I. Significant Revision *(Complete this section if you are submitting a significant revision application or a renewal application that includes a significant revision.)*

A.	Is the site subject to bilingual requirements pursuant to 30 TAC § 122.322?	☒YES ☐ NO
B.	Indicate the alternate language(s) in which public notice is required: Spanish	
C.	Will there be a change in air pollutant emissions as a result of the significant revision	☒ YES ☐ NO

D. Indicate the air pollutant(s) that will be changing and include a brief description of the change in pollutant emissions for each pollutant:

Pollutant	Description of the Change in Pollutant Emissions
NOx	+110.15 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
PM/PM10/PM2.5	+7.58 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
SO2	+2.82 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
CO	+73.23 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
VOC	+6.45 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Lead	+3.44E-4 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Total HAP	+0.10 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.

Brake Repair Downdraft Table	70022	106.261 & 106.262	08/04/2005
MO007	98846	106.261 & 106.262	11/04/2011
Aerosol Can Crusher	147753	106.261 & 106.262	08/11/2017

Commented [JT1]: BR001 will this suffice for a Unit ID?

Commented [JT2]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for each of them, we can call them CC001 and CC002."

Aerosol Can Crusher	106.261 & 106.262	08/11/2017

Commented [JT3]: BR001 will this suffice for a Unit ID?

Commented [JT4]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for each of them, we can call them CC001 and CC002."

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
1/10/2025	O1659	RN101612083

Unit ID No.	PBR No.	Version No./Date Or Registration No.	Monitoring Requirement
CT001	106.371	54052	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

EC002	106.495	52124	Maintain a copy of Section 106.4 and Section 106.495, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.495, the following conditions are met: (1) Before construction begins, the facility shall be registered with the commission's Office of Permitting, Remediation, and Registration in Austin using Form PI-7. (2) The combustible material shall not exceed 10% by weight of the total load to the oven, furnace, and/or incinerator. (3) The combustible material shall contain no halogenated organic compounds. (4) The oven, furnace, and/or incinerator shall be equipped with an afterburner automatically controlled to operate with a minimum temperature of 1,400 degrees Fahrenheit and a gas retention time of 0.5 second or greater. (5) Opacity of emissions from the oven, furnace, and/or incinerator shall not exceed 5.0% averaged over a five-minute period. (6) The manufacturer's recommended operating instructions shall be posted at each oven, furnace, and/or incinerator, and each unit shall be operated in accordance with these instructions. (7) Heat shall be provided by the combustion of sweet natural gas, liquid petroleum gas, or Number 2 fuel oil with no more than 0.5% sulfur by weight, or by electric power. (8) The emission of any air contaminant shall not exceed 0.5 pounds per Hour and 2.0 tons per year. Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6

IC001-14	106.511	54052	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp: EF for 1,3-Butadiene = 3.16E-4 EF for Acrolein = 7.48E-4 EF for Toluene = 3.31E-3 EF for Anthracene = 1.51E-5 EF for Pyrene = 3.87E-5 EF for Xylene = 2.31E-3 EF for Benzo[GHI]Perylene = 3.96E-6 EF for Indeno[1,2,3-CD]Pyrene = 3.03E-6 EF for Benzo[B]Fluoranthene = 8.02E-7 EF for Fluoranthene = 6.16E-5 EF for Benzo[K]Fluoranthene = 1.25E-6 EF for Ancenaphthylene = 4.09E-5 EF for Chrysene = 2.86E-6 EF for Formaldehyde = 9.55E-3 EF for Benzo[A]Pyrene = 1.52E-6 EF for Dibenz[A,H]Anthracene = 4.72E-6 EF for Benz[A]Anthracene = 1.36E-5 EF for Carbon Monoxide = 7.685 EF for Benzene = 7.55E-3 EF for Acetaldehyde = 6.2E-3 EF for Acenaphthene = 1.15E-5 EF for Phenanthrene = 2.38E-4 EF for Fluorene = 2.36E-4 EF for Naphthalene = 6.86E-4 EF for NOx = 35.7 EF for PM10 = 2.51 EF for PM2.5 = 2.51 EF for SOx = 1.26E-2 EF for VOCs = 2.79

MO004	106.262, 106.533	41479	Maintain a copy of Section 106.4, 106.533, and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Soil Bioremediation Operations are monitored for VOC emissions using the following equation in compliance with monitoring requirements in 30 TAC 106.533: VOLUME*SOIL DENSITY*TPH*VTPH*BTEX*TBTEX*(VBTEX/24)*744 Where Volume is measured by site operators who maintain a spreadsheet that is updated after each turn-in of soil, which is converted to cubic yards. The data is reported monthly to the Air Team for consumption data entry to be used in the above equation. Soil data is based on historic sampling: Soil Density is 1.037 TPH is 0.025% VTPH is 0.5% BTEX is 0.1% TBTEX is 0.35% VBTEX is 1.0%

MO006	106.262	76961	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Tanker truck purge operations are monitored for VOC emissions using the following equation: NUMBER OF TRUCKS*VOC CONTENT Where The number of trucks is recorded by DPW ENV. This team runs the facility and enters each tank type that goes through the purge facility into the consumption tracking database by type, date, and quantity. Conservative assumptions are made estimating the remaining fuel left to be cleaned. The VOC content is taken from F-24 MSDS
SC011	106.433	70014	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information

SC021	106.433	13851	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE)*(1-TRANS EFF/100)*(1-FO/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information

ST003A	106.412	24583	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%
SU001	106.454	50528	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

SU003	106.261	52124	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

EC002	106.183	09/04/2000	Maintain a copy of Section 106.4 and Section 106.183, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6 EF for Ancenaphthylene = 1.8E-6 EF for Chrysene = 1.8E-6 EF for Formaldehyde = 0.075 EF for Benzo[A]Pyrene = 1.6E-6 EF for Dibenz[A,H]Anthracene = 1.6E-6 EF for 3-Methylcholanthrene = 1.8E-6 EF for Benz[A]Anthracene = 1.8E-6 EF for Benz[A]Anthracene, 7, 12-Dimethyl = 1.6E-5 EF for Carbon Monoxide = 84 EF for Benzene = 5.8E-3 EF for Lead = 5.0E-4 EF for Manganese = 3.8E-4 EF for Mercury = 2.6E-4 EF for Nickel = 2.1E-3 EF for Arsenic = 2.0E-4

IC004-8	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

SC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-4/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6
WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

Brake Repair Downdraft Table	106.261 & 106.262	08/04/2005	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track number of brake pads.
MO007	106.261 & 106.262	11/04/2011	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
Aerosol Can Crusher	106.261 & 106.262	08/11/2017	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS

Commented [JT5]: TCEQ stated this is not a valid unit ID. Does this have a unit ID?

Commented [JT6R5]: BR001 will this suffice for a Unit ID?

Commented [JT7]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for each of them, we can call them CC001 and CC002."

Good Afternoon,

My management has approved your request to extend the due date. The new due date is now **01/17/2025.**

Please let me know if you have any questions.

Sincerely,

John Walker

Subject: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Cavazos

Hello Mr. Walker,

Ft. Cavazos and Olsson are diligently addressing the comments on each Title V application form and responding to the questions from your previous email. We are also making any necessary updates to the information in the forms. However, some of the required information will take longer to gather. Therefore, on behalf of Ft. Cavazos, Olsson respectfully requests an extension to the due date.

Please let me know if you have any questions.

Thank you,

Jim L. Timmons

Good Afternoon,

I have conducted a technical review of this application and I have attached an electronic copy of the Working Draft Permit (WDP) for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application and any updates provided.

Please note that not all information in this working draft permit is accurate as we are still waiting for the following information to be updated. I have not added PBR Registration PBR 54052 as a preconstruction authorization (PCA) for any unit. Also, Unit IDs FS011A, FS011B, FS011C, ST001A, ST001B, and ST001C from the most recent OP-UA3 update for MACT ZZZZ have not been added either. I require additional information for 2 of the units and internal logic to be built for the 4 other units (in progress). I have requested the additional information required for the units below. However, I believe the rest of the permit is as accurate as can be based on what has been provided so far. Please note I made these additional changes to the WDP:

1. All permit shields that had symbols such as “<” or “>” in their negative applicability text have been updated to replace the symbols with “less than” or “greater than” per guidance from TCEQ Management.

2. I removed reference to MACT GG in Permit Term 1.E. since the site is not subject to MACT GG due to not being major for HAPs and having no units subject to MACT GG.

I have also attached the most recent copies of the forms I believe still need to be resolved for reference. I have items listed below in regard to them.

Please review the WDP and submit to me any comments you have regarding it by <u>12/20/2024</u>. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP. Note that any application updates necessary to make requested changes must accompany the WDP comments.

Please provide the requested information below by **<u>12/20/2024</u>**:

1. Please provide Form OP-UA3 Table 3 for NSPS Kb applicability for Unit IDs ST001A and ST001B. The code “NONE3” was provided for WW TANK Control. “NONE3” is not a valid code but “NONE” is. Was the code “NONE” the intended code? Please confirm.

If the code is intended to be “NONE”, additional codes are required per the Form OP-UA3 Table 3 instructions. A code is required for Maximum TVP and additional codes may be required for Storage vessel description and AMEL ID. No. per the Form OP-UA Form Instructions. I have attached the most recently provided OP-UA3 for reference.

3. Please review my comments on the WDP. I believe Form OP-REQ1 Page 88 for PBRs should be provided to correct the Version No./Date of a PBR. This update should also occur on Form OP-SUMR and OP-2.

4. Please review my comments on the most recent Form OP-SUMR provided (04/15/2024). There were many inconsistencies provided on the Form. Please review my comments and make any necessary corrections. If any additional changes are needed, please provide the appropriate forms. I would ensure that the most recent OP-2 and OP-SUMR are consistent. It seems that changes that occurred throughout the life of the project were not reflected on Form OP-SUMR and outdated information was provided. Please review my comments and confirm. If you have any questions about my comments, please contact me.

5. Please provide an updated Form OP-1 Section VII. for updating the Technical Contact Identifying Information. Based on prior discussions with Mr. Michael Clark, Mr. Clark has replaced Mr. Robert Kennedy as the technical contact.

6. If there are any changes required to Form OP-PBRSUP based on changes made to Form OP-SUMR or any other form, please provide them. I believe we are still waiting on the Form OP-PBRSUP that was requested in my 03/18/2024 email.

   Please ensure that Form OP-PBRSUP is filled out correctly. Any units within the Title V permit that have a PBR as a PCA should be identified on Form OP-PBRSUP. However, there may be many units provided on Form OP-PBRSUP that are not documented in the Title V permit because they have no Title V requirements. Form OP-PBRSUP is a supplemental form for all PBRs used. That said, if there are units on Form OP-PBRSUP that are not documented in the Title V permit because they don’t have Title V requirements, that is perfectly normal. In fact, those units should not be documented on any Title V forms (Forms OP-2, OP-SUMR, etc.), however, if you want them documented on Form OP-2 that is fine. One revision line item stating you are adding units to Form OP-PBRSUP is acceptable.

7. Please provide a status update for the ongoing resolution of issues identified with PBR Registration No. 54052.

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process, application updates, WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified submittals, including application updates supporting the WDP comments is required to be submitted with the WDP response.

After final review of the WDP, additional changes, supported by application updates, may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that were not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1. This form will be requested at a later date.

If you choose to submit your application updates through STEERS, please notify me when these updates have been submitted.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

John Walker

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
11/18/2022	O1659	RN101612083

Unit ID No.	PBR No.	Version No./Date Or Registration No.	Monitoring Requirement
CT001	106.371	54052	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

EC002	106.495	52124	Maintain a copy of Section 106.4 and Section 106.495, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.495, the following conditions are met: (1) Before construction begins, the facility shall be registered with the commission's Office of Permitting, Remediation, and Registration in Austin using Form PI-7. (2) The combustible material shall not exceed 10% by weight of the total load to the oven, furnace, and/or incinerator. (3) The combustible material shall contain no halogenated organic compounds. (4) The oven, furnace, and/or incinerator shall be equipped with an afterburner automatically controlled to operate with a minimum temperature of 1,400 degrees Fahrenheit and a gas retention time of 0.5 second or greater. (5) Opacity of emissions from the oven, furnace, and/or incinerator shall not exceed 5.0% averaged over a five-minute period. (6) The manufacturer's recommended operating instructions shall be posted at each oven, furnace, and/or incinerator, and each unit shall be operated in accordance with these instructions. (7) Heat shall be provided by the combustion of sweet natural gas, liquid petroleum gas, or Number 2 fuel oil with no more than 0.5% sulfur by weight, or by electric power. (8) The emission of any air contaminant shall not exceed 0.5 pounds per Hour and 2.0 tons per year. Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6

IC001-14	106.511	54052	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp: EF for 1,3-Butadiene = 3.16E-4 EF for Acrolein = 7.48E-4 EF for Toluene = 3.31E-3 EF for Anthracene = 1.51E-5 EF for Pyrene = 3.87E-5 EF for Xylene = 2.31E-3 EF for Benzo[GHI]Perylene = 3.96E-6 EF for Indeno[1,2,3-CD]Pyrene = 3.03E-6 EF for Benzo[B]Fluoranthene = 8.02E-7 EF for Fluoranthene = 6.16E-5 EF for Benzo[K]Fluoranthene = 1.25E-6 EF for Ancenaphthylene = 4.09E-5 EF for Chrysene = 2.86E-6 EF for Formaldehyde = 9.55E-3 EF for Benzo[A]Pyrene = 1.52E-6 EF for Dibenz[A,H]Anthracene = 4.72E-6 EF for Benz[A]Anthracene = 1.36E-5 EF for Carbon Monoxide = 7.685 EF for Benzene = 7.55E-3 EF for Acetaldehyde = 6.2E-3 EF for Acenaphthene = 1.15E-5 EF for Phenanthrene = 2.38E-4 EF for Fluorene = 2.36E-4 EF for Naphthalene = 6.86E-4 EF for NOx = 35.7 EF for PM10 = 2.51 EF for PM2.5 = 2.51 EF for SOx = 1.26E-2 EF for VOCs = 2.79

MO004	106.262, 106.533	41479	Maintain a copy of Section 106.4, 106.533, and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Soil Bioremediation Operations are monitored for VOC emissions using the following equation in compliance with monitoring requirements in 30 TAC 106.533: VOLUME*SOIL DENSITY*TPH*VTPH*BTEX*TBTEX*(VBTEX/24)*744 Where Volume is measured by site operators who maintain a spreadsheet that is updated after each turn-in of soil, which is converted to cubic yards. The data is reported monthly to the Air Team for consumption data entry to be used in the above equation. Soil data is based on historic sampling: Soil Density is 1.037 TPH is 0.025% VTPH is 0.5% BTEX is 0.1% TBTEX is 0.35% VBTEX is 1.0%

MO006	106.262	76961	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Tanker truck purge operations are monitored for VOC emissions using the following equation: NUMBER OF TRUCKS*VOC CONTENT Where The number of trucks is recorded by DPW ENV. This team runs the facility and enters each tank type that goes through the purge facility into the consumption tracking database by type, date, and quantity. Conservative assumptions are made estimating the remaining fuel left to be cleaned. The VOC content is taken from F-24 MSDS
SC011	106.433	70014	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information

SC021	106.433	13851	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE)*(1-TRANS EFF/100)*(1-FO/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information

ST003A	106.412	24583	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%
SU001	106.454	50528	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

SU003	106.261	52124	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

EC002	106.183	09/04/2000	Maintain a copy of Section 106.4 and Section 106.183, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6 EF for Ancenaphthylene = 1.8E-6 EF for Chrysene = 1.8E-6 EF for Formaldehyde = 0.075 EF for Benzo[A]Pyrene = 1.6E-6 EF for Dibenz[A,H]Anthracene = 1.6E-6 EF for 3-Methylcholanthrene = 1.8E-6 EF for Benz[A]Anthracene = 1.8E-6 EF for Benz[A]Anthracene, 7, 12-Dimethyl = 1.6E-5 EF for Carbon Monoxide = 84 EF for Benzene = 5.8E-3 EF for Lead = 5.0E-4 EF for Manganese = 3.8E-4 EF for Mercury = 2.6E-4 EF for Nickel = 2.1E-3 EF for Arsenic = 2.0E-4

IC004-8	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

SC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-4/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6
WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

Commented [JW2]: For Unit IDs SC004, SC005, SC006, and SC007 (revision items 121, 123, 125, and 127), PBR Registration No. 24538 was provided however there is no PBR Registration No. 24538. There is a NSR permit 24538. I have left the preconstruction authorization as NSR 24538.

Should PBR 106.433 also be documented as a preconstruction authorization for these units? Please look at the OP-SUM excel sheet because the other SC* units also have NSR 24538 documented as a PCA, though some have PBR 106.433.

Commented [JW3]: There is no revision 137 on the April 15, 2024 OP-2. I believe this was changed at another date. I am unsure of where this unit came from.

Texas Commission on Environmental Quality
Federal Operating Permit Program
Application for Permit Revision/Renewal
Form OP-2-Table 1

Date:	1/19/2022
Permit No.:	O1659
Regulated Entity No.:	RN101612083
Company Name:	US Department of the Army

For Submissions to EPA

Has a copy of this application been submitted (or is being submitted) to EPA?	☒ YES ❑ NO

I. Application Type

Indicate the type of application:

☒Renewal ❑ Streamlined Revision (Must include provisional terms and conditions as explained in the instructions.)

❑ Significant Revision ❑ Revision Requesting Prior Approval ❑ Administrative Revision ❑ Response to Reopening

II. Qualification Statement

For SOP Revisions Only The referenced changes qualify for the marked revision type.	☒ YES ❑ NO
For GOP Revisions Only The permitted area continues to qualify for a GOP.	☐ YES ❑ NO

III. Major Source Pollutants (Complete this section if the permit revision is due to a change at the site or change in regulations.)

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	VOC	NO_X	SO_2	PM_{10}	CO	Pb	HAPs	Other
Major at the site *(YES/NO)*:	YES	YES	NO	NO	YES	NO	NO	

IV. Reference Only Requirements *(For reference only)*

Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ❑ NO ❑ N/A

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.

I. Description of Revision

Revision No.	Revision Code	Unit/Group Process			NSR Authorization	Description of change and Provisional Terms and Conditions
		New Unit	ID No.	Applicable Form		
1	SIG-E	Yes	BLR36071-1	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
2	SIG-E	Yes	BLR36071-2	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
3	SIG-E	Yes	BLR36071-3	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
4	SIG-E	Yes	BLR36071-4	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
5	SIG-E	Yes	BOILER10	OP-UA6	106.183/06/18/1997	Source removed from site
6	SIG-E	No	BOILER12	OP-REQ2	106.183/09/04/2000	Removes units from the permit. These boilers do not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
7	SIG-E	No	BOILER13	OP-REQ2	106.183/09/04/2000	
8	SIG-E	No	BOILER14	OP-REQ2	106.183/09/04/2000	
9	SIG-E	No	BOILER15	OP-REQ2	106.183/09/04/2000	
10	SIG-E	No	BOILER16	OP-REQ2	106.183/09/04/2000	
11	SIG-E	No	BOILER17	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117,

						therefore it is an off-permit source, per OP-UA6 instructions.
12	SIG-E	No	BOILER18	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
13	SIG-E	No	BOILER19	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
14	SIG-E	No	BOILER20	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
15	SIG-E	No	BOILER21	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
16	SIG-E	No	BOILER22	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
17	SIG-E	No	BOILER23	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input

						capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
18	SIG-E	No	BOILER24	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
19	SIG-E	No	BOILER25	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
20	SIG-E	No	BOILER9	OP-UA6	106.183/06/18/1997	Source removed from site.
21	SIG-E	No	EC001	OP-UA6	106.183/06/18/1997	Remove 40 CFR 63, Subpart O from Permit Shield as this rule is addressed on form OP-REQ1
22	SIG-E	No	GRP-ENGINE1	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
23	SIG-E	No	GRP-ENGINE10	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; Adjusting Basis of Determination for NSPS JJJJ Negative Applicability to properly address language of rule
24	SIG-E	No	GRP-ENGINE11	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; GRPENGINE11 will only have one Unit ID associated with it after other units are removed in this

						revision. This negative applicability being added for NSPS IIII for GRP-ENGINE11 can instead be added to IC001-21, and the grouping GRPENGINE11 does not need to exist anymore.
25	SIG-E	No	GRP-ENGINE12	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
26	SIG-E	No	GRP-ENGINE13	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
27	SIG-E	No	GRP-ENGINE14	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ; GRP-ENGINE14 will only have one Unit ID associated with it after other units are removed in this revision. This negative applicability being added for NSPS JJJJ for GRP-ENGINE14 can instead be added to IC001-51, and the grouping GRP-ENGINE14 does not need to exist anymore.
28	SIG-E	No	GRP-ENGINE16	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; Adjusting Basis of Determination for NSPS JJJJ Negative Applicability to properly address language of rule
29	SIG-E	No	GRP-ENGINE17	OP-REQ2	106.511/03/14/1997 106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
30	SIG-E	No	GRP-ENGINE18	OP-REQ2	106.511/03/14/1997 106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ

Application for Permit Revision/Renewal
Form OP-2-Table 3

Date:	1/19/2022
Permit No.:	**O1659**
Regulated Entity No.:	**RN101612083**
Company Name:	**US Department of the Army**

I. Significant Revision *(Complete this section if you are submitting a significant revision application or a renewal application that includes a significant revision.)*

A.	Is the site subject to bilingual requirements pursuant to 30 TAC § 122.322?		☒YES ☐ NO
B.	Indicate the alternate language(s) in which public notice is required:	Spanish	
C.	Will there be a change in air pollutant emissions as a result of the significant revision		☒ YES ☐ NO

D. Indicate the air pollutant(s) that will be changing and include a brief description of the change in pollutant emissions for each pollutant:

Pollutant	Description of the Change in Pollutant Emissions
NOx	+110.15 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
PM/PM10/PM2.5	+7.58 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
SO2	+2.82 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
CO	+73.23 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
VOC	+6.45 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Lead	+3.44E-4 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Total HAP	+0.10 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.

Follow Up Flag: Follow up
Flag Status: Completed

Good afternoon Mr. Walker,

1. Please see attached the corrected Form OP-UA3. Please note that tanks ST001A and ST001B were incorrectly categorized in the “WW Tank Control” column as “IFR” and have been corrected to “NONE3”. As no other columns are required for these two tanks per the OP-UA3 instructions, the “Storage Vessel Description” column has been cleared. The other four tanks (FS011A/B/C and ST001C) have been updated to include “IFR-VP” in the “Storage Vessel Description” section and do not require additional information per the Form OP-UA3 Instructions.
2. American Water (current permit holder for 54052) is still working with TCEQ on some administrative tasks related to their contractor status under the newly-named Fort Cavazos. Please feel free to contact Mr. Michael Clark with Fort Cavazos at michael.n.clark.civ@army.mil (also on this email) with further questions on this matter.

Thank you,

-Will C

Subject: RE: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Cavazos

Good Afternoon,

I have reviewed the most recent updates provided for FOP O1659/Project 33269 U.S. Department of the Army/Fort Cavazos. Please provide the requested information as soon as possible but no later than **07/12/2024:**

1. Please provide Form OP-UA3 Table 3, For Unit IDs FS011A, FS011B, FS011C, ST001A, ST001B, and ST001C. Additional codes are required for "storage vessel description" and possibly other codes may be required per the form instructions.

2. Please provide a status update for the ongoing resolution of issues identified with PBR Registration No. 54052.

Please let me know if you have any questions.

Sincerely,

John Walker

Follow Up Flag: Follow up
Flag Status: Completed

Good morning Mr. Walker,

Please see attached the updated Forms OP-UA2, OP-2, and OP-SUMR that incorporate the most current emergency engine inventory for Fort Cavazos.

Thank you!

-Will C

Date:	1/19/2022
Permit No.:	O1659
Regulated Entity No.:	RN101612083
Company Name:	US Department of the Army

For Submissions to EPA

Has a copy of this application been submitted (or is being submitted) to EPA?	☒ YES ❑ NO

I. Application Type

Indicate the type of application:

☒Renewal ❑ Streamlined Revision (Must include provisional terms and conditions as explained in the instructions.)

❑ Significant Revision ❑ Revision Requesting Prior Approval ❑ Administrative Revision ❑ Response to Reopening

II. Qualification Statement

For SOP Revisions Only The referenced changes qualify for the marked revision type.	☒ YES ❑ NO
For GOP Revisions Only The permitted area continues to qualify for a GOP.	☐ YES ❑ NO

III. Major Source Pollutants (Complete this section if the permit revision is due to a change at the site or change in regulations.)

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	VOC	NO_X	SO_2	PM_{10}	CO	Pb	HAPs	Other
Major at the site *(YES/NO)*:	YES	YES	NO	NO	YES	NO	NO	

IV. Reference Only Requirements *(For reference only)*

Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ❑ NO ❑ N/A

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.

Texas Commission on Environmental Quality
Federal Operating Permit Program
Application for Permit Revision/Renewal
Form OP-2-Table 3

Date:	1/19/2022
Permit No.:	**O1659**
Regulated Entity No.:	**RN101612083**
Company Name:	**US Department of the Army**

I. Significant Revision *(Complete this section if you are submitting a significant revision application or a renewal application that includes a significant revision.)*

A.	Is the site subject to bilingual requirements pursuant to 30 TAC § 122.322?		☒YES ☐ NO
B.	Indicate the alternate language(s) in which public notice is required:	Spanish	
C.	Will there be a change in air pollutant emissions as a result of the significant revision		☒ YES ☐ NO

D. Indicate the air pollutant(s) that will be changing and include a brief description of the change in pollutant emissions for each pollutant:

Pollutant	Description of the Change in Pollutant Emissions
NOx	+110.15 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
PM/PM10/PM2.5	+7.58 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
SO2	+2.82 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
CO	+73.23 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
VOC	+6.45 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Lead	+3.44E-4 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Total HAP	+0.10 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.

Subject: RE: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good Afternoon,

Yes, we can accept the request in item No. 3.a. We can also accept the request in the last paragraph about some changes to the emergency engine inventory. The deadline of April 15, 2024 is acceptable. We will not be able to extend this deadline. Also, we will not be able to accept any more updates.

Please let me know if you have any questions.

Sincerely,

John Walker

Follow Up Flag: Follow up
Flag Status: Completed

Good morning Mr. Walker,

Please see Fort Cavazos's responses in red below, as well as within the attached:

1. On Form OP-UA3 Table 3, units identified in GRPTANK9 (Unit IDs FS011A-C and ST001A-C) for NSPS Kb applicability have been listed multiple times and with different unit attributes.
    a. I have highlighted the duplicates in yellow for Unit IDs ST001A-C in the attached Form OP-UA03 in Table 3. Please confirm if some of these entries should be removed or if they represent alternate operating scenarios and should be identified under a different SOP Index No. The duplicates should be removed; please see the attached Form OP-UA03 with the deletion included as a tracked change.
    b. Additionally, since some of the units have different unit attributes than others, they cannot be grouped together in GRPTANK9. All units within a group must have the same unit attributes. Units without those attributes should be listed individually (or in another group with units that have matching attributes). Please confirm how these units should be documented and provide these updates on Forms OP-2, Form OP-SUMR (Tables 1 and 2), and Form OP-UA3. These units will be removed from GRPTANK9 and listed individually. Please see the attached updated Forms OP-2 and OP-SUMR along with OP-UA3 that document these 6 units' removal from GRPTANK9 as revision number 157. Edits are marked as tracked changes for faster reference.
2. In regard to the updated Form OP-REQ1 Page 88 submitted:
    a. PBR 106.472/03/14/1997 is documented in the WDP but not on OP-REQ1, Page 88 and is the Preconstruction Authorization (PCA) for several units within the WDP. Was it your intent to remove this PBR from OP-REQ1 Page 88 and the WDP? No, this PBR should still be included. See the updated form OP-REQ1, page 88 with the PBR re-added.
    b. Based on your 03/24/2023 response, there should be no permit listed in OP-REQ1 Section XII. J. (Permit No. 88412 issued on 07/17/2019). NSR Standard Permit 88412 was provided in OP-REQ1 Section XII. J., but is not a Municipal Solid Waste and Industrial Hazardous Waste Permit with an Air Addendum. I have documented NSR Standard Permit 88412 as an NSR Standard Permit in our database and the WDP. In your 03/24/2023 response, you agreed with this change but have provided NSR Standard Permit 88412 on OP-REQ1 Section XII. J in the most recent update. Please remove Permit No. 88412 from OP-REQ1 Page 88 Section XII. J. and add it to Form OP-REQ1 Page 87, Section

XII. H. Please see the attached updated Form OP-REQ1 with this correction included.

3. Please provide an update on the status of the resolution of PBR Registration No. 54052 and providing all necessary updates in regard to PBR changes on Forms OP-2, OP-SUMR, and OP-PBRSUP. Fort Cavazos has communicated to American Water (the current owner of PBR 54052) that this resolution is becoming time-sensitive. American Water is in active communication with TCEQ to initiate the final facility name changes in the Central Registry that are necessary before editing PBR 54052.
    a. Additionally, Fort Cavazos needs to permit some spray booths that are planned for the facility. Fort Cavazos would like to pursue the PBRs for the spray booths now and include them in the updated Forms OP-2, OP-SUMR, OP-REQ1, and OP-PBRSUP as necessary along with the finalized PBR 54052. This way, the PBRs can be included in the permit renewal. Please respond with whether this inclusion during this permit renewal action is feasible and acceptable for your team.
4. Please provide a copy of the Core Data Form that was submitted to the Central Registry so that I may give it to APIRT. This way APIRT can make the name change from Fort Hood to Fort Cavazos in our database. See attached.

Please also note that the Unit/Process Name/Description has been updated for some units within Form OP-SUMR. Per Fort Cavazos, where this column referred to “HAHP” should be updated to “YDAHP”. This change applies to Unit/Process ID Numbers IC003-26, IC003-7, IC003-8, FS011A, FS011B, FS011C, FS011, and IC003-26. Additionally, where the Unit/Process Name/Description refers to “FSBN” should be updated to “AFSBN”. This change applies to Unit/Process ID Numbers ST001A, ST001B, ST001C, ST002A, and ST003A. These administrative changes have been documented in Forms OP-SUMR and OP-2 as Revision Number 158. Form OP-SUMR also includes tracked changes and comments documenting this change for ease of reference.

As a final item, Fort Cavazos has undergone some changes to its emergency engine inventory throughout the renewal process. Fort Cavazos and Olsson are proposing to provide TCEQ with updated Unit Attribute and revision summary forms such that this permit renewal action will be as updated as possible for these units. Fort Cavazos and Olsson propose providing TCEQ with the updated engine forms by April 15th, 2024. Please respond with whether including this updated unit information in this permit renewal action is feasible and acceptable for your team.

Thank you,

-Will C

TCEQ Core Data Form

For detailed instructions on completing this form, please read the Core Data Form Instructions or call 512-239-5175.

SECTION I: General Information

1. Reason for Submission *(If other is checked please describe in space provided.)*

☐ New Permit, Registration or Authorization *(Core Data Form should be submitted with the program application.)*

☐ Renewal *(Core Data Form should be submitted with the renewal form)*

☒ Other **Military Installation Name Change**

2. Customer Reference Number *(if issued)*	Follow this link to search for CN or RN numbers in Central Registry**	3. Regulated Entity Reference Number *(if issued)*
CN 600126262		RN 101612083

SECTION II: Customer Information

4. General Customer Information | **5. Effective Date for Customer Information Updates** (mm/dd/yyyy) 05/09/2023

☐ New Customer ☒ Update to Customer Information ☐ Change in Regulated Entity Ownership

☐ Change in Legal Name (Verifiable with the Texas Secretary of State or Texas Comptroller of Public Accounts)

The Customer Name submitted here may be updated automatically based on what is current and active with the Texas Secretary of State (SOS) or Texas Comptroller of Public Accounts (CPA).

6. Customer Legal Name *(If an individual, print last name first: eg: Doe, John)* *If new Customer, enter previous Customer below:*

U. S. Department of the Army

7. TX SOS/CPA Filing Number	8. TX State Tax ID (11 digits)	9. Federal Tax ID (9 digits)	10. DUNS Number *(if applicable)*

11. Type of Customer: ☐ Corporation ☐ Individual Partnership: ☐ General ☐ Limited

Government: ☐ City ☐ County ☒ Federal ☐ Local ☐ State ☐ Other ☐ Sole Proprietorship ☐ Other:

12. Number of Employees

☐ 0-20 ☐ 21-100 ☐ 101-250 ☐ 251-500 ☒ 501 and higher

13. Independently Owned and Operated?

☐ **Yes** ☒ **No**

14. Customer Role (Proposed or Actual) – *as it relates to the Regulated Entity listed on this form. Please check one of the following*

☐ Owner ☐ Operator ☒ Owner & Operator ☐ Other:
☐ Occupational Licensee ☐ Responsible Party ☐ VCP/BSA Applicant

15. Mailing Address:

Department of the Army, Fort Cavazos
Directorate of Public Works, Environmental Division (AMIM-CAP-E), 4612 Engineer Dr.

City	Fort Cavazos	State	TX	ZIP	76544	ZIP + 4	5002

16. Country Mailing Information *(if outside USA)*	17. E-Mail Address *(if applicable)*
	brian.l.dosa.civ@army.mil

18. Telephone Number	19. Extension or Code	20. Fax Number *(if applicable)*

(254) 287-5707		( ) -

SECTION III: Regulated Entity Information

21. General Regulated Entity Information *(If 'New Regulated Entity" is selected, a new permit application is also required.)*

☐ New Regulated Entity ☐ Update to Regulated Entity Name ☒ Update to Regulated Entity Information

The Regulated Entity Name submitted may be updated, in order to meet TCEQ Core Data Standards (removal of organizational endings such as Inc, LP, or LLC).

22. Regulated Entity Name *(Enter name of the site where the regulated action is taking place.)*

Department of the Army, Fort Cavazos

23. Street Address of the Regulated Entity: ***(No PO Boxes)***	Directorate of Public Works, Environmental Division (AMIM-CAP-E)							
	4612 Engineer Dr.							
	City	Fort Cavazos	**State**	TX	**ZIP**	76544	**ZIP + 4**	5002
24. County	Bell/Coryell							

If no Street Address is provided, fields 25-28 are required.

25. Description to Physical Location:					
26. Nearest City			**State**		**Nearest ZIP Code**

Latitude/Longitude are required and may be added/updated to meet TCEQ Core Data Standards. (Geocoding of the Physical Address may be used to supply coordinates where none have been provided or to gain accuracy).

