent *Federal Register* [(FR)] notices. The designations and classifications for the one-hour ozone national ambient air quality standard in 40 CFR Part 81 were retained for the purpose of anti-backsliding and upon determination by the EPA that any requirement is no longer required for purposes of to prevent anti-backsliding, then that requirement no longer applies. [The following areas comprise the nonattainment areas within the state for all national ambient air quality standards (NAAQS). EPA has indicated that it will revoke the one-hour ozone standard in full, including the associated designations and classifications, on June 15, 2005, which is one year following the effective date of the designations for the eight-hour NAAQS of June 15, 2004.]

[(A) Carbon monoxide (CO). El Paso CO nonattainment area (56 FR 56694)--Classified as a Moderate CO nonattainment area with a design value less than or equal to 12.7 parts per million. Portion of El Paso County. Portion of the city limits of El Paso: That portion of the City of El Paso bounded on the north by Highway 10 from Porfirio Diaz Street to Raynolds Street, Raynolds Street from Highway 10 to the Southern Pacific Railroad lines, the Southern Pacific Railroad lines from Raynolds Street to Highway 62, Highway 62 from the Southern Pacific Railroad lines to Highway 20, and Highway 20 from Highway 62 to Polo Inn Road. Bounded on the east by Polo Inn Road from Highway 20 to the Texas-Mexico border. Bounded on the south by the Texas-Mexico border from Polo Inn Road to Porfirio Diaz Street. Bounded on the west by Porfirio Diaz Street from the Texas-Mexico border to Highway 10.]

[(B) Inhalable particulate matter (PM₁₀). El Paso PM₁₀ nonattainment area (56 FR 56694)--Classified as a Moderate PM₁₀ nonattainment area. Portion of El Paso County that comprises the El Paso city limit boundaries as they existed on November 15, 1990.]

[(C) Lead. No designated nonattainment areas.]

[(D) Nitrogen dioxide. No designated nonattainment areas.]

[(E) Ozone (one-hour).]

[(i) Houston-Galveston-Brazoria (HGB) one-hour ozone nonattainment area (56 FR 56694) - Classified as a Severe-17 ozone nonattainment area. Consists of Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, and Waller Counties.]

[(ii) El Paso one-hour ozone nonattainment area (56 FR 56694) - Classified as a Serious ozone nonattainment area. Consists of El Paso County.]

[(iii) Beaumont-Port Arthur (BPA) one-hour ozone nonattainment area (69 FR 16483) - Classified as a Serious ozone nonattainment area. Consists of Hardin, Jefferson, and Orange Counties.]

[(iv) Dallas-Fort Worth one-hour ozone nonattainment area (63 FR 8128) - Classified as a Serious ozone nonattainment area. Consists of Collin, Dallas, Denton, and Tarrant Counties.]

[(F) Ozone (eight-hour).]

[(i) HGB eight-hour ozone nonattainment area (69 FR 23936) - Classified as a Moderate ozone nonattainment area. Consists of Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, and Waller Counties.]

[(ii) BPA eight-hour ozone nonattainment area (69 FR 23936) - Classified as a Marginal ozone nonattainment area. Consists of Hardin, Jefferson, and Orange Counties.]

[(iii) Dallas-Fort Worth eight-hour ozone nonattainment area (69 FR 23936) - Classified as a Moderate ozone nonattainment area. Consists of Collin, Dallas, Denton, Ellis, Johnson, Kaufman, Parker, Rockwall, and Tarrant Counties.]

[(iv) San Antonio eight-hour ozone nonattainment area (69 FR 23936) - Classified under the Federal Clean Air Act, Title I, Part D, Subpart 1 (42 United States Code, §7502), nonattainment deferred to September 30, 2005, or as extended by EPA.]

[(G) Sulfur dioxide. No designated nonattainment areas.]

(71) Non-reportable emissions event--Any emissions event that in any 24-hour period does not result in an unauthorized emission from any emissions point equal to or in excess of the reportable quantity as defined in this section.

