Form OP-CRO1
Certification by Responsible Official
Federal Operating Permit Program
Texas Commission on Environmental Quality

All initial issuance, revision, and renewal permit application submittals requiring certification must be accompanied by this form. Updates to acid rain or CSAPR (other than public notice verification materials) must be certified prior to authorization of public notice for the draft permit.

IV. Certification of Truth

This certification does not extend to information which is designated by TCEQ as information for reference only.

I, Brian L. Dosa certify that I am the Responsible Official.
(Certifier Name printed or typed) *(RO or DAR)*

and that, based on information and belief formed after reasonable inquiry, the statements and information dated during the time period or on the specific date(s) below, are true, accurate, and complete:
Note: Enter Either a Time Period or Specific Date(s) for each certification. This section must be completed. The certification is not valid without documentation date(s).

Time Period: From 02/01/2022 to 03/27/2026.
(Start Date) *(End Date)*

Specific Dates: _____ _____ _____ _____
(Date 1) *(Date 2)* *(Date 3)* *(Date 4)*

UNCLASSIFIED

Good afternoon Mr. Walker,
As our director cannot currently log into STEERS, I will send the wet-ink OP-CRO1 no later than tomorrow morning via certified or priority mail ensuring it will be delivered by the 8th of April.

Thank you for your continued support with our Title V!

Good Afternoon Cassie,

Form OP-CRO1 should be submitted in STEERS as an application update (the application update in STEERS would need to be signed and submitted by the RO with their STEERS account) or you can mail in the hardcopy Form OP-CRO1 with the wet-ink signature. Please see the following webpage for guidance on how to submit Form OP-CRO1 via STEERS or by mail: Where to Submit FOP Applications and Permit-Related Documents - Texas Commission on Environmental Quality - www.tceq.texas.gov. **Please submit Form OP-CRO1 via STEERS or mail as soon as possible but no later than 04/08/2026.**

Please let me know if you have any questions.

Thank you for your cooperation.

Sincerely,

John Walker
Team Leader
OA/Air Permits Division/OP Section
Texas Commission on Environmental Quality

Hi John,

Please find the updated OP-PBRSUP form and OP-CRO1 form, as requested.

For your convenience, we have attached one version of OP-PBRSUP that contains redlines and comments in response to the requests received (labeled “Comments”). We have also included one PDF and one word of the form where all changes have been implemented fully (labeled “Clean”).

Please let me know if a hardcopy of OP-CRO1 needs to be mailed in or if anything else is needed.

Thank you,
Cassie

Form OP-PBRSUP - Instructions
Permits By Rule Supplemental Table
Texas Commission on Environmental Quality

Commented [CJ1]: Changes made:
All 601.511 mentions have date 9/5/2000 applied
Deleted IC003-1, 8, 11 From Table A (under Table B as claimed)
Deleted IC003-5, 6, 7, 9, 10 from Table A, B, & D (not on draft permit)
Dates updated on Table A, B, D to March 27, 2026
IC003-28, 29, 30, 31, 32, 33, and 34 put onto Table A & D as registered PBRs under **164083**
Changed IC001-DF90140, IC001-DF90148, IC001-DF90145 in Table D to match table A. Requesting this to be updated on Draft Permit.
Added IC006-1 to Table B and D as claimed PBR

General:

The form is used to provide supplemental information for all Permits by Rule (PBRs) that authorize emission units for a site (or area) subject to the requirements of the Federal Operating Permit (FOP) Program. For emission units identified on Form OP-SUM or Form OP-SUMR, the PBR registration number identified in Section A must also be included on Form OP-SUM or Form OP-SUMR.

The Texas Commission on Environmental Quality (TCEQ) regulated entity reference number (RNXXXXXXXXX), if assigned, and the application area name from Form OP-1 (Site Information Summary) must appear on the header of each page for purposes of identification for the initial submittal. The date of the initial submittal must also be included and should be consistent throughout the application (MM/DD/YYYY). The date on each table should be revised with any updated submittal provided during the review process. Leave the permit number blank only if the initial form submittal accompanies an initial application. If this form is included as part of the permit renewal or revision process, enter the FOP permit number assigned by the TCEQ, the area name from Form OP-1, the date of the renewal or revision submittal, and the regulated entity reference number. The form OP-PBRSUP should be submitted for any PBR authorization updates with each revision and renewal application.

The TCEQ requires that a Core Data Form be submitted on all incoming applications/registrations unless a regulated entity reference number and customer reference number have been issued by the TCEQ and no core data information has changed. If a regulated entity reference number or customer reference number has been issued, then the number must be noted on the request or applicable form. For more information regarding the Core Data Form, call (512) 239-5175 or go to the TCEQ website at: www.tceq.texas.gov/permitting/central_registry/guidance.html

Specific:

Permits by Rule (30 TAC Chapter 106) for the Application Area

Emission units authorized under the following PBRs and any corresponding historical (pre-March 1997) SEs are required to be listed in sections A, B, and D:

IC001-66	106.511	9/4/2000
IC001-67	106.511	9/4/2000

Commented [JW30]: There are many instance of 03/07/2003 being used as the Version No./Effective Date for PBR 106.511 throughout Table B and Table D. Please review the document in its entirety to correct this deficiency.

These all need to be corrected to 09/04/2000 since that is the valid version no./effective date in the Texas Administrative Code and what is documented in the Draft Permit.

Commented [CJ31R30]: Where applicable, PBR effective date 9/4/2000 has been updated.

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
~~08/27/2025~~03/27/2026	O1659	RN101612083

Commented [JW36]: Update.

Commented [CJ37R36]: This has been completed.

Unit ID No.	PBR No.	Version No./Date or Registration No.	Monitoring Requirement
AB001	106.452	107747	In accordance with Section 106.8, maintain records of the 12 month rolling totals of facility wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4(a)(1).
COMPREP	113	11/01/2001	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.
CT001	106.371	~~03/07/2003~~ 09/04/2000	The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

Commented [JW38]: Instance of 03/07/2003 being used when it should be 09/04/2000.

Commented [CJ39R38]: Where applicable, PBR effective date 9/4/2000 has been updated.

EC002	106.495	52124	Maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

ET001	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; or Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
ET003	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Five*Minutes in Mode Five/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Six*Minutes in Mode Six/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Seven*Minutes in Mode Seven/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Eight*Minutes in Mode Eight/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-14	106.511	09/04/2000~~03/07/2000 / TBD~~	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-16	106.511	09/04/2000~~03/07/2000 / TBD~~	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-17	106.511	09/04/2000~~03/07/2003 / TBD~~	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). MO004	106.262, 106.533	41479	Soil Bioremediation Operations are monitored for VOC emissions using the following equation in compliance with monitoring requirements in 30 TAC 106.533: VOLUME*SOIL DENSITY*TPH*VTPH*BTEX*TBTEX*(VBTEX/24)*744 Where Volume is measured by site operators who maintain a spreadsheet that is updated after each turn-in of soil, which is converted to cubic yards. The data is reported monthly to the Air Team for consumption data entry to be used in the above equation. Soil data is based on historic sampling: Soil Density is 1.037 TPH is 0.025% VTPH is 0.5% BTEX is 0.1% TBTEX is 0.35% VBTEX is 1.0%

MO006	106.262	76961	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Tanker truck purge operations are monitored for VOC emissions using the following equation: NUMBER OF TRUCKS*VOC CONTENT Where The number of trucks is recorded by DPW ENV. This team runs the facility and enters each tank type that goes through the purge facility into the consumption tracking database by type, date, and quantity. Conservative assumptions are made estimating the remaining fuel left to be cleaned. The VOC content is taken from F-24 MSDS.
SC011	106.433	70014	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
SC016	113	30861	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.

SC021	106.433	13851	Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE)*(1-TRANS EFF/100)*(1-FO/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
ST001A	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001B	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001C	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO67	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO68	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO69	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO70	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO71	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO72	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO73	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO74	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO75	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO76	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO77	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO78	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO79	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO80	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO81	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO82	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO83	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO84	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO85	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO86	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO87	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO88	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO89	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO90	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
EC002	106.183	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

FS011A	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS011B	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-21	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-22	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-25	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-30	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-36	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-43	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-44	106.511	09/04/2000 / TBD	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-46	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-47	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-48	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-49	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-53	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-54	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-55	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-57	106.511	09/04/2000	. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-58	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-59	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-60	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-61	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-62	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-66	106.511	09/04/2000~~/ TBD~~	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.
IC003-4	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

IC004-1	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

IC004-2	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

IC004-3	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). LR001	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

LR003	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
MO001	110	09/12/1989	Maintain a copy of Standard Exemption 110 to ensure that equipment is installed and operated in accordance with all applicable requirements.

CLSC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST004A	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST004B	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005A	51	10/04/1995	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW008	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-4/EC001	106.183	09/04/2000E	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

BR001	106.261 & 106.262	08/04/2005	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track number of brake pads.

Form OP-PBRSUP - Instructions
Permits By Rule Supplemental Table
Texas Commission on Environmental Quality

Commented [CJ1]: Changes made:
All 601.511 mentions have date 9/5/2000 applied
Deleted IC003-1, 8, 11 From Table A (under Table B as claimed)
Deleted IC003-5, 6, 7, 9, 10 from Table A, B, & D (not on draft permit)
Dates updated on Table A, B, D to March 27, 2026
IC003-28, 29, 30, 31, 32, 33, and 34 put onto Table A & D as registered PBRs under **164083**
Changed IC001-DF90140, IC001-DF90148, IC001-DF90145 in Table D to match table A. Requesting this to be updated on Draft Permit.
Added IC006-1 to Table B and D as claimed PBR

General:

The form is used to provide supplemental information for all Permits by Rule (PBRs) that authorize emission units for a site (or area) subject to the requirements of the Federal Operating Permit (FOP) Program. For emission units identified on Form OP-SUM or Form OP-SUMR, the PBR registration number identified in Section A must also be included on Form OP-SUM or Form OP-SUMR.

The Texas Commission on Environmental Quality (TCEQ) regulated entity reference number (RNXXXXXXXXX), if assigned, and the application area name from Form OP-1 (Site Information Summary) must appear on the header of each page for purposes of identification for the initial submittal. The date of the initial submittal must also be included and should be consistent throughout the application (MM/DD/YYYY). The date on each table should be revised with any updated submittal provided during the review process. Leave the permit number blank only if the initial form submittal accompanies an initial application. If this form is included as part of the permit renewal or revision process, enter the FOP permit number assigned by the TCEQ, the area name from Form OP-1, the date of the renewal or revision submittal, and the regulated entity reference number. The form OP-PBRSUP should be submitted for any PBR authorization updates with each revision and renewal application.

The TCEQ requires that a Core Data Form be submitted on all incoming applications/registrations unless a regulated entity reference number and customer reference number have been issued by the TCEQ and no core data information has changed. If a regulated entity reference number or customer reference number has been issued, then the number must be noted on the request or applicable form. For more information regarding the Core Data Form, call (512) 239-5175 or go to the TCEQ website at: www.tceq.texas.gov/permitting/central_registry/guidance.html

Specific:

Permits by Rule (30 TAC Chapter 106) for the Application Area

Emission units authorized under the following PBRs and any corresponding historical (pre-March 1997) SEs are required to be listed in sections A, B, and D:

Permit By Rule Supplemental Table (Page 1)
Table A: Registered Permits by Rule (30 TAC Chapter 106) for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
03/27/2026	O1659	RN101612083

IC001-DF90045	106.511	9/4/2000
IC001-10	106.511	9/4/2000

Commented [JW6]: Should this be updated to IC-DF90048 to match what is on Table D and documented in the Draft Permit?

Commented [CJ7R6]: Requesting to have this remain IC001-DF90048, updated Table D to reflect request. Requesting to be updated on draft permit.

Commented [JW8]: Should this be updated to IC-DF90140 to match what is on Table D and documented in the Draft Permit?

Commented [CJ9R8]: Requesting to have this remain IC001-DF90040, updated Table D to reflect request. Requesting to be updated on draft permit.

Commented [JW10]: Should this be updated to IC-DF90145 to match what is on Table D and documented in the Draft Permit?

Commented [CJ11R10]: Requesting to have this remain IC001-DF90045, updated Table D to reflect request. Requesting to be updated on draft permit.

IC001-66	106.511	9/4/2000
IC001-67	106.511	9/4/2000

Commented [JW14]: There are many instance of 03/07/2003 being used as the Version No./Effective Date for PBR 106.511 throughout Table B and Table D. Please review the document in its entirety to correct this deficiency.

These all need to be corrected to 09/04/2000 since that is the valid version no./effective date in the Texas Administrative Code and what is documented in the Draft Permit.

Commented [CJ15R14]: Where applicable, PBR effective date 9/4/2000 has been updated.