27. Latitude (N) In Decimal:			**28. Longitude (W) In Decimal:**		
Degrees	Minutes	Seconds	Degrees	Minutes	Seconds
31.1950 N			97.7413 W		

29. Primary SIC Code (4 digits)	**30. Secondary SIC Code** (4 digits)	**31. Primary NAICS Code** (5 or 6 digits)	**32. Secondary NAICS Code** (5 or 6 digits)
9711		928110	

33. What is the Primary Business of this entity? *(Do not repeat the SIC or NAICS description.)*

U. S. Army Active Duty Military Post

34. Mailing Address:	**Department of the Army, Fort Cavazos, Directorate of Public Works, Environmental Division (AMIM-CAP-E)**

Texas Commission on Environmental Quality
Federal Operating Permit Program
Application for Permit Revision/Renewal
Form OP-2-Table 1

Date:	1/19/2022
Permit No.:	O1659
Regulated Entity No.:	RN101612083
Company Name:	US Department of the Army

For Submissions to EPA

Has a copy of this application been submitted (or is being submitted) to EPA?	☒ YES ❑ NO

I. Application Type

Indicate the type of application:

☒Renewal ❑ Streamlined Revision (Must include provisional terms and conditions as explained in the instructions.)

❑ Significant Revision ❑ Revision Requesting Prior Approval ❑ Administrative Revision ❑ Response to Reopening

II. Qualification Statement

For SOP Revisions Only The referenced changes qualify for the marked revision type.	☒ YES ❑ NO
For GOP Revisions Only The permitted area continues to qualify for a GOP.	☐ YES ❑ NO

III. Major Source Pollutants (Complete this section if the permit revision is due to a change at the site or change in regulations.)

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	VOC	NO_X	SO_2	PM_{10}	CO	Pb	HAPs	Other
Major at the site *(YES/NO)*:	YES	YES	NO	NO	YES	NO	NO	

IV. Reference Only Requirements *(For reference only)*

Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ❑ NO ❑ N/A

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.

Company Name:	**US Department of the Army**

I. Significant Revision *(Complete this section if you are submitting a significant revision application or a renewal application that includes a significant revision.)*

A.	Is the site subject to bilingual requirements pursuant to 30 TAC § 122.322?		☒YES ☐ NO
B.	Indicate the alternate language(s) in which public notice is required:	Spanish	
C.	Will there be a change in air pollutant emissions as a result of the significant revision		☒ YES ☐ NO

D. Indicate the air pollutant(s) that will be changing and include a brief description of the change in pollutant emissions for each pollutant:

Pollutant	Description of the Change in Pollutant Emissions
NOx	+110.15 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
PM/PM10/PM2.5	+7.58 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
SO2	+2.82 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
CO	+73.23 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
VOC	+6.45 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Lead	+3.44E-4 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Total HAP	+0.10 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.

Subject:	RE: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood
Attachments:	01-03-2024_OP-UA3_ Revised_JWalker comments_20240303.docx

Good Afternoon,

I have reviewed the 01/04/2024 response to the Working Draft Permit (WDP) for FOP O1659/Project 33269 U.S. Department of the Army/Fort Cavazos. Please provide the requested information as soon as possible but no later than **03/19/2024.**

1. On Form OP-UA3 Table 3, units identified in GRPTANK9 (Unit IDs FS011A-C and ST001A-C) for NSPS Kb applicability have been listed multiple times and with different unit attributes.

    a. I have highlighted the duplicates in yellow for Unit IDs ST001A-C in the attached Form OP-UA03 in Table 3. Please confirm if some of these entries should be removed or if they represent alternate operating scenarios an d should be identified under a different SOP Index No.

    b. Additionally, since some of the units have different unit attributes than others, they cannot be grouped together in GRPTANK9. All units within a group must have the same unit attributes. Units without those attributes should be listed individually (or in another group with units that have matching attributes).

    Please confirm how these units should be documented and provide these updates on Forms OP-2, Form OP-SUMR (Tables 1 and 2), and Form OP-UA3.

2. In regard to the updated Form OP-REQ1 Page 88 submitted:

    a. PBR 106.472/03/14/1997 is documented in the WDP but not on OP-REQ1, Page 88 and is the Preconstruction Authorization (PCA) for several units within the WDP. Was it your intent to remove this PBR from OP-REQ1 Page 88 and the WDP?

    b. Based on your 03/24/2023 response, there should be no permit listed in OP-REQ1 Section XII. J. (Permit No. 88412 issued on 07/17/2019).

    NSR Standard Permit 88412 was provided in OP-REQ1 Section XII. J., but is not a Municipal Solid Waste and Industrial Hazardous Waste Permit with an Air Addendum. I have documented NSR Standard Permit 88412 as an NSR Standard Permit in our database and the WDP.

    In your 03/24/2023 response, you agreed with this change but have provided NSR Standard Permit 88412 on OP-REQ1 Section XII. J in the most recent update. Please

remove Permit No. 88412 from OP-REQ1 Page 88 Section XII. J. and add it to Form OP-REQ1 Page 87, Section XII. H.

3. Please provide an update on the status of the resolution of PBR Registration No. 54052 and providing all necessary updates in regard to PBR changes on Forms OP-2, OP-SUMR, and OP-PBRSUP.

4. Please provide a copy of the Core Data Form that was submitted to the Central Registry so that I may give it to APIRT. This way APIRT can make the name change from Fort Hood to Fort Cavazos in our database.

Please let me know if you have any questions.

Sincerely,

John Walker

Follow Up Flag: Follow up
Flag Status: Flagged

Good afternoon Mr. Walker,

Thank you for the draft permit for review to continue moving forward with Fort Cavazos's permit renewal. On behalf of Fort Cavazos, please see additional information below regarding one of the bulleted changes from your email:

- The Permit Face still reflects the Fort Hood name/information and not Fort Cavazos. It is my understanding that we are still waiting for a Core Data Form to be processed for this information to be updated.
    - Fort Cavazos response: The Central Registry has acknowledged and changed the Regulated Entity name to "DEPARTMENT OF THE ARMY FORT CAVAZOS" per Core data form submittal. https://www15.tceq.texas.gov/crpub/index.cfm?fuseaction=regent.showSingleRN&re_id=703357632002066

Please also see the responses attached and below to your four items of requested information:

1. Please see attached an updated Form OP-UA3 that addresses the "Guidepole" column for units in GRPTANK9 (FS011A-C and ST001A-C).
2. See also in the updated Form OP-UA3 confirmation that your assumption for the "WW Tank Control" column for GRPTANK6 is correct – the code should be "NONE."
3. Please see attached an updated Form OP-REQ1, Page 88. Per the comments in the form, the only change is the deletion of New Source Review Authorization 106.142. This PBR has been canceled and is not needed in the Title V permit. All other listed NSR Authorizations are correct as of the most current information available. Upon resolution of units covered by PBR 54052 being moved to new PBRs owned by Fort Cavazos, Forms OP-SUMR, OP-PBRSUP, and OP-2 will be updated as needed per TCEQ's request. Fort Cavazos is currently in active communication with the contractor that has this PBR to resolve the registration discrepancy.
4. Unit ID TANK12 was renamed to ST003A, which is already incorporated into the WDP. References to TANK12 therefore should not be documented in the database or Title V Permit.

Thank you as well for the additional information regarding Form OP-CRO1, the WDP refinement process, and STEERS submittal options. Fort Cavazos will contact you with any questions upon resolution of their PBR registrations to move forward with these final steps.

Sincerely,

-Will C

Subject: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good Afternoon,

I have conducted a technical review of this application and I have attached an electronic copy of the Working Draft Permit (WDP) for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application and any updates provided.

Please note that not all information in this working draft permit is accurate as we are still waiting for information to be updated. I wanted to give this to you so we may start refining the information in the permit while the PBR/RN information is still being worked on with other elements of the TCEQ. Please make comments directly on the WDP as necessary. Please note that this WDP reflects all information currently in our database and I have made the following changes:

- All permit shields requested on Form OP-REQ2 due to the site not being in an applicable county for the identified rule will not be added since the rule is not potentially applicable. I have highlighted other permit shields in red that are from the effective permit that will also be removed under this pretense.

- All units documented for MACT GG applicability have either been removed from the permit completely, or have been moved to OP-REQ2 to retain their permit shields. Since the site is not major for HAPS, the units are not subject to MACT GG . GROUP IDs SU001, SU002, GRPAROHCA, GRPAROHCB, and Unit ID AB001 have been removed from OP-UA57 for MACT GG. All the SC*** units have been removed from OP-UA18 for MACT GG but have been documented on Form OP-REQ2 to retain their permit shields.

  If you would like MACT GG permit shields for these units, please document them on Form OP-REQ2.

- I have not added any PBR Registration information for any units due to anticipated changes.

- For Unit ID IC000-9, I have removed permit shields for MACT ZZZZ due to the unit having applicable requirements for MACT ZZZZ identified in the Applicable Requirements Summary Table.

- The Permit Face still reflects the Fort Hood name/information and not Fort Cavazos. It is my understanding that we are still waiting for a Core Data Form to be processed for this information to be updated.

- There are a few items below that still need to be resolved in order for the units to be reflected accurately in the working draft permit.

Please review the WDP and submit to me any comments you have regarding it by 01/05/2024. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP. Note that any application updates necessary to make requested changes must accompany the WDP comments.

Please provide the requested information below by **01/05/2024**:

1. Please provide Group ID GRPTANK9 SOP Index No. 60Kb-1 on Form OP-UA3 Table 3. An additional code is required for "Guidepole".

2. Please provide Group ID GRPTANK6 SOP Index No. 60KB-1 on Form OP-UA3 Table 3. An additional code is required for "WW Tank Control". I have interpreted the answer as "NONE" and the requirements in the applicable requirements summary table reflect this. Please confirm the right code for "WW Tank Control".

3. Please review all the preconstruction authorizations. Please submit an updated Form OP-REQ1 88 as needed.

   Please note that the OP-REQ1 Page 88, Form OP-PBRSUP, and the Preconstruction Authorization Tables in the Draft Permit need to be consistent. There are cases in which a unit will appear on Form OP-PBRSUP but not in the Title V permit due to the unit having no applicable requirements documented in the Title V Permit. If a unit is authorized by a PBR in the Title V permit, it should be reflected on either Table A or B and have its monitoring identified in Table D.

   Please update Forms OP-SUMR, OP-PBRSUP, and OP-2 as needed to reflect all changes in PBR Registrations.

   I understand that some PBR information is still being worked on but please provide as much updated accurate information as possible.

4. Unit ID TANK12 is documented in our database on Form OP-UA03 but has no information other than a Preconstruction Authorization. Should this unit be documented in our database or the Title V Permit?

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process, application updates, WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified submittals, including application updates supporting the WDP comments is required to be submitted with the WDP response. After final review of the WDP, additional changes, supported by application updates, may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which

includes the specific dates or time-period of all submitted application documentation that were not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1. This form will be requested at a later date.

If you choose to submit your application updates through STEERS, please notify me when these updates have been submitted.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

John Walker

Subject: RN101612083 PBR Registration and Title V Permit Application Meeting

Good morning Ms. Segala and Mr. Sims,

Fort Cavazos's (FC) Title V permit renewal application reviewer, Mr. John Walker, has requested a timeline for when the final PBRs for the facility (RN101612083) will be registered. The remaining PBR to be fixed is PBR 54052. This permit is registered with a contractor for the facility, American Water (AW) (RN105671531), and covers cooling tower and engine units that need to be removed and re-registered under new PBRs owned by FC. Before this transition can happen, American Water is awaiting TCEQ's processing of Core Data Forms that relate to Fort Cavazos's name change from Fort Hood.

To get all parties involved in the finalization of these PBRs on the same page, **Olsson is requesting a half-hour Microsoft Teams meeting** between both of you, the Title V application review team, FC, and Olsson. I have received the availability of FC and the Title V team, which align in the times below over the next two weeks. If this meeting is acceptable for each of you, **please reply with the times that work** of those below, and I will send everyone on this email the Teams invite.

Tuesday (9/19): 2pm – 5pm
Monday (9/25): 2:30pm – 5pm
Wednesday (9/27): 3pm – 5pm

Subject: RE: Technical Review - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good afternoon John,

PBR 54052 is the final PBR that needs to be corrected to complete form OP-PBRSUP for Fort Cavazos (RN101612083). The current contractor that has ownership of that PBR is American Water (RN105671531). Regarding the possible timeline for when this last PBR can be sorted out, American Water (AW) must wait for the TCEQ to complete its processing of new Core Data Forms submitted by AW on June 20, 2023. Once the name change (and accompanying CN and RN changes) is complete, AW can remove the units under PBR 54052 that are owned by Fort Cavazos, and then Fort Cavazos can apply for new PBRs under their ownership to register those units.

American Water's TCEQ contact for this changeover is Ms. Bernadette Segala. To establish a timeline and some communication between the different entities involved with this process, Olsson is requesting a meeting between you, Ms. Segala, and Mr. Dan Sims with the APIRT team. In this meeting, all participants would be able to describe the status of their portions of the project, and a plan with a general timeline can be set.

If you agree that this coordination meeting would be helpful, please let me know the times during the week of September 18th and the week of September 25th that would work for you to attend this 30-minute meeting. I will then generate a new email thread with Ms. Segala and Mr. Sims to propose this meeting, present those times to them, and finalize the time. My availability is below for the two weeks mentioned (all in CST).

9/18-9/20: All working hours
9/21: 1pm-5pm
9/25: 10:30am-12pm, 2:30pm-5pm
9/27: 3pm-5pm
9/29: 8am-12pm

Apologies for not having a direct answer yet as to the ultimate timeline for the completion of OP-PBRSUP, but hopefully this communication will help with that answer!

Thank you,

-Will C

Subject: RE: Technical Review - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good morning,

Fort Hood has been undergoing a name change to Fort Cavazos. A Contractor (RN105671531) for Fort Cavazos (FC) has therefore had to submit a Core Data Form so their Regulated Entity number and Customer Numbers coincide with FC's new name. This has been submitted successfully and is in process by the TCEQ as of this month.

The final PBR action item involves PBR 54052, which is registered with this Contractor. Some of the units under that PBR are actually owned by FC, not the Contractor. Therefore, FC and the Contractor will work with the APIRT team to remove from PBR 54052 any generators and cooling towers that FC owns. Once FC confirms this is completed, we will be able to proceed with re-registering these generators and cooling towers under new PBRs associated with FC (RN101612083). Those new PBRs can then be added to form OP-PBRSUP, and we will turn that completed form around to you for final review.

Thank you,

-Will C

Good afternoon,

Yes of course. Olsson and Fort Hood representatives met with Dan Sims with APIRT on February 14. We went through each claimed and registered PBR Fort Hood has under RN101612083 to confirm that its status of registered or claimed is correct. We have compiled a brief list of items to review internally based on our talk with Mr. Sims and will be working on resolving them now that the list of discrepancies has been returned to you. For PBRs registered under other Reg. Numbers, Fort Hood has sent Olsson a list of which units should be moved to RN101612083. Olsson will be working with Mr. Sims to have these units transferred to the proper number. Information for these PBRs will then be entered into Form OP-PBRSUP.

Thank you,

-Will C

<FOP O1659_Project 33269_U.S. Department of the Army_Fort Hood_Deficiencies_20230224.docx>

FOP O1659/Project 33269
U.S. Department of the Army/Fort Hood
Deficiencies – 02/24/2023

Good morning,

I am currently reviewing the renewal application for FOP O1659/Project 33269 U.S. Department of the Army, Fort Hood. Please provide the following updates as soon as possible but no later than **03/27/2023:**

1. Revisions Nos. 140, 141, and 142 on Form OP-SUMR Table 1 are requesting the removal of Unit IDs IC001-10, IC001-17, and IC001-31 from the Title V Permit but there are no corresponding Form OP-2 Table 2 revisions.

   Please confirm if these units are to be removed from the permit and provide an updated Form OP-2 with corresponding revisions that request their removal. Units ARE to be removed; Form OP-2 has been updated with these requests.

2. Revision No. 136 on Form OP-2 is requesting the removal of Group ID SU002 and associated Unit IDs from the Title V Permit but there is no corresponding revision on Form OP-SUMR.

   Please confirm if this Group ID and associated units are to be removed from the permit and provide an updated Form OP-SUMR, Tables 1 & 2, with a corresponding revision that requests the removal of Group ID SU002. Group and its associated units ARE NOT to be removed; Revision No. 136 on Form OP-2 has been deleted.

3. NSR Standard Permit 88412 was provided in OP-REQ1 Section XII. J., but is not a Municipal Solid Waste and Industrial Hazardous Waste Permit with an Air Addendum. I have documented NSR Standard Permit 88412 as an NSR Standard Permit in our database and the Title V Permit. Please confirm if you agree with this change and if so, please update Form OP-REQ1 for your records with NSR Standard Permit 88412 listed in OP-REQ1 Page Section XII. H. NSR Standard Permit 88412 has been deleted from Form OP-REQ1 Section XII. J and is listed in Section XII. H.

4. Revisions 121, 123, 125, 127 on Form OP-SUMR Table 1 for Unit IDs SC004, SC005, SC006, and SC007, have too long of Unit/Process Name/Descriptions to be maintained in our database.

   Please provide a Unit/Process Name/Description for the identified units that is 50 or less characters long per the Form OP-SUMR Instructions. Unit/Process Name/Descriptions for Revisions 121, 123, 125, and 127 have been sufficiently abbreviated.

5. Form OP-REQ1 Section XI. B. Question 1 was answered "YES" but Question 2 was left blank. Please confirm if the application area contains units that are potentially subject to a regulation for which the TCEQ has not developed a unit attribute form.

   If so, please provided an updated Form OP-REQ1 Section XI. B. Question 2 to identify the rule(s).

   In our database, we have the following information from a previous application: 63 SUBPARTS: QQQQ, ZZZZ, DDDDD, GGGGG, PPPPP. (Please keep in mind that MACT ZZZZ is now on OP-UA2,

MACT DDDDD is now on OP-UA5 & 6, MACT GGGGG is now on OP-UA3, 12, 14, 15, 45, 52, 55). Reference to 40 CFR Part 63, Subparts QQQQ and PPPPP have been listed in Form OP-REQ1 Section XI. B. Question 2.

6. Please provide the following UA Forms with the requested information for the identified units. Please note that in instances where Group IDs exist, you only need to provide the Group ID instead of every individual unit on the UA Form:

    a. Form OP-UA02

        i. Table 2

            1. Unit/Group ID: GRP-ENGINE5 (IC003-6, IC003-7, IC003-8, IC003-9)

                a. Unit IDs IC003-6, IC003-8, and IC003-9 were provided on Form OP-UA02 Table 2a for MACT ZZZZ applicability, but IC003-7 was not. Are all the units still considered to be part of GRP-ENGINE5 and still have the same unit attributes? Unit IC003-7 is out of service and is to be deleted from the Title V Permit. This revision has been added as Revision 117 on Form OP-2. It has been reflected on Form OP-SUMR, and the unit's information has been added to Form OP-UA2.

            2. Many units were provided on Tables 2b and 2c with an SOP Index No. but no additional codes. If these units are not required to be on these tables according to the form instructions, please remove them. The units are not required to be on Tables 2b and 2c and have been removed.

        ii. Table 4

            1. Unit IDs: GRP-ENGINE16 (IC003-16, IC003-17), GRP-ENGINE4 (IC004-5, IC004-6, IC004-7)

                a. Form OP-UA02 was updated on 11/22 and an updated form is required. A code of "EXEMPT" or "NONE" is required for Exemption on Table 4a for NSPS JJJJ applicability. All information has been transferred to the updated UA-2 form, and the codes in Table 4a have been properly entered.

            2. Unit ID: IC003-4

                a. On Table 4b, for NSPS JJJJ applicability, the code "N0109+E" was provided for Manufacture Date. N0109+E is used for Emergency SI ICE that are greater than 25 HP and less than 130 HP, but the code "130-500E" was provided on Table 4a for Horsepower which is for Emergency SI ICE with a maximum engine power greater than or equal to 130 HP and less than 500 HP.

Using the two codes “N0109+E” and “130-500E” provide inconsistent unit attributes. Please provide an updated Form OP-UA02 Table 4 with the correct codes for NSPS JJJJ applicability. The code for this unit has been updated to N0111+E to properly reflect its manufacture date and bhp rating.

3. Unit/Group ID: GRP-ENGINE10 (IC003-18, IC003-19, IC003-20)

    a. On Form OP-UA02, Table 4a for NSPS JJJJ applicability, Unit ID IC003-19 was provided, which is part of GRP-ENGINE10 but the other units in the group were not included.

    Are all the units still considered to be part of GRP-ENGINE10 and still have the same unit attributes? Yes, they are still part of this group. IC003-18 and IC003-20 have been added to Tables 4a and 4b.

4. On Form OP-UA02, Table 4a, for NSPS JJJJ applicability, for all units provided in the application, the code “NO” was provided for Exemption. NO is not a valid code. Did you mean “NONE”? Please confirm the correct code. The correct code “NONE” has been added for all units.

iii. Table 5

1. Unit IDs/Group: GRP-ENGINE12 (IC001-46, IC001-55), IC001-48, IC001-49, IC001-56

    a. Table 5c for NSPS IIII applicability, the code “E130-68” was provided for Kilowatts. E130-68 is not a valid code. Did you mean “E130-368”? Please confirm the correct code. The correct code “E130-368” has replaced the invalid code.

    b. Form OP-UA02 was updated on 11/22 and an updated form is required. A code of “YES” or “NO” is required for AECD on Table 5c. All information has been transferred to the updated UA-2 form, and the codes in Table 5c have been properly entered.

2. Unit IDs: IC001-82, IC001-84

    a. Form OP-UA02 was updated on 11/22 and an updated form is required. On Table 5b a code for model year is required. On Table 5c, a code of YES or NO is required for AECD.

    Model years have been added to form OP-UA2. Unit IC001-82 (2022) is renamed to IC003-28; Forms OP-UA2, OP-SUMR, and OP-2 have been edited to reflect this name change. Unit model year for IC001-84 is 2021.

3. Unit/Group IDs: IC001-53, IC001-65, IC001-66, IC001-67, IC001-68,

IC001-69, IC001-70, GRP-ENGINE3 (IC001-71, IC001-74), IC001-72, IC001-75, IC001-77, IC001-78, IC001-79, IC001-81, IC001-83, IC001-85, IC001-86, IC001-87, IC001-88, GRP-ENGINE18 (IC002-3, IC002-4, IC002-5) GRP-ENGINE19 (IC002-10, IC002-11, IC002-12, IC002-13), IC002-14, IC002-15, IC002-16, IC002-18

a. Form OP-UA02 was updated on 11/22 and an updated form is required. A code of "YES" or "NO" is required for AECD on Table 5c. All information has been transferred to the updated UA-2 form, and the codes in Table 5c have been properly entered.

4. Unit ID: IC002-17

a. Table 5b for NSPS IIII applicability, a code for model year is required. Model year for IC002-17 (2020) has been added.

b. Table 5c for NSPS IIII applicability, the code "E368-500" was provided for Kilowatts. E368-500 is not a valid code. Please confirm the correct code. The code for this unit has been updated to E368-560 to properly reflect its manufacture date and bhp rating.

iv. Various Tables

1. Unit IDs: IC004-2, IC004-3, IC004-8

a. Please confirm if these units should be removed. These units were provided on Forms OP-2 and OP-SUMR in revisions 112, 113, and 115 stating they should be removed from the permit, but were provided on Form OP-UA02 with unit attributes for MACT ZZZZ on Table 2a (IC004-2, IC004-3, IC004-8) and NSPS JJJJ on Table 4a, 4b (IC004-8). IC004-2 is to be removed as this is a dual-fueled gensets. Requirements are now under IC-90145; IC004-3 is to be removed as this is a dual-fueled gensets. Requirements are now under IC-90048; IC004-8 is to be removed as this is a dual-fueled gensets. Requirements are now under IC-90140; See Form OP-2 Table 2 line items: 112, 113 and 115. All three units have been removed from form OP-UA2.

b. Form OP-UA03

i. Table 3

1. Unit/Group IDs: ST005H, ST005I, ST005J, ST006C, ST006D, GRPTANK9 (Unit IDs: ST001A, ST001B, ST001C),

a. Form OP-UA3 was recently revised, and updated codes are required. Please provide a code for WW Tank Control. GRPTANK9 = IFR; all others are NONE. ST005J does not exist and has been removed from the Title V permit renewal application Form OP-UA03.

2. Group ID: GRPTANK8 (ST005A, ST006E, ST008S, ST008T, ST008U, ST008V, ST008W, ST009F)

    a. Unit attributes were provided for Unit ID ST006E with a different SOP Index No. (60Kb-1) than the rest of GRPTANK8 (60Kb-6). Is Unit ID ST006E still part of GRPTANK8? If so, please confirm the correct SOP Index No. for GRPTANK8. The SOP Index No. for this unit has been corrected to 60Kb-6.

    b. Form OP-UA3 was recently revised, and updated codes are required. Please provide a code for WW Tank Control. ST005A is a UST. All others are HFR; therefore, WW Tank Control Code is NONE. GRPTANK8 max TVP is 2.1. Tank specs have been added to form OP-UA03.

3. Unit IDs: ST002A, ST005G

    a. Unit IDs are within our database on Form OP-UA03 without any unit attributes, and are on Form OP-REQ2 for a Permit Shield for 30 TAC Chapter 115, Storage of VOCs.

    Please confirm if there should be unit attributes on Form OP-UA3 for the identified units. If there are not any unit attributes, I will remove the units from Form OP-UA03 but keep them on Form OP-REQ2. ST002A is a 11,900 diesel Vertical Fixed Roof Tank and ST005G is a 2000 gal, Horizontal Fixed Roof diesel tank. PTLQ-3, max 2.1 psia. Control: NONE.

4. Unit/Group ID: GRPTANK11 (Unit IDs ST004A, ST004B)

    a. Group ID GRPTANK11 is within our database on Form OP-UA03 without any unit attributes, and are on Form OP-REQ2 for a Permit Shield for NSPS Ka.

    Please confirm if there should be unit attributes on Form OP-UA3 for the identified units. If there are not any unit attributes, I will remove the units from Form OP-UA03 but keep them on Form OP-REQ2. ST004A and ST004B are 541,380 gal F-24 Vertical tanks, Control: IFR; No unit attributes, RVP: < 1.0 psia

5. Unit IDs: ST006A, ST006B

a. On Form OP-UA03, Table 3, it was stated that these two units were removed but there are no corresponding revisions on Form OP-2 or OP-SUMR requesting the units to be removed from the Title V Permit.

   Please confirm if these units are to be removed. If they are to be removed, please provided revisions on Form OP-2 and OP-SUMR requesting their removal. Yes, these units are to be removed. Revisions have been made to Forms OP-2 and OP-SUMR requesting their removal.

   If they are not to be removed, Form OP-UA3 was recently revised, and updated codes are required. Please provide a code for WW Tank Control.

   Please note these units are part of GRPTANK6 and the SOP Index No. provided on Form OP-UA03, Table 3 was 60Kb-1 when GRPTANK6 has the SOP Index No. 60Kb-4 in the effective permit. All units within a group are required to have the same unit attributes and SOP Index No. As a confirmation, all units in GRPTANK6 should be 60Kb-4. ST006A and ST006B should both be removed.

   GRPTANK6 includes Unit IDs: ST005B, ST005C, ST005F, ST006A, ST006B, ST006C, ST006D, ST007A, ST007C, ST007D, ST007E, ST007F, ST007G, ST008A, ST008B, ST008C, ST008D, ST008E, ST008F, ST008G, ST008H, ST008I, ST008J, ST008K, ST008L, ST008M, ST008N, ST008O, ST008P, ST008Q, ST009A, ST009B, ST009C, ST009D, ST009E, ST010A, ST010B, ST010C

6. The following units were either provided on Form OP-UA03 Table 3 in this application or are in the effective permit and our database on Form OP-UA03 with SOP Index Nos. that do not align with our SOP Index No. Guidance.

   You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

   additional_fop_guidance.pdf (texas.gov)

   Please provide the following units on Form OP-UA03 Table 3 with SOP Index Nos. that align with our SOP Index No. Guidance. I have listed the units below with their current SOP Index No:

   a. Unit ID FS021A - the SOP Index No. V-1 does not align with our SOP Index No. guidance for NSPS Kb. SOP Index No. has been corrected to 60Kb-1.

b. Unit IDs FS019A, ST005E, and ST007B - SOP Index No 115B1 does not align with our SOP Index No. guidance for NSPS Kb. SOP Index No. has been corrected to 60Kb-1.

c. OP-UA04

i. Table 1

1. The following units were either provided on Form OP-UA04 Table 1 in this application or are in the effective permit and our database on Form OP-UA04 with SOP Index Nos. that do not align with our SOP Index No. Guidance.

   You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

   additional_fop_guidance.pdf (texas.gov)

   Please provide the following units on Form OP-UA04 Table 1 with SOP Index Nos. that align with our SOP Index No. Guidance. I have listed the units below with their current SOP Index No:

   a. Unit ID MO006 - SOP Index No. 115E3 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C. SOP Index No. has been corrected to R5211.

   b. Unit ID LR001 - SOP Index No. V-1 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C. SOP Index No. has been corrected to R5211.

   c. Unit IDs: FS020, FS021, FS022 – SOP Index No. 115C does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C. SOP Index No. has been corrected to R5211.

   d. Unit IDs: FS018, LR002 – SOP Index No. 115C1 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C. SOP Index No. has been corrected to R5211.

   e. Unit IDs: FS011, FS019 – SOP Index No. 115C2 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C. SOP Index No. has been corrected to R5211.

d. Form OP-UA06

i. Various Tables

1. Group ID EC001 (BLR36071-1, BLR36071-2, BLR36071-3, BLR36071-4)

a. SOP Index Nos. (112-1) on Tables 1a, 3a, 4a, 4b, and 7 are not consistent with our SOP Index No. Guidance for NSPS Subparts D, Db, Dc, and 30 TAC Chapter 112 respectively.

Please provide SOP Index Nos. consistent with our SOP Index No. Guidance. You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

additional_fop_guidance.pdf (texas.gov)

SOP Index Nos. have been corrected to 60D, 60Db, 60Dc, and R200 for NSPS Subparts D, Db, Dc, and 30 TAC Chapter 112, respectively.

b. Form OP-UA06 Table 7 (SOP Index No. 112-1) needs an additional code for Heat Input and additional codes may be required based upon the form instructions. Boilers are dual-fuel fired. 14.29 MMBTU/Hr and 102 GPH. Effective stack height is less than standard effective stack height. Form OP-UA6 Table 7 has been updated with 250L- heat input code and YES for "Stack Height."

e. Form OP-UA17

i. Table 1

1. Unit ID SU003

a. Unit ID SU003 is on Form OP-UA17 Table 1 for NSPS NNN applicability but has the SOP Index No. R115. R115 is not consistent with our SOP Index No. guidance for NSPS NNN.

Please provide SOP Index Nos. consistent with our SOP Index No. Guidance. You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

additional_fop_guidance.pdf (texas.gov)

An SOP Index No. of 60NNN is recommended for Unit ID SU003.

f. Form OP-UA18

i. Various Tables

1. Unit IDs: SC001, SC002, SC004, SC005, SC006, SC009, SC011, SC013, SC017

    a. The identified units are on Form OP-UA18 Table 9a for MACT GG applicability in our database and the effective permit but have the SOP Index No. R115E2. R115E2 is not consistent with our SOP Index No. guidance for MACT GG.

    Please provide SOP Index Nos. consistent with our SOP Index No. Guidance. You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

    additional_fop_guidance.pdf (texas.gov)

    SOP Index Nos. have been corrected to 63GG.

2. Unit ID: SC003, SC007, SC015

    a. The listed units are within our database on Form OP-UA18 without any unit attributes, and are on Form OP-REQ2 for various permit shields.

    Please confirm if there should be unit attributes on Form OP-UA18 for the identified units. If there are not any unit attributes, I will remove the units from Form OP-UA18 but keep them on Form OP-REQ2. Unit attributes have been added to units SC003, SC007, and SC015 in Form OP-UA18. For "Contains Operations Identified in 40 CFR § 63.741(c)" column, entry of "YES" was added for each unit. For "40 CFR § 63.741(f) Exemption" column, entry of "YES" was added for each unit.

Note that a Certification by the Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted once all items have been reviewed and resolved, I will request the form at a later time. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation. Please let me know if you have any questions.

Sincerely,

John Walker

For Submissions to EPA

Has a copy of this application been submitted (or is being submitted) to EPA?	☒ YES ❑ NO

I. Application Type

Indicate the type of application:

☒Renewal ❑ Streamlined Revision (Must include provisional terms and conditions as explained in the instructions.)

❑ Significant Revision ❑ Revision Requesting Prior Approval ❑ Administrative Revision ❑ Response to Reopening

II. Qualification Statement

For SOP Revisions Only The referenced changes qualify for the marked revision type.	☒ YES ❑ NO
For GOP Revisions Only The permitted area continues to qualify for a GOP.	☐ YES ❑ NO

III. Major Source Pollutants (Complete this section if the permit revision is due to a change at the site or change in regulations.)

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	VOC	NO_X	SO_2	PM_{10}	CO	Pb	HAPs	Other
Major at the site *(YES/NO)*:	YES	YES	NO	NO	YES	NO	NO	

IV. Reference Only Requirements *(For reference only)*

Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ❑ NO ❑ N/A

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.