(72) Opacity--The degree to which an emission of air contaminants obstructs the transmission of light expressed as the percentage of light obstructed as measured by an optical instrument or trained observer.

(73) Open-top vapor degreasing--A batch solvent cleaning process that is open to the air and that uses boiling solvent to create solvent vapor used to clean or dry parts through condensation of the hot solvent vapors on the parts.

(74) Outdoor burning--Any fire or smoke-producing process that is not conducted in a combustion unit.

(75) Particulate matter--Any material, except uncombined water, that exists as a solid or liquid in the atmosphere or in a gas stream at standard conditions.

(76) Particulate matter emissions--All finely-divided solid or liquid material, other than uncombined water, emitted to the ambient air as measured by United States Environmental Protection Agency Reference Method 5, as specified at 40

Code of Federal Regulations (CFR) Part 60, Appendix A, modified to include particulate caught by an impinger train; by an equivalent or alternative method, as specified at 40 CFR Part 51; or by a test method specified in an approved state implementation plan.

(77) Petroleum refinery--Any facility engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, or other products through distillation of crude oil, or through the redistillation, cracking, extraction, reforming, or other processing of unfinished petroleum derivatives.

(78) PM₁₀ --Particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers as measured by a reference method based on 40 Code of Federal Regulations (CFR) Part 50, Appendix J, and designated in accordance with 40 CFR Part 53, or by an equivalent method designated with that Part 53.

(79) PM₁₀ emissions--Finely-divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal ten micrometers emitted to the ambient air as measured by an applicable reference method, or an equivalent or alternative method specified in 40 Code of Federal Regulations Part 51, or by a test method specified in an approved state implementation plan.

(80) Polychlorinated biphenyl compound--A compound subject to 40 Code of Federal Regulations Part 761.

(81) Process or processes--Any action, operation, or treatment embracing chemical, commercial, industrial, or manufacturing factors such as combustion units, kilns, stills, dryers, roasters, and equipment used in connection therewith, and all other methods or forms of manufacturing or processing that may emit smoke, particulate matter, gaseous matter, or visible emissions.

(82) Process weight per hour--"Process weight" is the total weight of all materials introduced or recirculated into any specific process that may cause any discharge of air contaminants into the atmosphere. Solid fuels charged into the process will be considered as part of the process weight, but liquid and gaseous fuels and combustion air will not. The "process weight per hour" will be derived by dividing the total process weight by the number of hours in one complete operation from the beginning of any given process to the completion thereof, excluding any time during that the equipment used to conduct the process is idle. For continuous operation, the "process weight per hour" will be derived by dividing the total process weight for a 24-hour period by 24.

(83) Property--All land under common control or ownership coupled with all improvements on such land, and all fixed or movable objects on such land, or any vessel on the waters of this state.

(84) Reasonable further progress--Annual incremental reductions in emissions of the applicable air contaminant that are sufficient to provide for attainment of the applicable national ambient air quality standard in the designated nonattainment areas by the date required in the state implementation plan.

(85) Regulated entity--All regulated units, facilities, equipment, structures, or sources at one street address or location that are owned or operated by the same person. The term includes any property under common ownership or control identified in a permit or used in conjunction with the regulated activity at the same street address or location. Owners or operators of pipelines, gathering lines, and flowlines under common ownership or control in a particular county may be treated as a single regulated entity for purposes of assessment and regulation of emissions events.

(86) Remote reservoir cold solvent cleaning--Any cold solvent cleaning operation in which liquid solvent is pumped to a sink-like work area that drains solvent back into an enclosed container while parts are being cleaned, allowing no solvent to pool in the work area.

(87) Reportable emissions event--Any emissions event that in any 24-hour period, results in an unauthorized emission from any emissions point equal to or in excess of the reportable quantity as defined in this section.

