I am in favor of initiatives that will use fuel more efficiently and thus clean up the pollution in our air that exacerbates global warming.

I also suggest educating drivers to change their driving habits.

During rush hour, the freeways and toll roads may be the slowest way to go anywhere because of rush hour congestion.

Drivers will find, as I have found, that during peak hours the service roads and regular streets are faster than congested freeways.

Driving service roads and regular streets means that fuel is used more efficiently and that there will be less pollution from idling.

Thank you.