Form OP-2-Table 2

Date:	1/19/2022
Permit No.:	**O1659**
Regulated Entity No.:	**RN101612083**
Company Name:	**US Department of the Army**

I. Description of Revision

Revision No.	Revision Code	Unit/Group Process			NSR Authorization	Description of change and Provisional Terms and Conditions
		New Unit	ID No.	Applicable Form		
1	SIG-E	Yes	BLR36071-1	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
2	SIG-E	Yes	BLR36071-2	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
3	SIG-E	Yes	BLR36071-3	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
4	SIG-E	Yes	BLR36071-4	OP-UA6	106.183/09/04/2000	New dual-fired boiler in Building 36071 that should be added to Group EC001
5	SIG-E	Yes	BOILER10	OP-UA6	106.183/06/18/1997	Source removed from site
6	SIG-E	No	BOILER12	OP-REQ2	106.183/09/04/2000	Removes units from the permit. These boilers do not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
7	SIG-E	No	BOILER13	OP-REQ2	106.183/09/04/2000	
8	SIG-E	No	BOILER14	OP-REQ2	106.183/09/04/2000	
9	SIG-E	No	BOILER15	OP-REQ2	106.183/09/04/2000	
10	SIG-E	No	BOILER16	OP-REQ2	106.183/09/04/2000	
11	SIG-E	No	BOILER17	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117,

						therefore it is an off-permit source, per OP-UA6 instructions.
12	SIG-E	No	BOILER18	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
13	SIG-E	No	BOILER19	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
14	SIG-E	No	BOILER20	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
15	SIG-E	No	BOILER21	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
16	SIG-E	No	BOILER22	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
17	SIG-E	No	BOILER23	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input

Date:	1/19/2022					
Permit No.:	**O1659**					
Regulated Entity No.:	**RN101612083**					
Company Name:	**US Department of the Army**					
						capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
18	SIG-E	No	BOILER24	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
19	SIG-E	No	BOILER25	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
20	SIG-E	No	BOILER9	OP-UA6	106.183/06/18/1997	Source removed from site.
21	SIG-E	No	EC001	OP-UA6	106.183/06/18/1997	Remove 40 CFR 63, Subpart O from Permit Shield as this rule is addressed on form OP-REQ1
22	SIG-E	No	GRP-ENGINE1	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
23	SIG-E	No	GRP-ENGINE10	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; Adjusting Basis of Determination for NSPS JJJJ Negative Applicability to properly address language of rule
24	SIG-E	No	GRP-ENGINE11	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; GRPENGINE11 will only have one Unit ID associated with it after other units are removed in this revision. This

						negative applicability being added for NSPS IIII for GRP-ENGINE11 can instead be added to IC001-21, and the grouping GRPENGINE11 does not need to exist anymore.
25	SIG-E	No	GRP-ENGINE12	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
26	SIG-E	No	GRP-ENGINE13	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
27	SIG-E	No	GRP-ENGINE14	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ; GRP-ENGINE14 will only have one Unit ID associated with it after other units are removed in this revision. This negative applicability being added for NSPS JJJJ for GRP-ENGINE14 can instead be added to IC001-51, and the grouping GRP-ENGINE14 does not need to exist anymore.
28	SIG-E	No	GRP-ENGINE16	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; Adjusting Basis of Determination for NSPS JJJJ Negative Applicability to properly address language of rule
29	SIG-E	No	GRP-ENGINE17	OP-REQ2	106.511/03/14/1997 106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
30	SIG-E	No	GRP-ENGINE18	OP-REQ2	106.511/03/14/1997 106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
31	SIG-E	No	GRP-ENGINE19	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
32	SIG-E	No	GRP-ENGINE2	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII

I. Significant Revision *(Complete this section if you are submitting a significant revision application or a renewal application that includes a significant revision.)*

A.	Is the site subject to bilingual requirements pursuant to 30 TAC § 122.322?		☒YES ☐ NO
B.	Indicate the alternate language(s) in which public notice is required:	Spanish	
C.	Will there be a change in air pollutant emissions as a result of the significant revision		☒ YES ☐ NO

D. Indicate the air pollutant(s) that will be changing and include a brief description of the change in pollutant emissions for each pollutant:

Pollutant	Description of the Change in Pollutant Emissions
NOx	+110.15 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
PM/PM10/PM2.5	+7.58 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
SO2	+2.82 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
CO	+73.23 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
VOC	+6.45 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Lead	+3.44E-4 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Total HAP	+0.10 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.

Good morning,

I am currently reviewing the renewal application for FOP O1659/Project 33269 U.S. Department of the Army, Fort Hood. Please provide the following updates as soon as possible but no later than **03/27/2023:**

1. Please provide the information requested in the attached document.

Note that a Certification by the Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted once all items have been reviewed and resolved, I will request the form at a later time. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation. Please let me know if you have any questions.

Sincerely,

John Walker

FOP O1659/Project 33269
U.S. Department of the Army/Fort Hood
Deficiencies – 02/24/2023

Good morning,

I am currently reviewing the renewal application for FOP O1659/Project 33269 U.S. Department of the Army, Fort Hood. Please provide the following updates as soon as possible but no later than **03/27/2023:**

1. Revisions Nos. 140, 141, and 142 on Form OP-SUMR Table 1 are requesting the removal of Unit IDs IC001-10, IC001-17, and IC001-31 from the Title V Permit but there are no corresponding Form OP-2 Table 2 revisions.

   Please confirm if these units are to be removed from the permit and provide an updated Form OP-2 with corresponding revisions that request their removal.

2. Revision No. 136 on Form OP-2 is requesting the removal of Group ID SU002 and associated Unit IDs from the Title V Permit but there is no corresponding revision on Form OP-SUMR.

   Please confirm if this Group ID and associated units are to be removed from the permit and provide an updated Form OP-SUMR, Tables 1 & 2, with a corresponding revision that requests the removal of Group ID SU002.

3. NSR Standard Permit 88412 was provided in OP-REQ1 Section XII. J., but is not a Municipal Solid Waste and Industrial Hazardous Waste Permit with an Air Addendum. I have documented NSR Standard Permit 88412 as an NSR Standard Permit in our database and the Title V Permit. Please confirm if you agree with this change and if so, please update Form OP-REQ1 for your records with NSR Standard Permit 88412 listed in OP-REQ1 Page Section XII. H.

4. Revisions 121, 123, 125, 127 on Form OP-SUMR Table 1 for Unit IDs SC004, SC005, SC006, and SC007, have too long of Unit/Process Name/Descriptions to be maintained in our database.

   Please provide a Unit/Process Name/Description for the identified units that is 50 or less characters long per the Form OP-SUMR Instructions.

5. Form OP-REQ1 Section XI. B. Question 1 was answered "YES" but Question 2 was left blank. Please confirm if the application area contains units that are potentially subject to a regulation for which the TCEQ has not developed a unit attribute form.

   If so, please provided an updated Form OP-REQ1 Section XI. B. Question 2 to identify the rule(s).

   In our database, we have the following information from a previous application: 63 SUBPARTS: QQQQ, ZZZZ, DDDDD, GGGGG, PPPPP. (Please keep in mind that MACT ZZZZ is now on OP-UA2, MACT DDDDD is now on OP-UA5 & 6, MACT GGGGG is now on OP-UA3, 12, 14, 15, 45, 52, 55)

6. Please provide the following UA Forms with the requested information for the identified units. Please note that in instances where Group IDs exist, you only need to provide the Group ID instead of every individual unit on the UA Form:

a. Form OP-UA02

    i. Table 2

        1. Unit/Group ID: GRP-ENGINE5 (IC003-6, IC003-7, IC003-8, IC003-9)

            a. Unit IDs IC003-6, IC003-8, and IC003-9 were provided on Form OP-UA02 Table 2a for MACT ZZZZ applicability, but IC003-7 was not. Are all the units still considered to be part of GRP-ENGINE5 and still have the same unit attributes?

        2. Many units were provided on Tables 2b and 2c with an SOP Index No. but no additional codes. If these units are not required to be on these tables according to the form instructions, please remove them.

    ii. Table 4

        1. Unit IDs: GRP-ENGINE16 (IC003-16, IC003-17), GRP-ENGINE4 (IC004-5, IC004-6, IC004-7)

            a. Form OP-UA02 was updated on 11/22 and an updated form is required. A code of “EXEMPT” or “NONE” is required for Exemption on Table 4a for NSPS JJJJ applicability.

        2. Unit ID: IC003-4

            a. On Table 4b, for NSPS JJJJ applicability, the code “N0109+E” was provided for Manufacture Date. N0109+E is used for Emergency SI ICE that are greater than 25 HP and less than 130 HP, but the code “130-500E” was provided on Table 4a for Horsepower which is for Emergency SI ICE with a maximum engine power greater than or equal to 130 HP and less than 500 HP.

                Using the two codes “N0109+E” and “130-500E” provide inconsistent unit attributes. Please provide an updated Form OP-UA02 Table 4 with the correct codes for NSPS JJJJ applicability.

        3. Unit/Group ID: GRP-ENGINE10 (IC003-18, IC003-19, IC003-20)

            a. On Form OP-UA02, Table 4a for NSPS JJJJ applicability, Unit ID IC003-19 was provided, which is part of GRP-ENGINE10 but the other units in the group were not included.

                Are all the units still considered to be part of GRP-ENGINE10 and still have the same unit attributes?

        4. On Form OP-UA02, Table 4a, for NSPS JJJJ applicability, for all units

provided in the application, the code “NO” was provided for Exemption. NO is not a valid code. Did you mean “NONE”? Please confirm the correct code.

iii. Table 5

1. Unit IDs/Group: GRP-ENGINE12 (IC001-46, IC001-55), IC001-48, IC001-49, IC001-56

    a. Table 5c for NSPS IIII applicability, the code “E130-68” was provided for Kilowatts. E130-68 is not a valid code. Did you mean “E130-368”? Please confirm the correct code.

    b. Form OP-UA02 was updated on 11/22 and an updated form is required. A code of “YES” or “NO” is required for AECD on Table 5c.

2. Unit IDs: IC001-82, IC001-84

    a. Form OP-UA02 was updated on 11/22 and an updated form is required. On Table 5b a code for model year is required. On Table 5c, a code of YES or NO is required for AECD.

3. Unit/Group IDs: IC001-53, IC001-65, IC001-66, IC001-67, IC001-68, IC001-69, IC001-70, GRP-ENGINE3 (IC001-71, IC001-74), IC001-72, IC001-75, IC001-77, IC001-78, IC001-79, IC001-81, IC001-83, IC001-85, IC001-86, IC001-87, IC001-88, GRP-ENGINE18 (IC002-3, IC002-4, IC002-5) GRP-ENGINE19 (IC002-10, IC002-11, IC002-12, IC002-13), IC002-14, IC002-15, IC002-16, IC002-18

    a. Form OP-UA02 was updated on 11/22 and an updated form is required. A code of “YES” or “NO” is required for AECD on Table 5c.

4. Unit ID: IC002-17

    a. Table 5b for NSPS IIII applicability, a code for model year is required.

    b. Table 5c for NSPS IIII applicability, the code “E368-500” was provided for Kilowatts. E368-500 is not a valid code. Please confirm the correct code.

iv. Various Tables

1. Unit IDs: IC004-2, IC004-3, IC004-8

    a. Please confirm if these units should be removed. These units

were provided on Forms OP-2 and OP-SUMR in revisions 112, 113, and 115 stating they should be removed from the permit, but were provided on Form OP-UA02 with unit attributes for MACT ZZZZ on Table 2a (IC004-2, IC004-3, IC004-8) and NSPS JJJJ on Table 4a, 4b (IC004-8).

b. Form OP-UA03

   i. Table 3

      1. Unit/Group IDs: ST005H, ST005I, ST005J, ST006C, ST006D, GRPTANK9 (Unit IDs: ST001A, ST001B, ST001C),

         a. Form OP-UA3 was recently revised, and updated codes are required. Please provide a code for WW Tank Control.

      2. Group ID: GRPTANK8 (ST005A, ST006E, ST008S, ST008T, ST008U, ST008V, ST008W, ST009F)

         a. Unit attributes were provided for Unit ID ST006E with a different SOP Index No. (60Kb-1) than the rest of GRPTANK8 (60Kb-6). Is Unit ID ST006E still part of GRPTANK8? If so, please confirm the correct SOP Index No. for GRPTANK8.

         b. Form OP-UA3 was recently revised, and updated codes are required. Please provide a code for WW Tank Control.

      3. Unit IDs: ST002A, ST005G

         a. Unit IDs are within our database on Form OP-UA03 without any unit attributes, and are on Form OP-REQ2 for a Permit Shield for 30 TAC Chapter 115, Storage of VOCs.

            Please confirm if there should be unit attributes on Form OP-UA3 for the identified units. If there are not any unit attributes, I will remove the units from Form OP-UA03 but keep them on Form OP-REQ2.

      4. Unit/Group ID: GRPTANK11 (Unit IDs ST004A, ST004B)

         a. Group ID GRPTANK11 is within our database on Form OP-UA03 without any unit attributes, and are on Form OP-REQ2 for a Permit Shield for NSPS Ka.

            Please confirm if there should be unit attributes on Form OP-UA3 for the identified units. If there are not any unit attributes, I will remove the units from Form OP-UA03 but keep them on Form OP-REQ2.

5. Unit IDs: ST006A, ST006B

    a. On Form OP-UA03, Table 3, it was stated that these two units were removed but there are no corresponding revisions on Form OP-2 or OP-SUMR requesting the units to be removed from the Title V Permit.

       Please confirm if these units are to be removed. If they are to be removed, please provided revisions on Form OP-2 and OP-SUMR requesting their removal.

       If they are not to be removed, Form OP-UA3 was recently revised, and updated codes are required. Please provide a code for WW Tank Control.

       Please note these units are part of GRPTANK6 and the SOP Index No. provided on Form OP-UA03, Table 3 was 60Kb-1 when GRPTANK6 has the SOP Index No. 60Kb-4 in the effective permit. All units within a group are required to have the same unit attributes and SOP Index No.

       GRPTANK6 includes Unit IDs: ST005B, ST005C, ST005F, ST006A, ST006B, ST006C, ST006D, ST007A, ST007C, ST007D, ST007E, ST007F, ST007G, ST008A, ST008B, ST008C, ST008D, ST008E, ST008F, ST008G, ST008H, ST008I, ST008J, ST008K, ST008L, ST008M, ST008N, ST008O, ST008P, ST008Q, ST009A, ST009B, ST009C, ST009D, ST009E, ST010A, ST010B, ST010C

6. The following units were either provided on Form OP-UA03 Table 3 in this application or are in the effective permit and our database on Form OP-UA03 with SOP Index Nos. that do not align with our SOP Index No. Guidance.

   You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

   additional_fop_guidance.pdf (texas.gov)

   Please provide the following units on Form OP-UA03 Table 3 with SOP Index Nos. that align with our SOP Index No. Guidance. I have listed the units below with their current SOP Index No:

    a. Unit ID FS021A - the SOP Index No. V-1 does not align with our SOP Index No. guidance for NSPS Kb.

    b. Unit IDs FS019A, ST005E, and ST007B - SOP Index No 115B1

does not align with our SOP Index No. guidance for NSPS Kb.

c. OP-UA04

i. Table 1

1. The following units were either provided on Form OP-UA04 Table 1 in this application or are in the effective permit and our database on Form OP-UA04 with SOP Index Nos. that do not align with our SOP Index No. Guidance.

   You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

   additional_fop_guidance.pdf (texas.gov)

   Please provide the following units on Form OP-UA04 Table 1 with SOP Index Nos. that align with our SOP Index No. Guidance. I have listed the units below with their current SOP Index No:

   a. Unit ID MO006 - SOP Index No. 115E3 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C.

   b. Unit ID LR001 - SOP Index No. V-1 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C.

   c. Unit IDs: FS020, FS021, FS022 – SOP Index No. 115C does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C.

   d. Unit IDs: FS018, LR002 – SOP Index No. 115C1 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C.

   e. Unit IDs: FS011, FS019 – SOP Index No. 115C2 does not align with our SOP Index No. guidance for 30 TAC Chapter 115, Subchapter C

d. Form OP-UA06

i. Various Tables

1. Group ID EC001 (BLR36071-1, BLR36071-2, BLR36071-3, BLR36071-4)

a. SOP Index Nos. (112-1) on Tables 1a, 3a, 4a, 4b, and 7 are not consistent with our SOP Index No. Guidance for NSPS Subparts D, Db, Dc, and 30 TAC Chapter 112 respectively.

   Please provide SOP Index Nos. consistent with our SOP Index No. Guidance. You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

   additional_fop_guidance.pdf (texas.gov)

b. Form OP-UA06 Table 7 (SOP Index No. 112-1) needs an additional code for Heat Input and additional codes may be required based upon the form instructions.

e. Form OP-UA17

   i. Table 1

      1. Unit ID SU003

         a. Unit ID SU003 is on Form OP-UA17 Table 1 for NSPS NNN applicability but has the SOP Index No. R115. R115 is not consistent with our SOP Index No. guidance for NSPS NNN.

            Please provide SOP Index Nos. consistent with our SOP Index No. Guidance. You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

            additional_fop_guidance.pdf (texas.gov)

f. Form OP-UA18

   i. Various Tables

      1. Unit IDs: SC001, SC002, SC004, SC005, SC006, SC009, SC011, SC013, SC017

         a. The identified units are on Form OP-UA18 Table 9a for MACT GG applicability in our database and the effective permit but have the SOP Index No. R115E2. R115E2 is not consistent with our SOP Index No. guidance for MACT GG.

            Please provide SOP Index Nos. consistent with our SOP Index No. Guidance. You may find our SOP Index No. Guidance on pages 7-9 of the Additional FOP Guidance found at following link:

additional_fop_guidance.pdf (texas.gov)

2. Unit ID: SC003, SC007, SC015

    a. The listed units are within our database on Form OP-UA18 without any unit attributes, and are on Form OP-REQ2 for various permit shields.

       Please confirm if there should be unit attributes on Form OP-UA18 for the identified units. If there are not any unit attributes, I will remove the units from Form OP-UA18 but keep them on Form OP-REQ2

Note that a Certification by the Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted once all items have been reviewed and resolved, I will request the form at a later time. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation. Please let me know if you have any questions.

Sincerely,

John Walker

Good afternoon John,

Thank you for going through and addressing each of our questions. I will proceed with completing forms OP-SUMR and OP-2 according to your instructions and responses.

I will also be looking out for the list of discrepancies you are preparing with additional corrections.

We will continue to communicate our questions and updates as needed.

Subject: RE: FOP O1659/Project 33269 Form OP-SUMR

Good Afternoon,

I have answers to your questions submitted to me on 01/27/2023.

For units you are adding PBR Registration Nos. to, you would include a revision on Form OP-2 Table 2 stating you are adding various PBR Registrations to various units, and that information would be reciprocated on Form OP-SUMR for each individual unit. That is, each unit would be listed on Form OP-SUMR and have the PBR information in the format identified on pages 2-3 of the Form OP-SUMR instructions, in the preconstruction authorization column on Form OP-SUMR. This would allow me to add the PBR Registration Nos. to each individual unit. This information would be identified in the New Source Review Authorization References by Emission Unit table in the Title V Permit.

For units that have a preconstruction authorization that is a claimed PBR or SE, is subject to Title V Requirements, is to be identified in the Title V Permit, and there are revisions occurring to the unit, you would include the claimed PBR or SE information on Form OP-SUMR in the preconstruction authorization column for that unit. For example, If you are changing the preconstruction authorizations for units, or if the unit is being added, revised, or removed from the Title V Permit, that is the unit is required to be on Form OP-SUMR, you would include that claimed PBR or SE information in the preconstruction authorization column of Form OP-SUMR. If the claimed PBR or SE is the unit's NSR preconstruction authorization, it should be included on Form OP-SUMR. In some cases, for Form OP-2, if the revision identified required an NSR authorization, you would also include the claimed PBR or SE information on Form OP-2. If an NSR authorization was not required for the change/revision, you would enter N/A on Form OP-2 NSR Authorization Column. This information is identified in the Form Instructions of both the Form OP-2 and OP-SUMR. The claimed PBR or SE would also be identified in the New Source Review Authorization References by Emission Unit table in the Title V Permit.

I am unable to answer the question on whether or not you should register claimed PBRs or SEs. I am only able to work with Title V information. That would be a question for Dan Sims and the Rules Registration Section.

I would like to note, that the first group you identified in your email, Group SU002, was requested to be removed from the Title V Permit in revision no. 136 on Form OP-2. This information was not provided in a revision on Form OP-SUMR, and is a part of the deficiency list I am producing. However, I will use it as an example for your question. If it is your intention to remove this group from the Title V Permit, you would make a revision item on Form OP-2 (as you did), and would then identify that revision item on Form OP-SUMR with a revision requesting to delete the group. The Form OP-SUMR entry would have the unit's (or group's) preconstruction authorizations listed whether they are registered or claimed PBRs and SEs or any other type of NSR Authorization. In the case that it is not a registered PBR, you would list the PBR in the standard format of 106.XXX/MM/DD/YYYY.

Please note that PBRs required to be listed in the Title V Permit are identified in the OP-REQ1 Form Instructions on page 120. If a unit has one of those PBRs as a Preconstruction Authorization, it should also be listed on Table XII. I. of Form OP-REQ1 (without the PBR Registration information, the PBR Registration information is only to be identified on Form OP-PBRSUP and Form OP-SUMR).

I hope these answers help you. Please let me know if you have additional questions.

Sincerely,

John Walker

Subject: RE: FOP O1659/Project 33269 Form OP-SUMR

Hello John,

I have reformatted Fort Hood's forms OP-2 and OP-SUMR to include registration numbers for units to be covered under their Title V Permit Renewal. I would like to confirm the best course of action for units that are under claimed PBRs and Standard Exemptions at the facility that do not have registration numbers. The units in question are listed below. Should I work with Dan Sims with the NSR Permitting Team to register these claimed emissions, are these not needed in form OP-SUMR, or should they be included in OP-SUMR without a registration number?

Claimed PBRs and SEs with no listed registration number:

- Units in Group SU002 (Claimed PBR 106.263
  - ARO10A, ARO10B, ARO16A, ARO16B, ARO17A, ARO17B, ARO18A, ARO18B, ARO19A, ARO19B, ARO1A, ARO1B, ARO20A, ARO20B, ARO21A, ARO21B, ARO25A, ARO25B, ARO26A, ARO26B, ARO2A, ARO2B, ARO3A, ARO3B, ARO43A, ARO43B, ARO44A, ARO44B, ARO45A, ARO45B, ARO46A, ARO46B, ARO47A, ARO47B, ARO48A, ARO48B, ARO49A, ARO49B, ARO4A, ARO4B, ARO5A, ARO5B, ARO6A, ARO6B, ARO8A, ARO8B
- ARO65 (Touchup Topcoat Operation, Bldg. 707)
  - Standard Exemption 70, 06/07/1996
- ARO66 (Touchup Topcoat Operation, Bldg. 708)
  - Standard Exemption 70, 06/07/1996
- ARO67 (Touchup Topcoat Operation, Bldg. 7027)
  - Standard Exemption 70, 06/07/1996
- ARO7A & ARO7B (Hand-Wipe Cleaning Operation, Bldg. 7012
  - Standard Exemption 80, 12/01/1972
- EC002 (Site-Wide External Combustion Units <10MMBTU/Hr)
  - Claimed PBR 106.183, 09/04/2000
- FS011A, FS011B, & FS011C (HAHP F-24 Storage Tanks)
  - Claimed PBR 106.472, 03/14/1997
- FS011 (HAHP F-24 Fueling Station)
  - Claimed PBR 106.412, 03/14/1997
- FS018A (DOL Tank Farm Diesel Storage Tank A)
  - Standard Exemption 51, 11/05/1986
- FS018 (DOL Fueling Station – Biodiesel)
  - Claimed PBR 106.412, 09/04/2000
- FS019A (DOL Fueling Station E-85 Storage Tank A)
  - Claimed PBR 106.472, 09/04/2000
- FS019 (DOL Fueling Station – E-85 Gasoline)
  - Claimed PBR 106.412, 09/04/2000
- FS020 (NFH Fueling Station)
  - Claimed PBR 106.412, 09/04/2000
- FS021 (Split Tank Gasoline Fueling Station)
  - Claimed PBR 106.412, 09/04/2000
- FS022 (Split Tank Diesel Fueling Station)
  - Claimed PBR 106.412, 09/04/2000
- LR001 (Site-wide Gasoline Loading Racks)
  - Standard Exemption 106, 10/04/1995
  - Standard Exemption 14, 10/04/1995
  - Standard Exemption 51, 10/04/1995

- LR002 (Site-wide Diesel Loading Racks)
    - Claimed PBR 106.472, 03/14/1997
- LR003 (Site-wide F-24 Loading Racks)
    - Standard Exemption 106, 10/04/1995
    - Standard Exemption 14, 10/04/1995
    - Standard Exemption 51, 10/04/1995
- SC015 (Miscellaneous Surface Coating Operations)
    - Claimed PBR 106.433, 03/14/1997
- ST004A & ST004B (RGAAF Bulk F-24 Storage Tanks)
    - Standard Exemption 51, 09/23/1982
- ST005A (Miscellaneous Diesel Storage Tank A)
    - SE 51, 10/04/1995
- ST005B/C/F/G/I, ST006B/C/D/E, ST007A/C/D/E/F/G, & ST008G (Miscellaneous Diesel, F-24, Gasoline, and Used Oil Storage Tanks)
    - Claimed PBR 106.412, 09/04/2000
- ST005E
    - Claimed PBR 106.472, 09/04/2000
- ST005I, ST006A, ST008A/B/C/D/E/F/H/I/J/K/L/M/N/O/P/Q/S/T/U/V/W, ST009A/B/C/D/E/F, ST010A/B/C (Miscellaneous Diesel, F-24, Used Oil, Off-Spec Fuel, Oil Storage Tanks)
    - Claimed PBR 106.472, 09/04/2000
- ST007B (Miscellaneous Gasoline Storage Tank B)
    - Claimed PBR 106.473, 03/14/1997
- WL001 (Site-wide Welding Operations)
    - Claimed PBR 106.227, 09/04/2000
- WW001/2/3/4/5/7/9 (Woodworking Operations)
    - Claimed PBR 106.231, 09/04/2000
    - Claimed PBR 106.265, 09/04/2000
- Units in Group ID EC001 (Claimed PBR 106.183, 09/04/2000)
    - BLR36071-1, BLR36071-2, BLR36071-3, BLR36071-4 are being added to the permit and to this group
    - BOILER9, BOILER10, and BOILER11 are being deleted from this group and the permit

Thank you for your assistance.

Subject: RE: Fort Hood Air Operating Permit Renewal Follow Up - RN numbers

Good Morning,

My Management has requested to change the scheduled meeting time from 1:30 PM to 2:00 PM on 12/20/2022. I have also requested that Air Permit Initial Review Team (APIRT) Team Leader Johnny Bowers attend the meeting. He has confirmed he will be attending the meeting. APIRT is the section you would work with for any changes to RNs and he will be available to answer questions about that process.

If you are available at the requested time, please include the following individuals in your meeting request.

- Elizabeth Moorhead – Operating Permits Team Leader – elizabeth.moorhead@tceq.texas.gov
- Jesse Chacon – Operating Permits Section Manager - jesse.chacon@tceq.texas.gov
- Johnny Bowers – Air Permit Initial Review Team (APIRT) Team Leader - johnny.bowers@tceq.texas.gov

Please let me know if you have any questions.

Thank you for your cooperation.

Sincerely,

John Walker

Subject: Fort Hood Air Operating Permit Renewal Follow Up - RN numbers
When: Tuesday, December 20, 2022 1:30 PM-2:30 PM (UTC-06:00) Central Time (US & Canada).
Where: Microsoft Teams Meeting

This meeting is intended to discuss a process to evaluate multiple RN numbers (142) found in the TCEQ registry under the name “Fort Hood”.

Question needing to be addressed - Which equipment addressed by the RN’s are part of the Title V permit and which are not?

Good Afternoon,

We will have to schedule for an alternative time or day. I know that at the proposed time I will be in training and management will be occupied.

My immediate supervisor is out of the office today but I will let her know of your request so that she can provide a time/date when she is available. I will provide you with the time/date as soon as possible.

Thank you for your cooperation.

Sincerely,

John Walker

Subject: Proposed call on Thursday (12/15) to discuss Fort Hood and Multiple RN Numbers in TCEQ Registry

Good afternoon,

During a search of the TCEQ registry, it appears there are 142 RN numbers under “Fort Hood”.

I set up a 30 minute call for tomorrow (Thursday, 12/15) to discuss the process to evaluate the RN numbers to determine which are in the Title V permit and which will not be in the Title V permit.

Feel free to propose an alternative day and time that works better for your schedule.

Thanks!

Tim

Subject: RE: FOP O1659/Project 33269 Meeting Follow-Up

Good Afternoon,

Thank you for taking the time to meet with us today. As requested, I have included Dan Sim's email and links to information which can aid you below.

Dan Sims contact info:
Dan.sims@tceq.texas.gov

Outdated Standard Exemption Index:
Outdated Standard Exemption Index - Texas Commission on Environmental Quality - www.tceq.texas.gov

Please note, I was able to find the PBR Registration Nos. identified in my 11/21/2022 email. They do exist within our database, but under different Regulated Entity Reference Numbers (RN). This information will need to be sorted out with NSR or APIRT and Dan has stated you can contact him for questions. As you get the PBR information consistent, I will continue to review the Title V Permit Application and associated Title V forms that were submitted. You will receive an additional email from me with a list of discrepancies that will need to be resolved. These discrepancies will be kept independent from any issues identified so far with Form OP-PBRSUP and its associated PBR information. I hope to get this email to you before the upcoming holidays as I have worked through most of the Title V Renewal application. I don't believe the deficiencies will be as complex as those previously identified with the Form OP-PBRSUP and associated information.

Please provide me with the list of discrepancies between Fort Hood's provided PBR workbook, TCEQ's Central Registry listings under RN101612083, and the PDF documentation of PBRs and Standard Exemptions kept by Fort Hood and I will assist you in determining the best way to resolve them. I am only able to work on Title V documentation but can ensure you are directed to the proper people and teams to resolve discrepancies that I cannot resolve.

Please let me know if you have any additional questions.

Thank you for your cooperation.

Sincerely,

John Walker

Subject: FOP O1659/Project 33269 Meeting Follow-Up

Good afternoon John,

Thank you for helping to organize this morning's Teams meeting between Olsson, Fort Hood, and the TCEQ. As a follow-up, Olsson's next steps will be to finalize the list of discrepancies between Fort Hood's provided PBR workbook, TCEQ's Central Registry listings under RN101612083, and the PDF documentation of PBRs and Standard Exemptions kept by Fort Hood. Once this is completed and sent to you, Olsson will also address the edits you requested on forms OP-SUMR and OP-2. Once these are addressed, Olsson will continue to work with Fort Hood, Dan Sims, and you to complete the OP-PBRSUP form.

Thank you,

Will Calderon, EI, MS

Subject: RE: FOP O1659/Project 33269 U.S. Department of the Army, Fort Hood - OP-2 (Revised), OP-PBRSUP, OP-SUMR (Revised)

Good Afternoon,

I am currently reviewing the renewal application for FOP O1659/Project 33269 U.S. Department of the Army, Fort Hood. Please provide the following updates as soon as possible but no later than **11/28/2022:**

The documents submitted to me on 11/18/2022 require corrections. I have listed recommended changes to Form OP-PBRSUP, Form OP-SUMR, and Form OP-2 below. Please note that the submitted Form OP-PBRSUP will not be accepted by the EPA as is.

1. Form OP-PBRSUP

   (1) Many of the PBR Registration Nos. provided on Table A such as 54052, 52124, and 41479 do not exist within our databases. Please verify the PBR Registration Nos. and update them if required. You may use the TCEQ Site Map linked below to ensure your information is consistent between Form OP-PBRSUP and the TCEQ Site Map.

   TCEQ - NSR, TV and CapTrade Searchs (texas.gov)

   To use the TCEQ Site Map, select the link above. Then click on New Source Review Air Permits. Then enter the RN under Regulated Entity. For Status select ALL and Sort Direction select Descending. This will show all of the NSR Permits under the RN to better aid you in your determinations.

   (2) Please verify the Registration Dates for the PBR Registration Nos. and update them if required. I have noticed that some of the provided registration dates do not align with our database such as the Registration Date 03/14/1997 for PBR Registration No. 70014 for Unit ID SC011 and PBR 106.433. Our database shows that the Registration Date or Project Complete Date is 11/17/03.

   (3) Please verify that the PBR Registration Nos. are consistent with the listed PBR.

   For example, on Form OP-PBRSUP Table A for Unit ID ST003A, PBR Registration No. 24583 was provided for PBR 106.412 but our database shows that 24583 is for Standard Exemption 86.

   (4) Many of the Items listed on Table A of Form OP-PBRSUP have “Claimed, No Registration Required” for the Registration No. The EPA will not accept this. Table B is for Claimed (not registered) PBRs for the Application Area (by unit), and Table C is for Claimed (not registered) PBRs for Insignificant Sources for the Application Area.

   Please make corrections to Form OP-PBRSUP so that registered and claimed PBRs are on the correct tables respectively.

   (5) Please ensure that all PBRs listed on Tables A and B are listed on Table D.

2. Form OP-2 Table 2

   Revision No. 153 on Form OP-2 states you are adding PBR Registration Nos. but has conflicting information that may be confusing.

For example, you have listed units which you have requested to be removed from the Title V Permit and are stating you are adding PBR Registration Nos. to those units. This can be seen for Unit ID No. ARO81 which is part of Group ID No. SU001 which was removed by revision 134. I cannot add PBR Registration Nos. to units that are not in the Title V Permit. There can be units on Form OP-PBRSUP that are not in the Title V Permit but in order to avoid any confusion, I think using a revision with more general language and information may be more appropriate.

Please use a revision with more general information such as the example provided below.

Revision No.	Revision Code	Unit/Group Process			NSR Authoriz
		New Unit	ID No.	Applicable Form	
153	MS-A	Yes/No	Various	Various	Various

3. Form OP-SUMR

PBR Registration Nos. and the identified PBRs were not included on Form OP-SUMR Table 1 for their respective Unit IDs in the Preconstruction Authorizations 30 TAC Chapter 116/30 TAC Chapter 106 column. I am unable to add PBR Registration Nos. from Table A of Form OP-PBRSUP to units in the Title V Permit if they are not identified on Form OP-SUMR and in the correct format. Additionally, you have added revisions for adding PBR Registration Nos. to units that are being removed from the Title V Permit as identified in the item above.

Please add the PBR Registration Nos. from Table A of Form OP-PBRSUP to their respective units in the Title V Permit on Form OP-SUMR in the format found on pages 2 and 3 of the Form OP-SUMR Instructions linked below. An example of this format would be for 106.311/11/01/2003[81233] for Unit ID MO011 with 81233 being the PBR Registration number as seen below.

Please note that Form OP-PBRSUP is not an applicable form, it is not a Form in which I am adding information to the database. The appropriate UA Form or applicable Form should be identified. Examples of applicable forms are the OP-UA## Forms, OP-REQ2, OP-PCA, etc. Instructions for identifying Applicable Forms may be found on Page 6 of the Form OP-SUMR Instructions.

TCEQ Form 10344 - Individual Unit Summary for Revisions Form OP-SUMR Instructions (texas.gov)

Unit/Process AI	Unit/Process Revision No.	Unit/Process ID No.	Unit/Process Applicable Form	Unit/Process Name/ Description	Unit/Process CAM	Preco Authorizatio 116/ 30 T
A	153	MO011	~~OP-PBRSUP~~ Form OP-PCA	AMMO CRUSHING OPERATIONS		§106.262/1 106.311/11

Please let me know if you have questions in regards to these requested items.

Note that a Certification by the Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted once all items have been reviewed and resolved, I will request the form at a later time. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

John Walker

Good morning, Mr. Walker.

On behalf of Fort Hood, U.S. Army, and Veterans Environmental Group, please find attached the requested air quality operating permit renewal application forms including:

- OP-2 (revised),
- OP-PBRSUP, and
- OP-SUMR (revised).

On behalf of Fort Hood, U.S. Army, and Veterans Environmental Group, you are welcome to call or email me if you have any questions regarding the attached forms.

I will give you a call at 1 PM this afternoon to confirm you received the attachments.

