

2002 Water Quality Inventory Summary of Water Bodies with Concerns for Use Attainment (October 1, 2002)

This report identifies water bodies with concerns for use attainment (primary concerns). These concerns are identified for indicators such as dissolved oxygen which are directly tied to support of designated uses and criteria adopted in the *Texas Surface Water Quality Standards*.

- *Use Concerns-Limited Data* (Tier 1 Primary Concerns) are identified for indicators where less than 10 samples were available for assessment and some exceedances were identified.
- *Use Concerns* (Tier 2 Primary Concerns) are identified for indicators that support the designated use as determined by an adequate number of samples (10-sample minimum), but a few reported exceedances (for example, 3 of 20 samples) indicated a potential water quality problem.
- *Threatened* water bodies either show a significant decline in water quality or have recently shown toxic contaminants at levels of some concern for drinking water use.

For more information about concerns for use attainment and how they are identified, please see the document *Guidance for Assessing Texas Surface and Finished Drinking Water Quality Data* on the TNRCC Web site at http://www.tnrcc.state.tx.us/water/quality/02_twqmar/index.html.