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
03/27/2026	O1659	RN101612083

Commented [CJ18R17]: This has been completed.

Unit ID No.	PBR No.	Version No./Date or Registration No.	Monitoring Requirement
AB001	106.452	107747	In accordance with Section 106.8, maintain records of the 12 month rolling totals of facility wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4(a)(1).
COMPREP	113	11/01/2001	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.
CT001	106.371	09/04/2000	The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

EC002	106.495	52124	Maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

ET001	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; or Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
ET003	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Five*Minutes in Mode Five/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Six*Minutes in Mode Six/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Seven*Minutes in Mode Seven/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Eight*Minutes in Mode Eight/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-14	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-16	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-17	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-32	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-42	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-5	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-51	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-56	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-64	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-65	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-68	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 20215 Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-8	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-85	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-86	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-91	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-92	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-93	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-94	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-95	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC002-1	106.511	09/04/200	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.

IC002-15	106.511	09/04/200	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.
IC002-3	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

IC002-4	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.
IC002-5	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

IC002-6	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.
IC002-7	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO35	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO36	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO37	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO38	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO39	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO42	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO65	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO66	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO67	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO68	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO69	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO70	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO71	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO72	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO73	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO74	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO75	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO76	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO77	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO78	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO79	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO80	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO81	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO82	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO83	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO84	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO85	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO86	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO87	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO88	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO89	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO90	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
EC002	106.183	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

FS011A	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS011B	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS011C	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

IC001-10	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-13	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-18	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-21	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-22	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-25	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-30	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-36	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-43	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-44	106.511	09/04/2000 / TBD	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-46	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-47	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-48	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-49	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-53	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-54	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-55	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-57	106.511	09/04/2000	. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-58	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-59	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-60	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-61	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-62	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-66	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-67	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-69	106.511	09/04/2000	. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-70	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-71	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-72	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-74	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-75	106.511	09/04/200	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-76	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-77	106.511	09/04/2000	accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

LR001	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

LR003	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
MO001	110	09/12/1989	Maintain a copy of Standard Exemption 110 to ensure that equipment is installed and operated in accordance with all applicable requirements.

CLSC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST004A	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST004B	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005A	51	10/04/1995	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	**106.472**	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

BR001	106.261 & 106.262	08/04/2005	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track number of brake pads.

Form OP-PBRSUP - Instructions
Permits By Rule Supplemental Table
Texas Commission on Environmental Quality

Commented [CJ1]: Changes made:
All 601.511 mentions have date 9/5/2000 applied
Deleted IC003-1, 8, 11 From Table A (under Table B as claimed)
Deleted IC003-5, 6, 7, 9, 10 from Table A, B, & D (not on draft permit)
Dates updated on Table A, B, D to March 27, 2026
IC003-28, 29, 30, 31, 32, 33, and 34 put onto Table A & D as registered PBRs under **164083**
Changed IC001-DF90140, IC001-DF90148, IC001-DF90145 in Table D to match table A. Requesting this to be updated on Draft Permit.
Added IC006-1 to Table B and D as claimed PBR

General:

The form is used to provide supplemental information for all Permits by Rule (PBRs) that authorize emission units for a site (or area) subject to the requirements of the Federal Operating Permit (FOP) Program. For emission units identified on Form OP-SUM or Form OP-SUMR, the PBR registration number identified in Section A must also be included on Form OP-SUM or Form OP-SUMR.

The Texas Commission on Environmental Quality (TCEQ) regulated entity reference number (RNXXXXXXXXX), if assigned, and the application area name from Form OP-1 (Site Information Summary) must appear on the header of each page for purposes of identification for the initial submittal. The date of the initial submittal must also be included and should be consistent throughout the application (MM/DD/YYYY). The date on each table should be revised with any updated submittal provided during the review process. Leave the permit number blank only if the initial form submittal accompanies an initial application. If this form is included as part of the permit renewal or revision process, enter the FOP permit number assigned by the TCEQ, the area name from Form OP-1, the date of the renewal or revision submittal, and the regulated entity reference number. The form OP-PBRSUP should be submitted for any PBR authorization updates with each revision and renewal application.

The TCEQ requires that a Core Data Form be submitted on all incoming applications/registrations unless a regulated entity reference number and customer reference number have been issued by the TCEQ and no core data information has changed. If a regulated entity reference number or customer reference number has been issued, then the number must be noted on the request or applicable form. For more information regarding the Core Data Form, call (512) 239-5175 or go to the TCEQ website at: www.tceq.texas.gov/permitting/central_registry/guidance.html

Specific:

Permits by Rule (30 TAC Chapter 106) for the Application Area

Emission units authorized under the following PBRs and any corresponding historical (pre-March 1997) SEs are required to be listed in sections A, B, and D:

IC001-66	106.511	9/4/2000
IC001-67	106.511	9/4/2000

Commented [JW14]: There are many instance of 03/07/2003 being used as the Version No./Effective Date for PBR 106.511 throughout Table B and Table D. Please review the document in its entirety to correct this deficiency.

These all need to be corrected to 09/04/2000 since that is the valid version no./effective date in the Texas Administrative Code and what is documented in the Draft Permit.

Commented [CJ15R14]: Where applicable, PBR effective date 9/4/2000 has been updated.

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
03/27/2026	O1659	RN101612083

Commented [CJ18R17]: This has been completed.

Unit ID No.	PBR No.	Version No./Date or Registration No.	Monitoring Requirement
AB001	106.452	107747	In accordance with Section 106.8, maintain records of the 12 month rolling totals of facility wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4(a)(1).
COMPREP	113	11/01/2001	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.
CT001	106.371	09/04/2000	The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

EC002	106.495	52124	Maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

ET001	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; or Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
ET003	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Five*Minutes in Mode Five/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Six*Minutes in Mode Six/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Seven*Minutes in Mode Seven/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Eight*Minutes in Mode Eight/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-14	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-16	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-17	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-32	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-42	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-5	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-51	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-56	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-64	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-65	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-68	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 20215 Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-8	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-85	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-86	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-91	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-92	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-93	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-94	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-95	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC002-1	106.511	09/04/200	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.

IC002-15	106.511	09/04/200	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.
IC002-3	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

IC002-4	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.
IC002-5	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

ST003A	106.412	24583	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%
SU001	106.454	50528	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

SU003	106.261	52124	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
MO007	106.261, 106.262	98846	Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
MO007	106.261, 106.262	147753	Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
ARO28	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO29	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO30	41	11/25/1985	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO31	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO32	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO33	41	11/05/1986	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO34	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO35	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO36	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO37	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO38	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO39	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO42	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO65	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO66	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO67	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO68	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO69	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO70	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO71	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO72	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO73	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO74	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO75	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO76	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO77	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO78	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO79	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO80	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO81	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO82	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO83	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO84	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO85	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO86	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO87	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO88	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO89	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO90	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
EC002	106.183	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

FS011A	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS011B	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS019	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-46	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-47	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-48	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-49	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-53	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-54	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-55	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-57	106.511	09/04/2000	. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-58	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-59	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-60	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-61	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-62	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-66	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-67	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-69	106.511	09/04/2000	. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-70	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-71	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-72	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-74	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-75	106.511	09/04/200	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-76	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-77	106.511	09/04/2000	accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-78	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-79	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-81	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-83	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-84	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-87	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-88	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-9	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC002-10	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

IC002-11	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.
IC002-12	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

IC002-13	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.
IC002-14	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.

IC002-16	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.
IC002-17	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp

IC002-18	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.
IC003-13	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC003-14	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.
IC003-16	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

IC003-17	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.
IC003-18	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

IC003-19	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.
IC003-20	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

IC003-21	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

LR001	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

LR003	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
MO001	110	09/12/1989	Maintain a copy of Standard Exemption 110 to ensure that equipment is installed and operated in accordance with all applicable requirements.

CLSC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST004A	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST004B	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005A	51	10/04/1995	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	**106.472**	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

BR001	106.261 & 106.262	08/04/2005	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track number of brake pads.

Good Afternoon,

Thank you for pointing out that webpage. Unfortunately, that webpage is outdated. I have informed my management and hopefully it gets updated soon.

Please see the newly revised (06/25) Form OP-DEL instructions. In the first paragraph it specifies that the DAR option is only available for corporations, not parternships, military bases, or municipalities. TCEQ Form 10011 - OP-DEL - Instructions Delegation of Responsible Official Information

Please let me know if you have additional questions.

Hi John,

Thank you – we will look into the changes noted below and within the OP-PBRSUP form and have the documents returned to you by the 27th.

I wanted to ask for clarification on the assigning of a DAR for military bases. On TCEQ's Responsible Official and Certifications page, it looks like delegation to a DAR is allowed as long as From OP-DEL is included. Is this correct? If this is outdated, no worries, Mr. Dosa can sign to certify the documents.

Thank you,
Cassie

UNCLASSIFIED

Good morning and thank you Mr. Walker,
We will get on this right away. Since we have to get our Director to sign, it may add a day or two.
I was out of office on Friday, but on another note: 24538 has been out for public notice which the comment period ends on Thursday, 19 March. I have the TCEQ-20244 (Public Notice Verification Form) form ready to send to TCEQ and R6AirPermitsTX@epa.gov on Friday to hopefully wrap that up.

Respectfully,

Subject: RE: O1659/Project 33269 U.S. Department of the Army/Fort Hood - OP-PBRSUP - [UNCLASSIFIED]

Good Afternoon,

I have attached a courtesy copy of the updated Draft Permit for FOP O1659/Project 33269. This draft permit contains all updates made during the project. There are a few corrections that are required on Form OP-PBRSUP and final certification of the application and all updates is required. I have requested this information below. **Please provide the requested information as soon as possible but no later than 03/27/2026**:

1. **Please provide an updated Form OP-PBRSUP**. I have attached the most recently submitted Form OP-PBRSUP with my comments. Please resolve these comments and provide an updated Form OP-PBRSUP. Please note that submitting an updated Form OP-PBRSUP will result in Permit Term 15 being updated to reference the most recently submitted Form OP-PBRSUP. In addition to my comments, please make the following changes:

    a. Unit IDs IC003-28, 29, 30, 31, 32, 33, and 34 are no longer documented on Form OP-PBRSUP Tables A and D, but were previously documented on Tables A and D as being authorized under PBR Registration 106.511/09/04/2000[164083] which is still an active PBR Registration and documented in the Title V permit. Please make the necessary updates.

    b. Unit ID IC006-1 is currently not documented on Tables B and D of Form OP-PBRSUP but is documented in the draft permit as being authorized by PBR 106.512/06/13/2001. Please add this unit to Table B and D of Form OP-PBRSUP.

2. **Please provide Form OP-CRO1.**

    The application and all updates provided need to be certified by the Responsible Official (RO) before TCEQ may issue the Public Notice Authorization Package (PNAP).

    The initial application submittal was certified by Duly Authorized Representative (DAR) Timi M. Dutchuk however, since then it has been determined that the DAR option is not available to Military bases per [30 TAC Chapter 122.165(c) and 40 CFR 70.2 defining “responsible official”]. The RO will need to certify the initial application submittal and all updates provided.

    The current RO on file is Mr. Brian L. Dosa. He will need to sign and submit Form OP-CRO1 to certify the time period of 02/01/2022 to the date you respond with the OP-PBRSUP requested above (your last update) and the Submittal Type should be

marked: Update to Permit Application. If this form is submitted in STEERS as an application update, Form OP-CRO1 will not require the RO's signature because the RO must sign and submit the update with his STEERS account (which is the certification method) but his information should still be provided on Form OP-CRO1. As an alternative, you may mail in the hardcopy of the OP-CRO1 and requested updated but Form OP-CRO1 must have a wet-ink signature from the RO.

Please see the following webpage for guidance on how to submit these updates: Where to Submit FOP Applications and Permit-Related Documents - Texas Commission on Environmental Quality - www.tceq.texas.gov

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

Please let me know if you have any questions.

Thank you for your cooperation.

Sincerely,

John Walker

Good afternoon Mr. Walker,
I figured I had best email you in the event that you have not been notified of the manual permit renewal that I have been working with Ms. Carolyn Thomas on since last week. They did find it in STEERS from what I did in August but it was not sent to them due to the payment process (was paid in ePay not STEERS).
After quite a few back and forths, I believe that the renewal is almost complete as last I heard from her is that she is fixing to send me the Public Notice verbiage.

Hope this helps in our Title V endeavor.