Thank you,

Tim

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
11/18/2022	O1659	RN101612083

Unit ID No.	PBR No.	Version No./Date Or Registration No.	Monitoring Requirement
CT001	106.371	54052	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

EC002	106.495	52124	Maintain a copy of Section 106.4 and Section 106.495, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.495, the following conditions are met: (1) Before construction begins, the facility shall be registered with the commission's Office of Permitting, Remediation, and Registration in Austin using Form PI-7. (2) The combustible material shall not exceed 10% by weight of the total load to the oven, furnace, and/or incinerator. (3) The combustible material shall contain no halogenated organic compounds. (4) The oven, furnace, and/or incinerator shall be equipped with an afterburner automatically controlled to operate with a minimum temperature of 1,400 degrees Fahrenheit and a gas retention time of 0.5 second or greater. (5) Opacity of emissions from the oven, furnace, and/or incinerator shall not exceed 5.0% averaged over a five-minute period. (6) The manufacturer's recommended operating instructions shall be posted at each oven, furnace, and/or incinerator, and each unit shall be operated in accordance with these instructions. (7) Heat shall be provided by the combustion of sweet natural gas, liquid petroleum gas, or Number 2 fuel oil with no more than 0.5% sulfur by weight, or by electric power. (8) The emission of any air contaminant shall not exceed 0.5 pounds per Hour and 2.0 tons per year. Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6

In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

IC004-6	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

IC004-7	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

IC004-8	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

SC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-4/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6
WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

Texas Commission on Environmental Quality
Federal Operating Permit Program
Application for Permit Revision/Renewal
Form OP-2-Table 1

Date:	1/19/2022
Permit No.:	O1659
Regulated Entity No.:	RN101612083
Company Name:	US Department of the Army

For Submissions to EPA

Has a copy of this application been submitted (or is being submitted) to EPA?	☒ YES ❑ NO

I. Application Type

Indicate the type of application:

☒Renewal ❑ Streamlined Revision (Must include provisional terms and conditions as explained in the instructions.)

❑ Significant Revision ❑ Revision Requesting Prior Approval ❑ Administrative Revision ❑ Response to Reopening

II. Qualification Statement

For SOP Revisions Only The referenced changes qualify for the marked revision type.	☒ YES ❑ NO
For GOP Revisions Only The permitted area continues to qualify for a GOP.	☐ YES ❑ NO

III. Major Source Pollutants (Complete this section if the permit revision is due to a change at the site or change in regulations.)

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	VOC	NO_X	SO_2	PM_{10}	CO	Pb	HAPs	Other
Major at the site *(YES/NO)*:	YES	YES	NO	NO	YES	NO	NO	

IV. Reference Only Requirements *(For reference only)*

Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ❑ NO ❑ N/A

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.

A.	Is the site subject to bilingual requirements pursuant to 30 TAC § 122.322?		☒YES ☐ NO
B.	Indicate the alternate language(s) in which public notice is required:	Spanish	
C.	Will there be a change in air pollutant emissions as a result of the significant revision		☒ YES ☐ NO

D. Indicate the air pollutant(s) that will be changing and include a brief description of the change in pollutant emissions for each pollutant:

Pollutant	Description of the Change in Pollutant Emissions
NOx	+110.15 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
PM/PM10/PM2.5	+7.58 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
SO2	+2.82 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
CO	+73.23 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
VOC	+6.45 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Lead	+3.44E-4 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Total HAP	+0.10 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.

Good afternoon Mr. Walker,

Thank you again for clarifying some of the information requirements for form OP-PBRSUP in our correspondence last week. On behalf of Ft. Hood, I would like to request an extension on providing the completed OP-PBRSUP, OP-2, and OP-SUMR forms until Friday, November 18th. This will allow for needed additional time to compile the emissions monitoring and compliance information for all relevant pollutants from registered PBR equipment into OP-PBRSUP.

Thank you,

Will Calderon, EI, MS

Good afternoon, John.

On behalf of Fort Hood, U.S. Army, and Veterans Environmental Group, I would like to schedule a conference call to discuss the information collected to-date to address the information requested in your September 9th email referenced below.

Fort Hood is currently collecting information to respond to this request. This intent of the conference call is to confirm the draft response is on the “right track” to properly identify the required elements of the requested forms.

I can email a Teams call invitation with both phone-in and video conferencing capabilities based on your availability for a call during the week of October 3rd.

Please know which days and times during the week of October 3rd you will be available for a call.

Robert Kennedy at Fort Hood is planning to attend the call on behalf of the Fort Hood team.

Curtis Hodges from Veterans Environmental Group might attend the call depending on his availability.

I will attend. Will Calderon from Olsson might also attend the call.

Thank you,

Tim

Good morning Mr. Walker! We are in a support contract switchover at the moment. The consultant who assisted us with preparing our permit renewal application is in negotiations with our new support contractor to assist with follow-on permit work. As such, would it be possible to get a 30-day extension on preparing the new documentation and revisions to submit back to you while they negotiate?

Very respectfully,

Robert Kennedy

Subject: RE: [URL Verdict: Neutral][Non-DoD Source] Technical Review - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good Afternoon,

I am currently reviewing the renewal application for FOP O1659/Project 33269 U.S. Department of the Army, Fort Hood. Please provide the following updates as soon as possible but no later than **09/23/2022:**

1. Please submit Form OP-PBRSUP to provide supplemental information for all Permits by Rule (PBRs) that authorize emission units for the site (or area) subject to the requirements of the Federal Operating Permit (FOP) Program.

   Please ensure the monitoring for all items on Table A and B of Form OP-PBRSUP have their monitoring identified on Table D.

   PBR Registration Nos. found on Table A need to be added to their respective unit's authorized PBR. Please provide or update revisions on Forms OP-2 Table 2 and OP-SUMR to state you are adding PBR Registration Nos. to PBRs. Please follow the guidance found on page 2 and 3 of the Form OP-SUMR Instructions to ensure that the PBR and PBR Registration No. are formatted correctly. You can find the Form OP-SUMR Instructions at the following link:

   https://www.tceq.texas.gov/assets/public/permitting/air/Forms/Title_V/Administrative/10344.pdf

Note that a Certification by the Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted once all items have been reviewed and resolved, I will request the form at a later time. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation. Please let me know if you have any questions.

Sincerely,

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

February 2, 2022

THE HONORABLE DAWN BUCKINGHAM
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 33269
Permit Number: O1659
US Department of the Army
Fort Hood, U.s. Army
Killeen, Bell County
Regulated Entity Number: RN101612083
Customer Reference Number: CN600126262

Dear Senator Buckingham:

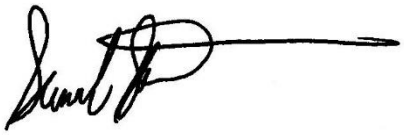
This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application.
http://www.tceq.texas.gov/assets/public/hb610/index.html?lat=31.133333&lng=-97.6&zoom=13&type=r.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Re: Accepted Federal Operating Permit Renewal Application

This letter is being sent to you for information only and no action is required. If you need further information, please contact me at (512) 239-1250.

Sincerely,



Samuel Short, Deputy Director
Air Permits Division
Office of Air
Texas Commission on Environmental Quality

July 6, 2021

MR ROBERT KENNEDY
AIR QUALITY PROGRAM MANAGER
US DEPARTMENT OF THE ARMY
4612 ENGINEER DR, DPW, ENVIRONMENTAL DIVISIONIMHD-PWE
FORT HOOD TX 76544-5055

Re: Federal Operating Permit Renewal
Permit Number: O1659
Company Name: U.S. Department of the Army
Customer Reference Number: CN600126262
Regulated Entity Number: RN101612083

Dear Mr. Kennedy:

The renewal of the above-referenced site operating permit (SOP) is required every 5 years, as indicated in Title 30 Texas Administrative Code § 122.241(a) [30 TAC § 122.241(a)] or, more frequently if so indicated on the permit face. Accordingly, permit holders are required to submit *timely and complete* permit renewal applications as specified in 30 TAC § 122.241(b). Title 30 TAC § 122.134(a) indicates that an application is *complete* on the 61st day after receipt by the executive director, unless the executive director has requested additional information or otherwise notified the applicant of incompleteness. For an application to be *timely*, 30 TAC § 122.133(2) indicates that its submittal must occur between 6 and 18 months before the permit's expiration date. Our receipt of a timely and complete application allows you to operate under your SOP's current terms and conditions until final action is taken on your renewal application. Please disregard this notification letter if a renewal application has been submitted and is currently being processed.

The expiration of your permit is August 8, 2022; and any *complete* application received before February 4, 2022, will be considered timely. If your SOP expires without the submittal of a timely and complete renewal application, your right to operate the above-referenced facility will be terminated. The reinstatement of your right to operate will require your submittal, and our final approval, of a new and separate SOP application.)

A complete application for renewal must include all of the information required by 30 TAC Chapter 122 (see 30 TAC § 122.132). To comply with these requirements, please provide new versions of the following forms: Form OP-1 (Site Information Summary), Form OP-2 (Applications for Permit Revision/Renewal), Form OP-ACPS (Application Compliance Plan and Schedule), Form OP-REQ1 (Application Area-Wide Applicability Determinations and General Information), and Form OP-CRO1 (Certification by Responsible Official). In addition, please review all other forms that were previously submitted and provide any updated information necessary for processing of the SOP renewal (i.e. appropriate Unit Attribute forms, OP-REQ2, OP-REQ3, OP-MON, etc. Note that even though nothing may have changed at the site, updated Unit Attribute forms are required to be submitted if the most recent version of the TCEQ Unit Attribute form includes additional applicable questions or revised applicable option codes for any answer.). Title V permit holders with major New Source Review (NSR) permits must include in the Title V renewal application a Major NSR Summary Table. The Major NSR Summary Table must also be submitted electronically upon request. **Failure to submit all of the required forms may result in a determination that your renewal application is not complete.** If any

of your company's core data (i.e., name, address, phone number, etc.) has changed, a TCEQ Core Data form will be required with these submittals. All forms may be found at the TCEQ Web page at http://www.tceq.texas.gov/permitting/air/nav/tv_admin_forms.html.

As a reminder, you may void your SOP if you demonstrate that the permitted site is no longer subject to the Federal Operating Permits Program. If you wish to pursue voidance of your SOP, please notify us in writing to this effect and provide the supporting documentation required by 30 TAC § 122.161(e)(1).

Any application submitted by a person/entity who is delinquent on a fee and/or penalty will not be declared administratively complete until the fees/penalties are paid and/or current. Similarly, final action will be withheld by the agency on an application if it is discovered after the application is considered administratively complete that the owner/entity who submitted the application is delinquent on fees and/or penalties until such time as the fees/penalties are paid and/or current. You may visit the agency Web site for additional information at www.tceq.texas.gov/agency/financial/fees/delin/index.html.

Further information regarding the renewal process and required submissions may be accessed at http://www.tceq.texas.gov/permitting/air/guidance/titlev/tv_site_guidance.html. Please disregard this notice if you have already submitted the above-referenced renewal application. Thank you for your cooperation in this matter. If you have questions concerning the processing of your SOP renewal application, please contact Mr. Jesse Chacon at (512) 239-1570.

Sincerely,

Texas Commission on Environmental Quality

1. TITLE V COMPLIANCE REPORT & OPERATING PEMRIT RENEWAL

1.1 Introduction

In support to the Department of the Army (Army), Whitetail, was contracted to assist the Environmental Division's air quality program at Fort Hood, Texas with the preparation of the 2022 Title V Compliance and Operating Permit Renewal for submittal to the Texas Commission for Environmental Quality (TCEQ).

This report includes Title V Permit renewal revisions and Title V renewal submittal application documentation. The Title V Compliance report is broken up further into three (3) sections:

- Section 2.0 provides facility overview information
- Section 3.0 provides the revisions for 2017 Title V Permit Renewal
- Section 4.0 contains the TCEQ Title V Operating Permit renewal forms
- Appendix A – Title V Operating Permit No. O1659
- Appendix B – Source Calculations
- Appendix C – Process Flow Diagrams
- Appendix D – HDR Memo

1.2 Purpose of the Title V Permit Renewal

As per 30 Texas Administrative Code (TAC) Chapter 122.241, Fort Hood is submitting a permit renewal to TCEQ to fulfill the five (5) year renewal requirement and to reflect changes that have occurred, as well as create consistency with Fort Hood's Air Emissions Inventory (AEI) and their Emissions Inventory Questionnaire (EIQ).

2. FACILITY OVERVIEW

This section provides a facility overview including site location information that contributes to Title V Air Quality at Fort Hood. Information in this section includes:

- Site location information referencing location to major cities
- An overview of major units, and tenant organizations
- Fort Hood's major source pollutants
- An overview of the current military activities and operations
- An overview of the source categories at Fort Hood
- EU and process descriptions

2.1 Site Location

Fort Hood is located adjacent to the City of Killeen in central Texas within Bell and Coryell Counties and is between the Dallas-Fort Worth and San Antonio areas. The capital city of Austin is located approximately 60 miles to the south; Waco is located about 50 miles to the north and Dallas is about 125 miles northwest of Fort Hood.

Fort Hood is comprised of approximately 339 square miles of land, consists of three cantonment areas (Main Post, West Fort Hood, and North Fort Hood), two airfields, and several maneuver/live fire training areas. The Main Post cantonment area is located at the southern edge of the range training area. North Fort Hood cantonment is at the northern edge of the installation and West Fort Hood cantonment is located south of United States (US) Highway 190/Interstate 14 in the southern extremity of the reservation. The southeastern boundary of the installation lies adjacent to the City of Killeen.

2.2 Fort Hood Units, Tenant Organizations and Contractors

The primary support at Fort Hood is training and mobilization for the military units assigned to the facility. It is also a mobilization site for Army Reserve and National Guard units. The installation also provides services for a wide variety of tenant organizations and a diverse military community. It provides housing for military personnel and their families and facilities similar to those in a typical civilian community. These facilities include a hospital and health care, recreational amenities, retail services, restaurants, and a golf course.

2.3 Major Source Pollutants

Bell County, Texas is an attainment area so the TCEQ regulatory requirements are less stringent than those located in the Dallas Fort-Worth counties and areas. However, according to the data listed in TCEQ Form OP-2, due to its size and the nature of the work conducted on Fort Hood, the following pollutants are emitted at or above the major source thresholds:

- Volatile Organic Compounds (VOCs), Carbon Monoxide (CO) and

- Nitrogen Oxides (NOx).

The majority of Fort Hood EUs operate under one of the 120 TCEQ listed Permits by Rule (PBR) and do not exceed the potential to emit requirements for those operations.

Air quality operating permit form OP2 identifies each applicable PBR.

2.4 Title V Source Categories and Emission Unit (EU) Identifications (ID)

An emission unit (EU) is defined in Title 40, Part 70.2 of the Code of Federal Regulations (CFR) (40 CFR 70.2) as any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under Section 112(b) of the Clean Air Act Amendments of 1990.

EUs are identified in the Title V Permit O1659 by a two-character prefix based on their source category and is followed by a three-digit identification number that identifies each EU within a source category. These numbers are identified further in the Air Program Information Management System (APIMS) and are linked to the process IDs for the sources. The source categories associated with each two-character prefix are as follows:

- AB = Abrasive Blasting Operations
- EC = External Combustion Equipment Operations
- ET = Engine Testing Operations
- FD = Fugitive Dust Sources
- FS = Fueling Station Operations
- IC = Internal Combustion Equipment
- LR = Loading Rack Operations
- MO = Miscellaneous Operations
- SU = Solvent Use Operations
- ST = Storage Tanks
- SC = Surface Coating Operations
- WL = Welding Operations
- WW = Woodworking Operations

The air operating permit unit attribute forms and the existing air quality operating permit in Appendix A identify current EU's at Fort Hood.

3. TITLE V PERMIT RENEWAL REVISIONS

All renewal additions and deletions are identified on the applicable air operating permit application forms.

3.1 Proposed Title V Renewal Emission Unit (EU) Additions

The subsection provides a list of proposed EUs by source category to be added to the Title V Permit.

3.1.1 External Combustion Equipment Operations

External combustion equipment operations at Fort Hood consists of both greater than 10 million British thermal units per hour (MMBtu/hr.) boilers and less than 10 MMBtu/hr. boilers and heaters. There are four (4) EU's (EC001-EC004) that group these units together. EC001 is comprised of the boilers that are greater than 10 MMBtu/hr and EC002 is comprised of those units that are below 10 MMbtu/hr as part of the 2017 renewal application, EC003 and EC004 were deleted and the units were moved to groups EC001 and EC002 according to their output. Fort Hood added the following equipment to the following external combustion EUs for inclusion in the permit:

EC001 – Four (4) new steam boilers for the new hospital in building 36071. The boilers are manufactured by Cleaver Books and have a max output of greater than 10 MMBtu/hr. These boilers need to be added to the permit as part of Group EC001. Fort Hood requested the addition of these four boilers in their Operating Permit Renewal Application dated January 2017; however, the boilers were inadvertently omitted from the permit.

EC002 – Added three (3) steam boilers in building 87018 to this EU ID. These steam boilers have a max output of less than 10 MMBtu/hr. This EU ID consists of boilers 12-17 and boilers 21-25 as well as site wide boilers and heaters.

3.1.2 Fueling Station Operations

Additional fueling station (FS) operations at Fort Hood were added as part of the 2022 renewal application and consisted of one (1) airfield rapid refueling station, two motor pools, and other miscellaneous fueling stations. No additional fueling stations are identified as part of this 2022 renewal application.

3.1.3 Internal Combustion Operations

Internal combustion (IC) operations at Fort Hood consists of diesel, natural gas, and propane fired emergency generators. The Title V Permit groups the equipment in this operation into four IC sources: IC001, IC002, IC003, and IC004. New sources should include all other IC equipment not previously included in the Title V Permit. An increase in the number of IC units covered by IC001

– IC004 allow for units to be added and/or deleted without the need to revise the permit. The air operating permit application forms identify the EU's to be added and deleted.

3.1.4 Miscellaneous Operations

Miscellaneous operations at Fort Hood consist of various equipment including landfill and bioremediation operations, tank purge operations, aerosol can crushing, solvent distillation and ammo crushing. Attachments to air quality operating permit application form OP-UA1 identify the miscellaneous operations.

3.1.5 Storage Tanks

Fort Hood operates above ground underground storage tanks. The storage tanks are identified on the applicable air quality operating permit application forms, either explicitly on the form or as an attachment to a form.

3.1.6 Surface Coating Operations

The surface coating operations are identified on the applicable air quality operating permit application forms, either explicitly on the form or as an attachment to a form.

3.1.7 Wood Working Operations

Woodworking (WW) operations at Fort Hood consist of crate, box, and furniture buildings as well as other miscellaneous woodworking activities. Operations consist of sawing, cutting, sanding, grinding, etc. Particulate matter (PM) emissions are controlled using cyclone type dust collectors and bag houses. The WW operations are identified on the applicable air operating permit application forms.

3.2 Proposed Title V Renewal Emission Unit (EU) Deletions

EU deletions are reflected on the applicable air quality operating permit application forms.

3.3 Proposed Title V Renewal Administrative Revisions

The enclosed applicable air quality operating permit application forms identify proposed administrative changes by source category and EU to be revised in the Title V Permit.

Based on the Environmental Protection Agency's (EPA's) reversal of the "Once In Always In" (OIAI) policy for major source National Emission Standards for Hazardous Air Pollutants (NESHAP) for Source Categories[1], 40 CFR Part 63, Subpart GG, National Emission Standards for Aerospace Manufacturing and Rework Facilities (Aerospace NESHAP), EPA documents related to reversal of the OIAI policy, federal regulations, TCEQ guidance, and TCEQ regulations were reviewed to assess if Fort Hood may opt out of being subject to the Aerospace NESHAP standard. In addition, reclassification of major sources as area sources under Section 112 of the Clean Air Act effective January 19, 2021 may remove all applicable major source NESHAP

requirements by reference. Historically, Fort Hood has been a synthetic minor source of hazardous air pollutants for approximately 14 years and the Aerospace NESHAP no longer applies to Fort Hood operations.

This Title V Permit Revision application removes all applicable requirements for NESHAP GG from the Title V permit as this rule is now entirely addressed on form OP-REQ1. Those sources removed from the permit as a result of this regulatory determination are detailed in form OP-2.

Fort Hood is requesting to remove all references of applicability for NESHAP JJ in-line with EPA's Once-In-Always-In EPA rules. It is further requested that all major source NESHAP applicability be removed from Fort Hood's Title V SOP where applicable under guidance. Appendix D contains Fort Hood's internal review supporting this request."

[1]Reclassifcation of Major Sources as Area Sources Under Section 112 of the Clean Air Act, William L. Wehrun, January 25, 2018

4. TITLE V RENEWAL APPLICATION FORMS

This section includes the TCEQ required application forms for the 2022 Fort Hood Title V Renewal.

Title V Renewal Application Forms in this subsection include the following:

- Form CR01 – Certification by Responsible Official
- Form OP-1 – Site Information Summary
- Form OP-2 – Application for Permit Revision/Renewal
- Form OP-SUMR – Individual Unit Summary for Revisions
- Unit Attribute Forms
    - Form OP-UA1 – Miscellaneous Unit Attributes
    - Form OP-UA2 – Stationary Reciprocating Internal Combustion Engine Unit Attributes
    - Form OP-UA3 – Storage Tank/Vessel Attributes
    - Form OP-UA4 – Loading/Unloading Operations Attributes
    - Form OP-UA6 – Boiler/Steam Generator/Steam Generating Unit Attributes
    - Form OP-UA18 – Surface Coating Operations Attributes
- Form OP-REQ1 – Area-Wide Applicability Determinations and General Information
- Form OP-REQ2 – Negative Applicable Requirement Determinations
- Form OP-REQ3 – Applicable Requirements Summary
- Form OP-ACPS – Application Compliance Plan and Schedule
- Form OP-MON – Monitoring Requirement

The Core Data form was not included with this package because Ms. Timi M. Dutchuk is identified as a Duly Authorized Representative (DAR) with TCEQ; thus, the Core Data form does not require any updates or changes at this time.

FORM CR01 – CERTIFICATION BY RESPONSIBLE OFFICIAL

Form OP-CRO1
Certification by Responsible Official
Federal Operating Permit Program

All initial permit application, revision, renewal, and reopening submittals requiring certification must be addressed using this form. Updates to site operating permit (SOP) and temporary operating permit (TOP) applications, other than public notice verification materials, must be certified prior to authorization of public notice or start of public announcement. Updates to general operating permit (GOP) applications must be certified prior to receiving an authorization to operate under a GOP.

I. Identifying Information		
RN: RN101612083	CN: CN600126262	Account No.: BF-0129-I

FORM OP-2 – APPLICATION FOR PERMIT REVISION/RENEWAL

Texas Commission on Environmental Quality
Federal Operating Permit Program
Application for Permit Revision/Renewal
Form OP-2-Table 1

Date:	1/19/2022
Permit No.:	O1659
Regulated Entity No.:	RN101612083
Company Name:	US Department of the Army

For Submissions to EPA

Has a copy of this application been submitted (or is being submitted) to EPA?	☒ YES ☐ NO

I. Application Type

Indicate the type of application:

☒ Renewal ☐ Streamlined Revision (Must include provisional terms and conditions as explained in the instructions.)

☐ Significant Revision ☐ Revision Requesting Prior Approval ☐ Administrative Revision ☐ Response to Reopening

II. Qualification Statement

For SOP Revisions Only The referenced changes qualify for the marked revision type.	☒ YES ☐ NO
For GOP Revisions Only The permitted area continues to qualify for a GOP.	☐ YES ☐ NO

III. Major Source Pollutants (Complete this section if the permit revision is due to a change at the site or change in regulations.)

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	VOC	NO_X	SO_2	PM_{10}	CO	Pb	HAPs	Other
Major at the site *(YES/NO)*:	YES	YES	NO	NO	YES	NO	NO	

IV. Reference Only Requirements *(For reference only)*

Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ☐ NO ☐ N/A

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.

Regulated Entity No.:	RN101612083
Company Name:	US Department of the Army

12	SIG-E	No	BOILER18	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
13	SIG-E	No	BOILER19	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
14	SIG-E	No	BOILER20	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
15	SIG-E	No	BOILER21	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
16	SIG-E	No	BOILER22	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
17	SIG-E	No	BOILER23	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.

Date:	1/19/2022					
Permit No.:	**O1659**					
Regulated Entity No.:	**RN101612083**					
Company Name:	**US Department of the Army**					
18	SIG-E	No	BOILER24	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
19	SIG-E	No	BOILER25	OP-REQ2	106.183/09/04/2000	Remove unit from permit. This boiler does not fire liquid or solid fuel, has a heat input capacity <10 MMBTU/hr, and is located in a county affected by 30 TAC Chapter 117, therefore it is an off-permit source, per OP-UA6 instructions.
20	SIG-E	No	BOILER9	OP-UA6	106.183/06/18/1997	Source removed from site.
21	SIG-E	No	EC001	OP-UA6	106.183/06/18/1997	Remove 40 CFR 63, Subpart O from Permit Shield as this rule is addressed on form OP-REQ1
22	SIG-E	No	GRP-ENGINE1	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ
23	SIG-E	No	GRP-ENGINE10	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; Adjusting Basis of Determination for NSPS JJJJ Negative Applicability to properly address language of rule
24	SIG-E	No	GRP-ENGINE11	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart IIII; GRPENGINE11 will only have one Unit ID associated with it after other units are removed in this revision. This negative applicability being added for NSPS IIII for GRP-ENGINE11 can instead be added to IC001-21, and the grouping GRPENGINE11 does not need to exist anymore.
25	SIG-E	No	GRP-ENGINE12	OP-REQ2	106.511/09/04/2000	Demonstrating Negative Applicability for 40 CFR 60, Subpart JJJJ

Company Name:	**US Department of the Army**

I. Significant Revision *(Complete this section if you are submitting a significant revision application or a renewal application that includes a significant revision.)*

A.	Is the site subject to bilingual requirements pursuant to 30 TAC § 122.322?		☒YES ☐ NO
B.	Indicate the alternate language(s) in which public notice is required:	Spanish	
C.	Will there be a change in air pollutant emissions as a result of the significant revision		☒ YES ☐ NO

D. Indicate the air pollutant(s) that will be changing and include a brief description of the change in pollutant emissions for each pollutant:

Pollutant	Description of the Change in Pollutant Emissions
NOx	+110.15 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
PM/PM10/PM2.5	+7.58 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
SO2	+2.82 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
CO	+73.23 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
VOC	+6.45 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Lead	+3.44E-4 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.
Total HAP	+0.10 tons/year of potential emissions from added units. Removed units are not reflected in this emission change.

Attachment to Form OP-2
Summary of Air Emission Changes

Note: The table provided below is intended to calculate potential air emission changes associated with added units. Units removed from the facility are not accounted for in the calculated emission changes below.
The calculations use conservatively high emission factors to cover the spectrum of engines located at the facility, ranging from existing NESHAP ZZZZ engines to engines subject to the most current NSPS emission standards.
The potential to emit values listed below are to be interpreted as "no greater than" values. Future refinement of the emission factors is available. The facility operates emission units to maintain facility-wide emission levels below major source HAP thresholds.

Air Emission Factors for Stationary Diesel Engines ≤ 600 bhp (lb/bHP)

NOx	PM/PM10/PM2.5	SO_2	CO	VOC	Pb	HAP	Emission Factor Source
0.031	2.20E-03	2.50E-03	6.68E-03	0.0025141	-	2.77E-05	EPA AP-42, Section 3.3, Table 3.3-1 (All PM = PM10 and PM2.5)

Air Emission Factors for Stationary Diesel Engines > 600 bhp (lb/bHP)

NOx	PM/PM10/PM2.5	SO_2	CO	VOC	Pb	HAP	Emission Factor Source
0.024	7.00E-04	1.21E-05	5.50E-03	0.00064155	-	9.53E-06	EPA AP-42, Section 3.4, Table 3.4-1 (All PM = PM10 and PM2.5)

Air Emission Factors for 4SRB Stationary Natural Gas Engines (lb/bHP @ 7,000 Btu/bHP-hr)

NOx	PM/PM10/PM2.5	SO_2	CO	VOC	Pb	HAP	Emission Factor Source
0.016	1.36E-04	4.12E-06	2.60E-02	0.0002072	-	2.27E-04	EPA AP-42, Section 3.2, Table 3.2-3 (All PM = PM10 and PM2.5)

Air Emission Factors for Dual Fuel Boilers (lbMMscf @ 1,020 Btu/scf), Natural Gas fuel assumed as primary heat input

NOx	PM/PM10/PM2.5	SO_2	CO	VOC	Pb	HAP	Emission Factor Source
100	7.60	0.60	84	5.50	0.0005	1.85E-03	EPA AP-42, Section 1.4, Table 1.4-1, 1.4-2, 1.4-3 (All PM = PM10 and PM2.5)

[1]Maximum Annual Operating Hours reflective of 10% of normal annual hours of operation per TAC 106.511 Permit by Rule.
[2]Maximum MMBtu/hr per boiler is no greater than 40 MMBtu/hr (0.039 MMscf/hr). For conservatism, 40 MMBtu/hr is used as a high-end value per boiler for maximum heat input. Future refinement of PTE per boiler is available using unit-specific maximum heat input.
[3]Permitted by TAC 106.183 Permit by Rule.
Actual emissions from facilities covered by permit by rule regulations must be less than emission levels in TAC 106.4 (1) and (4).

UNIT ATTRIBUTE FORMS

Note regarding the enclosed UA forms: Consistent with the 2017 renewal application, this renewal application includes the existing air operating permit, dated August 8, 2017, in Appendix A to identify all existing permitted air emission units. Changes to the facility relative to the existing air quality operating permit are identified on the enclosed OP-2 and OP-SUMR forms. The information contained on the enclosed unit attribute forms is intended to communicate the same level of detail as identified in the application for the August 8, 2017 air quality operating permit.

Please note, all storage tanks that previously stored JP8 fuel now store F24 fuel.

TITLE V SOURCE CATEGORIES AND EMISSION UNIT (EU) IDENTIFICATIONS (ID)

An emission unit (EU) is defined in Title 40, Part 70.2 of the Code of Federal Regulations (CFR) (40 CFR 70.2) as any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any pollutant listed under Section 112(b) of the Clean Air Act Amendments of 1990.

EUs are identified in the Title V Permit O1659 by a two-character prefix based on their source category and is followed by a three-digit identification number that identifies each EU within a source category. These numbers are identified further in the Air Program Information Management System (APIMS) and are linked to the process IDs for the sources. The source categories associated with each two-character prefix are as follows:

- AB = Abrasive Blasting Operations
- EC = External Combustion Equipment Operations
- ET = Engine Testing Operations
- FD = Fugitive Dust Sources
- FS = Fueling Station Operations
- IC = Internal Combustion Equipment
- LR = Loading Rack Operations
- MO = Miscellaneous Operations
- SU = Solvent Use Operations
- ST = Storage Tanks
- SC = Surface Coating Operations
- WL = Welding Operations
- WW = Woodworking Operations

Subchapter JJJJ: Standards of Performance for Stationary Spark Ignition Internal Combustion Engines

NOTE: The Facility has other RICEs where the RICE NESHAP only requires compliance with NSPS Subpart JJJJ; however, there are no applicable requirements since these emergency engine (>25hp) were manufactured prior to January 1, 2009 and installed prior to January 1, 2011. EPA expects a future rulemaking on this category of engines.