(88) Reportable quantity (RQ)--Is as follows:

(A) for individual air contaminant compounds and specifically listed mixtures by name or Chemical Abstracts Service (CAS) number, either:

(i) the lowest of the quantities:

(I) listed in 40 Code of Federal Regulations (CFR) Part 302, Table 302.4, the column "final RQ";

(II) listed in 40 CFR Part 355, Appendix A, the column "Reportable Quantity"; or

(III) listed as follows:

(-a-) acetaldehyde - 1,000 pounds, except in the Houston-Galveston-Brazoria (HGB) and Beaumont-Port Arthur (BPA) ozone nonattainment areas as defined in paragraph (70) [(70)(E)(i) and (iii)] of this section, where the RQ must be 100 pounds;

(-b-) butanes (any isomer) - 5,000 pounds;

(-c-) butenes (any isomer, except 1,3-butadiene) - 5,000 pounds, except in the HGB and BPA ozone nonattainment areas as defined in paragraph (70) [(70)(E)(i) and (iii)] of this section, where the RQ must be 100 pounds;

(-d-) carbon monoxide - 5,000 pounds;

(-e-) 1-chloro-1,1-difluoroethane (HCFC-142b)
- 5,000 pounds;

(-f-) chlorodifluoromethane (HCFC-22) - 5,000
pounds;

(-g-) 1-chloro-1-fluoroethane (HCFC-151a) -

5,000 pounds;

(-h-) chlorofluoromethane (HCFC-31) - 5,000

pounds;

(-i-) chloropentafluoroethane (CFC-115) -

5,000 pounds;

(-j-) 2-chloro-1,1,1,2-tetrafluoroethane (HCFC-

124) - 5,000 pounds;

(-k-) 1-chloro-1,1,2,2 tetrafluoroethane (HCFC-

124a) - 5,000 pounds;

(-l-) 1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC

43-10mee) - 5,000 pounds;

(-m-) decanes (any isomer) - 5,000 pounds;

(-n-) 1,1-dichloro-1-fluoroethane (HCFC-141b) -
5,000 pounds;

(-o-) 3,3-dichloro-1,1,2,2-pentafluoropropane
(HCFC- 225ca) - 5,000 pounds;

(-p-) 1,3-dichloro-1,1,2,2,3-pentafluoropropane
(HCFC-225cb) - 5,000 pounds;

(-q-) 1,2-dichloro-1,1,2,2-tetrafluoroethane
(CFR-114) - 5,000 pounds;

(-r-) 1,1- dichlorotetrafluoroethane (CFC-114a)
- 5,000 pounds;

(-s-) 1,2-dichloro-1,1,2-trifluoroethane (HCFC-
123a) - 5,000 pounds;

(-t-) 1,1-difluoroethane (HFC-152a) - 5,000
pounds;

(-u-) difluoromethane (HFC-32) - 5,000

pounds;

(-v-) ethanol - 5,000 pounds;

(-w-) ethylene - 5,000 pounds, except in the

HGB and BPA ozone nonattainment areas as defined in paragraph (70) [(70)(E)(i) and (iii)] of this section, where the RQ must be 100 pounds;

(-x-) ethylfluoride (HFC-161) - 5,000 pounds;

(-y-) 1,1,1,2,3,3,3-heptafluoropropane (HFC-

227ea) - 5,000 pounds;

(-z-) 1,1,1,3,3,3-hexafluoropropane (HFC-

236fa) - 5,000 pounds;

(-aa-) 1,1,1,2,3,3-hexafluoropropane (HFC-

236ea) - 5,000 pounds;

(-bb-) hexanes (any isomer) - 5,000 pounds;

(-cc-) isopropyl alcohol - 5,000 pounds;

(-dd-) mineral spirits - 5,000 pounds;

(-ee-) octanes (any isomer) - 5,000 pounds;

(-ff-) oxides of nitrogen - 200 pounds in ozone nonattainment, ozone maintenance, early action compact areas, Nueces County, and San Patricio County, and 5,000 pounds in all other areas of the state, which should be used instead of the RQs for nitrogen oxide and nitrogen dioxide provided in 40 CFR Part 302, Table 302.4, the column "final RQ";

(-gg-) pentachlorofluoroethane (CFR-111) - 5,000 pounds;

(-hh-) 1,1,1,3,3-pentafluorobutane (HFC-365mfc) - 5,000 pounds;