UNCLASSIFIED

Good morning Mr. Walker,
I think I figured out what is going on with the renewal application for 24538 that I submitted back in August of 2025.
During the submission process in which I worked with Miyah Calhoun from the Coating Section, I was told that since the Dept. of Defense had not received a budget yet, that we could do a credit card payment for the minimum of $600 and pay the rest once a Dept. of Defense budget was approved by the President and funds were available.
I submitted the permit in STEERS and my credit card holder paid the minimum fee that was agreed upon (see the TCEQ ePay Receipt attached). Apparently, the Coatings section did not pull my renewal from the "Ready to Pay" status and start their review per our agreement (see attached screenshot that has the Ref Number that I provided to you months ago).

I will give you a call later in the day so we can discuss what the easiest/best way is to move forward with the Title V since there was no review started on my 24538. I will also be making a phone call to the Coatings Section.

Mr. Walker,
I submitted the workbook myself in STEERS with assistance from Sabrina Coty-Butler, Miyah Calhoun, and some other nice folks from TCEQ along with a $600 pre-payment on the the day it was set to expire.

I am at home during this Ice Storm and was just notified that Fort Hood is closed tomorrow as well minus mission essential personnel. I will jump on this first thing once I get back into the office Wednesday.

Thank you very much and we will get this all sorted.

Good Afternoon,

I have discussed the request to keep NSR 24538 in the Title V permit with TCEQ Management. It has been confirmed that NSR does not currently have the renewal application for NSR 24538. Please resubmit the renewal application that was previously submitted but include in the cover letter when it was initially submitted.

Please submit the renewal application for NSR 24538 to NSR by 02/06/2026. It should also be submitted to the APIRT email address (APIRT@tceq.texas.gov). Please CC the Operating Permits Section Manager Rhyan Stone (rhyan.stone@tceq.texas.gov) and myself (john.walker@tceq.texas.gov) on the email.

Please let me know if you have any questions.

Thank you for your cooperation.

TCEQ Core Data Form

For detailed instructions on completing this form, please read the Core Data Form Instructions or call 512-239-5175.

SECTION I: General Information

1. Reason for Submission (*If other is checked please describe in space provided.*)

☐ New Permit, Registration or Authorization (*Core Data Form should be submitted with the program application.*)

☐ Renewal *(Core Data Form should be submitted with the renewal form)*

☒ Other **Military Installation Name Change**

2. Customer Reference Number *(if issued)*	Follow this link to search for CN or RN numbers in Central Registry**	**3. Regulated Entity Reference Number** *(if issued)*
CN 600126262		**RN 101612083**

SECTION II: Customer Information

4. General Customer Information	**5. Effective Date for Customer Information Updates** (mm/dd/yyyy)	6/11/2025

☐ New Customer ☒ Update to Customer Information ☐ Change in Regulated Entity Ownership
☐ Change in Legal Name (Verifiable with the Texas Secretary of State or Texas Comptroller of Public Accounts)

The Customer Name submitted here may be updated automatically based on what is current and active with the Texas Secretary of State (SOS) or Texas Comptroller of Public Accounts (CPA).

6. Customer Legal Name *(If an individual, print last name first: eg: Doe, John)*	*If new Customer, enter previous Customer below:*
U.S. Department of the Army	

7. TX SOS/CPA Filing Number	**8. TX State Tax ID** (11 digits)	**9. Federal Tax ID** (9 digits)	**10. DUNS Number** *(if applicable)*

11. Type of Customer:	☐ Corporation	☐ Individual	Partnership: ☐ General ☐ Limited
Government: ☐ City ☐ County ☒ Federal ☐ Local ☐ State ☐ Other		☐ Sole Proprietorship	☐ Other:

12. Number of Employees	**13. Independently Owned and Operated?**
☐ 0-20 ☐ 21-100 ☐ 101-250 ☐ 251-500 ☒ 501 and higher	☐ **Yes** ☒ **No**

14. Customer Role (Proposed or Actual) – *as it relates to the Regulated Entity listed on this form. Please check one of the following*

☐ Owner ☐ Operator ☒ Owner & Operator
☐ Occupational Licensee ☐ Responsible Party ☐ VCP/BSA Applicant ☐ Other:

15. Mailing Address:								
Department of the Army, Fort Hood								
Directorate of Public Works, Environmental Division (AMIM-HDP-E), 1225 Engineer Dr. , Bldg 4612								
City	Fort Hood	**State**	TX	**ZIP**	76544	**ZIP + 4**	5002	

16. Country Mailing Information *(if outside USA)*	**17. E-Mail Address** *(if applicable)*
	brian.l.dosa.civ@army.mil

18. Telephone Number	19. Extension or Code	20. Fax Number *(if applicable)*

VI.	**Air Authorizations That Are Affected By This Action**
A.	List all NSR authorizations (including PBR, SE, and standard permit registrations, and NSR permits), as applicable:
24538, 88412, 24583, 30861, 41479, 50528, 52124, 70014, 98846, 79646, 81233, 107747,	
131851, 147753, 164083	
B.	List all FOPs (including SOPs and ATOs under GOPs), as applicable:
O-01659	

VII. NSR Conditions for Change of Ownership under 30 TAC § 116.110(e)

- The new owner agrees to be bound by all the permit conditions and all representations made in the permit and any amendments and alterations.
- The new owner asserts there will be no change in the type of pollutants emitted.
- The new owner asserts there will be no increase in the quantity emitted.

Change of Name/Ownership Form
Air Permits Division
Texas Commission on Environmental Quality

VIII. FOP Conditions for Change of Ownership

- For SOP holders:
  Pursuant to 30 TAC § 122.210 and § 122.211, the permit holder (new owner) is required to submit a permit revision application for a change to the permit identification of ownership or operational control of a site. The change must be facilitated by a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the old and new permit holder. This written agreement is maintained with the permit.
- For GOP holders:
  Pursuant to 30 TAC § 122.503, the permit holder (new owner) is required to submit (before the change is operated) an application for a new authorization to operate for a change to the permit identification of ownership or operational control of a site. The change must be facilitated by a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the old and new permit holder. This written agreement is maintained with the permit.

A. Are any other changes needed for the FOP? ☐ YES ☐ NO
(If YES, submit the information as explained in the instructions.)

B. Is there an Acid Rain permit or Cross-State Air Pollution Rule (CSAPR) requirements included in the SOP? ☐ YES ☐ NO
(If YES, submit the information as explained in the instructions.)

IX. Authorization

I, Sean Goodwin

certify that I am the responsible official for this application and that, based on information and belief formed after reasonable inquiry, the statements and information on this form are true, accurate, and complete.

UNCLASSIFIED

Good morning Mr. Walker,
Attached is the Core Data Form that I uploaded into STEERS right after the name changed earlier this year (June). I will look to see what all else may have changed that I may have missed earlier and do an OP-1 as necessary.

As for 24538, Robert Kennedy (former Air Manager here) was tracking that 24538 expired in 2029 as he amended/renewed it in 2019 but apparently TCEQ only did the amendment which of course did not change the expiration date.
I worked with Miyah Calhoun and Stephanie Heath and got the PI-1 workbook uploaded into STEERS just prior to expiration and paid a partial fee. I am not sure of it's current status but will check once we are off of furlough. (hopefully they do a CR or something soon as we (ENV) have zero funding and I also would like to get paid as I have not since end of September).

Good Afternoon,

Can you please provide the following information by **11/15/2025:**

1. Please submit to me the TCEQ Core Data Form and the TCEQ 20405 Change of Name/Ownership Form so that TCEQ can complete the name change from Fort Cavazos to Fort Hood for the Title V permit. In addition, please provide an updated Form OP-1 for any other changes that may have occurred due to the name change.

   This was requested on 08/11/2025 to be submitted in STEERS but I did not receive it in STEERS.

2. Looking at the TCEQ database, it seems that NSR 24538 expired without being renewed. Can you please provide me a status update on NSR 24538.

Please let me know if you have any questions.

Sincerely,

John Walker

Mr. Walker,

Please find OP-PBRSUP attached in PDF and Word configurations for Fort Hood.

Fort Hood and American Water, in correspondence with TCEQ, have agreed to void PBR 54052. It was decided the units under 54052 would be re-registered by their respective owners. The voiding of 54052 will be submitted to TCEQ by Fort Hood/American Water.

American Water will be taking responsibility of the following units from 54052: IC001-19, IC001-33, IC001-34, IC001-35, and IC001-37. These have been removed from OP-PBRSUP.

The remaining units under 54052 will be claimed by Fort Hood under Air PBR 106.511 or 106.371. These include: CT001, IC001-14, IC001-18, IC001-22, IC001-25, IC001-36, IC001-43, IC001-43, IC001-46, IC001-47, IC001-48, IC001-51, IC001-53, IC001-55, IC001-56, IC001-65, I C001-66, IC001-67, IC0011-68, IC001-69, IC001-70, IC001-71, IC001-72, IC001-74, IC001-75, IC001-76, IC001-77, IC001-79, IC001-8, IC001-81, IC001-83, IC001-84, IC001-85, IC001-86, IC001-87, IC001-88, IC001-9, IC001-91, IC001-92, IC001-93, IC001-94 IC001-95, IC002-1, IC002-3, IC002-4, IC002-5, IC002-6, IC002-7, IC002-8, IC002-9, IC002-15, IC003-1, IC003-8.

Units being claimed by Fort Hood have been moved to Table B from Table A in OP-PBRSUP. Table D has been updated to remove 54052 from the column labeled “Version No./Date or Registration Number.” Comments provided on July 26, 2025 by TCEQ have been considered in these updates.

Please let me know if there are any questions or concerns. Thank you,

Cassie Johnson

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
08/27/2025	O1659	RN101612083

Unit ID No.	PBR No.	Version No./Date or Registration No.	Monitoring Requirement
AB001	106.452	107747	In accordance with Section 106.8, maintain records of the 12 month rolling totals of facility wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4(a)(1).
COMPREP	113	11/01/2001	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.
CT001	106.371	03/07/2003	The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

EC002	106.495	52124	Maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

ET001	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; or Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
ET003	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Five*Minutes in Mode Five/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Six*Minutes in Mode Six/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Seven*Minutes in Mode Seven/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Eight*Minutes in Mode Eight/60*Emission Factor/1000; Where Horsepower for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-14	106.511	03/07/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-16	106.511	03/07/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-17	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-32	106.511	03/07/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-42	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-5	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-51	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-56	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-64	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-65	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-68	106.511	03/07/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 20215 Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-8	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-85	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-86	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-91	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-92	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-93	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-94	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-95	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC002-1	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.

IC002-15	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.
IC002-3	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

IC002-4	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.
IC002-5	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines 1200 ≤ hp ≤ 3000.

IC002-6	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.
IC002-7	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.

IC002-8	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.
IC002-9	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines > 600 hp.

IC003-10	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.
IC003-11	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

IC003-1	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units
IC003-5	106.511	9/4/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

IC003-6	106.511	3/7/2003	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.
IC003-7	106.511	03/07/2003	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-8, 3-10 for 4-stroke rich burn units.

IC003-8	106.511	03/07/2003 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. MO004	106.262, 106.533	41479	Soil Bioremediation Operations are monitored for VOC emissions using the following equation in compliance with monitoring requirements in 30 TAC 106.533: VOLUME*SOIL DENSITY*TPH*VTPH*BTEX*TBTEX*(VBTEX/24)*744 Where Volume is measured by site operators who maintain a spreadsheet that is updated after each turn-in of soil, which is converted to cubic yards. The data is reported monthly to the Air Team for consumption data entry to be used in the above equation. Soil data is based on historic sampling: Soil Density is 1.037 TPH is 0.025% VTPH is 0.5% BTEX is 0.1% TBTEX is 0.35% VBTEX is 1.0%

MO006	106.262	76961	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Tanker truck purge operations are monitored for VOC emissions using the following equation: NUMBER OF TRUCKS*VOC CONTENT Where The number of trucks is recorded by DPW ENV. This team runs the facility and enters each tank type that goes through the purge facility into the consumption tracking database by type, date, and quantity. Conservative assumptions are made estimating the remaining fuel left to be cleaned. The VOC content is taken from F-24 MSDS.
SC011	106.433	70014	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
SC016	113	30861	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.

SC021	106.433	13851	Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE)*(1-TRANS EFF/100)*(1-FO/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
ST001A	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001B	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001C	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST002A	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.

ST003A	106.412	24583	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%
SU001	106.454	50528	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

SU003	106.261	52124	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
MO007	106.261, 106.262	98846	Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
MO007	106.261, 106.262	147753	Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
ARO28	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO29	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO30	41	11/25/1985	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO31	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO32	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO33	41	11/05/1986	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO34	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO35	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO36	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO37	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO38	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO39	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO42	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO65	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO66	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO67	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO68	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO69	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO70	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO71	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO72	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO73	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO74	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO75	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO76	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO77	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO78	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO79	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO80	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO81	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO82	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO83	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO84	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO85	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO86	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO87	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO88	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO89	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO90	106.454	03/14/1997	VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
EC002	106.183	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 2-3 and 2-5.