Form OP-REQ1: Page 1			
I.	**Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter**		
	A.	**Visible Emissions**	
♦	1.	The application area includes stationary vents constructed on or before January 31, 1972.	☒YES ☐NO
♦	2.	The application area includes stationary vents constructed after January 31, 1972. *If the responses to Questions I.A.1 and I.A.2 are both "NO," go to Question I.A.6.* *If the response to Question I.A.1 is "NO" and the response to Question I.A.2 is "YES," go to Question I.A.4.*	☒YES ☐NO
♦	3.	The application area is opting to comply with the requirements for stationary vents constructed after January 31, 1972 for vents in the application area constructed on or before January 31, 1972.	☒YES ☐NO
♦	4.	All stationary vents are addressed on a unit specific basis.	☐YES ☒NO
♦	5.	Test Method 9 (40 CFR Part 60, Appendix A, Method 9 - Visual Determination of the Opacity of Emissions from Stationary Sources) is used to determine opacity of emissions in the application area.	☒YES ☐NO
♦	6.	The application area includes structures subject to 30 TAC § 111.111(a)(7)(A).	☒YES ☐NO
♦	7.	The application area includes sources, other than those specified in 30 TAC § 111.111(a)(1), (4), or (7), subject to 30 TAC § 111.111(a)(8)(A).	☒YES ☐NO
♦	8.	Emissions from units in the application area include contributions from uncombined water.	☒YES ☐NO
♦	9.	The application area is located in the City of El Paso, including Fort Bliss Military Reservation, and includes solid fuel heating devices subject to 30 TAC § 111.111(c).	☐YES ☐NO ☒N/A

I.	**Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter (continued)**			
	B.	**Materials Handling, Construction, Roads, Streets, Alleys, and Parking Lots**		
	1.	Items a - d determines applicability of any of these requirements based on geographical location.		
♦		a.	The application area is located within the City of El Paso.	☐YES ☒NO
♦		b.	The application area is located within the Fort Bliss Military Reservation, except areas specified in 30 TAC § 111.141.	☐YES ☒NO
♦		c.	The application area is located in the portion of Harris County inside the loop formed by Beltway 8.	☐YES ☒NO
♦		d.	The application area is located in the area of Nueces County outlined in Group II state implementation plan (SIP) for inhalable particulate matter adopted by the TCEQ on May 13, 1988.	☐YES ☒NO
		If there is any "YES" response to Questions I.B.1.a - d, answers Questions I.B.2.a - d. If all responses to Questions I.B.1.a-d are "NO," go to Section I.C.		
	2.	Items a - d determine the specific applicability of these requirements.		
♦		a.	The application area is subject to 30 TAC § 111.143.	☐YES ☐NO
♦		b.	The application area is subject to 30 TAC § 111.145.	☐YES ☐NO
♦		c.	The application area is subject to 30 TAC § 111.147.	☐YES ☐NO
♦		d.	The application area is subject to 30 TAC § 111.149.	☐YES ☐NO
	C.	**Emissions Limits on Nonagricultural Processes**		
♦	1.	The application area includes a nonagricultural process subject to 30 TAC § 111.151.		☒YES ☐NO
	2.	The application area includes a vent from a nonagricultural process that is subject to additional monitoring requirements. *If the response to Question I.C.2 is "NO," go to Question I.C.4.*		☐YES ☒NO
	3.	All vents from nonagricultural process in the application area are subject to additional monitoring requirements.		☐YES ☐NO

Date:	01/14/2022

Form OP-REQ1: Page 5			
III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	C.	**Industrial Wastewater**	
	1.	The application area includes affected VOC wastewater streams of an affected source category, as defined in 30 TAC § 115.140. *If the response to Question III.C.1 is "NO" or "N/A," go to Section III.D.*	☐YES ☐NO ☒N/A
	2.	The application area is located at a petroleum refinery in the Beaumont/Port Arthur or Houston/Galveston/Brazoria area. *If the response to Question III.C.2 is "YES" and the refinery is in the Beaumont/Port Arthur area, go to Section III.D.*	☐YES ☐NO
	3.	The application area is complying with the provisions of 40 CFR Part 63, Subpart G, as an alternative to complying with this division (relating to Industrial Wastewater). *If the response to Question III.C.3 is "YES," go to Section III.D.*	☐YES ☐NO
	4.	The application area is located at a plant with an annual VOC loading in wastewater, as determined in accordance with 30 TAC § 115.148, less than or equal to 10 Mg (11.03 tons). *If the response to Question III.C.4 is "YES," go to Section III.D.*	☐YES ☐NO
	5.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that are subject to the control requirements of 30 TAC § 115.142(1).	☐YES ☐NO
	6.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that handle streams chosen for exemption under 30 TAC § 115.147(2).	☐YES ☐NO
	7.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that have an executive director approved exemption under 30 TAC § 115.147(4).	☐YES ☐NO
	D.	**Loading and Unloading of VOCs**	
♦	1.	The application area includes VOC loading operations.	☒YES ☐NO
♦	2.	The application area includes VOC transport vessel unloading operations. *For GOP applications, if the responses to Questions III.D.1 - D.2 are "NO," go to Section III.E.*	☒YES ☐NO

Date:	01/14/2022
Permit No.:	O1659

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	D.	**Loading and Unloading of VOCs (continued)**	
♦	3.	Transfer operations at motor vehicle fuel dispensing facilities are the only VOC transfer operations conducted in the application area.	☐YES ☒NO
	E.	**Filling of Gasoline Storage Vessels (Stage I) for Motor Vehicle Fuel Dispensing Facilities**	
♦	1.	The application area includes one or more motor vehicle fuel dispensing facilities and gasoline is transferred from a tank-truck tank into a stationary storage container. *If the response to Question III.E.1 is "NO," go to Section III.F.*	☒YES ☐NO
♦	2.	Transfers to stationary storage containers used exclusively for the fueling of agricultural implements are the only transfer operations conducted at facilities in the application area.	☐YES ☒NO
♦	3.	All transfers at facilities in the application area are made into stationary storage containers with internal floating roofs, external floating roofs, or their equivalent. *If the response to Question III.E.2 and/or E.3 is "YES," go to Section III.F.*	☐YES ☒NO
♦	4.	The application area is located in a covered attainment county as defined in 30 TAC § 115.10. *If the response to Question III.E.4 is "NO," go to Question III.E.9.*	☒YES ☐NO
♦	5.	Stationary gasoline storage containers with a nominal capacity less than or equal to 1,000 gallons are located at the facility.	☒YES ☐NO
♦	6.	Stationary gasoline storage containers with a nominal capacity greater than 1,000 gallons are located at the facility.	☒YES ☐NO
♦	7.	At facilities located in covered attainment counties other than Bastrop, Bexar, Caldwell, Comal, Guadalupe, Hays, Travis, Williamson, or Wilson County, transfers are made to stationary storage tanks greater than 1000 gallons located at a facility which has dispensed less than 100,000 gallons of gasoline in a calendar month after October 31, 2014. *If the response to Question III.E.7 is "YES," go to Section III.F.*	☒YES ☐NO

♦	3.	Tank-truck tanks are filled with, or emptied of, gasoline at a facility that is subject to 30 TAC § 115.214(b)(1)(C) or 115.224(2) within the application area.	☐YES ☐NO ☐N/A
	G.	**Control of Vehicle Refueling Emissions (Stage II) at Motor Vehicle Fuel Dispensing Facilities**	
♦	1.	The application area includes one or more motor vehicle fuel dispensing facilities and gasoline is transferred from a stationary storage container into motor vehicle fuel tanks. *If the response to Question III.G.1 is "NO" or "N/A," go to Section III.H.*	☐YES ☐NO ☒N/A
♦	2.	The application area includes facilities that began construction on or after November 15, 1992 and prior to May 16, 2012.	☐YES ☐NO
♦	3.	The application area includes facilities that began construction prior to November 15, 1992. *If the responses to Questions III.G.2 and Question III.G.3 are both "NO," go to Section III.H.*	☐YES ☐NO
♦	4.	The application area includes only facilities that have a monthly throughput of less than 10,000 gallons of gasoline.	☐YES ☐NO
♦	5.	The decommissioning of all Stage II vapor recovery control equipment located in the application area has been completed and the decommissioning notice submitted.	☐YES ☐NO ☐N/A

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	H.	**Control Of Reid Vapor Pressure (RVP) of Gasoline**	
♦	1.	The application area includes stationary tanks, reservoirs, or other containers holding gasoline that may ultimately be used in a motor vehicle in El Paso County. *If the response to Question III.H.1 is "NO" or "N/A," go to Section III.I.*	☐YES ☐NO ☒N/A
♦	2.	The application area includes stationary tanks, reservoirs, or other containers holding gasoline that will be used exclusively for the fueling of agricultural implements.	☐YES ☐NO
♦	3.	The application area includes a motor vehicle fuel dispensing facility.	☐YES ☐NO
♦	4.	The application area includes stationary tanks, reservoirs, or other containers holding gasoline and having a nominal capacity of 500 gallons or less.	☐YES ☐NO
	I.	**Process Unit Turnaround and Vacuum-Producing Systems in Petroleum Refineries**	
	1.	The application area is located at a petroleum refinery.	☐YES ☒NO
	J.	**Surface Coating Processes (Complete this section for GOP applications only.)**	
♦	1.	Surface coating operations (other than those performed on equipment located on-site and in-place) that meet the exemption specified in 30 TAC § 115.427(3)(A) or 115.427(7) are performed in the application area.	☐YES ☐NO ☐N/A

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	K.	**Cutback Asphalt**	
	1.	Conventional cutback asphalt containing VOC solvents for the paving of roadways, driveways, or parking lots, is used or specified for use in the application area by a state, municipal, or county agency. *If the response to Question III.K.1 is "N/A," go to Section III.L.*	☐YES ☐NO ☒N/A
	2.	The use, application, sale, or offering for sale of conventional cutback asphalt containing VOC solvents for the paving of roadways, driveways, or parking lots occurs in the application area.	☐YES ☐NO ☐N/A
	3.	Asphalt emulsion is used or produced within the application area.	☐YES ☐NO
	4.	The application area is using an alternate control requirement as specified in 30 TAC § 115.513. *If the response to Question III.K.4 is "NO," go to Section III.L.*	☐YES ☐NO
	5.	The application area uses, applies, sells, or offers for sale asphalt concrete, made with cutback asphalt, that meets the exemption specified in 30 TAC § 115.517(1).	☐YES ☐NO
	6.	The application area uses, applies, sells, or offers for sale cutback asphalt that is used solely as a penetrating prime coat.	☐YES ☐NO
	7.	The applicant using cutback asphalt is a state, municipal, or county agency.	☐YES ☐NO
	L.	**Degassing of Storage Tanks, Transport Vessels and Marine Vessels**	
♦	1.	The application area includes degassing operations for stationary, marine, and/or transport vessels. *If the response to Question III.L.1 is "NO" or "N/A," go to Section III.M.*	☐YES ☐NO ☒N/A
♦	2.	Degassing of only ocean-going, self-propelled VOC marine vessels is performed in the application area. *If the response to Question III.L.2 is "YES," go to Section III.M.*	☐YES ☐NO ☐N/A

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 11

III. Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)

L. Degassing of Storage Tanks, Transport Vessels and Marine Vessels (continued)

♦	3.	Degassing of stationary VOC storage vessels with a nominal storage capacity of 1,000,000 gallons or more and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☐YES ☐NO ☐N/A
♦	4.	Degassing of stationary VOC storage vessels with a nominal storage capacity of 250,000 gallons or more, or a nominal storage capacity of 75,000 gallons and storing materials with a true vapor pressure greater than 2.6 psia, and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☐YES ☐NO ☐N/A
♦	5.	Degassing of VOC transport vessels with a nominal storage capacity of 8,000 gallons or more and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☐YES ☐NO
♦	6.	Degassing of VOC marine vessels with a nominal storage capacity of 10,000 barrels (420,000 gallons) or more and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☐YES ☐NO ☐N/A
♦	7.	Degassing of VOC marine vessels with a nominal storage capacity of 10,000 barrels (420,000 gallons) and a vapor space partial pressure ≥ 0.5 psia that have sustained damage as specified in 30 TAC § 115.547(5) is performed in the application area.	☐YES ☐NO ☐N/A

M. Petroleum Dry Cleaning Systems

	1.	The application area contains one or more petroleum dry cleaning facilities that use petroleum based solvents.	☐YES ☐NO ☒N/A

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
N.	**Vent Gas Control (Highly-reactive volatile organic compounds (HRVOC)**		
1.	The application area includes one or more vent gas streams containing HRVOC.	☐YES ☒NO ☐N/A	
2.	The application area includes one or more flares that emit or have the potential to emit HRVOC. *If the responses to Questions III.N.1 and III.N.2 are both "NO" or "N/A," go to Section III.O. If the response to Question III.N.1 is "YES," continue with Question III.N.3.*	☐YES ☒NO ☐N/A	
3.	All vent streams in the application area that are routed to a flare contain less than 5.0% HRVOC by weight at all times.	☐YES ☐NO	
4.	All vent streams in the application area that are not routed to a flare contain less than 100 ppmv HRVOC at all times. *If the responses to Questions III.N.3 and III.N.4 are both "NO," go to Section III.O.*	☐YES ☐NO	
5.	The application area contains pressure relief valves that are not controlled by a flare.	☐YES ☐NO	
6.	The application area has at least one vent stream which has no potential to emit HRVOC.	☐YES ☐NO	
7.	The application area has vent streams from a source described in 30 TAC § 115.727(c)(3)(A) - (H).	☐YES ☐NO	
O.	**Cooling Tower Heat Exchange Systems (HRVOC)**		
1.	The application area includes one or more cooling tower heat exchange systems that emit or have the potential to emit HRVOC.	☐YES ☒NO ☐N/A

IV.	**Title 30 TAC Chapter 117 - Control of Air Pollution from Nitrogen Compounds**		
	A.	**Applicability**	
♦	1.	The application area is located in the Houston/Galveston/Brazoria, Beaumont/Port Arthur, or Dallas/Fort Worth Eight-Hour area. *For SOP applications, if the response to Question IV.A.1 is "YES," complete Sections IV.B - IV.F and IV.H.* *For GOP applications for GOPs 511, 512, 513, or 514, if the response to Question IV.A.1 is "YES," go to Section IV.F.* *For GOP applications for GOP 517, if the response to Question IV.A.1 is "YES," complete Sections IV.C and IV.F.* *For GOP applications, if the response to Question IV.A.1 is "NO," go to Section VI.*	☐YES ☒NO
	2.	The application area is located in Bexar, Comal, Ellis, Hays, or McLennan County and includes a cement kiln. *If the response to Question IV.A.2 is "YES," go to Question IV.H.1.*	☐YES ☒NO
	3.	The application area includes a utility electric generator in an east or central Texas county. *See instructions for a list of counties included.* *If the response to Question IV.A.3 is "YES," go to Question IV.G.1.* *If the responses to Questions IV.A.1 - 3 are all "NO," go to Question IV.H.1.*	☐YES ☒NO
	B.	**Utility Electric Generation in Ozone Nonattainment Areas**	
	1.	The application area includes units specified in 30 TAC §§ 117.1000, 117.1200, or 117.1300. *If the response to Question IV.B.1 is "NO," go to Question IV.C.1.*	☐YES ☐NO
	2.	The application area is complying with a System Cap in 30 TAC §§ 117.1020 or 117.1220.	☐YES ☐NO

IV.	**Title 30 TAC Chapter 117 - Control of Air Pollution from Nitrogen Compounds (continued)**		
	C.	**Commercial, Institutional, and Industrial Sources in Ozone Nonattainment Areas**	
♦	1.	The application area is located at a site subject to 30 TAC Chapter 117, Subchapter B and includes units specified in 30 TAC §§ 117.100, 117.300, or 117.400. *For SOP applications, if the response to Question IV.C.1 is "NO," go to Question IV.D.1. For GOP applications for GOP 517, if the response to Question IV.C.1 is "NO," go to Section IV.F.*	☐YES ☐NO
♦	2.	The application area is located at a site that was a major source of NO_X before November 15, 1992.	☐YES ☐NO ☐N/A
♦	3.	The application area includes an electric generating facility required to comply with the System Cap in 30 TAC § 117.320.	☐YES ☐NO
	D.	**Adipic Acid Manufacturing**	
	1.	The application area is located at, or part of, an adipic acid production unit.	☐YES ☐NO ☐N/A
	E.	**Nitric Acid Manufacturing - Ozone Nonattainment Areas**	
	1.	The application area is located at, or part of, a nitric acid production unit.	☐YES ☐NO ☐N/A
	F.	**Combustion Control at Minor Sources in Ozone Nonattainment Areas - Boilers, Process Heaters, Stationary Engines and Gas Turbines**	
♦	1.	The application area is located at a site that is a minor source of NO_X in the Houston/Galveston/Brazoria or Dallas/Fort Worth Eight-Hour areas (except for Wise County). *For SOP applications, if the response to Question IV.F.1 is "NO," go to Question IV.G.1. For GOP applications, if the response to Question IV.F.1 is "NO," go to Section VI.*	☐YES ☐NO
♦	2.	The application area is located in the Houston/Galveston/Brazoria area and has units that qualify for an exemption under 30 TAC § 117.2003(a).	☐YES ☐NO
♦	3.	The application area is located in the Houston/Galveston/Brazoria area and has units that qualify for an exemption under 30 TAC § 117.2003(b).	☐YES ☐NO

	F.	**Combustion Control at Minor Sources in Ozone Nonattainment Areas - Boilers, Process Heaters, Stationary Engines and Gas Turbines (continued)**	
♦	4.	The application area is located in the Dallas/Fort Worth Eight-Hour area (except for Wise County) and has units that qualify for an exemption under 30 TAC § 117.2103.	☐YES ☐NO
♦	5.	The application area has units subject to the emission specifications under 30 TAC §§ 117.2010 or 30 TAC § 117.2110.	☐YES ☐NO
	6.	The application area has a unit that has been approved for alternative case specific specifications (ACSS) in 30 TAC § 117.2025 or 30 TAC § 117.2125. *If the response to Question IV.F.6 is "NO," go to Section IV.G.*	☐YES ☐NO
	7.	An ACSS for carbon monoxide (CO) has been approved?	☐YES ☐NO
	8.	An ACSS for ammonia (NH_3) has been approved?	☐YES ☐NO
	9.	Provide the Permit Number(s) and authorization/issuance date(s) of the NSR project(s) that incorporates an ACSS below.	
	G.	**Utility Electric Generation in East and Central Texas**	
	1.	The application area includes utility electric power boilers and/or stationary gas turbines (including duct burners used in turbine exhaust ducts) that were placed into service before December 31, 1995. *If the response to Question IV.G.1 is "NO," go to Question IV.H.1.*	☐YES ☐NO
	2.	The application area is complying with the System Cap in 30 TAC § 117.3020.	☐YES ☐NO
	H.	**Multi-Region Combustion Control - Water Heaters, Small Boilers, and Process Heaters**	
	1.	The application area includes a manufacturer, distributor, retailer or installer of natural gas fired water heaters, boilers or process heaters with a maximum rated capacity of 2.0 MMBtu/hr or less. *If the response to question IV.H.1 is "NO," go to Section V.*	☒YES ☐NO
	2.	All water heaters, boilers or process heaters manufactured, distributed, retailed or installed qualify for an exemption under 30 TAC § 117.3203.	☐YES ☒NO

VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)**		
	B.	**Subpart Y - Standards of Performance for Coal Preparation and Processing Plants**	
	1.	The application area is located at a coal preparation and processing plant. *If the response to Question VI.B.1 is "NO," go to Section VI.C.*	☐YES ☒NO
	2.	The coal preparation and processing plant has a design capacity greater than 200 tons per day (tpd). *If the response to Question VI.B.2 is "NO," go to Section VI.C.*	☐YES ☐NO
	3.	The plant has an option to enforceably limit its operating level to less than 200 tpd and is choosing this option. *If the response to Question VI.B.3 is "YES," go to Section VI.C.*	☐YES ☐NO
	4.	The plant contains an open storage pile, as defined in § 60.251, as an affected facility. *If the response to Question VI.B.4 is "NO," go to Section VI.C.*	☐YES ☐NO
	5.	The open storage pile was constructed, reconstructed or modified after May 27, 2009.	☐YES ☐NO
	C.	**Subpart GG - Standards of Performance for Stationary Gas Turbines (GOP applicants only)**	
♦	1.	The application area includes one or more stationary gas turbines that have a heat input at peak load greater than or equal to 10 MMBtu/hr (10.7GJ/hr), based on the lower heating value of the fuel fired. *If the response to Question VI.C.1 is "NO" or "N/A," go to Section VI.D.*	☐YES ☐NO ☐N/A
♦	2.	One or more of the affected facilities were constructed, modified, or reconstructed after October 3, 1977 and prior to February 19, 2005. *If the response to Question VI.C.2 is "NO," go to Section VI.D.*	☐YES ☐NO
♦	3.	One or more stationary gas turbines in the application area are using a previously approved alternative fuel monitoring schedule as specified in 40 CFR § 60.334(h)(4).	☐YES ☐NO
♦	4.	The exemption specified in 40 CFR § 60.332(e) is being utilized for one or more stationary gas turbines in the application area.	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)**		
	C.	**Subpart GG - Standards of Performance for Stationary Gas Turbines (GOP applicants only) (continued)**	
♦	5.	One or more stationary gas turbines subject to 40 CFR Part 60, Subpart GG in the application area is injected with water or steam for the control of nitrogen oxides.	☐YES ☐NO
	D.	**Subpart XX - Standards of Performance for Bulk Gasoline Terminals**	
	1.	The application area includes bulk gasoline terminal loading racks. *If the response to Question VI.D.1 is "NO," go to Section VI.E.*	☐YES ☒NO ☐N/A
	2.	One or more of the loading racks were constructed or modified after December 17, 1980, and are not subject to 40 CFR Part 63, Subpart CC.	☐YES ☐NO
	E.	**Subpart LLL - Standards of Performance for Onshore Natural Gas Processing: Sulfur Dioxide (SO_2) Emissions**	
♦	1.	The application area includes affected facilities identified in 40 CFR § 60.640(a) that process natural gas (onshore). *For SOP applications, if the response to Question VI.E.1 is "NO," go to Section VI.F. For GOP applications, if the response to Question VI.E.1 is "NO" or "N/A," go to Section VI.H.*	☐YES ☒NO
♦	2.	The affected facilities commenced construction or modification after January 20, 1984 and on or before August 23, 2011. *For SOP applications, if the response to Question VI.E.2 is "NO," go to Section VI.F. For GOP applications, if the response to Question VI.E.2 is "NO," go to Section VI.H.*	☐YES ☐NO
♦	3.	The application area includes a gas sweetening unit with a design capacity greater than or equal to 2 long tons per day (LTPD) of hydrogen sulfide but operates at less than 2 LTPD. *For SOP applications, if the response to Question VI.E.3 is "NO," go to Section VI.F. For GOP applications, if the response to Question VI.E.3 is "NO," go to Section VI.H.*	☐YES ☐NO

Date:	01/14/2022

VI. Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)

E. Subpart LLL - Standards of Performance for Onshore Natural Gas Processing: Sulfur Dioxide (SO_2) Emissions (continued)

♦	4.	Federally enforceable operating limits have been established in the preconstruction authorization limiting the gas sweetening unit to less than 2 LTPD. *For SOP applications, if the response to Question VI.E.4. is "NO," go to Section VI.F. For GOP applications, if the response to Question VI.E.4. is "NO," go to Section VI.H.*	☐YES ☐NO
♦	5.	Please provide the Unit ID(s) for the gas sweetening unit(s) that have established federally enforceable operating limits in the space provided below.	

F. Subpart OOO - Standards of Performance for Nonmetallic Mineral Processing Plants

	1.	The application area includes affected facilities identified in 40 CFR § 60.670(a)(1) that are located at a fixed or portable nonmetallic mineral processing plant. *If the response to Question VI.F.1 is "NO," go to Section VI.G.*	☐YES ☒NO
	2.	Affected facilities identified in 40 CFR § 60.670(a)(1) and located in the application area are subject to 40 CFR Part 60, Subpart OOO.	☐YES ☐NO

G. Subpart QQQ - Standards of Performance for VOC Emissions from Petroleum Refinery Wastewater Systems

	1.	The application area is located at a petroleum refinery and includes one or more of the affected facilities identified in 40 CFR § 60.690(a)(2) - (4) for which construction, modification, or reconstruction was commenced after May 4, 1987. *If the response to Question VI.G.1 is "NO," go to Section VI.H.*	☐YES ☒NO
	2.	The application area includes storm water sewer systems.	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

	J.	**Subpart EEEE - Standards of Performance for Other Solid Waste Incineration Units for Which Construction Commenced After December 9, 2004 or for Which Modification or Reconstruction Commenced on or After June 16, 2006 (continued)**	
♦	8.	All air curtain incinerators constructed before December 9, 2004 and not modified or reconstructed on or after June 16, 2006 combust only wood waste, clean lumber, or yard waste or a mixture of these materials.	☐YES ☐NO
♦	9.	The air curtain incinerator is located at an institutional facility and is a distinct operating unit of the institutional facility that generated the waste.	☐YES ☐NO
♦	10.	The air curtain incinerator burns less than 35 tons per day of wood waste, clean lumber, or yard waste or a mixture of these materials.	☐YES ☐NO
	K.	**Subpart OOOO - Standards of Performance for Crude Oil and Natural Gas Production, Transmission and Distribution**	
♦	1.	The application area includes one or more of the onshore affected facilities listed in 40 CFR § 60.5365(a)-(g) that are subject to 40 CFR Part 60, Subpart OOOO.	☐YES ☒NO
VII.	**Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants**		
	A.	**Applicability**	
♦	1.	The application area includes a unit(s) that is subject to one or more 40 CFR Part 61 subparts. *If the response to Question VII.A.1 is "NO" or "N/A," go to Section VIII.*	☒YES ☐NO ☐N/A
	B.	**Subpart F - National Emission Standard for Vinyl Chloride**	
	1.	The application area is located at a plant which produces ethylene dichloride by reaction of oxygen and hydrogen chloride with ethylene, vinyl chloride by any process, and/or one or more polymers containing any fraction of polymerized vinyl chloride.	☐YES ☒NO
	C.	**Subpart J - National Emission Standard for Benzene Emissions for Equipment Leaks (Fugitive Emission Sources) of Benzene (Complete this section for GOP applications only)**	
♦	1.	The application area includes equipment in benzene service.	☐YES ☐NO ☐N/A

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 26			
VII.	**Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)**		
	D.	**Subpart L - National Emission Standard for Benzene Emissions from Coke By-Product Recovery Plants**	
	1.	The application area is located at a coke by-product recovery plant and includes one or more of the affected sources identified in 40 CFR § 61.130(a) - (b). *If the response to Question VII.D.1 is "NO," go to Section VII.E.*	☐YES ☒NO
	2.	The application area includes equipment in benzene service as determined by 40 CFR § 61.137(b).	☐YES ☐NO
	3.	The application area has elected to comply with the provisions of 40 CFR § 61.243-1 and 40 CFR § 61.243-2.	☐YES ☐NO
	E.	**Subpart M - National Emission Standard for Asbestos**	
		Applicability	
	1.	The application area includes sources, operations, or activities specified in 40 CFR §§ 61.143, 61.144, 61.146, 61.147, 61.148, or 61.155. *If the response to Question VII.E.1 is "NO," go to Section VII.F.*	☒YES ☐NO
		Roadway Construction	
	2.	The application area includes roadways constructed or maintained with asbestos tailings or asbestos-containing waste material.	☒YES ☐NO
		Manufacturing Commercial Asbestos	
	3.	The application area includes a manufacturing operation using commercial asbestos. *If the response to Question VII.E.3 is "NO," go to Question VII.E.4.*	☐YES ☒NO
		a. Visible emissions are discharged to outside air from the manufacturing operation	☐YES ☐NO
		b. An alternative emission control and waste treatment method is being used that has received prior U.S. Environmental Protection Agency (EPA) approval.	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
E. Subpart M - National Emission Standard for Asbestos (continued)		
***Manufacturing Commercial Asbestos* (continued)**		
c.	Asbestos-containing waste material is processed into non-friable forms.	☐YES ☐NO
d.	Asbestos-containing waste material is adequately wetted.	☐YES ☐NO
e.	Alternative filtering equipment is being used that has received EPA approval.	☐YES ☐NO
f.	A high efficiency particulate air (HEPA) filter is being used that is certified to be at least 99.97% efficient for 0.3 micron particles	☐YES ☐NO
g.	The EPA has authorized the use of wet collectors designed to operate with a unit contacting energy of at least 9.95 kilopascals.	☐YES ☐NO
Asbestos Spray Application		
4.	The application area includes operations in which asbestos-containing materials are spray applied. *If the response to Question VII.E.4 is "NO," go to Question VII.E.5.*	☐YES ☒NO
a.	Asbestos fibers are encapsulated with a bituminous or resinous binder during spraying and are not friable after drying. *If the response to Question VII.E.4.a is "YES," go to Question VII.E.5.*	☐YES ☐NO
b.	Spray-on applications on buildings, structures, pipes, and conduits do not use material containing more than 1% asbestos.	☐YES ☐NO
c.	An alternative emission control and waste treatment method is being used that has received prior EPA approval.	☐YES ☐NO

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
G. Subpart BB - National Emission Standard for Benzene Emissions from Benzene Transfer Operations (continued)		
3.	The application area includes benzene transfer operations at railcar loading racks.	☐YES ☐NO
4.	The application area includes benzene transfer operations at tank-truck loading racks.	☐YES ☐NO
H. Subpart FF - National Emission Standard for Benzene Waste Operations		
Applicability		
1.	The application area includes a chemical manufacturing plant, coke by-product recovery plant, or petroleum refinery facility as defined in § 61.341.	☐YES ☒NO
2.	The application area is located at a hazardous waste treatment, storage, and disposal (TSD) facility site as described in 40 CFR § 61.340(b). *If the responses to Questions VII.H.1 and VII.H.2 are both "NO," go to Section VIII.*	☐YES ☒NO
3.	The application area is located at a site that has no benzene onsite in wastes, products, byproducts, or intermediates. *If the response to Question VII.H.3 is "YES," go to Section VIII.*	☐YES ☐NO
4.	The application area is located at a site having a total annual benzene quantity from facility waste less than 1 megagram per year (Mg/yr). *If the response to Question VII.H.4 is "YES," go to Section VIII*	☐YES ☐NO
5.	The application area is located at a site having a total annual benzene quantity from facility waste greater than or equal to 1 Mg/yr but less than 10 Mg/yr. *If the response to Question VII.H.5 is "YES," go to Section VIII.*	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 31		
VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
H. Subpart FF - National Emission Standard for Benzene Waste Operations (continued)		
***Applicability* (continued)**		
6.	The flow-weighted annual average benzene concentration of each waste stream at the site is based on documentation.	☐YES ☐NO
7.	The application area has waste streams with flow-weighted annual average water content of 10% or greater.	☐YES ☐NO
Waste Stream Exemptions		
8.	The application area has waste streams that meet the exemption specified in 40 CFR § 61.342(c)(2) (the flow-weighted annual average benzene concentration is less than 10 ppmw).	☐YES ☐NO
9.	The application area has waste streams that meet the exemption specified in 40 CFR § 61.342(c)(3) because process wastewater has a flow rate less than 0.02 liters per minute or an annual wastewater quantity less than 10 Mg/yr.	☐YES ☐NO
10.	The application area has waste streams that meet the exemption specified in 40 CFR § 61.342(c)(3) because the total annual benzene quantity is less than or equal to 2 Mg/yr.	☐YES ☐NO
11.	The application area transfers waste off-site for treatment by another facility.	☐YES ☐NO
12.	The application area is complying with 40 CFR § 61.342(d).	☐YES ☐NO
13.	The application area is complying with 40 CFR § 61.342(e). *If the response to Question VII.H.13 is "NO," go to Question VII.H.15.*	☐YES ☐NO
14.	The application area has facility waste with a flow weighted annual average water content of less than 10%.	☐YES ☐NO

Date:	01/14/2022

Form OP-REQ1: Page 32		
VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
H. Subpart FF - National Emission Standard for Benzene Waste Operations (continued)		
Container Requirements		
15.	The application area has containers, as defined in 40 CFR § 61.341, that receive non-exempt benzene waste. *If the response to Question VII.H.15 is "NO," go to Question VII.H.18.*	☐YES ☐NO
16.	The application area is an alternate means of compliance to meet the 40 CFR § 61.345 requirements for containers. *If the response to Question VII.H.16 is "YES," go to Question VII.H.18.*	☐YES ☐NO
17.	Covers and closed-vent systems used for containers operate such that the container is maintained at a pressure less than atmospheric pressure.	☐YES ☐NO
Individual Drain Systems		
18.	The application area has individual drain systems, as defined in 40 CFR § 61.341, that receive or manage non-exempt benzene waste. *If the response to Question VII.H.18 is "NO," go to Question VII.H.25.*	☐YES ☐NO
19.	The application area is using an alternate means of compliance to meet the 40 CFR § 61.346 requirements for individual drain systems. *If the response to Question VII.H.19 is "YES," go to Question VII.H.25.*	☐YES ☐NO
20.	The application area has individual drain systems complying with 40 CFR § 61.346(a). *If the response to Question VII.H.20 is "NO," go to Question VII.H.22.*	☐YES ☐NO
21.	Covers and closed-vent systems used for individual drain systems operate such that the individual drain system is maintained at a pressure less than atmospheric pressure.	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater		
Applicability		
1.	The application area is located at a site that is subject to 40 CFR 63, Subpart F and the application area includes process vents, storage vessels, transfer racks, or waste streams associated with a chemical manufacturing process subject to 40 CFR 63, Subpart F. *If the response to Question VIII.C.1 is "NO," go to Section VIII.D.*	☐YES ☐NO
2.	The application area includes fixed roofs, covers, and/or enclosures that are required to comply with 40 CFR § 63.148.	☐YES ☐NO
3.	The application area includes vapor collection systems or closed-vent systems that are required to comply with 40 CFR § 63.148. *If the response to Question VIII.C.3 is "NO," go to Question VIII.C.8.*	☐YES ☐NO
4.	The application area includes vapor collection systems or closed-vent systems that are constructed of hard-piping.	☐YES ☐NO
5.	The application area includes vapor collection systems or closed-vent systems that contain bypass lines that could divert a vent stream away from a control device and to the atmosphere. *If the response to Question VIII.C.5 is "NO," go to Question VIII.C.8.*	☐YES ☐NO
Vapor Collection and Closed Vent Systems		
6.	Flow indicators are installed, calibrated, maintained, and operated at the entrances to bypass lines in the application area.	☐YES ☐NO
7.	Bypass lines in the application area are secured in the closed position with a car-seal or a lock-and-key type configuration.	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater (continued)		
Reloading or Cleaning of Railcars, Tank Trucks, or Barges		
8.	The application area includes reloading and/or cleaning of railcars, tank trucks, or barges that deliver HAPs to a storage tank. *If the response to Question VIII.C.8 is "NO," go to Question VIII.C.11.*	☐YES ☐NO
9.	The application area includes operations that are complying with § 63.119(g)(6) through the use of a closed-vent system with a control device used to reduce inlet emissions of HAPs by at least 95 percent by weight or greater.	☐YES ☐NO
10.	The application area includes operations that are complying with § 63.119(g)(6) through the use of a vapor balancing system.	☐YES ☐NO
Transfer Racks		
11.	The application area includes Group 1 transfer racks that load organic HAPs.	☐YES ☐NO
Process Wastewater Streams		
12.	The application area includes process wastewater streams. *If the response to Question VIII.C.12 is "NO," go to Question VIII.C.34.*	☐YES ☐NO
13.	The application area includes process wastewater streams that are also subject to the provisions of 40 CFR Part 61, Subpart FF. *If the response to Question VIII.C.13 is "NO," go to Question VIII.C.15.*	☐YES ☐NO
14.	The application area includes process wastewater streams that are complying with 40 CFR §§ 63.110(e)(1)(i) and (e)(1)(ii).	☐YES ☐NO
15.	The application area includes process wastewater streams that are also subject to the provisions of 40 CFR Part 61, Subpart F. *If the response to Question VIII.C.15 is "NO," go to Question VIII.C.17.*	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater (continued)		
***Process Wastewater Streams* (continued)**		
16.	The application area includes process wastewater streams utilizing the compliance option specified in 40 CFR § 63.110(f)(4)(ii).	☐YES ☐NO
17.	The application area includes process wastewater streams that are also subject to the provisions of 40 CFR Parts 260 through 272. *If the response to Question VIII.C.17 is "NO," go to Question VIII.C.20.*	☐YES ☐NO
18.	The application area includes process wastewater streams complying with 40 CFR § 63.110(e)(2)(i).	☐YES ☐NO
19.	The application are includes process wastewater streams complying with 40 CFR § 63.110(e)(2)(ii).	☐YES ☐NO
20.	The application area includes process wastewater streams, located at existing sources, that are designated as Group 1; are required to be treated as Group 1 under 40 CFR § 63.110; or are determined to be Group 1 for Table 9 compounds.	☐YES ☐NO
21.	The application area includes process wastewater streams, located at existing sources that are Group 2.	☐YES ☐NO
22.	The application area includes process wastewater streams, located at new sources, that are designated as Group 1; required to be treated as Group 1 under 40 CFR § 63.110; or are determined to be Group 1 for Table 8 or Table 9 compounds.	☐YES ☐NO
23.	The application area includes process wastewater streams, located at new sources that are Group 2 for both Table 8 and Table 9 compounds.	☐YES ☐NO

C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater (continued)