(-ii-) pentafluoroethane (HFC-125) - 5,000 pounds;

(-jj-) 1,1,2,2,3-pentafluoropropane (HFC-
245ca) - 5,000 pounds;

(-kk-) 1,1,2,3,3-pentafluoropropane (HFC-
245ea) - 5,000 pounds;

(-ll-) 1,1,1,2,3-pentafluoropropane (HFC-
245eb) - 5,000 pounds;

(-mm-) 1,1,1,3,3-pentafluoropropane (HFC-
245fa) - 5,000 pounds;

(-nn-) pentanes (any isomer) - 5,000 pounds;

(-oo-) propane - 5,000 pounds;

(-pp-) propylene - 5,000 pounds, except in the
HGB and BPA ozone nonattainment areas as defined in paragraph (70) [(70) (E) (i) and
(iii)] of this section, where the RQ must be 100 pounds;

(-qq-) 1,1,2,2-tetrachlorodifluoroethane (CFR -
112) - 5,000 pounds;

(-rr-) 1,1,1,2-tetrachlorodifluoroethane (CFC-
112a) -5,000 pounds;

(-ss-) 1,1,2,2-tetrafluoroethane (HFC-134) -
5,000 pounds;

(-tt-) 1,1,1,2-tetrafluoroethane (HFC-134a) -
5,000 pounds;

(-uu-) 1,1,2-trichloro-1,2,2-trifluoroethane
(CFR-113) - 5,000 pounds;

(-vv-) 1,1,1-trichloro- 2,2,2- trifluoroethane
(CFC- 113a) - 5,000 pounds;

(-ww-) 1,1,1-trifluoro-2,2-dichloroethane
(HCFC-123) - 5,000 pounds;

(-xx-) 1,1,1-trifluoroethane (HFC-143a) - 5,000

pounds;

(-yy-) trifluoromethane (HFC-23) - 5,000

pounds; or

(-zz-) toluene - 1,000 pounds, except in the

HGB and BPA ozone nonattainment areas as defined in paragraph (70) [(70)(E)(i) and (iii)] of this section, where the RQ must be 100 pounds;

(ii) if not listed in clause (i) of this subparagraph, 100

pounds;

(B) for mixtures of air contaminant compounds:

(i) where the relative amount of individual air contaminant compounds is known through common process knowledge or prior engineering analysis or testing, any amount of an individual air contaminant compound that equals or exceeds the amount specified in subparagraph (A) of this paragraph;

(ii) where the relative amount of individual air contaminant compounds in subparagraph (A)(i) of this paragraph is not known, any amount of the mixture that equals or exceeds the amount for any single air contaminant compound that is present in the mixture and listed in subparagraph (A)(i) of this paragraph;

(iii) where each of the individual air contaminant compounds listed in subparagraph (A)(i) of this paragraph are known to be less than 0.02% by weight of the mixture, and each of the other individual air contaminant compounds covered by subparagraph (A)(ii) of this paragraph are known to be less than 2.0% by weight of the mixture, any total amount of the mixture of air contaminant compounds greater than or equal to 5,000 pounds; or

(iv) where natural gas excluding carbon dioxide, water, nitrogen, methane, ethane, noble gases, hydrogen, and oxygen or air emissions from crude oil are known to be in an amount greater than or equal to 5,000 pounds or the associated hydrogen sulfide and mercaptans in a total amount greater than 100 pounds, whichever occurs first;

(C) for opacity from boilers and combustion turbines as defined in this section fueled by natural gas, coal, lignite, wood, fuel oil containing hazardous air pollutants at a concentration of less than 0.02% by weight, opacity that is equal to or

exceeds 15 additional percentage points above the applicable limit, averaged over a six-minute period. Opacity is the only RQ applicable to boilers and combustion turbines described in this paragraph; or

(D) for facilities where air contaminant compounds are measured directly by a continuous emission monitoring system providing updated readings at a minimum 15-minute interval an amount, approved by the executive director based on any relevant conditions and a screening model, that would be reported prior to ground level concentrations reaching at any distance beyond the closest regulated entity property line:

(i) less than one-half of any applicable ambient air standards;

and

(ii) less than two times the concentration of applicable air emission limitations.

