

**TCEQ Chemical Sources
Current Best Available Control Technology (BACT) Requirements**

Wastewater Facilities

Year	Source Type	Pollutant	Minimum Acceptable Control	Control Efficiency or Details
2011	Wastewater Facilities	VOCs organics, inorganics	If site uncontrolled wastewater emissions are less than 5 TPY VOC: Piped/covered conveyance to storage or biological treatment.	See Storage tank requirements
			If site uncontrolled wastewater emissions are greater than 5 TPY VOC: Stripped gases from pretreatment routed to a control device, collection system hard piped/covered conveyance to biological treatment unit vented to a control device, wastewater treatment system must be at least 90 percent efficient.	See specific control device requirements