FS011A	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS011B	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS011C	106.472	03/14/1997	PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS022	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

IC001-10	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-13	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-18	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-21	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-22	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-25	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-30	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-36	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-43	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-44	106.511	09/04/2000 / TBD	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-46	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-47	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-48	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-49	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-53	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-54	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-55	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-57	106.511	09/04/2000	. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-58	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-59	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-60	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-61	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-62	106.511	09/04/2000	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-66	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-67	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-69	106.511	09/04/2000 / TBD	. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-70	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-71	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-72	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-74	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2025; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.

IC001-75	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp.
IC001-76	106.511	09/04/2000 / TBD	In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
MO001	110	09/12/1989	Maintain a copy of Standard Exemption 110 to ensure that equipment is installed and operated in accordance with all applicable requirements.

CLSC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method’s typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST004A	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST004B	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005A	51	10/04/1995	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW008	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-4/EC001	106.183	09/04/2000E	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

BR001	106.261 & 106.262	08/04/2005	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track number of brake pads.

Good morning Micheal,

For Title V permits, all you need is the EPR_TV which you already have. I do not know much about the other program areas that Fort Hood may be subject to using.

Sincerely,

John Walker

Thank you for the great information Mr. Walker!
I do have the Title V Operating Permits on my account but completed submitted the Core Data Form under the EPR_ECDF e-Permit area as I was told by Karen, but now I know.

I am including a screenshot of my STEERS account Program Areas, please let me know if it looks like I have all I need or if you feel I should add a few other programs.

I had to add a few after Robert Kennedy left as there were things that he did as Program Manager that I did not whilst working under him.

Subject: RE: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good morning,

Regarding the Core Data Form STEERS submittal, I do not see that submitted in the Title V program area of STEERS. During the lifetime of this project, Title V incorporated STEERS into the application submittal process. This is required for all initial application submittals however, updates may still be received by email and mail. You can find more about how to submit in the Title V STEERS program area at the following link: Where to Submit FOP Applications and Permit-Related Documents - Texas Commission on Environmental Quality - www.tceq.texas.gov. I do suggest you set up your STEERS account to have access to the Title V Program area for future application submittals. If you need additional guidance on this, please let me know as I am considered the Title V STEERS subject matter expert.

In regard to the CN documented on the TCEQ 20405 Change of Name/Ownership Form, it should remain “US DEPARTMENT OF THE ARMY” so that it matches the current CN. Please be sure to update the site name under Section V. A of the form.

You may submit these updates in the Title V STEERS program area. I am not requiring it for this project since TCEQ incorporated STEERS into the Title V application submittal process during this project. You may email me a copy of the Core Data Form and the TCEQ 20405 Change of Name/Ownership Form. When the Working Draft Permit is approved, I will request Form OP-CRO1 to certify the application and all updates which will need to be submitted either in Title V STEERS or by mail with a wet-ink signature. All other updates

may remain emails until then.

Please let me know if you have additional questions.

Subject: RE: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good morning Mr. Walker.
I submitted the Core Data Form via STEERS in early July after we received the official orders from the Department of Defense. The person that I worked with from TCEQ was Karen Young.
As I have never done a 20405 and we did not do once when we changed from Fort Hood to Fort Cavazos back in 2016, I just have one question ; our CN lists our Customer Name as "US DEPARTMENT OF THE ARMY" which did not change and will keep that, on my draft 20405 I listed the "Company Name" as "DEPARTMENT OF THE ARMY, FORT HOOD" - will that suffice for the form and the Title V Renewal?

I will reach out to Mr. Calderon and Timmons and we will update the OP-PBRSUP and OP-1 forms as necessary

Thank you for your invaluable assistance and patience with this renewal.

Subject: RE: Working Draft Permit - FOP O1659/Project 33269 U.S. Department of the Army/Fort Hood

Good Afternoon,

Please confirm and provide the following requested information as soon as possible but no later than **08/29/2025:**

1. Please disregard the due date in the previous request for information sent on 07/26/2025.

2. Based on the meeting that occurred on 07/31/2025 between TCEQ, American Water, and Fort Hood, it was decided that PBR Registration 54052 will be voided and that Fort Hood will apply for a new PBR Registration. Do you have an estimate on when the application for this new PBR Registration will be submitted? If not, please submit the PBR Registration application to Rule Registrations by 08/29/2025.

   Please continue working on Form OP-PBRSUP as you work through the PBR Registration. The Title V Working Draft Permit and Form OP-PBRSUP will need to reflect the changes due to the new PBR Registration.

3. Please submit to me the TCEQ Core Data Form and the TCEQ 20405 Change of Name/Ownership Form so that TCEQ can complete the name change from Fort Cavazos to Fort Hood for the Title V permit. In addition, please provide an updated Form OP-1 for any other changes that may occurred due to the name change.

Please let me know if you have any questions.

Thank you for your cooperation.

Sincerely,

Attachments:	20250726 Working Draft Permit_FOP O1659_Project 33269_Marked.docx; 20250726_OP-PBRSUP_Facility response (002)_Marked.docx

Good Afternoon,

Sorry for the delay in my response. I have reviewed the provided documents. Please provide the requested items below by **08/25/2025:**

1. I have attached a copy of Form OP-PBRSUP and the Working Draft Permit with my comments. These comments are examples of the types of deficiencies that need to be resolved. Please refer to these examples when resolving the following items:

    a. In regard to PBRs, everything that is in the Working Draft Permit's New Source Review Authorization References Table (Starting on Page 139) and the following New Source Review Authorization References by Emission's Unit Table needs to be documented on Form OP-PBRSUP. Please cross reference these tables with Form OP-PBRSUP.
    b. On Form OP-PBRSUP, Registered PBRs need to go on Table A and Claimed PBRs need to go on Table B. All information on Table A and B, need to be documented on Table D. There may be units on Form OP-PBRSUP that are not in the Working Draft Permit if they have no Title V Requirements however, every PBR that is documented in the Working Draft Permit needs to be documented on Form OP-PBRSUP. Please cross reference Form OP-PBRSUP with the previously mentioned Tables in the Working Draft Permit.
    c. There have been many changes throughout the lifetime of this project and to my knowledge the Working Draft Permit is up to date and reflects the most accurate information. Please use it as a reference to ensure that Form OP-PBRSUP reflects the most accurate information. I will be able to make changes to the Working Draft Permit in regard to these PBRs without the submittal of additional forms (Forms OP-2 or OP-2) if needed if you provide comments on the Working Draft Permit but it is my understanding that it will not be required. We only need to sort out the Form OP-PBRSUP. Please let me know if you have any comments.
    d. In regard to PBRs, I understand that we have meeting on 07/31/2025. I am providing this request for information ahead of time so that if you have any questions we may go over them during the meeting. Please use the Form OP-PBRSUP and Working Draft Permit submitted to me on 03/14/2025 as the

official documents. The documents I have attached are examples and may have had information changed that was not intentional.

2. It is my understanding that Fort Cavazos has been renamed to Fort Hood. Please submit to me the TCEQ Core Data Form and the TCEQ 20405 Change of Name/Ownership Form. In addition, please provide an updated Form OP-1 for any other changes that may occurred due to the name change.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified submittals, including application updates supporting the WDP comments is required to be submitted with the WDP response. After final review of the WDP, additional changes, supported by application updates, may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that were not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1. This form will be requested at a later date.

If you choose to submit your application updates through STEERS, please notify me when these updates have been submitted.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

John Walker

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
1/10/2025	O1659	RN101612083

Unit ID No.	PBR No.	Version No./Date Or Registration No.	Monitoring Requirement
AB001	106.452	107747	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Any abrasive cleaning operation that will satisfy paragraph (1) or (2) of this section is permitted by rule: (1) enclosed abrasive cleaning: (A) the particulate matter emissions are evacuated through a fabric filter with a maximum filtering velocity of 4.0 feet per minute (ft/min) with mechanical cleaning or 7.0 ft/min with air cleaning; and (B) there are no visible fugitive emissions from the facility. (2) outside blast cleaning: (A) abrasive usage rate shall not exceed 150 tons per year, 15 tons per month, and one ton per day; and (B) the blast cleaning is performed at least 500 feet from any recreational area or residence or other structure not occupied or used solely by the owner of the facility or the owner of the property upon which the facility is located; and (C) records shall be maintained of operating hours and abrasive material usage; and (D) before construction begins, the facility is registered with the commission's Office of Permitting, Remediation, and Registration in Austin using Form PI-7; and (E) before construction of the facility begins, written site approval shall be received from the executive director.
CT001	106.371	54052	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

Commented [JW45]: For each entry on Table D, it seems that the rule language from the specific PBR was copied over. The monitoring requirement should only list which monitoring requirements requirements apply to the unit.

EC002	106.495	52124	Maintain a copy of Section 106.4 and Section 106.495, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.495, the following conditions are met: (1) Before construction begins, the facility shall be registered with the commission's Office of Permitting, Remediation, and Registration in Austin using Form PI-7. (2) The combustible material shall not exceed 10% by weight of the total load to the oven, furnace, and/or incinerator. (3) The combustible material shall contain no halogenated organic compounds. (4) The oven, furnace, and/or incinerator shall be equipped with an afterburner automatically controlled to operate with a minimum temperature of 1,400 degrees Fahrenheit and a gas retention time of 0.5 second or greater. (5) Opacity of emissions from the oven, furnace, and/or incinerator shall not exceed 5.0% averaged over a five-minute period. (6) The manufacturer's recommended operating instructions shall be posted at each oven, furnace, and/or incinerator, and each unit shall be operated in accordance with these instructions. (7) Heat shall be provided by the combustion of sweet natural gas, liquid petroleum gas, or Number 2 fuel oil with no more than 0.5% sulfur by weight, or by electric power. (8) The emission of any air contaminant shall not exceed 0.5 pounds per Hour and 2.0 tons per year. Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6

The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-8, 3-10 for 4-stroke rich burn units: EF for Ethylbenzene = 1.95E-4 EF for Styrene = 9.35E-5 EF for Ethylene Dibromide = 1.67E-4 EF for 1,3-Butadiene = 5.21E-3 EF for Acrolein = 2.07E-2 EF for Ethylene Dichloride = 8.88E-5 EF for Toluene = 4.38E-3 EF for Chlorobenzene = 1.01E-4 EF for Xylene = 1.53E-3 EF for Formaldehyde = 1.61E-1 EF for 1,3-Dichloropropene = 9.98E-5 EF for Carbon Tetrachloride = 1.39E-4 EF for Carbon Monoxide = 27.6 EF for Methanol = 2.40E-2 EF for Chloroform = 1.08E-4 EF for Benzene = 1.24E-2 EF for Vinyl Chloride = 5.64E-5 EF for Acetaldehyde = 2.19E-2 EF for Methylene Chloride = 3.24E-4 EF for 1,1-Dichloroethane = 8.88E-5 EF for Dichloropropane = 1.02E-4 EF for 1,1,2-Trichloroethane = 1.20E-4 EF for Tetrachloroethane = 1.99E-4 EF for Naphthalene = 7.63E-4 EF for NOx = 17.8 EF for PM, PM10, and PM2.5 = 7.47E-2 EF for SOx = 4.62E-3 EF for VOCs = 2.33E-1

MO011	106.262	81233	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The calculation formula for unit emissions is: Hours of Operation * Emission Factor Where Emission factors are reported in lb*1000/hp-hr and sourced from Fort Hood Munitions Burner Documentation EF for Ethylbenzene = 6.00E-7 EF for Styrene = 2.60E-6 EF for P-Dichlorobenzene = 9.41E-7 EF for Butane = 1.65E-3 EF for 1,3-Butadiene = 3.00E-6 EF for Acrylonitrile = 5.40E-6 EF for Toluene = 1.07E-5 EF for Pentane = 2.04E-3 EF for N-Hexane = 1.41E-3 EF for Propylene = 2.20E-5 EF for Anthracene = 1.63E-8 EF for Pyrene = 1.68E-7 EF for Dichloroethane = 1.48E-6 EF for Xylene = 1.16E-6 EF for Benzo[GHI]Perylene = 2.61E-7 EF for Benzo[E]Pyrene = 1.08E-7 EF for Indeno[1,2,3-CD]Pyrene = 6.14E-8 EF for Benzo[B]Fluoranthene = 5.34E-8 EF for Benzo[K]Fluoranthene = 2.54E-8 EF for Acenaphthylene = 1.38E-7 EF for Chrysene = 4.34E-8 EF for Formaldehyde = 6.78E-5 EF for Benzo[A]Pyrene = 7.49E-8 EF for Dibenz[A,H]Anthracene = 6.90E-9 EF for 3-Methylcholanthrene = 1.40E-9 EF for Benz(A)Anthracene = 3.54E-8 EF for Cyanide = 2.20E-4 EF for Benz[A]Anthracene,7,12-Dimethyl = 1.30E-9 EF for Carbon Monoxide = 2.39E-1 EF for Benzene = 8.16E-5 EF for Aluminum = 1.54E-5 EF for Lead = 3.92E-7 EF for Manganese = 2.98E-7 EF for Mercury = 2.04E-7 EF for Molybdenum = 8.63E-7 EF for Nickel = 1.65E-6

