What is TERP Usage Reporting?

TERP Automated Asset Usage Reporting is a service provided by Precision Tracking Solutions, through a partnership with the Texas Commission on Environmental Quality. PTS monitors the usage of TERP-funded assets, and submits the required semi-annual reports, in accordance with TERP program guidelines.

How can it help my team?

- Automatically records and verifies semi-annual usage report data for grant activities.
- Records mileage or engine hours, depending on the asset type. Hardware configurations are available for all types of on- and off-road applications.
- PTS submits the verified reports to the TCEQ, on your behalf.
- **Provides your team access to a full suite of Asset Monitoring tools; including real-time and historic GPS tracking, customizable reporting, maintenance reminders, activity alerts, and more!**

What does it cost? Will my grant pay for it?

TERP will include the standard cost of hardware and installation in the eligible grant amount, if reporting is selected during the grant process.

Hardware & Installation	\$557.33*
Subscription Fee	\$29.58/mo
Average Total Cost (5 years)	\$1.12/day

[Dash Cam & Mobile DVR System Upgrades available!](#)
Up to 5 cameras, automatic event recording, and more!

Subscription fees are *billed annually*. Some applications may require additional hardware, integration, and/or installation costs.

*Included in grant amount. All prices are 'per asset'. Includes standard hardware and installation for most applications.