(89) Rubbish--Nonputrescible solid waste, consisting of both combustible and noncombustible waste materials. Combustible rubbish includes paper, rags, cartons, wood, excelsior, furniture, rubber, plastics, yard trimmings, leaves, and similar materials. Noncombustible rubbish includes glass, crockery, tin cans, aluminum cans,

metal furniture, and like materials that will not burn at ordinary incinerator temperatures (1,600 degrees Fahrenheit to 1,800 degrees Fahrenheit).

(90) Scheduled maintenance, startup, or shutdown activity--For activities with unauthorized emissions that are expected to exceed a reportable quantity (RQ), a scheduled maintenance, startup, or shutdown activity is an activity that the owner or operator of the regulated entity whether performing or otherwise affected by the activity, provides prior notice and a final report as required by §101.211 of this title (relating to Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements); the notice or final report includes the information required in §101.211 of this title; and the actual unauthorized emissions from the activity do not exceed the emissions estimates submitted in the initial notification by more than an RQ. For activities with unauthorized emissions that are not expected to, and do not, exceed an RQ, a scheduled maintenance, startup, or shutdown activity is one that is recorded as required by §101.211 of this title. Expected excess opacity events as described in §101.201(e) of this title (relating to Emissions Event Reporting and Recordkeeping Requirements) resulting from scheduled maintenance, startup, or shutdown activities are those that provide prior notice (if required), and are recorded and reported as required by §101.211 of this title.

(91) Sludge--Any solid or semi-solid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant; water supply treatment plant, exclusive of the treated effluent from a wastewater treatment plant; or air pollution control equipment.

(92) Smoke--Small gas-born particles resulting from incomplete combustion consisting predominately of carbon and other combustible material and present in sufficient quantity to be visible.

(93) Solid waste--Garbage, rubbish, refuse, sludge from a waste water treatment plant, water supply treatment plant, or air pollution control equipment, and other discarded material, including solid, liquid, semisolid, or containerized gaseous material resulting from industrial, municipal, commercial, mining, and agricultural operations and from community and institutional activities. The term does not include:

(A) solid or dissolved material in domestic sewage, or solid or dissolved material in irrigation return flows, or industrial discharges subject to regulation by permit issued under the Texas Water Code, Chapter 26;

(B) soil, dirt, rock, sand, and other natural or man-made inert solid materials used to fill land, if the object of the fill is to make the land suitable for the construction of surface improvements; or

(C) waste materials that result from activities associated with the exploration, development, or production of oil or gas, or geothermal resources, and other substance or material regulated by the Railroad Commission of Texas under Natural Resources Code, §91.101, unless the waste, substance, or material results from activities associated with gasoline plants, natural gas liquids processing plants, pressure maintenance plants, or repressurizing plants and is hazardous waste as defined by the administrator of the United States Environmental Protection Agency under the federal Solid Waste Disposal Act, as amended by Resource Conservation and Recovery Act, as amended (42 United States Code, §§6901 *et seq.*).

(94) Sour crude--A crude oil that will emit a sour gas when in equilibrium at atmospheric pressure.

(95) Sour gas--Any natural gas containing more than 1.5 grains of hydrogen sulfide per 100 cubic feet, or more than 30 grains of total sulfur per 100 cubic feet.

(96) Source--A point of origin of air contaminants, whether privately or publicly owned or operated. Upon request of a source owner, the executive director shall determine whether multiple processes emitting air contaminants from a single point of emission will be treated as a single source or as multiple sources.

(97) Special waste from health care-related facilities--A solid waste that if improperly treated or handled, may serve to transmit infectious disease(s) and that is comprised of the following: animal waste, bulk blood and blood products, microbiological waste, pathological waste, and sharps.

(98) Standard conditions--A condition at a temperature of 68 degrees Fahrenheit (20 degrees Centigrade) and a pressure of 14.7 pounds per square inch absolute (101.3 kiloPascals).