Drains

31.	The application area includes individual drain systems that receive or manage a Group 1 wastewater stream, or a residual removed from a Group 1 wastewater stream. *If the response to Question VIII.C.31 is "NO," go to Question VIII.C.34.*	☐YES ☐NO
32.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of cover and, if vented, closed vent systems and control devices.	☐YES ☐NO
33.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of water seals or tightly fitting caps or plugs.	☐YES ☐NO
34.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that are part of a chemical manufacturing process unit that meets the criteria of 40 CFR § 63.100(b). *If the response to Question VIII.C.34 is "NO," go to Question VIII.C.39.*	☐YES ☐NO
35.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes (that are part of a chemical manufacturing process unit) that meet the criteria listed in 40 CFR § 63.149(d). *If the response to Question VIII.C.35 is "NO," go to Question VIII.C.39.*	☐YES ☐NO
36.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that convey water with a total annual average concentration greater than or equal to 10,000 parts per million by weight of compounds listed in 40 CFR Part 63 Subpart G, Table 9, at any flow rate.	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C.	**Subpart G-National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operation, and Wastewater (continued)**	
	***Drains* (continued)**	
	37. The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration greater than or equal to 1,000 parts per million by weight of compounds listed in 40 CFR Part 63 Subpart G, Table 9, at an annual average flow rate greater than or equal to 10 liters per minute.	☐YES ☐NO
	38. The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that are part of a chemical manufacturing process unit that is subject to the new source requirements of 40 CFR § 63.100(l)(1) or (l)(2); and the equipment conveys water with a total annual average concentration greater than or equal to 10 parts per million by weight of compounds listed in 40 CFR Part 63 Subpart G, Table 8, at an average annual flow rate greater than or equal to 0.02 liter per minute.	☐YES ☐NO
	Gas Streams	
	39. The application area includes gas streams meeting the characteristics of 40 CFR § 63.107(b) - (h) or the criteria of 40 CFR § 63.113(i) and are transferred to a control device not owned or operated by the applicant.	☐YES ☐NO
	40. The applicant is unable to comply with 40 CFR §§ 63.113 - 63.118 for one or more reasons described in 40 CFR § 63.100(q)(1), (3), or (5).	☐YES ☐NO
D.	**Subpart N - National Emission Standards for Chromium Emissions From Hard and Decorative Chromium Electroplating and Chromium Anodizing Tanks**	
	1. The application area includes chromium electroplating or chromium anodizing tanks located at hard chromium electroplating, decorative chromium electroplating, and/or chromium anodizing operations.	☐YES ☒NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
E.	**Subpart O - Ethylene Oxide Emissions Standards for Sterilization Facilities**	
1.	The application area includes sterilization facilities where ethylene oxide is used in the sterilization or fumigation of materials. *If the response to Question VIII.E.1 is "NO," go to Section VIII.F.*	☐YES ☒NO
2.	Sterilization facilities located in the application area are subject to 40 CFR Part 63, Subpart O. *If the response to Question VIII.E.2 is "NO," go to Section VIII.F.*	☐YES ☐NO
3.	The sterilization source has used less than 1 ton (907 kg) of ethylene oxide within all consecutive 12-month periods after December 6, 1996.	☐YES ☐NO
4.	The sterilization source has used less than 10 tons (9070 kg) of ethylene oxide within all consecutive 12-month periods after December 6, 1996.	☐YES ☐NO
F.	**Subpart Q - National Emission Standards for Industrial Process Cooling Towers**	
1.	The application area includes industrial process cooling towers. *If the response to Question VIII.F.1 is "NO," go to Section VIII.G.*	☐YES ☒NO
2.	Chromium-based water treatment chemicals have been used on or after September 8, 1994.	☐YES ☐NO
G.	**Subpart R - National Emission Standards for Gasoline Distribution Facilities (Bulk Gasoline Terminals and Pipeline Breakout Stations)**	
1.	The application area includes a bulk gasoline terminal.	☐YES ☒NO
2.	The application area includes a pipeline breakout station. *If the responses to Questions VIII.G.1 and VIII.G.2 are both "NO," go to Section VIII.H.*	☐YES ☒NO
3.	The bulk gasoline terminal or pipeline breakout station is located within a contiguous area and under common control with another bulk gasoline terminal or a pipeline breakout station. *If the response to Question VIII.G.3 is "YES," go to Question VIII.G.10.*	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
G.	**Subpart R - National Emission Standards for Gasoline Distribution Facilities (Bulk Gasoline Terminals and Pipeline Breakout Stations) (continued)**	
4.	The bulk gasoline terminal or pipeline breakout station is located within a contiguous area and under common control with sources, other than bulk gasoline terminals or pipeline breakout stations that emit or have the potential to emit HAPs. *If the response to Question VIII.G.4 is "YES," go to Question VIII.G.10.*	☐YES ☐NO
5.	An emissions screening factor was calculated for the bulk gasoline terminal or pipeline breakout station. *If the response to Question VIII.G.5 is "NO," go to Question VIII.G.10.*	☐YES ☐NO
6.	The value 0.04(OE) is less than 5% of the value of the bulk gasoline terminal emissions screening factor (ET) or the pipeline breakout station emissions screening factor (Ep). *If the response to Question VIII.G.6 is "NO," go to Question VIII.G.10.*	☐YES ☐NO
7.	Emissions screening factor less than 0.5 (ET or EP < 0.5). *If the response to Question VIII.G.7 is "YES," go to Section VIII.H.*	☐YES ☐NO
8.	Emissions screening factor greater than or equal to 0.5, but less than 1.0 (0.5 ≤ ET or EP < 1.0). *If the response to Question VIII.G.8 is "YES," go to Section VIII.H.*	☐YES ☐NO
9.	Emissions screening factor greater than or equal to 1.0 (ET or EP ≥ 1.0). *If the response to Question VIII.G.9 is "YES," go to Question VIII.G.11.*	☐YES ☐NO
10.	The site at which the application area is located is a major source of HAP. *If the response to Question VIII.G.10 is "NO," go to Section VIII.H.*	☐YES ☐NO
11.	The application area is using an alternative leak monitoring program as described in 40 CFR § 63.424(f).	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

H. Subpart S - National Emission Standards for Hazardous Air Pollutants from the Pulp and Paper Industry

1.	The application area includes processes that produce pulp, paper, or paperboard and are located at a plant site that is a major source of HAPs as defined in 40 CFR § 63.2. *If the response to Question VIII.H.1 is "NO," go to Section VIII.I.*	☐YES ☒NO
2.	The application area uses processes and materials specified in 40 CFR § 63.440(a)(1) - (3). *If the response to Question VIII.H.2 is "NO," go to Section VIII.I.*	☐YES ☐NO
3.	The application area includes one or more sources subject to 40 CFR Part 63, Subpart S that are existing sources. *If the response to Question VIII.H.3 is "NO," go to Section VIII.I.*	☐YES ☐NO
4.	The application area includes one or more kraft pulping systems that are existing sources.	☐YES ☐NO
5.	The application area includes one or more dissolving-grade bleaching systems that are existing sources at a kraft or sulfite pulping mill.	☐YES ☐NO
6.	The application area includes bleaching systems that are existing sources and are complying with the Voluntary Advanced Technology Incentives Program for Effluent Limitation Guidelines in 40 CFR § 430.24. *If the response to Question VIII.H.6 is "NO," go to Section VIII.I.*	☐YES ☐NO
7.	The application area includes bleaching systems that are complying with 40 CFR § 63.440(d)(3)(i).	☐YES ☐NO
8.	The application area includes bleaching systems that are complying with 40 CFR § 63.440(d)(3)(ii).	☐YES ☐NO

Date:	01/14/2022

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

I. Subpart T - National Emission Standards for Halogenated Solvent Cleaning

1.	The application area includes an individual batch vapor, in-line vapor, in-line cold, and/or batch cold solvent cleaning machine that uses a hazardous air pollutant (HAP) solvent, or any combination of halogenated HAP solvents, in a total concentration greater than 5% by weight, as a cleaning and/or drying agent.	☐YES ☒NO
2.	The application area is located at a major source and includes solvent cleaning machines, qualifying as affected facilities, that use perchloroethylene, trichloroethylene or methylene chloride.	☐YES ☒NO
3.	The application area is located at an area source and includes solvent cleaning machines, other than cold batch cleaning machines, that use perchloroethylene, trichloroethylene or methylene chloride.	☐YES ☒NO

J. Subpart U - National Emission Standards for Hazardous Air Pollutant Emissions: Group 1 Polymers and Resins

1.	The application area includes elastomer product process units and/or wastewater streams and wastewater operations that are associated with elastomer product process units. *If the response to Question VIII.J.1 is "NO," go to Section VIII.K.*	☐YES ☒NO
2.	Elastomer product process units and/or wastewater streams and wastewater operations located in the application area are subject to 40 CFR Part 63, Subpart U. *If the response to Question VIII.J.2 is "NO," go to Section VIII.K.*	☐YES ☐NO
3.	The application area includes process wastewater streams that are designated as Group 1 or are determined to be Group 1 for organic HAPs as defined in 40 CFR § 63.482.	☐YES ☐NO
4.	The application area includes process wastewater streams that are Group 2 for organic HAPs as defined in 40 CFR § 63.482.	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.

	***Applicability* (continued)**	
9.	The application area includes Group 1 or Group 2 wastewater streams that are complying with 40 CFR § 63.640(o)(2)(ii). *If the response to Question VIII.N.9 is "NO," go to Section VIII.O.*	☐YES ☐NO
10.	The application area includes Group 2 wastewater streams or organic streams whose benzene emissions are subject to control through the use of one or more treatment processes or waste management units under the provisions of 40 CFR Part 61, Subpart FF on or after December 31, 1992.	☐YES ☐NO
	Containers, Drains, and other Appurtenances	
11.	The application area includes containers that are subject to the requirements of 40 CFR § 63.135 as a result of complying with 40 CFR § 63.640(o)(2)(ii).	☐YES ☐NO
12.	The application area includes individual drain systems that are subject to the requirements of 40 CFR § 63.136 as a result of complying with 40 CFR § 63.640(o)(2)(ii).	☐YES ☐NO
O.	**Subpart DD - National Emission Standards for Off-site Waste and Recovery Operations**	
1.	The application area receives material that meets the criteria for off-site material as specified in 40 CFR § 63.680(b)(1). *If the response to Question VIII.O.1 is "NO" or "N/A," go to Section VIII.P*	☐YES ☒NO ☐N/A
2.	Materials specified in 40 CFR § 63.680(b)(2) are received at the application area.	☐YES ☐NO
3.	The application area has a waste management operation receiving off-site material and is regulated under 40 CFR Part 264 or Part 265.	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 51

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

O. Subpart DD - National Emission Standards for Off-site Waste and Recovery Operations (continued)

4.	The application area has a waste management operation treating wastewater which is an off-site material and is exempted under 40 CFR §§ 264.1(g)(6) or 265.1(c)(10).	☐YES ☐NO
5.	The application area has an operation subject to Clean Water Act, § 402 or § 307(b) but is not owned by a "state" or "municipality."	☐YES ☐NO
6.	The predominant activity in the application area is the treatment of wastewater received from off-site.	☐YES ☐NO
7.	The application area has a recovery operation that recycles or reprocesses hazardous waste which is an off-site material and is exempted under 40 CFR §§ 264.1(g)(2) or 265.1(c)(6).	☐YES ☐NO
8.	The application area has a recovery operation that recycles or reprocesses used solvent which is an off-site material and is not part of a chemical, petroleum, or other manufacturing process that is required to use air emission controls by another subpart of 40 CFR Part 63 or Part 61.	☐YES ☐NO
9.	The application area has a recovery operation that re-refines or reprocesses used oil which is an off-site material and is regulated under 40 CFR Part 279, Subpart F (Standards for Used Oil Processors and Refiners).	☐YES ☐NO
10.	The application area is located at a site where the total annual quantity of HAPs in the off-site material is less than 1 megagram per year. *If the response to Question VIII.O.10 is "YES," go to Section VIII.P.*	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

O. Subpart DD - National Emission Standards for Off-site Waste and Recovery Operations (continued)

11.	The application area receives offsite materials with average VOHAP concentration less than 500 ppmw at the point of delivery that are not combined with materials having a VOHAP concentration of 500 ppmw or greater. *If the response to Question VIII.O.11 is "NO," go to Question VIII.O.14.*	☐YES ☐NO
12.	VOHAP concentration is determined by direct measurement.	☐YES ☐NO
13.	VOHAP concentration is based on knowledge of the off-site material.	☐YES ☐NO
14.	The application area includes an equipment component that is a pump, compressor, and agitator, pressure relief device, sampling connection system, open-ended valve or line, valve, connector or instrumentation system. *If the response to Question VIII.O.14 is "NO," go to Question VIII.O.17.*	☐YES ☐NO
15.	An equipment component in the application area contains or contacts off-site material with a HAP concentration greater than or equal to 10% by weight.	☐YES ☐NO
16.	An equipment component in the application area is intended to operate 300 hours or more during a 12-month period.	☐YES ☐NO
17.	The application area includes containers that manage non-exempt off-site material.	☐YES ☐NO
18.	The application area includes individual drain systems that manage non-exempt off-site materials.	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)			
	P.	**Subpart GG - National Emission Standards for Aerospace Manufacturing and Rework Facilities**	
	1.	The application area includes facilities that manufacture or rework commercial, civil, or military aerospace vehicles or components. *If the response to Question VIII.P.1 is "NO" or "N/A," go to Section VIII.Q.*	☐YES ☐NO ☒N/A
	2.	The application area includes one or more of the affected sources specified in 40 CFR § 63.741(c)(1) - (7).	☐YES ☐NO
	Q.	**Subpart HH - National Emission Standards for Hazardous Air Pollutants From Oil and Natural Gas Production Facilities.**	
♦	1.	The application area contains facilities that process, upgrade or store hydrocarbon liquids that are located at oil and natural gas production facilities prior to the point of custody transfer.	☐YES ☒NO
♦	2.	The application area contains facilities that process, upgrade or store natural gas prior to the point at which natural gas enters the natural gas transmission and storage source category or is delivered to a final end user. *For SOP applications, if the responses to Questions VIII.Q.1 and VIII.Q.2 are both "NO," go to Section VIII.R.* *For GOP applications, if the responses to Questions VIII.Q.1 and VIII.Q.2 are both "NO," go to Section VIII.Z.*	☐YES ☒NO
♦	3.	The application area contains only facilities that exclusively process, store or transfer black oil as defined in § 63.761. *For SOP applications, if the response to Question VIII.Q.3 is "YES," go to Section VIII.R.* *For GOP applications, if the response to Question VIII.Q.3 is "YES," go to Section VIII.Z.*	☐YES ☐NO
♦	4.	The application area is located at a site that is a major source of HAP. *If the response to Question VIII.Q.4 is "NO," go to Question VIII.Q.6.*	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

Q. Subpart - HH - National Emission Standards for Hazardous Air Pollutants From Oil and Natural Gas Production Facilities (continued)

♦	5.	The application area contains only a facility, prior to the point of custody transfer, with facility-wide actual annual average natural gas throughput less than 18.4 thousand standard cubic meters (649,789.9 ft^3) per day and a facility-wide actual annual average hydrocarbon liquid throughput less than 39,700 liters (10,487.6 gallons) per day. *For SOP applications, if the response to Question VIII.Q.5 is "YES," go to Section VIII.R.* *For GOP applications, if the response to Question VIII.Q.5 is "YES," go to Section VIII.Z.* *For all applications, if the response to Question VIII.Q.5 is "NO," go to Question VIII.Q.9.*	☐YES ☐NO
♦	6.	The application area includes a triethylene glycol (TEG) dehydration unit. *For SOP applications, f the answer to Question VIII.Q.6 is "NO," go to Section VIII.R. For GOP applications, if the response to Question VIII.Q.6 is "NO," go to Section VIII.Z.*	☐YES ☐NO
♦	7.	The application area is located at a site that is within the boundaries of UA plus offset or a UC, as defined in 40 CFR § 63.761.	☐YES ☐NO
♦	8.	The site has actual emissions of 5 tons per year or more of a single HAP, or 12.5 tons per year or more of a combination of HAP.	☐YES ☐NO
♦	9.	Emissions for major source determination are being estimated based on the maximum natural gas or hydrocarbon liquid throughput as calculated in § 63.760(a)(1)(i)-(iii).	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

R.	**Subpart II - National Emission Standards for Shipbuilding and Ship Repair (Surface Coating)**	
1.	The application area includes shipbuilding or ship repair operations. *If the response to Question VIII.R.1 is "NO," go to Section VIII.S.*	☐YES ☒NO
2.	Shipbuilding or ship repair operations located in the application area are subject to 40 CFR Part 63, Subpart II.	☐YES ☐NO
S.	**Subpart JJ - National Emission Standards for Wood Furniture Manufacturing Operations**	
1.	The application area includes wood furniture manufacturing operations and/or wood furniture component manufacturing operations. *If the response to Question VIII.S.1 is "NO" or "N/A," go to Section VIII.T.*	☐YES ☐NO ☒N/A
2.	The application area meets the definition of an "incidental wood manufacturer" as defined in 40 CFR § 63.801.	☐YES ☐NO
T.	**Subpart KK - National Emission Standards for the Printing and Publishing Industry**	
1.	The application area includes publication rotogravure, product and packaging rotogravure, or wide-web flexographic printing presses.	☐YES ☒NO ☐N/A
U.	**Subpart PP - National Emission Standards for Containers**	
1.	The application area includes containers for which another 40 CFR Part 60, 61, or 63 subpart references the use of 40 CFR Part 63, Subpart PP for the control of air emissions. *If the response to Question VIII.U.1 is "NO," go to Section VIII.V.*	☐YES ☒NO
2.	The application area includes containers using Container Level 1 controls.	☐YES ☐NO
3.	The application area includes containers using Container Level 2 controls.	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

X. Subpart JJJ - National Emission Standards for Hazardous Air Pollutant Emissions: Group IV Polymers and Resins (continued)

5.	The application area includes process wastewater streams that are designated as Group 1 or are determined to be Group 1 for organic HAPs as defined in 40 CFR § 63.1312.	☐YES ☐NO
6.	The application area includes process wastewater streams, located at existing sources, that are Group 2 for organic HAPs as defined in 40 CFR § 63.1312.	☐YES ☐NO
7.	The application area includes process wastewater streams, located at new sources, that are Group 2 for organic HAPs as defined in 40 CFR § 63.1312.	☐YES ☐NO
8.	All Group 1 wastewater streams at the site are demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.X.8 is "YES," go to Question VIII.X.18.*	☐YES ☐NO
9.	The site has untreated and/or partially treated Group 1 wastewater streams demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.X.9 is "NO," go to Question VIII.X.11.*	☐YES ☐NO
10.	The application area includes waste management units that receive or manage a partially treated Group 1 wastewater stream prior to or during treatment.	☐YES ☐NO
11.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an on-site treatment operation that is not owned or operated by the owner or operator of the source generating the waste stream or residual.	☐YES ☐NO
12.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an off-site treatment operation. *If the responses to Questions VIII.X.11 - VIII.X.12 are both "NO," go to Question VIII.X.14.*	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

AA. Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON) (continued)

21.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of water seals or tightly fitting caps or plugs.	☐YES ☐NO
22.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that are part of a chemical manufacturing process unit that meets the criteria of 40 CFR § 63.100(b). *If the response to Question VIII.AA.22 is "NO," go to Section VIII.BB.*	☐YES ☐NO
23.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes (that are part of a miscellaneous chemical manufacturing process unit) that meet the criteria listed in 40 CFR § 63.149(d). *If the response to Question VIII.AA.23 is "NO," go to Section VIII.BB.*	☐YES ☐NO
24.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration of compounds in table 8 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 10,000 ppmw at any flow rate, and the total annual load of compounds in table 8 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 200 lb/yr.	☐YES ☐NO
25.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that convey water with a total annual average concentration of compounds in table 8 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 1,000 ppmw, and the annual average flow rate is greater than or equal to 1 liter per minute.	☐YES ☐NO
26.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that are part of a chemical manufacturing process unit that is subject to the new source requirements of 40 CFR § 63.2445(a); and the equipment conveys water with a combined total annual average concentration of compounds in tables 8 and 9 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 30,000 ppmw, and the combined total annual load of compounds in tables 8 and 9 to this subpart is greater than or equal to 1 tpy.	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
AA. Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON) (continued)		
BB. Subpart GGGG - National Emission Standards for Hazardous Air Pollutants for: Solvent Extractions for Vegetable Oil Production.		
1.	The application area includes a vegetable oil production process that: is by itself a major source of HAP emissions or, is collocated within a plant site with other sources that are individually or collectively a major source of HAP emissions.	☐YES ☒NO
CC. Subpart GGGGG - National Emission Standards for Hazardous Air Pollutants: Site Remediation		
1.	The application area includes a facility at which a site remediation is conducted. *If the answer to Question VIII.CC.1 is "NO," go to Section VIII.DD.*	☒YES ☐NO
2.	The application area is located at a site that is a major source of HAP. *If the answer to Question VIII.CC.2 is "NO," go to Section VIII.DD.*	☐YES ☒NO
3.	All site remediation's qualify for one of the exemptions contained in 40 CFR § 63.7881(b)(1) through (6). *If the answer to Question VIII.CC.3 is "YES," go to Section VIII.DD.*	☐YES ☐NO
4.	Prior to beginning site remediation activities it was determined that the total quantity of HAP listed in Table 1 of Subpart GGGGG that will be removed during all site remediations will be less than 1 Mg/yr. *If the answer to Question VIII.CC.4 is "YES," go to Section VIII.DD.*	☐YES ☐NO
5.	The site remediation will be completed within 30 consecutive calendar days.	☐YES ☐NO
6.	No site remediation will exceed 30 consecutive calendar days. *If the answer to Question VIII.CC.6 is "YES," go to Section VIII.DD.*	☐YES ☐NO
7.	Site remediation materials subject to 40 CFR Part 63, Subpart GGGGG are transferred from the application area to an off-site facility.	☐YES ☐NO
8.	All site remediation materials subject to 40 CFR Part 63, Subpart GGGGG are transferred from the application area to an off-site facility. *If the answer to Question VIII.CC.8 is "YES," go to Section VIII.DD.*	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

CC. Subpart GGGGG - National Emission Standards for Hazardous Air Pollutants: Site Remediation (continued)

9.	The application area includes containers that manage site remediation materials subject to 40 CFR Part 63, Subpart GGGGG. *If the response to Question VIII.CC.9 is "NO," go to Question VIII.CC.14.*	☐YES ☐NO
10.	The application area includes containers using Container Level 1 controls as specified in 40 CFR § 63.922(b).	☐YES ☐NO
11.	The application area includes containers with a capacity greater than 0.46 m^3 that meet the requirements of 40 CFR § 63.7900(b)(3)(i) and (ii).	☐YES ☐NO
12.	The application area includes containers using Container Level 2 controls as specified in 40 CFR § 63.923(b).	☐YES ☐NO
13.	The application area includes containers using Container Level 3 controls as specified in 40 CFR § 63.924(b).	☐YES ☐NO
14.	The application area includes individual drain systems complying with the requirements of 40 CFR § 63.962.	☐YES ☐NO

DD. Subpart YYYYY - National Emission Standards for Hazardous Air Pollutants for Area/Sources: Electric Arc Furnace Steelmaking Facilities

1.	The application area includes an electric arc furnace (EAF) steelmaking facility, and the site is an area source of hazardous air pollutant (HAP) emissions. *If the response to Question VIII.DD.1 is "NO," go to Section VIII.EE.*	☐YES ☒NO
2.	The EAF steelmaking facility is a research and development facility. *If the response to Question VIII.DD.2 is "YES," go to Section VIII.EE.*	☐YES ☐NO
3.	Metallic scrap is utilized in the EAF.	☐YES ☐NO
4.	Scrap containing motor vehicle scrap is utilized in the EAF.	☐YES ☐NO
5.	Scrap not containing motor vehicle scrap is utilized in the EAF.	☐YES ☐NO

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

EE. Subpart BBBBBB - National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Distribution Bulk Terminals, Bulk Plants and Pipeline Facilities

1.	The application area is located at a site that is an area source of HAPs. *If the answer to Question EE.1 is "NO," go to Section VIII.FF.*	☒YES ☐NO
2.	The application area includes a pipeline breakout station, as defined in 40 CFR Part 63, Subpart BBBBBB, not subject to the control requirements of 40 CFR Part 63, Subpart R.	☐YES ☒NO
3.	The application area includes a pipeline pumping station as defined in 40 CFR Part 63, Subpart BBBBBB.	☐YES ☒NO
4.	The application area includes a bulk gasoline plant as defined in 40 CFR Part 63, Subpart BBBBBB. *If the answer to Question VIII.EE.4 is "NO," go to Question VIII.EE.6.*	☐YES ☒NO
5.	The bulk gasoline plant was operating, prior to January 10, 2010, in compliance with an enforceable State, local or tribal rule or permit that requires submerged fill as specified in 40 CFR § 63.11086(a).	☐YES ☐NO
6.	The application area includes a bulk gasoline terminal, as defined in 40 CFR Part 63, Subpart BBBBBB, not subject to the control requirements of 40 CFR Part 63, Subpart R or Subpart CC. *If the answer to Question VIII.EE.6 is "NO," go to Section VIII.FF.*	☒YES ☐NO
7.	The bulk gasoline terminal has throughput of less than 250,000 gallons per day. *If the answer to Question VIII.EE.7 is "YES," go to Section VIII.FF.*	☒YES ☐NO
8.	The bulk gasoline terminal loads gasoline into gasoline cargo tanks other than railcar cargo tanks.	☐YES ☐NO
9.	The bulk gasoline terminal loads gasoline into railcar cargo tanks. *If the answer to Question VIII.EE.9 is "NO," go to Section VIII.FF.*	☐YES ☐NO
10.	The bulk gasoline terminal loads gasoline into railcar cargo tanks which do not collect vapors from a vapor balance system.	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)

EE. Subpart BBBBBB - National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Distribution Bulk Terminals, Bulk Plants and Pipeline Facilities (continued)

	11.	The bulk gasoline terminal loads gasoline into railcar cargo tanks which collect vapors from a vapor balance system and that system complies with a Federal, State, local, tribal rule or permit.	☐YES ☐NO

FF. Subpart CCCCCC - National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Dispensing Facilities

♦	1.	The application area is located at a site that is an area source of hazardous air pollutants. *If the answer to Question VIII.FF.1 is "NO," go to Section VIII.GG.*	☒YES ☐NO
♦	2.	The application area includes at least one gasoline dispensing facility as defined in 40 CFR § 63.11132. *If the answer to Question VIII.FF.2 is "NO," go to Section VIII.GG.*	☒YES ☐NO
♦	3.	The application area includes at least one gasoline dispensing facility with a monthly throughput of less than 10,000 gallons.	☒YES ☐NO
♦	4.	The application area includes at least one gasoline dispensing facility where gasoline is dispensed from a fixed gasoline storage tank into a portable gasoline tank for the on-site delivery and subsequent dispensing into other gasoline-fueled equipment.	☒YES ☐NO

GG. Recently Promulgated 40 CFR Part 63 Subparts

♦	1.	The application area is subject to one or more promulgated 40 CFR Part 63 subparts not addressed on this form. *If the response to Question VIII.GG.1 is "NO," go to Section IX. A list of promulgated 40 CFR Part 63 subparts not otherwise addressed on OP-REQ1 is included in the instructions.*	☒YES ☐NO
♦	2.	Provide the Subpart designation (i.e. Subpart EEE) in the space provided below. **40 CFR Part 63, Subparts QQQQ, WWWW, ZZZZ, DDDD, PPPP, and GGGG**

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 78			
XI.	**Miscellaneous (continued)**		
	B.	**Forms**	
♦	1.	The application area contains units that are potentially subject to a regulation for which the TCEQ has not developed a unit attribute form. *If the response to Question XI.B.1 is "NO" or "N/A," go to Section XI.C.*	☒YES ☐NO ☐N/A
♦	2.	Provide the Part and Subpart designation for the federal rule(s) or the Chapter, Subchapter, and Division designation for the State regulation(s) in the space provided below.	
	C.	**Emission Limitation Certifications**	
♦	1.	The application area includes units for which federally enforceable emission limitations have been established by certification.	☒YES ☐NO
	D.	**Alternative Means of Control, Alternative Emission Limitation or Standard, or Equivalent Requirements**	
	1.	The application area is located at a site that is subject to a site-specific requirement of the state implementation plan (SIP).	☐YES ☒NO
	2.	The application area includes units located at the site that are subject to a site-specific requirement of the SIP.	☐YES ☒NO
	3.	The application area includes units which demonstrate compliance by using an alternative means of control, alternative emission limitation or standard or equivalent requirements approved by the EPA Administrator. *If the response to Question XI.D.3 is "YES," please include a copy of the approval document with the application.*	☐YES ☒NO
	4.	The application area includes units which demonstrate compliance by using an alternative means of control, alternative emission limitation or standard or equivalent requirements approved by the TCEQ Executive Director. *If the response to Question XI.D.4 is "YES," please include a copy of the approval document with the application.*	☐YES ☒NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 79		
XI.	**Miscellaneous (continued)**	
E.	**Title IV - Acid Rain Program**	
1.	The application area includes emission units subject to the Acid Rain Program (ARP), including the Opt-In Program.	☐YES ☒NO
2.	The application area includes emission units qualifying for the new unit exemption under 40 CFR § 72.7.	☐YES ☒NO
3.	The application area includes emission units qualifying for the retired unit exemption under 40 CFR § 72.8.	☐YES ☒NO
F.	**40 CFR Part 97, Subpart EEEEE - Cross-State Air Pollution Rule (CSAPR) NO_X Ozone Season Group 2 Trading Program**	
1.	The application area includes emission units subject to the requirements of the CSAPR NO_X Ozone Season Group 2 Trading Program. *If the response to Question XI.F.1 is "NO," go to Question XI.F.7.*	☐YES ☒NO
2.	The application area includes units that are complying with the CEMS requirements of 40 CFR Part 75, Subpart H for NO_X and heat input.	☐YES ☐NO
3.	The application area includes gas or oil-fired units that are complying with the CEMS requirements of 40 CFR Part 75, Subpart H for NO_X, and the monitoring requirements of 40 CFR Part 75, Appendix D for heat input.	☐YES ☐NO
4.	The application area includes gas or oil-fired peaking units that are complying with the monitoring requirements of 40 CFR Part 75, Appendix E for NO_X, and the monitoring requirements of 40 CFR Part 75, Appendix D for heat input.	☐YES ☐NO
5.	The application area includes gas or oil-fired units that are complying with the Low Mass Emissions monitoring requirements of 40 CFR § 75.19 for NO_X and heat input.	☐YES ☐NO
6.	The application area includes units that are complying with EPA-approved alternative monitoring system requirements of 40 CFR Part 75, Subpart E for NO_X and heat input.	☐YES ☐NO
7.	The application area includes emission units that qualify for the CSAPR NO_X Ozone Season Group 2 retired unit exemption.	☐YES ☒NO

Form OP-REQ1: Page 80		
XI. Miscellaneous (continued)		
G. 40 CFR Part 97, Subpart FFFFF - Texas SO_2 Trading Program		
1.	The application area includes emission units complying with the requirements of the Texas SO_2 Trading Program. *If the response to Question XI.G.1 is "NO," go to Question XI.G.6.*	☐YES ☒NO
2.	The application area includes units that are complying with the CEMS requirements of 40 CFR Part 75, Subpart B for SO_2 and 40 CFR Part 75, Subpart H for heat input.	☐YES ☐NO
3.	The application area includes gas or oil-fired units that are complying with the monitoring requirements of 40 CFR Part 75, Appendix D for SO_2 and heat input.	☐YES ☐NO
4.	The application area includes gas or oil-fired units that are complying with the Low Mass Emissions monitoring requirements of 40 CFR § 75.19 for SO_2 and heat input.	☐YES ☐NO
5.	The application area includes units that are complying with EPA-approved alternative monitoring system requirements of 40 CFR Part 75, Subpart E for SO_2 and heat input.	☐YES ☐NO
6.	The application area includes emission units that qualify for the Texas SO_2 Trading Program retired unit exemption.	☐YES ☒NO
H. Permit Shield (SOP Applicants Only)		
1.	A permit shield for negative applicability entries on Form OP-REQ2 (Negative Applicable Requirement Determinations) is being requested or already exists in the permit.	☒YES ☐NO

Form OP-REQ1: Page 81			
XI.	**Miscellaneous (continued)**		
	I.	**GOP Type (Complete this section for GOP applications only)**	
♦	1.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 511 - Oil and Gas General Operating Permit for Brazoria, Chambers, Collin, Dallas, Denton, El Paso, Ellis, Fort Bend, Galveston, Hardin, Harris, Jefferson, Johnson, Kaufman, Liberty, Montgomery, Orange, Parker, Rockwall, Tarrant, Waller, and Wise Counties.	☐YES ☐NO
♦	2.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 512 - Oil and Gas General Operating Permit for Gregg, Nueces, and Victoria Counties.	☐YES ☐NO
	3.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 513 - Oil and Gas General Operating Permit for Aransas, Bexar, Calhoun, Matagorda, San Patricio, and Travis Counties.	☐YES ☐NO
♦	4.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 514 - Oil and Gas General Operating Permit for All Texas Counties Except Aransas, Bexar, Brazoria, Calhoun, Chambers, Collin, Dallas, Denton, El Paso, Ellis, Fort Bend, Galveston, Gregg, Hardin, Harris, Jefferson, Johnson, Kaufman, Liberty, Matagorda, Montgomery, Nueces, Orange, Parker, Rockwall, San Patricio, Tarrant, Travis, Victoria, Waller, and Wise County.	☐YES ☐NO
♦	5.	The application area is applying for initial issuance, revision, or renewal of a solid waste landfill general operating permit under GOP No. 517 - Municipal Solid Waste Landfill general operating permit.	☐YES ☐NO
	J.	**Title 30 TAC Chapter 101, Subchapter H**	
♦	1.	The application area is located in a nonattainment area. *If the response to Question XI.J.1 is "NO," go to question XI.J.3.*	☐YES ☒NO
♦	2.	The applicant has or will generate emission reductions to be credited in the TCEQ Emissions Banking and Trading Program.	☐YES ☐NO ☐N/A
♦	3.	The applicant has or will generate discrete emission reductions to be credited in the TCEQ Emissions Banking and Trading Program.	☐YES ☒NO ☐N/A

♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 82			
XI.	**Miscellaneous (continued)**		
	J.	**Title 30 TAC Chapter 101, Subchapter H (continued)**	
♦	4.	The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area where the facilities have a collective uncontrolled design capacity to emit 10 tpy or more of NO_X.	☐YES ☒NO
♦	5.	The application area includes an electric generating facility permitted under 30 TAC Chapter 116, Subchapter I.	☐YES ☒NO
♦	6.	The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area and the site has a potential to emit more than 10 tpy of highly-reactive volatile organic compounds (HRVOC) from facilities covered under 30 TAC Chapter 115, Subchapter H, Divisions 1 and 2.	☐YES ☒NO
♦	7.	The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area, the site has a potential to emit 10 tpy or less of HRVOC from covered facilities and the applicant is opting to comply with the requirements of 30 TAC Chapter 101, Subchapter H, Division 6, Highly Reactive VOC Emissions Cap and Trade Program.	☐YES ☒NO
	K.	**Periodic Monitoring**	
♦	1.	The applicant or permit holder is submitting at least one periodic monitoring proposal described on Form OP-MON in this application.	☐YES ☒NO
♦	2.	The permit currently contains at least one periodic monitoring requirement. *If the responses to Questions XI.K.1 and XI.K.2 are both "NO," go to Section XI.L.*	☒YES ☐NO
♦	3.	All periodic monitoring requirements are being removed from the permit with this application.	☐YES ☒NO