			EF for Antimony = 6.60E-5 EF for Arsenic = 1.57E-7 EF for Barium = 3.45E-6 EF for Beryllium = 9.40E-9 EF for Cadmium = 8.63E-7 EF for Chromium = 1.10E-6 EF for Cobalt = 6.59E-8 EF for Copper = 6.67E-7 EF for Vanadium = 1.80E-6 EF for Zinc = 1.57E-4 EF for Sulfur Dioxide = 4.71E-4 EF for Ethane = 2.43E-3 EF for Ethylene = 8.00E-5 EF for Methyl Chloride = 5.20E-8 EF for Hydrogen Cyanide = 3.20E-3 EF for Propane = 1.25E-3 EF for Acetonitrile = 2.40E-5 EF for Methylene Chloride = 1.60E-5 EF for Ammonia = 6.60E-3 EF for Selenium = 1.88E-8 EF for Methyl Ethyl Ketone = 2.80E-7 EF for Phenanthrene = 8.33E-8 EF for Fluorene = 7.02E-8 EF for 1,2,4-Triethylbenzene = 1.42E-7 EF for Naphthalene = 4.08E-6 EF for Naphthalene, 2-Methyl- = 1.88E-8 EF for NOx = 1.57E-1 EF for PM10 = 1.22E-2 EF for VOCs = 1.23E-2
MO004	106.262, 106.533	41479	Maintain a copy of Section 106.4, 106.533, and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Soil Bioremediation Operations are monitored for VOC emissions using the following equation in compliance with monitoring requirements in 30 TAC 106.533: VOLUME*SOIL DENSITY*TPH*VTPH*BTEX*TBTEX*(VBTEX/24)*744 Where Volume is measured by site operators who maintain a spreadsheet that is updated after each turn-in of soil, which is converted to cubic yards. The data is reported monthly to the Air Team for consumption data entry to be used in the above equation. Soil data is based on historic sampling: Soil Density is 1.037 TPH is 0.025% VTPH is 0.5% BTEX is 0.1% TBTEX is 0.35% VBTEX is 1.0%

MO006	106.262	76961	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Tanker truck purge operations are monitored for VOC emissions using the following equation: NUMBER OF TRUCKS*VOC CONTENT Where The number of trucks is recorded by DPW ENV. This team runs the facility and enters each tank type that goes through the purge facility into the consumption tracking database by type, date, and quantity. Conservative assumptions are made estimating the remaining fuel left to be cleaned. The VOC content is taken from F-24 MSDS
SC011	106.433	70014	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
SC016	113	30861	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.

SC021	106.433	13851	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE)*(1-TRANS EFF/100)*(1-FO/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
ST001A	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001B	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001C	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST002A	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.

ST003A	106.412	24583	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%
SU001	106.454	50528	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

SU003	106.261	52124	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
MO007	106.261, 106.262	98846	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
MO007	106.261, 106.262	147753	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
ARO28	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO29	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO30	41	11/25/1985	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO31	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO32	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO33	41	11/05/1986	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO34	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO35	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO36	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO37	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO38	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO39	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO42	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO65	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO66	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO67	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO68	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO69	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO70	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO71	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO72	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO73	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO74	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO75	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO76	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO77	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO78	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO79	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

EC002	106.183	09/04/2000	Maintain a copy of Section 106.4 and Section 106.183, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6 EF for Ancenaphthylene = 1.8E-6 EF for Chrysene = 1.8E-6 EF for Formaldehyde = 0.075 EF for Benzo[A]Pyrene = 1.6E-6 EF for Dibenz[A,H]Anthracene = 1.6E-6 EF for 3-Methylcholanthrene = 1.8E-6 EF for Benz[A]Anthracene = 1.8E-6 EF for Benz[A]Anthracene, 7, 12-Dimethyl = 1.6E-5 EF for Carbon Monoxide = 84 EF for Benzene = 5.8E-3 EF for Lead = 5.0E-4 EF for Manganese = 3.8E-4 EF for Mercury = 2.6E-4 EF for Nickel = 2.1E-3 EF for Arsenic = 2.0E-4

The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

IC004-8	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

LR001	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

LR003	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
MO001	110	09/12/1989	Maintain a copy of Standard Exemption 110 to ensure that equipment is installed and operated in accordance with all applicable requirements.

CLosSC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST004A	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST004B	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005A	51	10/04/1995	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW008	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-4/EC001	106.183	09/04/2000E	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW004	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

BR001	106.261 & 106.262	08/04/2005	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track number of brake pads.

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Acronym List 152

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
CEMS ..... continuous emissions monitoring system
CFR ..... Code of Federal Regulations
COMS ..... continuous opacity monitoring system
CVS ..... closed vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MACT ..... Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr ..... Million British thermal units per hour
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NESHAP ..... National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PEMS ..... predictive emissions monitoring system
PM ..... particulate matter
ppmv ..... parts per million by volume
PRO ..... process unit
PSD ..... prevention of significant deterioration
psia ..... pounds per square inch absolute
SIP ..... state implementation plan
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

Subject: PBR 54052

Hello Mr. Walker, Mr. Wheatley and Mr. Reynolds,

Would you be available for a call next week between TCEQ, American Water and Ft. Hood (with Olsson/consultant) to discuss the needed changes to PBR 54052 that will allow Ft. Hood to proceed with its Title V renewal application and form PBRSUP?

We are available for a 30 min Teams meeting on July 31 at 2pm CST or August 1 anytime between 10am-2pm CST. Please let me know if any of these time slots work for you or if you have a time or day that would work better.

Thank you,

Jim L. Timmons

Good afternoon Mr. Walker,

On behalf of Fort Cavazos, please see attached the forms OP-SUMR, OP-PBRSUP, and OP-REQ1 with responses to your comments included and edits made accordingly.

The facility understands its responsibility to submit an updated form OP-CRO2 in STEERS signed by the new RO.

Regarding PBR Registration 54052 – Fort Cavazos is urging American Water to remove the units from 54052 that should be taken on by Fort Cavazos. Olsson is planning to contact Mr. Dan Sims with the APIRT team to request some specific step-by-step instructions to forward to American Water to guide them through the necessary STEERS steps to have units removed from 54052.

Mr. Sims is the contact you have recommended in the past for PBR-related questions, but please let us know if there is another TCEQ representative that would be better suited for this request. We greatly appreciate your assistance with this!

We will stand by for any additional comments on these forms after you have reviewed and will concurrently be working to resolve the 54052 issues such that the related units in the permit application can be correctly added.

Thank you,

-Will C

	127	SC007	OP-REQ2	PAINT SPRAY BOOTH BLDG 88027 BAY IV		(24538)	
A	177	SC016	OP-UA1	COMPOSITE SITE OPERATIONS		113/10/04/1995[30861]	
A	138	WW001	OP-REQ2	LRC WOODWORKING AND MANUFACTURING OPERATIONS		106.231/09/04/2000, 106.265/09/04/2000	

Commented [JW1]: For Unit IDs SC004, SC005, SC006, and SC007 (revision items 121, 123, 125, and 127), PBR Registration No. 24538 was provided however there is no PBR Registration No. 24538. There is a NSR permit 24538. I have left the preconstruction authorization as NSR 24538.

Should PBR 106.433 also be documented as a preconstruction authorization for these units? Please look at the OP-SUM excel sheet because the other SC* units also have NSR 24538 documented as a PCA, though some have PBR 106.433.

Commented [JT2R1]: This should be in format referring to NSR 24538.

Commented [JW3R1]: updated

Commented [JW4]: There is no revision 137 on the April 15, 2024 OP-2. I believe this was changed at another date. I am unsure of where this unit came from.

Commented [JT5R4]: Revision 137 on OP-2 corrected to show SC016.

Commented [JW6R4]: So revision 137 on Form OP-2 states to rename Unit ID WW002 as SC016.

This means that WW002 no longer exists. All other instances of WW002 should be removed from this form such as Revisions 138 and 158 on Tables 1 and 2 on Form OP-SUMR. I have also removed the Unit from GRP-WW

The effective Form is OP-UA1 but should it be OP-REQ2 and retain the permit shields that were added with WW002? This is how it is now displayed in the permit.

Commented [SA7R4]: The name change was erroneous. WW002 and SC016 exist at the site. Revision 137 has been restored to its original state, incorporating WW002. Revision 177 has been created to add SC016 and its authorization to the permit. The unit and its authorization are accounted for in Forms OP-SUMR, OP-UA1, OP-PBRSUP, and OP-2.

Commented [JW11]: This unit does not exist in the permit and no OP-UA13 was provided.

Commented [JT12R11]: Filled out OP-UA13 for this group of cooling towers.

Commented [JW13R11]: This unit was not added since the site is not documented as a Major Source of HAPS.

Commented [SA14R11]: I believe this is resolved

Commented [JW15]: This unit does not exist in the permit and no OP-UA13 was provided.

Commented [SA16R15]: I believe this may have been a mistake, this emission unit wouldn't require an OP-UA13

Commented [JW17]: Not a valid Version No./Date. I have left it as 09/04/2000. Please confirm.

Commented [JT18R17]: Version No./Date corrected to 09/04/2000.

Commented [JW19]: This description goes over the character limit. I have left it as "DIESEL IC EQUIPMENT > 600HP"

Commented [JT20R19]: "DIESEL IC EQUIPMENT > 600HP" will work for this source.

Commented [JW21R19]: updated

Commented [JW31]: This unit was previously removed from permit. See comments for SU001

Commented [SA32R31]: Removed

Formatted: Font color: Red, Strikethrough

Formatted: Font color: Red, Strikethrough

Formatted: Font color: Red, Strikethrough

Commented [JW33]: Not a valid unit ID. Is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements?

Commented [JT34R33]: This unit is being removed. Added to PBRSUP.

Commented [JW35]: Is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT36R35]: Added to PBRSUP.

Commented [JT37R35]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for them, we can call them CC001 and CC002."

Mr. Walker, would this suffice?

Commented [JW38R35]: The Units should match EPNs if in a NSR/PBR Registration permit only or it should match Unit IDs from the Title V permit (if they are documented in the Title V permit).

Requesting to be removed if not documented in the Title V permit.

Commented [SA39R35]: Yes, removed from Title V permit. Units are listed on OP-PBRSUP but are not in Title V permit.

Commented [JW40]: is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT41R40]: Added to OP-PBRSUP.

Commented [JT42R40]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if ...

Commented [JW43R40]: See comment above.

Commented [SA44R40]: This PBR is in PBRSUP and not if ...

Commented [JW45]: is this a process that should be listed o ...

Commented [JT46R45]: CT001 is on OP-PBRSUP.

Commented [JW47R45]: See note above in regard to being ...

Commented [WC48R45]: Agreed; removed.

	[Intentionally left blank]

Commented [JT1]: Added to this form due to SU003 on OP-SUMR Preconstruction Authorization: 106.261/09/11/2002[52124].

Commented [JW2R1]: 09/11/2002 is not a valid Version No./Effective Date for PBR 106.261 per the Texas Administrative Code Chapter 106. The date should be either 03/14/1997, 12/24/1998, 09/04/2000, or 11/01/2003. 09/11/2002 seems to be the Registration Date for PBR Registration 52124.

Since the PBR is already added with the effective date 11/01/2003, I have left it as 11/01/2003 unless there is a different Version No./Effective Date for PBR Registration 52124. Please confirm.

Commented [SA3R1]: PBR version in effect was 09/04/2000 at the time this was approved

Commented [JW4]: This should be removed per your comment on the Working Draft Permit where you confirmed the Correct Effective date is 11/01/2001.

Commented [SA5R4]: To be removed

Formatted: Font color: Red, Strikethrough

Formatted: Font color: Red, Strikethrough

Formatted: Font color: Red, Strikethrough

Commented [JW6]: This is not a valid Version No./Effective Date. Per the Texas Administrative Code Chapter 106, the date should be 03/14/1997, 07/08/1998, or 09/04/2000. Please confirm the correct date.

Commented [SA7R6]: Version in place at time of permit was 03/14/1997, date has been changed

Commented [JW8]: This is not a valid Version No./Effective Date. Per the Texas Administrative Code Chapter 106, there is only one date and that is 07/04/2004. Since that date is already documented in the entry above, I have removed this from the permit. You should also remove this entry from Form OP-REQ1.