(99) Standard metropolitan statistical area--An area consisting of a county or one or more contiguous counties that is officially so designated by the United States Bureau of the Budget.

(100) Submerged fill pipe--A fill pipe that extends from the top of a tank to have a maximum clearance of six inches (15.2 centimeters) from the bottom or, when applied to a tank that is loaded from the side, that has a discharge opening entirely

submerged when the pipe used to withdraw liquid from the tank can no longer withdraw liquid in normal operation.

(101) Sulfur compounds--All inorganic or organic chemicals having an atom or atoms of sulfur in their chemical structure.

(102) Sulfuric acid mist/sulfuric acid--Emissions of sulfuric acid mist and sulfuric acid are considered to be the same air contaminant calculated as H_2SO_4 and must include sulfuric acid liquid mist, sulfur trioxide, and sulfuric acid vapor as measured by Test Method 8 in 40 Code of Federal Regulations Part 60, Appendix A.

(103) Sweet crude oil and gas--Those crude petroleum hydrocarbons that are not "sour" as defined in this section.

(104) Total suspended particulate--Particulate matter as measured by the method described in 40 Code of Federal Regulations Part 50, Appendix B.

(105) Transfer efficiency--The amount of coating solids deposited onto the surface or a part of product divided by the total amount of coating solids delivered to the coating application system.

(106) True vapor pressure--The absolute aggregate partial vapor pressure, measured in pounds per square inch absolute, of all volatile organic compounds at the temperature of storage, handling, or processing.

(107) Unauthorized emissions--Emissions of any air contaminant except carbon dioxide, water, nitrogen, methane, ethane, noble gases, hydrogen, and oxygen that exceed any air emission limitation in a permit, rule, or order of the commission or as authorized by Texas Clean Air Act, §382.0518(g).

(108) Unplanned maintenance, startup, or shutdown activity--For activities with unauthorized emissions that are expected to exceed a reportable quantity or with excess opacity, an unplanned maintenance, startup, or shutdown activity is:

(A) a startup or shutdown that was not part of normal or routine facility operations, is unpredictable as to timing, and is not the type of event normally authorized by permit; or

(B) a maintenance activity that arises from sudden and unforeseeable events beyond the control of the operator that requires the immediate corrective action to minimize or avoid an upset or malfunction.

(109) Upset event--An unplanned and unavoidable breakdown or excursion of a process or operation that results in unauthorized emissions. A maintenance, startup, or shutdown activity that was reported under §101.211 of this title (relating to Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements), but had emissions that exceeded the reported amount by more than a reportable quantity due to an unplanned and unavoidable breakdown or excursion of a process or operation is an upset event.

(110) Utility boiler--A boiler used to produce electric power, steam, or heated or cooled air, or other gases or fluids for sale.

(111) Vapor combustor--A partially enclosed combustion device used to destroy volatile organic compounds by smokeless combustion without extracting energy in the form of process heat or steam. The combustion flame may be partially visible, but at no time does the device operate with an uncontrolled flame. Auxiliary fuel and/or a flame air control damping system that can operate at all times to control the air/fuel mixture to the combustor's flame zone, may be required to ensure smokeless combustion during operation.

(112) Vapor-mounted seal--A primary seal mounted so there is an annular space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the tank wall, the liquid surface, and the floating roof or cover.

(113) Vent--Any duct, stack, chimney, flue, conduit, or other device used to conduct air contaminants into the atmosphere.

(114) Visible emissions--Particulate or gaseous matter that can be detected by the human eye. The radiant energy from an open flame is not considered a visible emission under this definition.

(115) Volatile organic compound--As defined in 40 Code of Federal Regulations §51.100(s), except §51.100(s)(2) - (4), as amended on November 29, 2004 (69 FR 69290).

(116) Volatile organic compound (VOC) water separator--Any tank, box, sump, or other container in which any VOC, floating on or contained in water entering such tank, box, sump, or other container, is physically separated and removed from such water prior to outfall, drainage, or recovery of such water.