Form OP-REQ1: Page 83			
XI.	**Miscellaneous (continued)**		
	L.	**Compliance Assurance Monitoring**	
♦	1.	The application area includes at least one unit that does not meet the CAM exemptions in 40 CFR § 64.2(b) for all applicable requirements that it is subject to, and the unit has a pre-control device potential to emit greater than or equal to the amount in tons per year required in a site classified as a major source. *If the response to Question XI.L.1 is "NO," go to Section XI.M.*	☐YES ☒NO
♦	2.	The unit or units defined by XI.L.1 are using a control device to comply with an applicable requirement. *If the response to Question XI.L.2 is "NO," go to Section XI.M.*	☐YES ☐NO
♦	3.	The permit holder has submitted a CAM proposal on Form OP-MON in a previous application.	☐YES ☐NO
♦	4.	The owner/operator or permit holder is submitting a CAM proposal on Form OP-MON according to the deadlines for submittals in 40 CFR § 64.5 in this application. *If the responses to Questions XI.L.3 and XI.L.4 are both "NO," go to Section XI.M.*	☐YES ☐NO
	5.	The owner/operator or permit holder is submitting a CAM implementation plan and schedule to be incorporated as enforceable conditions in the permit.	☐YES ☐NO
	6.	Provide the unit identification numbers for the units for which the applicant is submitting a CAM implementation plan and schedule in the space below.	
♦	7.	At least one unit defined by XI.L.1 and XI.L.2 is using a CEMS, COMS or PEMS meeting the requirements of 40 CFR § 64.3(d)(2).	☐YES ☐NO
♦	8.	All units defined by XI.L.1 and XI.L.2 are using a CEMS, COMS or PEMS meeting the requirements of 40 CFR § 64.3(d)(2). *If the response to Question XI.L.8 is "YES," go to Section XI.M.*	☐YES ☐NO

Date:	01/14/2022
Permit No.:	O1659
RN No.:	RN101612083

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

Form OP-REQ1: Page 84			
XI.	**Miscellaneous (continued)**		
	L.	**Compliance Assurance Monitoring (continued)**	
♦	9.	At least one of the CAM proposals as described by question XI.L.3 or XI.L.4 addresses particulate matter, and the emission unit has a capture system as defined in 40 CFR §64.1.	☐YES ☐NO
♦	10.	At least one of the CAM proposals as described by question XI.L.3 or XI.L.4 addresses VOC, and the emission unit has a capture system as defined in 40 CFR §64.1.	☐YES ☐NO
♦	11.	At least one of the CAM proposals as described by question XI.L.3 or XI.L.4 addresses a regulated pollutant other than particulate matter or VOC, and the emission unit has a capture system as defined in 40 CFR §64.1.	☐YES ☐NO
♦	12.	The control device in the CAM proposal as described by question XI.L.3 or XI.L.4 has a bypass.	☐YES ☐NO
	M.	**Title 30 TAC Chapter 113, Subchapter D, Division 5 - Emission Guidelines and Compliance Times**	
♦	1.	The application area includes at least one air curtain incinerator that commenced construction on or before December 9, 2004. *If the response to Question XI.M.1 is "NO," or "N/A," go to Section XII.*	☐YES ☒NO ☐N/A
♦	2.	All air curtain incinerators constructed on or before December 9, 2004 combust only wood waste, clean lumber, or yard waste or a mixture of these materials.	☐YES ☐NO
XII.	**New Source Review (NSR) Authorizations**		
	A.	**Waste Permits with Air Addendum**	
♦	1.	The application area includes a Municipal Solid Waste Permit or an Industrial Hazardous Waste with an Air Addendum. *If the response to XII.A.1 is "YES," include the waste permit numbers and issuance date in Section XII.J.*	☒YES ☐NO

XII. New Source Review (NSR) Authorizations (continued)			
	B.	**Air Quality Standard Permits**	
♦	1.	The application area includes at least one Air Quality Standard Permit NSR authorization. *If the response to XII.B.1 is "NO," go to Section XII.C. If the response to XII.B.1 is "YES," be sure to include the standard permit's registration numbers in Section XII.H and answer XII.B.2 - B.16 as appropriate.*	☒YES ☐NO
♦	2.	The application area includes at least one "State Pollution Control Project" Air Quality Standard Permit NSR authorization under 30 TAC § 116.617.	☐YES ☒NO
♦	3.	The application area includes at least one non-rule Air Quality Standard Permit for Pollution Control Projects NSR authorization.	☐YES ☒NO
♦	4.	The application area includes at least one "Installation and/or Modification of Oil and Gas Facilities" Air Quality Standard Permit NSR authorization under 30 TAC § 116.620.	☐YES ☒NO
♦	5.	The application area includes at least one non-rule Air Quality Standard Permit for Oil and Gas Handling and Production Facilities NSR authorization.	☐YES ☒NO
♦	6.	The application area includes at least one "Municipal Solid Waste Landfill" Air Quality Standard Permit NSR authorization under 30 TAC § 116.621.	☒YES ☐NO
♦	7.	The application area includes at least one "Municipal Solid Waste Landfill Facilities and Transfer Stations" Standard Permit authorization under 30 TAC Chapter 330, Subchapter U.	☒YES ☐NO
	8.	The application area includes at least one "Concrete Batch Plant" Air Quality Standard Permit NSR authorization.	☐YES ☒NO
♦	9.	The application area includes at least one "Concrete Batch Plant with Enhanced Controls" Air Quality Standard Permit NSR authorization.	☐YES ☒NO
♦	10.	The application area includes at least one "Hot Mix Asphalt Plant" Air Quality Standard Permit NSR authorization.	☐YES ☒NO

FORM OP-ACPS – APPLICATION COMPLIANCE PLAN AND SCHEDULE

Texas Commission on Environmental Quality
Form OP-ACPS
Application Compliance Plan and Schedule

Date: 01/16/2022	Regulated Entity No.: RN101612083	Permit No.: O1659
Company Name: US Department of Army		Area Name: Fort Hood, US Army

- Part 1 of this form must be submitted with all initial FOP applications and renewal applications.
- The Responsible Official must use Form OP-CRO1 (Certification by Responsible Official) to certify information contained in this form in accordance with 30 TAC § 122.132(d)(8).

Part 1

A. Compliance Plan — Future Activity Committal Statement	
The *Responsible Official* commits, utilizing reasonable effort, to the following: As the responsible official it is my intent that all emission units shall continue to be in compliance with all applicable requirements they are currently in compliance with, and all emission units shall be in compliance by the compliance dates with any applicable requirements that become effective during the permit term.	
B. Compliance Certification - Statement for Units in Compliance* (Indicate response by entering an "X" in the appropriate column)	
1. With the exception of those emission units listed in the Compliance Schedule section of this form (Part 2, below), and based, at minimum, on the compliance method specified in the associated applicable requirements, are all emission units addressed in this application in compliance with all their respective applicable requirements as identified in this application?	☒ YES ☐ NO
2. Are there any non-compliance situations addressed in the Compliance Schedule Section of this form (Part 2)?	☐ YES ☒ NO
3. If the response to Item B.2, above, is "Yes," indicate the total number of Part 2 attachments included in this submittal. *(For reference only)*	
* *For Site Operating Permits (SOPs), the complete application should be consulted for applicable requirements and their corresponding emission units when assessing compliance status.* *For General Operating Permits (GOPs), the application documentation, particularly Form OP-REQ1 should be consulted as well as the requirements contained in the appropriate General Permits portion of 30 TAC Chapter 122.* *Compliance should be assessed based, at a minimum, on the required monitoring, testing, record keeping, and/or reporting requirements, as appropriate, associated with the applicable requirement in question.*

FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
US Department of the Army

AUTHORIZING THE OPERATION OF
Fort Hood
Fort Hood, U.S. Army
National Security

LOCATED AT
Bell County, Texas
Latitude 31° 8' 0" Longitude 97° 36' 0"
Regulated Entity Number: RN101612083

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1659 Issuance Date: August 8, 2017

For the Commission

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the

(i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)

(iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the

B. Title 40 CFR § 63.11111(i), for compliance due to increase of throughput

C. Title 40 CFR § 63.11113(c), for compliance due to increase of throughput

D. Title 40 CFR § 63.11115(a), for operation of the source

E. Title 40 CFR § 63.11116(a) and (a)(1) - (4), for work practices

F. Title 40 CFR § 63.11116(b), for records availability

G. Title 40 CFR § 63.11116(d), for portable gasoline containers

12. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

13. As an alternative to performing opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A), as specified in Special Term and Conditions 3A - 3C, the permit holder may use a digital camera opacity system in accordance with EPA Alternate Method 082 to determine opacities at each source. In addition, the digital opacity camera system may be used in lieu of opacity observations required in any underlying applicable requirement within this permit.

Additional Monitoring Requirements

14. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

15. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: EC001	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 112, Sulfur Compounds	SOP Index No.: 112-1
Pollutant: SO_2	Main Standard: § 112.9(a)
Monitoring Information	
Indicator: Sulfur Content of Fuel	
Minimum Frequency: Quarterly and within 24 hours of any fuel change	
Averaging Period: n/a*	
Deviation Limit: >440 parts per million by volume (ppmv) at actual stack conditions and averaged over a three-hour period.	
Periodic Monitoring Text: Measure and record the sulfur content of the fuel. Any monitoring data above the deviation limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

APPENDIX A

Title V Operating Permit No. O1659

FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
US Department of the Army

AUTHORIZING THE OPERATION OF
Fort Hood
Fort Hood, U.S. Army
National Security

LOCATED AT
Bell County, Texas
Latitude 31° 8' 0" Longitude 97° 36' 0"
Regulated Entity Number: RN101612083

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1659 Issuance Date: August 8, 2017

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

   A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

   B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

   C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subparts GG, AAAA, ZZZZ and GGGGG as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.380, §113.840, §113.1090, and §113.1160 respectively, which incorporate the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed either before or after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the

air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)

(iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the

source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

F. Permit holders for sites that have materials handling, construction, roads, streets, alleys, and parking lots shall comply with the following requirements:

(i) Title 30 TAC § 111.143 (relating to Materials Handling)

(ii) Title 30 TAC § 111.145 (relating to Construction and Demolition)

(iii) Title 30 TAC § 111.147 (relating to Roads, Streets, and Alleys)

(iv) Title 30 TAC § 111.149 (relating to Parking Lots)

G. Outdoor burning, as stated in 30 TAC § 111.201, shall not be authorized unless the following requirements are satisfied:

(i) Title 30 TAC § 111.205 (relating to Exception for Fire Training)

(ii) Title 30 TAC § 111.207 (relating to Exception for Recreation, Ceremony, Cooking, and Warmth)

(iii) Title 30 TAC § 111.211 (relating to Exception for Prescribed Burn)

(iv) Title 30 TAC § 111.219 (relating to General Requirements for Allowable Outdoor Burning)

(v) Title 30 TAC § 111.221 (relating to Responsibility for Consequences of Outdoor Burning)

4. Permit holder shall comply with the following 30 TAC Chapter 115, Subchapter C requirements:

A. When filling gasoline storage vessels with a nominal capacity greater than 1,000 gallons (Stage I) at motor vehicle fuel dispensing facilities, which have dispensed less than 100,000 gallons of gasoline in any calendar month after October 31, 2014, the permit holder shall comply with the following requirements specified in 30 TAC Chapter 115, Subchapter C:

(i) Title 30 TAC § 115.222(3) (relating to Control Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors

(ii) Title 30 TAC § 115.222(6) (relating to Control Requirements)

(iii) Title 30 TAC § 115.224(1) (relating to Inspection Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors

(iv) Title 30 TAC § 115.226(2)(B) (relating to Recordkeeping Requirements)

B. When filling stationary gasoline storage containers with a nominal capacity less than or equal to 1,000 gallons at a Stage I motor vehicle fuel dispensing facility, the permit holder shall comply with the following requirements specified in 30 TAC Chapter 115, Subchapter C:

(i) Title 30 TAC § 115.222(3) (relating to Control Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors

(ii) Title 30 TAC § 115.222(6) (relating to Control Requirements)

(iii) Title 30 TAC § 115.224(1) (relating to Inspection Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors

5. The permit holder shall comply with the following requirements of 30 TAC Chapter 117:

A. For the manufacturing, distribution, sales, and installation of natural gas-fired water heaters, boilers, and process heaters subject to Subchapter E, Division 3 (30 TAC § 117.3200):

(i) Title 30 TAC § 117.3205 (relating to Emission Specifications)

(ii) Title 30 TAC § 117.3210 (relating to Certification Requirements)

(iii) Title 30 TAC § 117.3215 (relating to Notification and Labeling Requirements)

6. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

B. Title 40 CFR § 60.8 (relating to Performance Tests)

C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

D. Title 40 CFR § 60.12 (relating to Circumvention)

E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

F. Title 40 CFR § 60.14 (relating to Modification)

G. Title 40 CFR § 60.15 (relating to Reconstruction)

H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

7. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

8. For sources subject to emission standards in 40 CFR Part 63, Subpart GG, the permit holder shall comply with the requirements below (Title 30 TAC Chapter 113, Subchapter C, § 113.380 incorporated by reference):

A. Title 40 CFR § 63.748 (relating to Standards: Handling and Storage of Waste)

B. Title 40 CFR § 63.749(a) (relating to Compliance Dates and Determinations)

9. For wood furniture manufacturing operations specified in 40 CFR Part 63, Subpart JJ, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.410 incorporated by reference):

A. Title 40 CFR § 63.800(a) (relating to Applicability), for recordkeeping requirements for an incidental wood furniture manufacturer

10. For each bulk gasoline plant specified in 40 CFR Part 63, Subpart BBBBBB, the permit holder shall comply with the following requirements (Title 30 TAC, Subchapter C, § 113.1370 incorporated by reference):

A. Title 40 CFR § 63.11086(d), for handling of gasoline

B. Title 40 CFR § 63.11085(a), for operation and maintenance of the affected source

C. Title 40 CFR § 63.11086(e), for Initial Notification

D. Title 40 CFR § 63.11086(f), for Notification of Compliance Status

E. Title 40 CFR § 63.11089(a), for leak inspections at the facility

F. Title 40 CFR § 63.11089(b) and (c), for log book maintenance and recordkeeping

G. Title 40 CFR § 63.11089(d), for delay of repair

H. Title 40 CFR § 63.11094(d), for recordkeeping

I. Title 40 CFR § 63.11094(e), for recordkeeping

J. Title 40 CFR § 63.11094(g), for recordkeeping

K. Title 40 CFR § 63.11095(a)(3), (b), (b)(5), (c) and (d), for reporting

11. For each gasoline dispensing facility, with a throughput of less than 10,000 gallons per month as specified in 40 CFR Part 63, Subpart CCCCCC, the permit holder shall comply with the following requirements (Title 30 TAC, Subchapter C, § 113.1380 incorporated by reference):

A. Title 40 CFR § 63.11111(e), for records of monthly throughput

B. Title 40 CFR § 63.11111(i), for compliance due to increase of throughput

C. Title 40 CFR § 63.11113(c), for compliance due to increase of throughput

D. Title 40 CFR § 63.11115(a), for operation of the source

E. Title 40 CFR § 63.11116(a) and (a)(1) - (4), for work practices

F. Title 40 CFR § 63.11116(b), for records availability

G. Title 40 CFR § 63.11116(d), for portable gasoline containers

12. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

13. As an alternative to performing opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A), as specified in Special Term and Conditions 3A - 3C, the permit holder may use a digital camera opacity system in accordance with EPA Alternate Method 082 to determine opacities at each source. In addition, the digital opacity camera system may be used in lieu of opacity observations required in any underlying applicable requirement within this permit.

Additional Monitoring Requirements

14. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

15. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions

referenced in the New Source Review Authorization References attachment. These requirements:

A. Are incorporated by reference into this permit as applicable requirements

B. Shall be located with this operating permit

C. Are not eligible for a permit shield

16. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

17. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

18. The permit holder shall comply with the terms and conditions of the air addendum of the [Municipal Solid Waste], [Industrial Hazardous Waste] permits listed in the New Source Review Authorization Reference Attachment. Requirements other than those of the air addendum are not applicable to this operating permit.

19. The permit holder shall comply with the following requirements for Air Quality Standard Permits:

A. Registration requirements listed in 30 TAC § 116.611, unless otherwise provided for in an Air Quality Standard Permit

B. General Conditions listed in 30 TAC § 116.615, unless otherwise provided for in an Air Quality Standard Permit

C. Applicable requirements of 30 TAC Chapter 330, Subchapter U (Standard Air Permits for Municipal Solid Waste Landfill Facilities and Transfer Stations)

D. Applicable requirements of 30 TAC § 116.621 for Municipal Solid Waste Landfills based on the information contained in the registration application.

E. Concrete Batch Plant Standard Permit.

Compliance Requirements

20. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited

to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

21. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Protection of Stratospheric Ozone

22. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

B. Any on site servicing, maintenance, and repair of fleet vehicle air conditioning using ozone-depleting refrigerants shall be conducted in accordance with 40 CFR Part 82, Subpart B. Permit holders shall ensure that repairs or refrigerant removal are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart B.

C. The permit holder shall comply with 40 CFR Part 82, Subpart D related to the procurement requirements of Class I or Class II (ozone-depleting) substances or products containing those substances as specified in 40 CFR § 82.80 - § 82.86 and the applicable Part 82 Appendices.

D. The permit holder shall comply with 40 CFR Part 82, Subpart F related to the disposal requirements for appliances using Class I or Class II (ozone-depleting) substances or non-exempt substitutes as specified in 40 CFR §§ 82.150 - 82.166 and the applicable Part 82 Appendices.

E. The permit holder shall comply with 40 CFR Part 82, Subpart H related to Halon Emissions Reduction requirements as specified in 40 CFR § 82.250 - § 82.270 and the applicable Part 82 Appendices.

Temporary Fuel Shortages (30 TAC § 112.15)

23. The permit holder shall comply with the following 30 TAC Chapter 112 requirements:

A. Title 30 TAC § 112.15 (relating to Temporary Fuel Shortage Plan Filing Requirements)

B. Title 30 TAC § 112.16(a), (a)(1), and (a)(2)(B) - (C) (relating to Temporary Fuel Shortage Plan Operating Requirements)

C. Title 30 TAC § 112.17 (relating to Temporary Fuel Shortage Plan Notification Procedures)

D. Title 30 TAC § 112.18 (relating to Temporary Fuel Shortage Plan Reporting Requirements)

Permit Location

24. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

25. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit

shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary 24

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Additional Monitoring Requirements

Periodic Monitoring Summary 94

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: EC001	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 112, Sulfur Compounds	SOP Index No.: 112-1
Pollutant: SO_2	Main Standard: § 112.9(a)
Monitoring Information	
Indicator: Sulfur Content of Fuel	
Minimum Frequency: Quarterly and within 24 hours of any fuel change	
Averaging Period: n/a*	
Deviation Limit: >440 parts per million by volume (ppmv) at actual stack conditions and averaged over a three-hour period.	
Periodic Monitoring Text: Measure and record the sulfur content of the fuel. Any monitoring data above the deviation limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Permit Shield

Permit Shield 96

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
COMPREP	N/A	40 CFR Part 63, Subpart WWWW	Composite repair-only operations exempt from requirements of Subpart WWWW.
EC001	BOILER10, BOILER11, BOILER9	30 TAC Chapter 113, Hos/Med/Inf Waste Incinerators	Not a hospital/medical/infectious waste incinerator.
EC001	BOILER10, BOILER11, BOILER9	40 CFR Part 60, Subpart Da	Not an electric utility steam generating unit.
EC001	BOILER10, BOILER11, BOILER9	40 CFR Part 60, Subpart Db	Maximum design heat capacity is less than 100MMBtu/hr.
EC001	BOILER10, BOILER11, BOILER9	40 CFR Part 63, Subpart DDDDD	Not a major source of HAPS.
EC001	BOILER10, BOILER11, BOILER9	40 CFR Part 63, Subpart JJJJJJ	Gas-fired boilers, as defined in this subpart, are not subject to this subpart.
EC001	BOILER10, BOILER11, BOILER9	40 CFR Part 63, Subpart O	No ethylene oxide is used.
EC002	BOILER12, BOILER13, BOILER14, BOILER15, BOILER16, BOILER17, BOILER18, BOILER19, BOILER20, BOILER21, BOILER22, BOILER23, BOILER24, BOILER25	30 TAC Chapter 112, Sulfur Compounds	Does not fire liquid or solid fossil fuels.
EC002	BOILER12, BOILER13, BOILER14, BOILER15, BOILER16, BOILER17,	40 CFR Part 60, Subpart Da	Not an electric utility steam generating unit.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
	BOILER18, BOILER19, BOILER20, BOILER21, BOILER22, BOILER23, BOILER24, BOILER25		
EC002	BOILER12, BOILER13, BOILER14, BOILER15, BOILER16, BOILER17, BOILER18, BOILER19, BOILER20, BOILER21, BOILER22, BOILER23, BOILER24, BOILER25	40 CFR Part 60, Subpart Db	Maximum design heat capacity is less than 100MMBtu/hr.
EC002	BOILER12, BOILER13, BOILER14, BOILER15, BOILER16, BOILER17, BOILER18, BOILER19, BOILER20, BOILER21, BOILER22, BOILER23, BOILER24, BOILER25	40 CFR Part 60, Subpart Dc	Maximum design heat capacity is less than 10 MMBtu/hr.
EC002	BOILER12, BOILER13, BOILER14, BOILER15, BOILER16, BOILER17, BOILER18, BOILER19, BOILER20, BOILER21, BOILER22, BOILER23, BOILER24, BOILER25	40 CFR Part 63, Subpart DDDDD	Not a major source of HAPS.
EC002	BOILER12, BOILER13, BOILER14, BOILER15,	40 CFR Part 63, Subpart JJJJJJ	Gas-fired boilers, as defined in this subpart, are not subject to this subpart.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
	BOILER16, BOILER17, BOILER18, BOILER19, BOILER20, BOILER21, BOILER22, BOILER23, BOILER24, BOILER25		
FS011	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Not applicable since it is a motor vehicle fuel dispensing facility.
FS011	N/A	40 CFR Part 60, Subpart XX	Not applicable since it is not a bulk gasoline terminal loading rack.
FS011	N/A	40 CFR Part 61, Subpart BB	Not applicable since no benzene loading occurs at the site.
FS011	N/A	40 CFR Part 63, Subpart R	Not applicable since it is not a gasoline distribution terminal.
FS018	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Not applicable since it is a motor vehicle fuel dispensing facility.
FS018	N/A	40 CFR Part 60, Subpart XX	Not applicable since it is not a bulk gasoline terminal loading rack.
FS018	N/A	40 CFR Part 61, Subpart BB	Not applicable since no benzene loading occurs at the site.
FS018	N/A	40 CFR Part 63, Subpart R	Not applicable since it is not a gasoline distribution terminal.
FS018A	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank does not contain VOC.
FS019	N/A	30 TAC Chapter 115, Loading and	Not applicable since it is a motor vehicle fuel

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
		Unloading of VOC	dispensing facility.
FS019	N/A	40 CFR Part 60, Subpart XX	not applicable since it is not a bulk gasoline terminal loading rack.
FS019	N/A	40 CFR Part 61, Subpart BB	Not applicable since no benzene loading occurs at the site.
FS019	N/A	40 CFR Part 63, Subpart R	Not applicable since it is not a gasoline distribution terminal.
FS019A	N/A	30 TAC Chapter 115, Storage of VOCs	Not applicable since base is located in Bell & Coryell counties.
FS019A	N/A	40 CFR Part 60, Subpart Kb	Not applicable since the storage tank is located at a gasoline service station.
FS019A	N/A	40 CFR Part 61, Subpart Y	Not applicable since the tank does not store benzene.
FS019A	N/A	40 CFR Part 63, Subpart R	Not applicable since it is not associated with a bulk gasoline terminal.
FS020	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Since it is a motor vehicle fuel dispensing facility, it is exempt from the Division.
FS020	N/A	40 CFR Part 60, Subpart XX	Not defined as a bulk gasoline terminal loading rack.
FS020	N/A	40 CFR Part 63, Subpart R	Not defined as a gasoline distribution terminal.
FS021	N/A	30 TAC Chapter 115, Loading and	Since it is a motor vehicle fuel dispensing

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Municipal Solid Waste and Industrial Hazardous Waste Permits With an Air Addendum	
Permit No.: 88412	

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
ARO10A	HAND-WIPE CLEANING OPERATION, BLDG. 7013	80/12/01/1972
ARO10B	HAND-WIPE CLEANING OPERATION, BLDG. 7013	80/12/01/1972
ARO16A	HAND-WIPE CLEANING OPERATION, BLDG. 90094	70/11/25/1985
ARO16B	HAND-WIPE CLEANING OPERATION, BLDG. 90094	70/11/25/1985
ARO17A	HAND-WIPE CLEANING OPERATION, BLDG. 90098	70/11/05/1986
ARO17B	HAND-WIPE CLEANING OPERATION, BLDG. 90098	70/11/05/1986
ARO18A	HAND-WIPE CLEANING OPERATION, BLDG. 90033	70/11/25/1985
ARO18B	HAND-WIPE CLEANING OPERATION, BLDG. 90033	70/11/25/1985
ARO19A	HAND-WIPE CLEANING OPERATION, BLDG. 88024	70/06/07/1996
ARO19B	HAND-WIPE CLEANING OPERATION, BLDG. 88024	70/06/07/1996
ARO1A	HAND-WIPE CLEANING OPERATION BLDG 6978	124/05/04/1994
ARO1B	HAND-WIPE CLEANING OPERATION, BLDG. 6978	70/11/05/1986
ARO20A	HAND-WIPE CLEANING OPERATION, BLDG. 88024	70/06/07/1996
ARO20B	HAND-WIPE CLEANING OPERATION, BLDG. 88024	70/06/07/1996
ARO21A	HAND-WIPE CLEANING OPERATION, BLDG. 88027	70/07/20/1992
ARO21B	HAND-WIPE CLEANING OPERATION, BLDG. 88027	70/07/20/1992
ARO25A	HAND-WIPE CLEANING OPERATION, BLDG. 90051	80/12/01/1972
ARO25B	HAND-WIPE CLEANING OPERATION, BLDG. 90051	80/12/01/1972
ARO26A	HAND-WIPE CLEANING OPERATION, BLDG. 90051	80/12/01/1972

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
ARO26B	HAND-WIPE CLEANING OPERATION, BLDG. 90051	80/12/01/1972
ARO28	SITE WIDE COLD SOLVENT PARTS CLEANERS	107/05/04/1994
ARO29	SITE WIDE COLD SOLVENT PARTS CLEANERS	107/05/04/1994
ARO2A	HAND-WIPE CLEANING OPERATION, BLDG. 6975	124/05/04/1994
ARO2B	HAND-WIPE CLEANING OPERATION, BLDG. 6975	70/11/05/1986
ARO30	ENGINE CLEANING BY FLUSHING BLDG. 90033	41/11/25/1985
ARO31	ENGINE CLEANING BY FLUSHING BLDG. 90051	46/05/08/1972
ARO32	COLD SOLVENT PARTS WASHER, BLDG. 90098	107/05/04/1994
ARO33	ENGINE CLEANING BY FLUSHING BLDG. 90098	41/11/05/1986
ARO34	COLD SOLVENT PARTS WASHER BLDG. 90051	107/05/04/1994
ARO35	ENGINE CLEANING BY FLUSHING, BLDG. 90051	46/05/08/1972
ARO36	COLD SOLVENT PARTS WASHER, BLDG. 6940	107/05/04/1994
ARO37	COLD SOLVENT PARTS WASHER, BLDG. 7007	107/05/04/1994
ARO38	COLD SOLVENT PARTS WASHER BLDG. 7021	107/05/04/1994
ARO39	COLD SOLVENT PARTS WASHER BLDG. 7022	107/05/04/1994
ARO3A	HAND-WIPE CLEANING OPERATION, BLDG. 7007	124/05/04/1994
ARO3B	HAND-WIPE CLEANING OPERATION, BLDG. 7007	80/09/17/1973
ARO42	COLD SOLVENT PARTS WASHER, BLDG. 7013	107/05/04/1994
ARO43A	HAND WIPE CLEAINING, BLDG 6940 (AVIM)	70/11/05/1986

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
ARO43B	HAND WIPE CLEANING, BLDG 6940 (AVIM)	70/11/05/1986
ARO44A	HAND WIPE CLEAINING, BLDG 90094	70/11/05/1986
ARO44B	HAND WIPE CLEANING, BLDG 90094 (AVIM)	70/11/05/1986
ARO45A	HAND WIPE CLEAINING, BLDG 707	124/05/04/1994
ARO45B	HAND WIPE CLEANING, BLDG 707	124/05/04/1994
ARO46A	HAND WIPE CLEANING, BLDG 708	124/05/04/1994
ARO46B	HAND WIPE CLEANING, BLDG 708	124/05/04/1994
ARO47A	HAND WIPE CLEANING, BLDG 6970	70/11/05/1986
ARO47B	HAND WIPE CLEANING, BLDG 6970	70/11/05/1986
ARO48A	HAND WIPE CLEANING, BLDG 6972	70/11/05/1986
ARO48B	HAND WIPE CLEANING, BLDG 6972	70/11/05/1986
ARO49A	HAND WIPE CLEANING, BLDG 7027	124/05/04/1994
ARO49B	HAND WIPE CLEANING, BLDG 7027	124/05/04/1994
ARO4A	HAND-WIPE CLEANING OPERATION, BLDG. 6940	124/05/04/1994
ARO4B	HAND-WIPE CLEANING OPERATION, BLDG. 6940	70/11/05/1986
ARO5A	HAND-WIPE CLEANING OPERATION, BLDG. 7021	124/05/04/1994
ARO5B	HAND-WIPE CLEANING OPERATION, BLDG. 7021	80/09/23/1982
ARO65	TOUCHUP TOPCOAT OPERATION, BLDG 707	70/06/07/1996
ARO66	TOUCHUP TOPCOAT OPERATION, BLDG 708	70/06/07/1996

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
ARO67	TOUCHUP TOPCOAT OPERATION, BLDG 7027	70/06/07/1996
ARO68	ENGINE FLUSH CLEANING, BLDG 6975	041/06/07/1996, 41/06/07/1996
ARO69	ENGINE FLUSH CLEANING, BLDG 6975	41/06/07/1996
ARO6A	HAND-WIPE CLEANING OPERATION, BLDG. 7022	80/01/08/1980
ARO6B	HAND-WIPE CLEANING OPERATION, BLDG. 7022	80/01/08/1980
ARO70	ENGINE FLUSH CLEANING, BLDG 6978	41/06/07/1996
ARO71	ENGINE FLUSH CLEANING, BLDG 7012/7013	41/06/07/1996
ARO72	ENGINE FLUSH CLEANING, BLDG 7021	41/06/07/1996
ARO73	ENGINE FLUSH CLEANING, BLDG 7022	41/06/07/1996
ARO74	ENGINE FLUSH CLEANING, BLDG 90094 (AVIM)	41/06/07/1996
ARO75	ENGINE FLUSH CLEANING, BLDG 707	41/06/07/1996
ARO76	ENGINE FLUSH CLEANING, BLDG 708	41/06/07/1996
ARO77	ENGINE FLUSH CLEANING, BLDG 6972	41/06/07/1996
ARO78	ENGINE FLUSH CLEANING, BLDG 7027	41/06/07/1996
ARO79	COLD PARTS WASHING, BLDG 6940 (AVIM)	106.454/03/14/1997
ARO7A	HAND-WIPE CLEANING OPERATION, BLDG. 7012	80/12/01/1972
ARO7B	HAND-WIPE CLEANING OPERATION, BLDG. 7012	80/12/01/1972
ARO80	COLD PARTS WASHING, BLDG 6970	106.454/03/14/1997

Appendix A

Acronym List 134

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
CEMS ..... continuous emissions monitoring system
CFR ..... Code of Federal Regulations
COMS ..... continuous opacity monitoring system
CVS ..... closed vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MACT ..... Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr ..... Million British thermal units per hour
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NESHAP ..... National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PEMS ..... predictive emissions monitoring system
PM ..... particulate matter
ppmv ..... parts per million by volume
PRO ..... process unit
PSD ..... prevention of significant deterioration
psia ..... pounds per square inch absolute
SIP ..... state implementation plan
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

APPENDIX B

Source Emission Calculations

SOURCE EMISSION CALCULATIONS

Air emission estimates were developed for each source category using the calculation methodologies described below.

Abrasive Blasting Operations

Actual annual PM-total emissions from abrasive blasting operations are based on the average blasting media usage rate, the control efficiency of the filtration system, annual hours of operation, and an industry accepted emissions factor from The State and Territorial Air Pollution Program Administrators (STAPPA) and the Association of Local Air Pollution Control Officials (ALAPCO). The equation below is used to calculate the annual actual PM emissions.

$$AE_{TSP}\left(\frac{ton}{year}\right) = MUR\ (lbs) * EF\left(\frac{lb\ PM}{lb\ media}\right) * \left(1-\frac{PMEFF}{100}\right) * CF$$

Where: AE = actual emissions; EF = emission factor; MUR = media usage; PMEFF = particulate control efficiency; CF = conversion factor (lb to tons)

Example 1: Actual annual PM-total emissions from the site-wide Abrasive Blasting operations (AB002).

Given: MUR = 2400; PMEFF = 99.85%; EF = 0.01; CF = 0.0005

$$\mathbf{0.0015}\left(\frac{ton}{year}\right) = 2400\,(lbs) * 0.82\left(\frac{lb\ PM}{lb\ media}\right) * \left(1-\frac{99.85}{100}\right) * 0.0005$$

External Combustion Equipment

Actual air emissions from the external combustion equipment are estimated by multiplying the actual fuel usage by the appropriate emission factor set from the 5th edition of *Compilation of Air Pollution Emission Factors – Volume I* (AP-42), U.S. Environmental Protection Agency (USEPA). For natural gas-fired units, emission factors from Section 1.4 of AP-42 are used. For units that use fuel oil as primary or back up, emission factors from Section 1.3 of AP-42 are used. The following equation is used to calculate the actual annual emission rates for all pollutants from the external combustion equipment:

$$AE\left(\frac{ton}{year}\right) = AFU\left(\frac{MMcf}{year}\right) * EF\left(\frac{lb}{MMcf}\right) * CF$$

Where: AE = actual emissions
AFU = actual fuel usage (natural gas)
CF = conversion factor (lb to tons)
EF = emission factor

$$AE\left(\frac{ton}{year}\right) = AFU\left(\frac{gal}{year}\right) * EF\left(\frac{lb}{1000gal}\right) * CF$$

Where: AE = actual emissions
AFU = actual fuel usage (fuel oil)
CF = conversion factor (lb to tons)
EF = emission factor

Example 2: Actual NO_X emissions from EC001, three natural gas-fired hot water boilers at building 36000.

Given: Primary Fuel - Natural gas
AFU = 47.39MMcf/yr (obtained from site records)
EF = 32 lb of NO_x per MMcf burned through low NOx burner/flue gas recirculation
CF = 0.0005 tons/lb

$$\mathbf{0.7582}\left(\frac{ton}{year}\right) = 47.39\left(\frac{MMcf}{year}\right) * 32\left(\frac{lb}{MMcf}\right) * 0.0005$$

Given: Secondary Fuel – Fuel oil
AFU = 680 gal/yr (obtained from site records)
EF = 10 lb of NO_x per 1000 gal burned
CF = 0.0005 tons/lb

$$\mathbf{0.0034}\left(\frac{ton}{year}\right) = 680\left(\frac{gal}{year}\right) * 10\left(\frac{lb}{1000gal}\right) * 0.0005$$

$$AE\left(\frac{ton}{year}\right) = 0.7582\left(\frac{ton}{year}\right) + 0.0034\left(\frac{ton}{year}\right) = \mathbf{0.7616}$$

Engine Testing Operations

Actual NOx emissions from each engine testing operation are estimated using emission factors derived from actual tests of the T700-GE-700, T700-GE-701, T700-GE-701C, and T700-GE-701D engine.