Commented [SA9R8]: To be removed

Permit By Rule Supplemental Table (Page 4)
Table D: Monitoring Requirements for registered and claimed PBRs for the Application Area
Texas Commission on Environmental Quality

Date	Permit Number	Regulated Entity Number
1/10/2025	O1659	RN101612083

Unit ID No.	PBR No.	Version No./Date Or Registration No.	Monitoring Requirement
AB001	106.452	107747	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). Any abrasive cleaning operation that will satisfy paragraph (1) or (2) of this section is permitted by rule: (1) enclosed abrasive cleaning: (A) the particulate matter emissions are evacuated through a fabric filter with a maximum filtering velocity of 4.0 feet per minute (ft/min) with mechanical cleaning or 7.0 ft/min with air cleaning; and (B) there are no visible fugitive emissions from the facility. (2) outside blast cleaning: (A) abrasive usage rate shall not exceed 150 tons per year, 15 tons per month, and one ton per day; and (B) the blast cleaning is performed at least 500 feet from any recreational area or residence or other structure not occupied or used solely by the owner of the facility or the owner of the property upon which the facility is located; and (C) records shall be maintained of operating hours and abrasive material usage; and (D) before construction begins, the facility is registered with the commission's Office of Permitting, Remediation, and Registration in Austin using Form PI-7; and (E) before construction of the facility begins, written site approval shall be received from the executive director.
CT001	106.371	54052	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1

Formatted: Space Before: 0 pt, No bullets or numbering

EC002	106.495	52124	Maintain a copy of Section 106.4 and Section 106.495, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.495, the following conditions are met: (1) Before construction begins, the facility shall be registered with the commission's Office of Permitting, Remediation, and Registration in Austin using Form PI-7. (2) The combustible material shall not exceed 10% by weight of the total load to the oven, furnace, and/or incinerator. (3) The combustible material shall contain no halogenated organic compounds. (4) The oven, furnace, and/or incinerator shall be equipped with an afterburner automatically controlled to operate with a minimum temperature of 1,400 degrees Fahrenheit and a gas retention time of 0.5 second or greater. (5) Opacity of emissions from the oven, furnace, and/or incinerator shall not exceed 5.0% averaged over a five-minute period. (6) The manufacturer's recommended operating instructions shall be posted at each oven, furnace, and/or incinerator, and each unit shall be operated in accordance with these instructions. (7) Heat shall be provided by the combustion of sweet natural gas, liquid petroleum gas, or Number 2 fuel oil with no more than 0.5% sulfur by weight, or by electric power. (8) The emission of any air contaminant shall not exceed 0.5 pounds per Hour and 2.0 tons per year. Compliance with 106.495(5) will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6

			EF for Ancenaphthylene = 1.8E-6 EF for Chrysene = 1.8E-6 EF for Formaldehyde = 0.075 EF for Benzo[A]Pyrene = 1.6E-6 EF for Dibenz[A,H]Anthracene = 1.6E-6 EF for 3-Methylcholanthrene = 1.8E-6 EF for Benz[A]Anthracene = 1.8E-6 EF for Benz[A]Anthracene, 7, 12-Dimethyl = 1.6E-5 EF for Carbon Monoxide = 84 EF for Benzene = 5.8E-3 EF for Lead = 5.0E-4 EF for Manganese = 3.8E-4 EF for Mercury = 2.6E-4 EF for Nickel = 2.1E-3 EF for Arsenic = 2.0E-4 EF for Beryllium = 1.2E-5 EF for Cadmium = 1.1E-3 EF for Chromium = 1.4E-3 EF for Cobalt = 8.4E-5 EF for Acetaldehyde = 3.1E-3 EF for Selenium = 2.4E-5 EF for Acenaphthene = 1.8E-6 EF for Phenanthrene = 1.7E-5 EF for Fluorene = 2.8E-6 EF for Naphthalene = 3.0E-4 EF for Naphthalene, 2-Methyl = 2.4E-5 EF for NOx = 100 EF for Total PM, PM2.5, and PM10 = 7.6 EF for SOx = 0.6 EF for Total VOCs = 5.5

~~EC002~~	~~106.495~~	~~52888~~	~~Maintain a copy of Section 106.4 and Section 106.495, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). ET001	106.263	79646	This PBR covers engine testing. This operation under PBR 106.263 is subject to 30 TAC 106.263(g) requiring records identifying: (1) the type and reason for the activity or facility construction; (2) the processes and equipment involved; (3) the date, time, and duration of the activity or facility operation; and (4) the air contaminants and amounts which are emitted as a result of the activity or facility operation. The calculation formulas for unit emissions are: Number of Engines*Horsepower of Mode One*Minutes in Mode One/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Two*Minutes in Mode Two/60*Emission Factor/1000; Number of Engines*Horsepower of Mode Three*Minutes in Mode Three/60*Emission Factor/1000; or Number of Engines*Horsepower of Mode Four*Minutes in Mode Four/60*Emission Factor/1000; Where Horsepowers for each engine mode are given in manufacturer's specifications; Minutes of runtime in each engine mode are recorded on the test stand; The number of engines tested monthly are submitted to the environmental management office for entry into the system database; Emission factors are reported in lb*1000/hp-hr and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 3-3, 3-6, and 3-7 for engines ≤ 600 hp: EF for 1,3-Butadiene = 3.16E-4 EF for Acrolein = 7.48E-4 EF for Toluene = 3.31E-3 EF for Anthracene = 1.51E-5 EF for Pyrene = 3.87E-5 EF for Xylene = 2.31E-3 EF for Benzo[GHI]Perylene = 3.96E-6 EF for Indeno[1,2,3-CD]Pyrene = 3.03E-6 EF for Benzo[B]Fluoranthene = 8.02E-7 EF for Fluoranthene = 6.16E-5 EF for Benzo[K]Fluoranthene = 1.25E-6 EF for Ancenaphthylene = 4.09E-5 EF for Chrysene = 2.86E-6 EF for Formaldehyde = 9.55E-3 EF for Benzo[A]Pyrene = 1.52E-6 EF for Dibenz[A,H]Anthracene = 4.72E-6 EF for Benz[A]Anthracene = 1.36E-5 EF for Carbon Monoxide = 7.685 EF for Benzene = 7.55E-3 EF for Acetaldehyde = 6.2E-3 EF for Acenaphthene = 1.15E-5 EF for Phenanthrene = 2.38E-4 EF for Fluorene = 2.36E-4 EF for Naphthalene = 6.86E-4 EF for NOx = 35.7 EF for PM10 = 2.51

MO004	106.262, 106.533	41479	Maintain a copy of Section 106.4, 106.533, and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Soil Bioremediation Operations are monitored for VOC emissions using the following equation in compliance with monitoring requirements in 30 TAC 106.533: VOLUME*SOIL DENSITY*TPH*VTPH*BTEX*TBTEX*(VBTEX/24)*744 Where Volume is measured by site operators who maintain a spreadsheet that is updated after each turn-in of soil, which is converted to cubic yards. The data is reported monthly to the Air Team for consumption data entry to be used in the above equation. Soil data is based on historic sampling: Soil Density is 1.037 TPH is 0.025% VTPH is 0.5% BTEX is 0.1% TBTEX is 0.35% VBTEX is 1.0%

MO006	106.262	76961	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Tanker truck purge operations are monitored for VOC emissions using the following equation: NUMBER OF TRUCKS*VOC CONTENT Where The number of trucks is recorded by DPW ENV. This team runs the facility and enters each tank type that goes through the purge facility into the consumption tracking database by type, date, and quantity. Conservative assumptions are made estimating the remaining fuel left to be cleaned. The VOC content is taken from F-24 MSDS
SC011	106.433	70014	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
SC016	113	30861	Maintain a copy of Standard Exemption 113 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of resin and acetone usage in pounds on a monthly and calendar year-to-date basis, and maintain these records on a calendar year basis with a two-year rolling retention period. For spraying operations, no more than 75 tons of resin and gelcoat combined, and 0.75 tons of acetone shall be used per year. For non-spraying operations, no more than 150 tons of resin and gelcoat combined and 1.5 tons of acetone shall be used per year.

SC021	106.433	13851	Maintain a copy of Section 106.4 and Section 106.433, including the effective dates of these regulations at the time this PBR was claimed. Surface coating operations are monitored for PM, VOCs, Methyl Isobutyl Ketone, and Xylene using the following equations, respectively: CONSUMPTION*DENSITY*(PCT SOLIDS/100)*(1-TRANS EFF/100)*(1-FO/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE); or CONSUMPTION*DENSITY*INGREDIENT PCT (AVERAGE)*(1-TRANS EFF/100)*(1-FO/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density is taken from chemical MSDS Percent solids are based on chemical MSDS Transfer Efficiency is assumed to be 0 Fallout Factor is assumed to be 0 VOC Content is calculated using mass balance Average ingredient percentages are based on MSDS Information
ST001A	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001B	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST001C	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST002A	51	24583	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.

ST003A	106.412	24583	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%
SU001	106.454	50528	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

SU003	106.261	52124	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
MO007	106.261, 106.262	98846	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
MO007	106.261, 106.262	147753	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers. NUMBER OF CANS*OUNCES/CAN*VOC CONTENT Where The number of cans is recorded with date and time by DPW ENV. The VOC content is taken from the SDS
ARO28	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO29	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

Formatted: Space Before: 0 pt, No bullets or numbering

Formatted: Tab stops: 0.76", Left + 1.14", Left

ARO30	41	11/25/1985	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO31	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO32	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO33	41	11/05/1986	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO34	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

Formatted: Tab stops: 0.76", Left + 1.14", Left

Formatted: Font color: Background 2

ARO35	46	05/08/1972	Maintain a copy of Standard Exemption 46 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO36	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO37	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO38	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO39	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr

ARO42	107	05/04/1994	Maintain a copy of Standard Exemption 107 to ensure that equipment is installed and operated in accordance with all applicable requirements. Records shall be kept on a monthly basis of total solvent makeup (gross usage minus waste disposal). (6) Total solvent makeup shall not exceed the following: (A) Chlorinated solvents - 660 gallons/yr (B) All other solvents - 1,500 gallons/yr
ARO65	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO66	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO67	70	06/07/1996	Maintain a copy of Standard Exemption 70 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO68	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO69	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO70	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO71	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO72	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO73	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO74	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO75	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO76	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO77	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);
ARO78	41	06/07/1996	Maintain a copy of Standard Exemption 41 to ensure that equipment is installed and operated in accordance with all applicable requirements. Actual emissions from the proposed facility shall not exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant; and, if total emissions from the property where the proposed facility is to be located will exceed 250 tons per year of carbon monoxide or nitrogen oxides or 25 tons per year of any other air contaminant, at least one facility at such property has been subject to public notification and comment as required by §116.10 of this title (relating to Public Notification and Comment Procedure) or §116.7 of this title (relating to Special Permits);

ARO79	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO80	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO81	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO82	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO83	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO84	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO85	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO86	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

ARO87	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO88	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ARO89	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. ARO90	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS

EC002	106.183	09/04/2000	Maintain a copy of Section 106.4 and Section 106.183, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for NOx, HAPs, and VOCs to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). In accordance with Rule 106.183, records of hours of fuel oil firing and fuel oil purchases are kept. Compliance will be/has been shown via a natural gas meter on the unit. The temperature setpoint is set and observed by the source operator. The natural gas meter is read monthly during operations, and emissions are then calculated using the equation described herein. The calculation formula for emissions is either: Natural Gas Consumption * Emission Factor, or Hours of Operation*Capacity/Heat Content of Natural Gas * Emission Factor, Where: Heat Content of Natural Gas is 1,030 Btu per cubic foot, Natural Gas Consumption is monitored via a natural gas meter on the unit, Emission Factors are in lbs/MM ft^3 and sourced from AIR EMISSIONS GUIDE FOR AIR FORCE STATIONARY SOURCES; June 2021; Tables 2-3 and 2-5: EF for Ethylbenzene = 0.0069 EF for P-Dichlorobenzene = 0.0012 EF for Acrolein = 0.0027 EF for Toluene = 0.0265 EF for N-Hexane = 0.0046 EF for Anthracene = 2.40E-6 EF for Pyrene = 5.0E-6 EF for Benzo(GHI)Perylene = 1.6E-6 EF for Indeno[1,2,3-CD]Pyrene = 1.8E-6 EF for Benzo[B]Fluoranthene = 1.8E-6 EF for Fluoranthene = 3.0E-6 EF for Benzo[K]Fluoranthene = 1.8E-6 EF for Ancenaphthylene = 1.8E-6 EF for Chrysene = 1.8E-6 EF for Formaldehyde = 0.075 EF for Benzo[A]Pyrene = 1.6E-6 EF for Dibenz[A,H]Anthracene = 1.6E-6 EF for 3-Methylcholanthrene = 1.8E-6 EF for Benz[A]Anthracene = 1.8E-6 EF for Benz[A]Anthracene, 7, 12-Dimethyl = 1.6E-5 EF for Carbon Monoxide = 84 EF for Benzene = 5.8E-3 EF for Lead = 5.0E-4 EF for Manganese = 3.8E-4 EF for Mercury = 2.6E-4 EF for Nickel = 2.1E-3 EF for Arsenic = 2.0E-4

			EF for Beryllium = 1.2E-5 EF for Cadmium = 1.1E-3 EF for Chromium = 1.4E-3 EF for Cobalt = 8.4E-5 EF for Acetaldehyde = 3.1E-3 EF for Selenium = 2.4E-5 EF for Acenaphthene = 1.8E-6 EF for Phenanthrene = 1.7E-5 EF for Fluorene = 2.8E-6 EF for Naphthalene = 3.0E-4 EF for Naphthalene, 2-Methyl = 2.4E-5 EF for NOx = 100 EF for Total PM, PM2.5, and PM10 = 7.6 EF for SOx = 0.6 EF for Total VOCs = 5.5
FS011A	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Fuel gallons remaining after tanker drainage are tracked along with number of tanks. Emission factor values are determined using a gasoline to jet fuel ratio for vaport pressure and density. Gasoline vapor HAP speciation is based on information contained in the Speciate v. 3.2 and Tanks v. 4.0: Actual VOC Emissions = Total Volatized Fuel (Gallons) * VOC Density * Control Efficiency Where Total Volatized Fuel is conservatively estimated at 25% VOC Density = 8 lbs/gal (Density of JP-8 Fuel) Control Efficiency = 95% (As reported in PBR documentation) And Individual HAPs Emissions = Total Actual VOC Emissions * % Speciation Where Benzene = 0.9423% Cumene = 0.2247% Ethylbenzene = 0.4212% Hexane = 0.8312% Isooctane = 0.0147% Naphthalene = 0.013% Toluene = 1.6429% Xylenes = 3.7247% Total Volatile HAPs = 7.8147%

FS011B	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

IC004-8	106.511	09/04/2000	Maintain a copy of Section 106.4 and Section 106.511, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: Horsepower Hours * Emission Factor / 1000 Where Horsepower hours for each engine are given in manufacturers specifications; Emission factors are reported in lbs/Mhp-hr and sourced from either: [1] South Coast Air Quality Management District AB 2588 Quadrennial Air Toxic Emissions Inventory Reporting Procedures – AER Program, Table B-3: Default EF for LPG, Butane, or Propane Combustion (lb/1000 gal); or [2] San Joaquin Valley Unified Air Pollution Control District Guidelines for Expedited Application Review Emergency Internal Combustion Engines EF for Ethylbenzene = 1.87E-4 [1] EF for Styrene = 9.02E-5 [1] EF for Ethylene Dibromide = 1.61E-4 [1] EF for 1,3-Butadiene = 5.01E-3 [1] EF for Acrolein = 1.99E-2 [1] EF for Ethylene Dichloride = 8.52E-5 [1] EF for Toluene = 4.21E-3 [1] EF for Xylene = 1.47E-3 [1] EF for Formaldehyde = 1.55E-1 [1] EF for 1,3-Dichloropropene = 9.60E-5 [1] EF for Carbon Tetrachloride = 1.61E-4 [1] EF for Carbon Monoxide = 22.8 [2] EF for Methanol = 2.31E-2 [1] EF for Chloroform = 1.04E-4 [1] EF for Benzene = 1.19E-2 [1] EF for Vinyl Chloride = 5.43E-5 [1] EF for Acetaldehyde = 2.10E-2 [1] EF for Methylene Chloride = 3.11E-4 [1] EF for Ammonia = 2.50E-2 [1] EF for Dichloropropane = 9.85E-5 [1] EF for 1,1,2-Trichloroethane = 1.15E-4 [1] EF for Tetrachloroethane = 1.91E-4 [1] EF for Naphthalene = 7.34E-4 [1] EF for NOx = 24.2 [2] EF for PM, PM10, and PM2.5 = 4.17E-1 [2] EF for SOx = 2.92E-2 [2] EF for VOCs = 1.90 [2]

LR001	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
LR002	106.472	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for each of the following pollutants: NOx, CO, VOC, SO2, PM, PM10, PM2.5, and hazardous air pollutants (all other air contaminants except water, nitrogen, ethane, hydrogen, oxygen, and GHGs) to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The emissions certification (APD-CERT form) documents how actual emissions from internal combustion and external combustion units are quantified and summed. The calculation formula for unit emissions is: (FUEL THROUGHPUT/1000) * (12.46*((Emission Factor * VAPORPRESSURE * MOLECULARWEIGHT) / (FUELTEMPERATURE + 460))) Where Diesel fuel throughput for this unit is tracked; Vapor Pressure is 0.0074 psia; Molecular Weight is 130 lb/lb-mol as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-6 “Fuel Properties,” Vapor Molecular Weight; Fuel Temperature is 67 deg. F; Emission factors are reported in lbs/MGal and are based on weight percentages in diesel fuel as reported in the Air Emissions Guide for Air Force Stationary Sources, June 2021, Table 6-5 “HAP Speciation of Fuels Commonly Used at USAF Installations,” Diesel Fuel, Vapor Phase: EF for Ethylbenzene = 1.86E-3 EF for Toluene = 1.38E-2 EF for N-Hexane = 2.39E-4 EF for Anthracene = 3.00E-10 EF for Pyrene = 3.00E-9 EF for Dibenzofuran = 7.56E-7 EF for Xylene = 4.31E-2 EF for Benzene = 1.18E-3 EF for Phenanthrene = 7.26E-8 EF for Fluorene = 3.29E-7 EF for Naphthalene = 1.29E-3 EF for VOCs = 6.00E-1 (Fuel Loading – Volatile Organic Compounds)

Formatted: Font: (Default) Times New Roman, 10 pt, Bold, Font color: Background 2

LR003	106, 14, 51	10/04/1995, 10/04/1995, 10/04/1995	Maintain a copy of Standard Exemption 14, 51, and 106 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51 and 106.
MO001	110	09/12/1989	Maintain a copy of Standard Exemption 110 to ensure that equipment is installed and operated in accordance with all applicable requirements.

CLosSC015	106.433	03/14/1997	Maintain a copy of Section 106.4, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.433 (4), the surface coating operations under this PBR will abide by the following: (A) 25 tons per year (tpy) of volatile organic compounds (VOC) and ten tpy of exempt solvents for all surface coating and stripping operations covered by section at a site; (B) 30 pounds per hour (lb/hr) of VOC and 5.0 lb/hr of exempt solvents for all surface coating and stripping operations covered by this section at a site; (C) if emissions are less than 0.25 lb/hr of VOC and/or exempt solvents, a facility is exempt from the remaining requirements of this section, including paragraphs (5) - (9) of this section. In accordance with Section 106.433 (8), the following records will be kept: (A) material safety data sheets for all coating materials and solvents; (B) data of daily coatings and solvent use and the actual hours of operation of each coating or stripping operation; (C) a monthly report that represents actual hours of operation each day, and emissions from each operation in the following categories: (i) pounds per hour; (ii) pounds per day; (iii) pounds per week; and (iv) tons emitted from the site during the previous 12 monthis; (D) examples of the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions. The calculation formulas for unit emissions are: CONSUMPTION*(PCT SOLIDS/100)*(1-TRANSFER EFFICIENCY/100)*EF; CONSUMPTION*DENSITY*(VOC CONTENT/100); CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*INGREDIENT PCT; CONSUMPTION*DENSITY*INGREDIENT PCT*(1-TRANSFER EFFICIENCY/100); or CONSUMPTION*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Percent solids, chemical density, and ingredient percentage are taken from chemical MSDS Transfer efficiency is either 30% or 65% based on the applicable coating application method's typical transfer efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Force Stationary Sources Emission factors are given as the fractional percentage to total PM as given in the June 2021 Air Emissions Guide for Air Force Stationary Sources, Equation 22-2 for solvent-based surface coatings: EF for PM = 1.00 EF for PM10 = 0.96 EF for PM2.5 = 0.925

ST004A	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST004B	51	09/23/1982	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005A	51	10/04/1995	Maintain a copy of Standard Exemption 51 to ensure that equipment is installed and operated in accordance with all applicable requirements. Maintain records of liquids loaded and unloaded from railcars, tank trucks, or drums to ensure that no visible emissions result from activities related to the list of liquids provided in Standard Exemption 51.
ST005B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005E	106.472	03/14/1997	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST005G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST005I	106.412, 106.472	09/04/2000, 09/04/2000	Maintain a copy of Section 106.4, Section 106.472, and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006B	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST006E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007A	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST007B	106.473	03/14/1997	Maintain a copy of Section 106.4 and Section 106.473, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007C	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007D	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007E	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007F	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST007G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008G	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008H	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008I	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008J	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008K	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008L	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008M	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008N	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008O	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST008P	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008Q	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008S	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008T	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008U	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008V	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST008W	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST009A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009D	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009E	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST009F	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010A	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

ST010B	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST010C	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.472, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
WL001	106.227	09/04/2000	Maintain a copy of Section 106.4 and 106.227, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.227, the soldering, brazing, or welding operations under this PBR will not emit 0.6 tons per year or more of lead in addition to staying below the general PBR emissions limits of 106.4. The calculation formula for unit emissions is: (LBS WELDING ROD/1000) * Emission Factor Where Lbs. of welding rod data are obtained directly from the Army's supply system for welding rods. Data is procured and entered into the Environmental Program Management System as the amount used for the reporting period. Emission factors are reported in lb/Mlbs and sourced from Table 24-1 "Particulate and Inorganic HAP Emission Factors for Welding Operations" in the June 2021 Air Emissions Guide for Air Force stationary Sources: EF for Chromium Hexavalent Ion = 1.88 EF for Lead = 1.62E-1 EF for Manganese = 23.2 EF for Nickel = 1.71 EF for Chromium = 2.53 EF for Cobalt = 1.00E-3 EF for PM, PM10, and PM2.5 = 81.6

WW001	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW002	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW003	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1
BLR36071-1/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.

BLR36071-2/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The equation used to determine PTE in TPY is below: PTE = 1.5 * Maximum Annual Fuel Usage * Emission Factor * lb-to-ton Conversion Factor The emission factor used for natural gas firing is 100 lbs NOx/MMcf (AP-42 Section 1.4). The emission factor used for fuel oil combustion is 20 lbs NOx/Mgal (AP-42 Section 1.3). Maximum annual fuel usage for each boiler was obtained from site records.
BLR36071-3/EC001	106.183	09/04/2000	Maintain a copy of Section 106.4 and 106.183, including the effective dates of these regulations at the time this PBR was claimed. In accordance with 106.183, a rolling 24-month record of hours of fuel oil firing, fuel oil purchases, and documentation showing compliance with applicable rules will be kept. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. Annual fuel throughput is limited to values determined in the APD-CERT form (Submitted Sept. 2020) multiplied by the emission factor sets identified by fuel types with low NOx burners/flue gas recirculation. Annual PTE emissions are calculated using the Environmental Program Information Management System with Emission Factors, Calculations, and runtime hours and are reported in form APD-CERT as 6.35 TPY of NOx. A factor of 1.5 times the annual fuel throughouput is used for conservatism. The calculation formula for unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1

WW007	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

WW009	106.231 & 106.265	09/04/2000	No registration or recordkeeping is required under PBR 106.265. Maintain a copy of Section 106.4 and 106.231, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.231, a rolling 24-month archive of purchase receipts for total coatings, solvents, and stripping agents will be maintained. Calculations showing the process stays below general PBR emissions thresholds are carried out as described below. The calculation formula for woodworking unit emissions is: ((WASTE COLLECTED / (1-CONTROL EFFICIENCY)) - WASTE COLLECTED) * EMISSION FACTOR Where Waste collected is reported monthly by operators as waste sawdust generated. The Fort Hood Air Quality Team then inputs the waste generation date into the proper consumption process in the Environmental Program Information Management System for calculations, tracking, and reporting; Control Efficiency is 95% as stated in the PBR; Emission factors are reported as fractional concentrations of woodworking dusts per Table 26-1, General Woodworking, in the June 2021 Air Emissions Guide for Air Foce Stationary Sources: EF for PM = 1.00 EF for PM10 = 4.52E-1 EF for PM2.5 = 3.43E-1 The calculation formulas for adhering and sealing operations are: CONSUMPTION*DENSITY*PCT SOLIDS/100*(1-TRANSFER EFFICIENCY/100); CONSUMPTION*DENSITY*VOC CONTENT/100; or CONSUMPTION*DENSITY*INGREDIENT PCT Where Consumption is monitored by the Fort Hood Air Quality Team using the Environmental Program Information System, which is kept current by operator reporting; Density, percent solids, VOC content, and toluene ingredient percentage are derived from chemical MSDS; and The basis for transfer efficiency is the method of product application and the corresponding efficiency per Table 22-2 in the June 2021 Air Emissions Guide for Air Foce Stationary Sources.