The actual emissions are obtained by multiplying the emission factors of each testing load by the percent of time tested at that load. The following equation is used to calculate the annual emissions of all pollutants from the jet engine testing operations:

$$AE\left(\frac{tons}{year}\right) = \sum\left[PT(\%) * TT\left(\frac{hours}{year}\right) * EF\left(\frac{lbs}{hour}\right) * CF\right]$$

Where: AE = actual emissions
TT = engine testing time
CF = conversion factor (lbs to tons)
PT = % hours tested at a specific load
EF = emission factor at a specific load

Example 3: Actual NOx emissions for ET001, an engine test cell for T700-GE-700 engine in building 6972.

Given: PT = 9% at 50% load
EF = 0.0609 lbs/hr at 50% load
TT = 1.6 hrs/yr
CF = 0.0005 ton/lbs

$$\mathbf{0.000004}\left(\frac{tons}{year}\right) = \Sigma\left[9(\%) * 1.6\left(\frac{hours}{year}\right) * 0.0609\left(\frac{lbs}{hour}\right) * 0.0005\right]$$

Table 3-1. Total NOx emissions for ET001 T700-GE-700 engine

SPECIFIC LOAD	TEST HOURS (%)	EMISSION FACTOR (lbs/hr)	EMISSIONS (tons/yr)
100 %	75	0.8226	0.00049
62%	8	0.0545	0.000003
50 %	9	0.0609	0.000004
Idle	8	0.0866	0.000006
TOTAL		**N/A**	**0.0005**

Fugitive Dust Sources

Unpaved Roads

Actual PM-total emissions from the unpaved roads are estimated by multiplying the miles of unpaved roads traveled by emission factors obtained from AP-42, Section 13.2. These emission factors are dependent upon the silt content of the road surface material and upon the average weight of vehicles traveled upon it. The following equations are used to determine the emission factor for unpaved roads.

$$\text{Unpaved Miles} = \text{TVM} * \left(\frac{MUP}{MP + MUP}\right) * \left(1 - \%RM\right)$$

Where: TVM = total vehicle mileage
MP = miles of paved roads
MUP = miles of unpaved roads
%RM = percentage of miles driven during range maneuvers[a]

[a]Range Maneuvers percentage is based on average miles driven during tactical training operations on the ranges.

$$\text{EF}\left(\frac{lbPM}{mile}\right) = k * \left(\frac{S}{12}\right)^{a} * \left(\frac{W}{3}\right)^{b}$$

Where: EF = emission factor
S = surface material silt content (%)
k, a, b = empirical constants
W = mean vehicle weight (tons)

Then the following equation is used to calculate the actual annual fugitive dust emissions for the traveled unpaved roads:

$$\text{AE}\left(\frac{ton}{year}\right) = \text{AU}\ (miles) * \text{EF}\left(\frac{lbPM}{mile}\right) * \text{CF}$$

Where: AE = actual emissions
AU = miles of unpaved roads
EF = Emission factor
CF = conversion factor (lbs to tons)

Example 4: Actual annual PM_{Total} emissions for ABRAMS M1A2 vehicles from FD001. To obtain the total PM, PM_{10} and $PM_{2.5}$ emissions from the EU, these calculations must be performed on all vehicles to get their individual total PM, PM_{10} and $PM_{2.5}$ emissions. The summation of these values is the total PM, PM_{10} and $PM_{2.5}$ emissions from the EU.

Given: TVM = 1,118.6
MP = 770
MUP = 471
%RM = 96%

$$\textbf{16.98 miles} = 1118.6 * \left(\frac{471}{770 + 471}\right) * \left(1 - 0.96\right)$$

Then,

Given: k = 4.9
b = 0.45
W = 62.1 tons
a = 0.7
S = 25.77%

$$\mathbf{1.3024}\left(\frac{lbPM}{mile}\right) = 4.9 * \left(\frac{.2577}{12}\right)^{0.7} * \left(\frac{62.1}{3}\right)^{0.45}$$

Then,

Given: AU = 906.21 CF = 0.0005
EF = 1.3024

$$\mathbf{0.0111}\left(\frac{ton}{year}\right) = 16.98\,(miles) * 1.3024\left(\frac{lbPM}{mile}\right) * 0.0005$$

Fueling Station Operations

VOC emissions from several of the tanks are assumed to be negligible due to the low volatility of the liquids stored, the small capacity of the tanks, minimal throughputs, and double-walled convault construction. Air emissions from the storage tanks are the result of breathing and working losses. Actual emissions from storage tanks were estimated using the USEPA's TANKS (Version 4.09) program and emission factors from AP 42, Section 5.2 which are included in APIMS.

Stationary Internal Combustion Equipment

Actual air emissions from internal combustion equipment are estimated using emission factors from Sections 3.3 and 3.4 of AP-42. The actual hours of operation are based on a preventative maintenance schedule of approximately 0.5 hrs/week for the generators and pumps. Actual hours of operation are used where logs are found to be maintained. A mechanical efficiency of 80-percent and load factors are used when available. The following equation is used to calculate the actual annual emission rates for all pollutants from the internal combustion engines:

$$AE\left(\frac{ton}{year}\right) = EKW(kW) * LF * OH\left(\frac{hours}{year}\right) * EF\left(\frac{grams}{kW-hr}\right) * CF_1 * CF_2$$

Where:
AE = actual emissions
EKW = engine capacity (kW)
LF = load factor
CF_2 = conversion factor (lb to tons)
OH = hours of operation
EF = emission factor
CF_1 = conversion factor (grams to lbs)

Example 5: Actual NO_X emissions from IC001, diesel emergency generators less than 600 hp.

Given:
EKW = 9622 kW
LF = 1.0
CF_1 = 0.00220
OH = 6.43 hr/yr
EF = 18.848 grams/kW-hr
CF_2 = 0.0005

$$\mathbf{1.2827}\left(\frac{ton}{year}\right) = 9622\,(kW) * 1 * 6.43\left(\frac{hours}{year}\right) * 18.848\left(\frac{grams}{kW-hr}\right) * 0.0022 * 0.0005$$

Loading Racks

VOC and HAP emissions for loading rack operations are estimated by determining the total loading losses from fuel transfer operations and the multiplying by the appropriate emission factors. Emission factors are derived from AP-42 and SPECIATE (Version 3.2). The following equations are used to calculate the actual emission rates from loading rack operations:

$$L_L\left(\frac{lbs}{year}\right) = AFT\left(\frac{kgal}{year}\right) * \left[\left(\frac{12.46 * S * M * P}{(T+460)}\right) * \left(1 - \frac{EFF}{100}\right)\right]$$

$$AE\left(\frac{ton}{year}\right) = L_L\left(\frac{lbs}{year}\right) * \left[EF_1\left(\frac{LPwt\%}{100}\right) + EF_2\left(\frac{VPwt\%}{100}\right)\right] * CF$$

Where:

AE = actual emissions		AFT = actual fuel throughput	
L_L = loading losses		S = saturation factor	
M = molecular weight		P = true vapor pressure	
T = temperature (°F)		EFF = overall reduction efficiency	
EF_1 = emission factor		EF_2 = emission factor	
LP = liquid phase		VP = vapor phase	
CF = conversion factor (lb to tons)			

Example 6: VOC emissions from site wide gasoline loading racks LR001.

Given:

Fuel = Gasoline		AFT = 343,387	
S = 1.0 (AP-42 Table 5.2-1)		M = 62 (AP-42 Table 7.1-2)	
P = 8.4353 (AP-42 Table 7.1-2)		T = 70	
EFF = 85%		EF_1 = 100%	
EF_2 = 100%		CF = 0.0005	

$$\mathbf{633.30}\left(\frac{lbs}{year}\right) = 343.387\left(\frac{kgal}{year}\right) * \left[\left(\frac{12.46 * 1 * 62 * 8.4353}{(70+460)}\right) * \left(1 - \frac{85}{100}\right)\right]$$

$$\mathbf{0.6333}\left(\frac{ton}{year}\right) = 633.30\left(\frac{lbs}{year}\right) * \left[\left(\frac{100}{100}\right) + \left(\frac{100}{100}\right)\right] * 0.0005$$

Miscellaneous Sources

Landfill Operations

Actual Non-Methane Organic Compounds (NMOC) emissions from the landfill operations are estimated in accordance with Section 115.156(3) of TCEQ. The Landfill Air Emissions Estimation model from AP 42 Ch. 2 is utilized. The following equation is used to calculate the actual annual non-methane organic compound emissions:

$$M_{NMOC}\left(\frac{ton}{year}\right) = 2\,L_o\left(\frac{m^3}{Mg}\right) * R\left(\frac{Mg}{year}\right) * (e^{-kc} - e^{-kt}) * C_{NMOC} * CF_1 * CF_2$$

Where: M_{NMOC} = actual emissions
L_o = methane generation potential
c = time since landfill closure
C_{NMOC} = conc. of NMOC as ppmv hexane
CF_2 = conversion factor (Mg to tons)
R = annual average waste acceptance
k = methane generation rate constant
t = time since initial waste placement
CF_1 = conversion factor (m3-ppmv to Mg)

Example 7: Actual annual VOC emissions from MO002, Open MSW Landfill.

Given: R = 17585.40
k = 0.02 per yr (regulatory default value)
t = 25 yrs
CF_1 = 3.6 x 10^{-9}
L_o = 170 (regulatory default value)
c = 0 yrs (for active landfills)
C_{NMOC} = 109 (site-specific data)
CF_2 = 1.10231131 (Mg to tons)

$$\mathbf{1.0174}\left(\frac{ton}{year}\right) = 2 * 170\left(\frac{m^3}{Mg}\right) * 17585.40\left(\frac{Mg}{year}\right) * (e^{-(0.02*0)} - e^{-(0.02*25)}) * 109 * 3.6 \times 10^{-9} * 1.10231131$$

Firing Range Operations

Air emissions from the firing range are the result of open burning, tamped detonation, range training and range clearance. Beginning in CY2010, emission factors from AP-42 chapter 15 were used. In instances where no factor was listed a surrogate factor is used.

$$AE_{PM10}\left(\frac{ton}{year}\right) = \text{Rounds Fired} * EF\left(\frac{lb}{Round}\right) * CF$$

Where: AE = actual emissions
Rounds Fired = # of rounds
EF = emission factor
CF = conversion factor (lb to tons)

Example 1: Actual annual PM10-total emissions from the Firing Range Operations (MO003) for A059 type round.

Given: Rounds fired = 2,097,260

EF = 0.000039
CF = 0.0005

$$\mathbf{0.0409}\left(\frac{ton}{year}\right) = 2{,}097{,}260 \text{ rounds Fired} * 0.000039\left(\frac{lb}{Round}\right) * 0.0005$$

Bioremediation of Contaminated Soils

Actual VOC and HAP emissions from bioremediation operations are estimated conservatively assuming that 50% of the Total Petroleum Hydrocarbon (TPH) level in the contaminated soil is volatile once biodegradation occurs and that 10% of the TPH contamination level is benzene, toluene, ethylbenzene, and total xylenes (BTEX). The method used to calculate emissions comes from Fort Hood's PBR #41479 for the bioremediation site. The following equations are used to calculate actual annual emission rates from the bioremediation site:

$$\text{VOC}\left(\frac{ton}{year}\right) = \text{V}\left(yd^3\right) * \square\left(\frac{tons}{yd^3}\right) * \left(\frac{TPH(\%wt)}{100}\right) * \left(\frac{VTPH(\%wt)}{100}\right) * \left(\frac{BTEX(\%wt)}{100}\right) * \left(\frac{TBTEX(\%wt)}{100}\right) * \left(\frac{VBTEX(\%wt)}{24\,hours}\right) * \text{OH}$$

Where: VOC = volatile organic compound emissions
V = soil volume
□ = soil density
TPH = maximum TPH concentration
VTPH = volatile TPH percentage
BTEX = BTEX concentration
TBTEX = BTEX remaining after treatment
VBTEX = % volatile BTEX per 24 hr period
OH = operating hours

$$\text{AE}\left(\frac{ton}{year}\right) = \text{VOC}\left(\frac{tons}{year}\right) * \text{EF}\left(\frac{\%wt}{100}\right)$$

Where: AE = actual emissions
EF = emission factor

Example 8: Actual annual HAP emissions from MO004.

Given: V = 259.14
□ = 1.037
TPH = 2.5%
VTPH = 50%
BTEX = 10%
TBTEX = 35%
VBTEX = 1%
OH = 8760

$$\mathbf{0.0429}\left(\frac{ton}{year}\right) = 259.14\left(yd^3\right)*1.037\left(\frac{tons}{yd^3}\right)*\left(\frac{2.5}{100}\right)*\left(\frac{50}{100}\right)*\left(\frac{10}{100}\right)*\left(\frac{35}{100}\right)*\left(\frac{\frac{1}{100}}{24\,hours}\right)$$

$$*8760\left(\frac{hours}{yr}\right)$$

Given: VOC = 0.0429 EF = 0.3223%

$$\mathbf{0.0001}\left(\frac{ton}{year}\right) = 0.0429\left(\frac{tons}{year}\right)*\left(\frac{0.3223}{100}\right)$$

Tanker Purge Operations

Actual annual air emissions from the tanker purge operations are estimated by multiplying the amount of JP-8 fuel cleaned from the tanks by the appropriate emission factor set for the operation. Emission factors are attained from Fort Hood's PBR registration for this operation. The following equation is used:

$$AE(tpy) = AFC\left(\frac{gal}{yr}\right)*\left(1-\frac{\%RR}{100}\right)*\rho_{voc}\left(\frac{lbs}{gal}\right)*\left(1-\frac{\%VCeff}{100}\right)*EF\left(\frac{\%wt}{100}\right)*CF$$

Where: AE = actual emissions
AFC = actual fuel cleaned
%RR = % fuel removed by rinsing
ρ_{voc} = voc density of JP-8 fuel
VCeff = voc control efficiency
EF = emission factor in percent by weight
CF = conversion factor (lbs-tons)

Example 10: Actual annual VOC emissions from MO006.

Given: AFC = 1737 %RR = 75
ρ_{voc} = 8.0 VCeff = 95
EF = 100 CF = 0.0005

$$\mathbf{0.0869}\left(\frac{tons}{year}\right) = 1737*\left(1-\frac{75}{100}\right)*8.0*\left(1-\frac{95}{100}\right)*\left(\frac{100}{100}\right)*0.0005$$

Aerosol Can Crushing Operations

Actual annual air emissions from the aerosol can crushing operations are estimated using mass balance procedures in conjunction with using the Super Paint, Super Solvent, and Super Lubricant composition profile delineated by its PI-7 registration. Usage amounts are determined

by obtaining the tracking logs and assuming that approximately 1 ounce of material was left in the cans when they are sent to the crusher. The control efficiency of any filters in place at a specific EU is taken into account when calculating VOC emissions. The following equation is used to calculate the actual annual emission rates for VOC pollutants:

(Note that the following equation can also be used to calculate VOC HAP.)

$$AE\left(\frac{ton}{year}\right) = CC * RP\left(\frac{ounces}{year}\right) * CF_1 * \rho\left(\frac{lbs}{gal}\right) * VC\left(\frac{VOCwt.\%}{100}\right) * \left(1 - \frac{VOCEFF}{100}\right) * CF_2$$

Where:	AE	=	actual emissions	CC =	Actual cans collected
	RP	=	remaining material in can	CF_1 =	conversion factor (ounces to gals)
	ρ	=	density of material	VC =	VOC content (% by weight)
	CF_2	=	conversion factor (lb to tons)	VOCEFF =	VOC control efficiency

Example 11: VOC emissions from paint aerosol cans crushed at MO007 (Super Paint). To obtain the total VOC emissions from the EU, these calculations must be performed on all can types crushed to get their individual VOC emissions. The summation of these values is the total VOC emissions from the EU.

Given:	Type	=	Paint		
	CC	=	1980 cans crushed	RP =	1
	ρ	=	8.34	CF_1 =	0.0078
	VC	=	220%	VOCEFF =	99%
	CF_2	=	0.0005		

$$\mathbf{0.0014}\left(\frac{ton}{year}\right) = 1980*1\left(\frac{ounces}{year}\right) * 0.0078 * 8.34\left(\frac{lbs}{gal}\right) * \left(\frac{220}{100}\right) * \left(1 - \frac{99}{100}\right) * 0.0005$$

Surface Coating Operations

VOC, volatile HAP, PM-total, and PM-HAP emissions from the surface coating operations are estimated using mass balance procedures in conjunction with each coating's composition profile. Usage amounts were obtained from the Air Program Information Management System (APIMS) utilized at Fort Hood. Potential emissions are calculated based on doubling the actual amount of material used. The control efficiency of any filters in place at a specific EU is taken into account when calculating TSP emissions. The following equations are used to calculate the actual annual emission rates for VOC and TSP pollutants:

(Note that the following equations are also used to calculate VOC HAP and PM-HAP, respectively.)

$$AE_{VOC}\left(\frac{ton}{year}\right) = \sum \left[AMU\left(\frac{gal}{year}\right) * \rho\left(\frac{lbs}{gal}\right) * VC\left(\frac{VOC\ /\ HAP\ wt.\%}{100}\right) \right] * CF$$

$$AE_{PMtotal}\left(\frac{ton}{year}\right) = \sum \left[AMU\left(\frac{gal}{year}\right) * \rho\left(\frac{lbs}{gal}\right) * PC\left(\frac{TSP\ wt.\%}{100}\right) * \left(1 - \frac{PMEFF}{100}\right) \right] * CF$$

Where:
AE = actual emissions
ρ = density of material
CF = conversion factor (lb to tons)
PMEFF = PM ctrl efficiency
AMU = Actual material usage
VC = VOC content (% by weight)
PC = PM content (% by weight)

Example 12: VOC and PM-total emissions from coatings used at SC004 (CARC Tan). To obtain the total VOC and PM-total emissions from the EU, these calculations must be performed on all coatings to get their individual VOC and PM-total emissions. The summation of these values is the total VOC and PM-total emissions from the EU.

Given: Coating = CARC Tan
ρ = 11.86
PMEFF = 99.1%
PC = 53.34%
AMU = 57.5 gal
VC = 12.66%
CF = 0.0005

$$\mathbf{0.0432}_{VOC}\left(\frac{ton}{year}\right) = 57.5\left(\frac{gal}{year}\right) * 11.86\left(\frac{lbs}{gal}\right) * \left(\frac{12.66}{100}\right) * 0.0005$$

$$\mathbf{0.00002}_{PMtotal}\left(\frac{ton}{year}\right) = 57.5\left(\frac{gal}{year}\right) * 11.86\left(\frac{lbs}{gal}\right) * \left(\frac{53.34}{100}\right) * \left(1 - \frac{99.1}{100}\right) * 0.0005$$

Storage Tanks and Related Fueling Operations

VOC emissions from several of the tanks are assumed to be negligible due to the low volatility of the liquids stored, the small capacity of the tanks, minimal throughputs, and double-walled convault construction. The maximum/potential throughput of each tank is calculated by doubling the actual annual throughput. Air emissions from the storage tanks are the result of breathing and working losses. Actual emissions from storage tanks are estimated using the USEPA's TANKS (Version 4.09d) program and emission factors from AP 42, Section 5.2 which are in APIMS.

Solvent Use Operations

Solvent use operations are comprised of cold solvent cleaners, a site-wide miscellaneous solvent use operation and a waste solvent reclamation unit. For the cold solvent cleaners and the reclamation unit usage data is collected from maintenance logs kept by the maintenance contractor (Clarus). Usage data for the site-wide miscellaneous solvent use unit is obtained from the Pollution Prevention Services Team usage report. Actual annual emissions are estimated by using mass balance procedures and by calculating an evaporative loss factor based on the mass balance equation. The following equation is used to calculate the actual annual emission rates for VOC and HAP pollutants:

$$AE_{VOC}\left(\frac{ton}{year}\right) = \sum \left[AMU\left(\frac{gal}{year}\right) * \rho\left(\frac{lbs}{gal}\right) * VC\left(\frac{VOC\ /\ HAP\ wt.\%}{100}\right) * EV\left(\frac{Loss\ \%}{100}\right) \right] * CF$$

Where: AE = actual emissions
ρ = density of material
CF = conversion factor (lb to tons)
AMU = sum of all actual material usage
VC = VOC/HAP content (% by weight)
EV = evaporation factor (%)

Example 13: VOC emissions for Cold Solvent Cleaners (SU001) using Safety Kleen MIL PRF-680, Type II Solvent.

Given: Solvent = PF Degreaser Solvent
EV = 10%
CF = 0.0005
AMU = 675 gal
ρ = 6.43
VC = 100

$$\mathbf{0.2170}\left(\frac{ton}{year}\right) = 675\left(\frac{gal}{year}\right) * 6.43\left(\frac{lbs}{gal}\right) * \left(\frac{100}{100}\right) * \left(\frac{10}{100}\right) * 0.0005$$

Welding Operations

Actual TSP emissions from the welding operations are estimated by multiplying the weight of welding rods used by emission factors obtained from AP-42, Section 12.19. These emission factors are dependent upon the type of welding process conducted and upon the type of welding rod used. Due to the large variety of welding rods used at Fort Hood, a conservative emission factor was developed for calculation purposes by taking the highest values found in Tables 12.19-1 and 12.19-2 of AP-42 to calculate the emission rates of the different pollutants emitted. The following equation is used to calculate the actual annual emission rates for all pollutants from the welding operations:

$$AE\left(\frac{ton}{year}\right) = AU\left(\frac{lbs}{yr}\right) * EF\left(\frac{lb\ PM}{1000\ lb\ rods}\right) * CF$$

Where: AE = actual emissions
AU = total weight of rods used
EF = Emission factor
CF = conversion factor (lbs to tons)

Example 14: Actual annual PM-total emissions from WL001.

Given: AU = 3580
EF = 37.64
CF = 0.0005

$$\mathbf{0.0674}\left(\frac{ton}{year}\right) = 3580\left(\frac{lbs}{yr}\right) * 37.64\left(\frac{lb\ PM}{1000\ lb\ rods}\right) * 0.0005$$

Woodworking Operations

Actual TSP emissions from the woodworking operations are back calculated based on an estimation of the amount of waste generated and the control efficiency of the filtration system. The equation below is used to calculate the annual actual TSP emissions:

$$AE_{TSP}\left(\frac{ton}{year}\right) = AWG\left(\frac{lb}{year}\right) * \left(\frac{1-(PMEFF/100)}{PMEFF/100}\right) * CF$$

Where: AE = actual emissions
CF = conversion factor (lb to tons)
AWG = amount waste generated
PMEFF = particulate control efficiency

Example 15: Actual annual PM-total emissions from WW001.

Given: AWG = 220
CF = 0.0005
PM EFF = 80.0% (low efficiency cyclone)

$$\mathbf{0.0275}\left(\frac{ton}{year}\right) = 220\left(\frac{lb}{year}\right) * \left(\frac{1-(80/100)}{80/100}\right) * 0.0005$$

APPENDIX D
HDR Memo

September 14, 2020

Ms. Tiffany Reid
Whitetail Environmental, LLC
P.O. Box 68
Jay, OK 74346

RE: **Fort Hood – Process for Removal of 40 CFR 63, Subpart JJ Wood Furniture Manufacturing Applicable Requirements from Title V Operating Permit under USEPA's Change to NESHAP Once-In-Always-In (OIAI) Policy – Letter Report (*Final*)**
HDR Project No. 10249104

Dear Ms. Reid,

HDR was subcontracted by Whitetail Environmental, LLC under their USACE, Tulsa District (Owner) Environmental Support Contract No. W912BV18D0007, Task Order Number W912BV19F0123 to conduct a major source National Emissions Standard for Hazardous Air Pollutants (NESHAP) rule review for U.S. Army Garrison, Department of Public Works (DPW), Fort Hood, Texas. This review focused on the 40 CFR 63, Subpart JJ – Wood Furniture Manufacturing NESHAP and includes a description of the process and requirements for removing applicability of this rule from Fort Hood's Title V operating permit. The basis for this project is a reversal in USEPA's OIAI policy that previously stated once a source is subject to a major source NESHAP/MACT rule, it is always subject, even if it reduces it's potential to emit and becomes an area source for hazardous air pollutants (HAP). A HAP area source is one whose facility-wide potential emissions of HAPs is less than 25 tons per year (tpy) for all HAPs combined and less than 10 tpy for each individual HAP.

This project was initiated by a kick-off telecom meeting on August 21, 2020 between Whitetail Environmental, Fort Hood (IMHD-PWE), and HDR. The purpose was to go over the scope, schedule, data needs, and permitting contacts with the Texas Commission on Environmental Quality (TCEQ). Subsequent to this call, HDR submitted a data request to Fort Hood on August 25, 2020. HDR requested information on each wood furniture manufacturing operation subject to 40 CFR 63 - Subpart JJ, product usage records for these operations over a year period, the most recent records demonstrating the facility-wide HAP emissions are below major source thresholds, and the most recent permit(s) showing HAP emissions limits. Fort Hood provided much of the requested data on August 31 and September 1, 2020. The records demonstrating facility-wide HAP emissions are below major source thresholds on a 12-month rolling basis were not available at the time of this report. It is anticipated Fort Hood will be able to generate and maintain those records in the near future.

HDR reviewed the following U.S. Environmental Protection Agency (USEPA), TCEQ, and Fort Hood documents to support development of this deliverable:

- USEPA Memorandum, Reclassification of Major Sources as Area Sources Under Section 112 of the Clean air Act, William L. Wehrum, Assistant Administrator to Regional Air Division Directors, January 25, 2018

- TCEQ, Guidance for Rescission of the Environmental Protection Agency's "Once-In, Always In (OIAI) Policy for Maximum Achievable control Technology (MACT) Standards, TCEQ-APDG 6472v1, November 2018
- Federal Operating Permit, U.S. Department of the Army, Fort Hood, Permit No. O1659, Issued August 8, 2017
- New Source Review (NSR) Permit No. 24538 (Amended), Authorizing Construction and Operation of Surface Coating Facilities at Fort Hood, Texas, Amendment Issued February 28, 2019
- 40 CFR 63, Subpart JJ – Wood Furniture Manufacturing NESHAP
- Federal Register Volume 84, No. 144, p. 36304, July 26, 2019, USEPA, Proposed Rule, Reclassification of Major Sources as Area Sources Under Section 112 of the Clean Air Act
- USEPA Memorandum, Documentation of the emission impacts analysis for the proposed rulemaking "Reclassification of Major Sources as Area Sources Under Section 112 of the Clean Air Act", Elineth Torres to MM2A Docket No. EPA-HQ-OAR-2019-022, May 2019

The TCEQ OIAI rescission guidance listed above states that current MACT major sources seeking to transition to non-major status for purposes of MACT applicability must continue to comply with all applicable requirements of the relevant major source MACT, and applicable permits, until conditions 1 through 4 below have been satisfied:

1) Any necessary new source review (NSR) permit revisions, authorizations, or certifications have been obtained, as needed to establish a federally enforceable PTE below the MACT major source thresholds and remove any permit conditions which require compliance with the relevant major source MACT standard;

2) Any necessary Federal Operating Permit (FOP) revisions have been obtained, as needed to remove any permit terms or citations which require compliance with the relevant major source MACT standard;

3) Any necessary physical or operational changes to reduce PTE have been completed as represented in the relevant permit actions above; and

4) The owner or operator is maintaining records at the site which demonstrate that the updated, federally-enforceable PTE is below the MACT major source thresholds. These records should be available upon request.

HDR has reviewed NSR Permit No. 24538 and has spoken with TCEQ regarding whether the site-wide HAP limits in this permit are considered "federally enforceable"; reference the conditions on the last page of this permit indicating all emissions sources are limited to 25 tons per year total HAP and 10 tons per year each individual HAP (see NSR permit excerpt page as Attachment 1 to this letter). Ms. Jasmine Yuan (Air Permit Engineer, Operating Permits Section, TCEQ) indicated verbally and in a subsequent email on September 2, 2020 that the

HAP limits along with the compliance demonstration stated in the permit, i.e. footnote (6) on the last page, are federally enforceable conditions and the NSR permit is incorporated into the Title V permit by reference on page 114 (see excerpted page of Title V permit as Attachment 2 to this letter).[1] This means that condition 1 in the TCEQ reclassification guidance has been satisfied.

HDR researched the necessary steps to remove major source MACT applicability requirements from the current Fort Hood Title V operating permit. In addition, HDR spoke with Ms. Yuan of TCEQ regarding Title V revisions. Ms. Yuan stated verbally and in the September 2, 2020 email that a Title V Minor Revision application would suffice to remove the major source MACT requirements. Ms. Yuan indicated the application should include a cover page, purpose, applicable process flow diagrams, and the following completed application forms: OP-1, OP-2, OP-CR01, OP-REQ-1 (applicable pages only), and applicable UA forms for emission units with MACT impacts (revising attributes to correspond to area source).[2] This Title V permit revision, once obtained, would satisfy condition 2 of the TCEQ reclassification guidance.[3] Condition 3 of the guidance is already met through NSR Permit no. 24538. HDR was not able to confirm that condition 4 of the reclassification guidance is being met. This demonstration would be achieved through the use of the APIMS database program and reports generated from this database. Due to some issues with APIMS, these reports were not available at the time of this letter report. Fort Hood should ensure emission source operating data is entered into APIMS at least monthly and that APIMS reports are generated on a monthly basis demonstrating that facility-wide 12-month rolling total HAP emissions are below major source thresholds.

The Wood Furniture Manufacturing NESHAP applicable requirement that would no longer apply after implementation of the actions above is contained within the Special Terms and Conditions section of Fort Hood's Title V permit. More specifically, the Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting, item 9, which references 40 CFR 63.800(a) and indirectly references definitions in 63.801. This requirement includes maintaining usage records of finishing materials (e.g. coatings, stains) and adhesives during incidental wood furniture making (e.g. producing cabinets, boxes, crates) to demonstrate a maximum monthly use of less than 100 gallons.

Pursuant to 40 CFR 63.9(j), Fort Hood will need to provide notification to USEPA of reclassification from major source to area source for HAPs for removal of applicability of 40 CFR 63, Subpart JJ – Wood Furniture Manufacturing NESHAP. This would be achieved through the Title V permit revision process as the USEPA would review the Title V permit revisions. Pursuant to 40 CFR 63.10, Fort Hood will be required to maintain records of documents developed for establishing reclassification to an area source for HAPs.

---

[1] HDR has observed that the issuance date of the NSR permit should be updated in the Title V permit to make it match the current version, i.e. change from 8/15/2015 to 2/28/2019.

[2] A copy of the September 2, 2020 email from Ms. Yuan is provided as Attachment 3 to this letter.

[3] Ms. Yuan indicated the process for this revision could take from 6 months to a year from application submission to obtain a final revised permit; includes a public review/comment period. Multiple major source MACT standards could be removed from the Title V permit using this same revision process.

HDR appreciates the opportunity to provide these air quality services to Whitetail and Fort Hood. Please don't hesitate to contact the undersigned at 571-327-5853 if you have any questions on this final letter report.

Sincerely,
HDR Environmental, Operations, and Construction

NSR Permit No. 24538 Excerpt

Emission Sources - Maximum Allowable Emission Rates

Emission Point No. (1)	Source Name (2)	Air Contaminant Name (3)	Emission Rates (7)	
			lbs/hour	TPY (6)
AERO-DPW15	DPW West Cantonment Aerosol Can Spray	VOC (4)	0.11	0.14
		Exempt Solvent (4)	<0.01	<0.01
		PM (4)	<0.01	<0.01
		PM_{10} (4)	<0.01	<0.01
		$PM_{2.5}$ (4)	<0.01	<0.01
All Emission Points at the Site	All Sources at the Site	Single HAP	—	<10.00
		All HAP	—	<25.00

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources, use area name or fugitive source name.
(3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
ES - Exempt Solvent , those carbon compounds or mixtures of carbon compounds used as solvents which have been excluded from the definition of volatile organic compound.
PM - total particulate matter, suspended in the atmosphere, including PM_{10} and $PM_{2.5}$
PM_{10} - total particulate matter equal to or less than 10 microns in diameter, including $PM_{2.5}$
$PM_{2.5}$ - particulate matter equal to or less than 2.5 microns in diameter
NO_x - total oxides of nitrogen
CO - carbon monoxide
SO_2 - sulfur dioxide
HAP - hazardous air pollutant as listed in § 112(b) of the Federal Clean Air Act or Title 40 Code of Federal Regulations Part 63, Subpart C
(4) Fugitive emissions
(5) Emissions from natural gas combustion
(6) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.
(7) Rates include planned maintenance, startup, and shutdown emissions.

Date: February 28, 2019

Email from Ms. Jasmine Yuan, TCEQ

From: Jasmine Yuan <Jasmine.Yuan@tceq.texas.gov>
Sent: Wednesday, September 2, 2020 3:03 PM
To: Peluso, Steven
Cc: Elizabeth Moorhead; robert.l.kennedy112.civ@mail.mil
Subject: RE: General Questions regarding Title V Air Operating Permit # O-01659 Amendments

CAUTION: [EXTERNAL] This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

The NSR MRT table is federal enforceable.
As long as the sitewide (all permits) HAP maximum emission rates < 10/25 tpy, you are minor. You can revise the Title V permit to remove MACT requirements.
The Minor Revision application forms are provided in the link below:

https://nam12.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.tceq.texas.gov%2Fpermitting%2Fair%2Ftitlev%2Fsite%2Fsite_experts.html&data=02%7C01%7CSteven.Peluso%40hdrinc.com%7C5447249a875a479071bc08d84f72c6f2%7C3667e201cbdc48b39b425d2d3f16e2a9%7C0%7C0%7C637346701673033320&sdata=RP1XrwrVnTRpSOf2MQXST2mRH13SpY1NLdVTKzQZyP4%3D&reserved=0

The minor application should include, cover page, purpose, process flow, OP-1, OP-2, OP-CRO1, OP-REQ1 (no need for the entire table, can be several pages).
You also will need to update / revise UA forms for units subject to MACT.
Some UA form/units are for HAP major, you can just cross through those SOP Index.
Some units on UA form distinguish the HAP area source and major source by attributes. So you need to revise the attributes, not simply strike through the entire SOP Index.

For example, Engines MACT ZZZZ may be still applicable for HAP area source (less stringent than major HAP source). We will update the MACT requirements based on your updated UA from for the engines.

You can look into your permit, Applicable requirement table, and focus on the units with MACT requirements.

Sincerely,

Jasmine Yuan