HH001	106.265	09/04/2000	Maintain a copy of Section 106.4 and Section 106.265, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The follow equation is used to determine emissions: Hours of machine operation * Emission Factor Where Hours of operation are tracked by operators Emission factor is reported in lbs/hr and is sourced from HILL AFB AO DAQE-AN101210259-18 NOI JULY 30, 2021: EF for PM, PM 10, and PM2.5 = 0.3
CT002	106.371	09/04/2000	Maintain a copy of Section 106.4 and Section 106.371, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of facility-wide actual emissions for PM2.5 and PM10 to demonstrate actual emissions are less than the thresholds listed in Section 106.4 (a)(1). The following calculation equation to determine emissions is carried out monthly, and results are documented: NUMBER OF DAYS*WATER FLOW RATE*0.001*TOTAL LIQUID DRIFT FACTOR*DISSOLVED SOLIDS*0.000001*EMISSION FACTOR Where: Number of Days (e.g. Operation Time) and Water Flow Rate are monitored using conservative assumptions or tracked by source operators Total Liquid Drift Factor = 1.7 lb/10^3 gal (AP-42 Ch. 13, Table 13.4-1) Emission factors are reported as fractional concentrations in lb/lbs of total PM as reported in Section 25.3 of the June 2021 Air Emissions Guide for Air Force Stationary Sources: Emission Factor for PM2.5 = 0.42 Emission Factor for PM10 = 0.7 Dissolved Solids are assumed to be 12000 ppm based on the August 2018 Air Emissions Guide for Air Force Stationary Sources, Equation 25-1
ST012	106.412	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

SP001	106.418	11/26/1997	Emissions for these Screen Printing operations are tracked as Process ID SC015 (Surface Coating). Maintain a copy of Section 106.4 and Section 106.418, including the effective dates of the these regulations at the time this PBR was claimed. In accordance with Section 106.8, maintain records of the 12-month rolling totals of applicable facility-wide actual emissions. The following equation is used to determine emissions: CONSUMPTION*DENSITY*(VOC CONTENT/100) Where Consumption is tracked by source operators who provide consumption records. Material balance from the supply system is also used to track. Density and VOC Content are taken from chemical MSDS
ARO00	106.433	09/04/2000	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
SU002	106.454	03/14/1997	Maintain a copy of Section 106.4 and Section 106.454, including the effective dates of these regulations at the time this PBR was claimed. VOC emissions for degreasing operations are calculated monthly using the following equation: CONSUMPTION*DENSITY*VOC CONTENT/100 Where Consumption is monitored by operators who record usage during cold solvent machine refilling. Density is taken from chemical MSDS VOC content is taken from chemical MSDS
ST014	106.472	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.
ST016	106.473	09/04/2000	Maintain a copy of Section 106.4 and Section 106.412, including the effective dates of these regulations at the time this PBR was claimed. PTE annual fuel throughput for this unit is estimated at 1.5 times the annual fuel throughput. Annual PTE emissions are calculated using the Environmental Program Management System with Emission Factors, Calculations, and Runtime hours. Use of either ACAM or APIMS is standard for calculating PTE from Storage Tanks. Both emissions estimation procedures are based upon Chapter 7 of AP-42.

~~Brake Repair Downdraft Table~~BR001	106.261 & 106.262	08/04/2005	Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track number of brake pads.
~~MO007~~	~~106.261 & 106.262~~	~~11/04/2011~~	~~Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers.~~ ~~NUMBER OF CANS*OUNCES/CAN*VOC CONTENT~~ ~~Where~~ ~~The number of cans is recorded with date and time by DPW ENV.~~ ~~The VOC content is taken from the SDS~~
~~Aerosol Can Crusher~~	~~106.261 & 106.262~~	~~08/11/2017~~	~~Maintain a copy of Section 106.4 and Section 106.262, including the effective dates of the these regulations at the time this PBR was claimed. Track max cans per day/week. 5% visible emissions for the can crushers.~~ ~~NUMBER OF CANS*OUNCES/CAN*VOC CONTENT~~ ~~Where~~ ~~The number of cans is recorded with date and time by DPW ENV.~~ ~~The VOC content is taken from the SDS~~

Commented [JT17]: TCEQ stated this is not a valid unit ID. Does this have a unit ID?

Commented [JT18R17]: BR001 will this suffice for a Unit ID?

Commented [WC19R17]: Changed to BR001

Mr. Walker,
Regarding the address issue, please try the following address below.
I am not sure why the address that has been used stopped working, but systems do change.

The following is the address to the Mail Distro office of DPW.

1225 Engineer Drive, Bldg. 4612
USAG Fort Cavazos, Texas 76544-5028

Michael Clark
Air Quality & Operational Noise Program Manager

Good Morning,

There is one more item that was brought to my attention by APIRT. The address provided for Mr. Micheal Clark as both the Technical Contact and Public Notice contact on Form OP-1 is not a valid USPS address. Can you please provide a valid USPS address for Mr. Michael Clark along with the other requested updates.

Please let me know if you have any questions

Thank you for your cooperation.

Sincerely,

John Walker

Good morning Mr. Walker,
I have received and will start my review and will work with Mr. Timmons and the team to ensure we get any comments back to you prior to 14 March.

Respectfully,

Michael Clark

Good Afternoon,

I have conducted a technical review of this application and I have attached an electronic copy of the Working Draft Permit (WDP) for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application and any updates provided.

Please note that note that I have added PBR Registration 54052 as a preconstruction authorization to all the requested units. I will present this information to my management after you approve the Working Draft Permit.

The permit contains all changes requested to date.

Please review the WDP and submit to me any comments you have regarding it by 03/14/2025. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP. Note that any application updates necessary to make requested changes must accompany the WDP comments. Since this is a follow-up review to the previously submitted and reviewed WDP, only comments concerning changes since the last WDP may be considered by TCEQ. Any comments outside the scope of the most recent changes should be submitted as a separate project. Please provide the requested information below by **03/14/2025**:

1. Please see my comments on the attached Form OP-REQ1 and provide the requested information. Please note there is one PBR in the WDP that must be corrected.

2. Please see my comments on Form OP-SUMR.

3. Please see my comments on Form OP-UA3. Please update the form for your records, you do not need to resubmit it.

4. I did not add units provided on OP-UA13 for MACT Q applicability because the site is not major for HAPS.

5. I removed permit shields for NSPS Kb for Units IDs FS011A, FS011B, FS011C, and ST001C due to NSPS Kb applicable requirements being provided on Form OP-UA3 and now being documented in the WDP.

6. Please provide an updated Form OP-PBRSUP. I noticed several deficiencies on Form OP-PBRSUP such as claimed PBRs being documented on Table A, which is for Registered PBRs.

   What is important is that the information provided on Forms OP-REQ1, OP-2, and OP-SUMR, in regard to PBRs and SEs is consistent. Then that information should be documented on Form OP-PBRSUP. Essentially, any PBRs/SEs documented in the Title V permit should be documented on Form OP-PBRSUP, however there are a few exceptions which are documented in the Form Instructions. There are also instances in which units not in the Title V permit should be documented on Form OP-PBRSUP as well, since Form OP-PBRSUP is for all PBRs utilized at a site. The Unit ID on Form OP-PBRSUP should match what is in the Title V Permit. If a unit is not documented in the Title V permit, the Unit ID should be the EPN from the PBR/NSR registration or however else the unit may be documented/referenced.

   All Registered PBRs/SEs should be provided on Table A and D.
   All claimed PBRs/SEs should be provided on Table B and D.
   All PBRs/SEs for insignificant sources should be provided on Table C.

   If you have any questions on this, please contact me.

7. On the updated Form OP-1 provided, a new RO was documented. Please submit Form OP-CRO2 in STEERS signed by the new RO.

   This needs to be signed and submitted in STEERS by the new RO. My office is currently under construction and I have limited access to my mailbox. If you have any questions on how to submit an update in STEERS, please contact me.

8. I have seen emails recently in regard to PBR Registration 54052 from Chad Reynolds of American Water to Brandon Marsh of TCEQ that were dated 01/24/2025. Brandon Marash is not the correct contact for American Water to contact for PBR Registrations. He should be contacting Rules Registration.

   Are the PBR Registration 54052 changes currently being made?

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process, application updates, WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified submittals, including application updates supporting the WDP comments is required to be submitted with the WDP response. After final review of the WDP, additional changes, supported by application updates, may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that were not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1. This form will be requested at a later date.

If you choose to submit your application updates through STEERS, please notify me when these updates have been submitted.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

John Walker

FS011B	60Kb-1	PTLQ-3	40K+	IFR	0.5-	IFR-VP		FLOAT		

Commented [JW1]: "NONE" was not the correct code but "NONE3" was for Storage Vessel Capacity. Please update Form OP-UA3 for your records.

Commented [JW2]: For units with 10-20k Storage Capacity, additional codes were not required per the form instructions. Please update Form OP-UA3 for your records as these codes may be removed from the table.

Commented [MC3]: MAX TVP: I added the 2.2- or 0.5- off of the tank size and the VP from the SDS and the codes listed in the Form OP-UA3 Storage Tank/Vessel Attributes

Commented [MC4]: FS021A and FS022A is a Split HFR tank so changed to NONE

Commented [JW5]: This unit is in GRPTANK8. You should list GRPTANK8 instead of the unit, unless the unit is not part of a GRPTANK8. I have left the requirements as there is no change.

Additionally for units with a Tank Capacity of 20K-40K, WW Tank Control NONE, and Maximum TVP, additional codes are not required per the form instructions.

Please update Form OP-UA3 for your records.

Commented [JW6]: Tanks with a storage capacity of 10k- do not need additional codes after storage capacity per the form instructions. Please update Form OP-UA3 for your records.

FS011C	60Kb-1	PTLQ-3	40K+	IFR	0.5-	IFR-VP		FLOAT		
ST001A	60Kb-1	PTLQ-3	40K+	~~IFR~~NONE~~3~~	0.5	NONE		~~NONE~~

Unit/Process AI	Unit/Process Revision No.	Unit/Process ID No.	Unit/Process Applicable Form	Unit/Process Name/ Description	Unit/Process CAM	Preconstruction Authorizations 30 TAC Chapter 116/ 30 TAC Chapter 106	Preconstruction Authorizations Title I
	121	SC004	OP-REQ2	PAINT SPRAY BOOTH BLDG 88027 BAY I		(24538)	
	123	SC005	OP-REQ2	PAINT SPRAY BOOTH BLDG 88027 BAY II		(24538)	
	125	SC006	OP-REQ2	PAINT SPRAY BOOTH BLDG 88027 BAY III		(24538)	
	127	SC007	OP-REQ2	PAINT SPRAY BOOTH BLDG 88027 BAY IV		(24538)	
A	137	SC016	OP-UA1	COMPOSITE SITE OPERATIONS		113/10/04/1995[30861]	
A	138	WW001	OP-REQ2	LRC WOODWORKING AND MANUFACTURING OPERATIONS		106.231/09/04/2000, 106.265/09/04/2000	

Commented [JW1]: For Unit IDs SC004, SC005, SC006, and SC007 (revision items 121, 123, 125, and 127), PBR Registration No. 24538 was provided however there is no PBR Registration No. 24538. There is a NSR permit 24538. I have left the preconstruction authorization as NSR 24538.

Should PBR 106.433 also be documented as a preconstruction authorization for these units? Please look at the OP-SUM excel sheet because the other SC* units also have NSR 24538 documented as a PCA, though some have PBR 106.433.

Commented [JT2R1]: This should be in format referring to NSR 24538.

Commented [JW3R1]: updated

Commented [JW4]: There is no revision 137 on the April 15, 2024 OP-2. I believe this was changed at another date. I am unsure of where this unit came from.

Commented [JT5R4]: Revision 137 on OP-2 corrected to show SC016.

Commented [JW6R4]: So revision 137 on Form OP-2 states to rename Unit ID WW002 as SC016.

This means that WW002 no longer exists. All other instances of WW002 should be removed from this form such as Revisions 138 and 158 on Tables 1 and 2 on Form OP-SUMR. I have also removed the Unit from GRP-WW

The effective Form is OP-UA1 but should it be OP-REQ2 and retain the permit shields that were added with WW002? This is how it is now displayed in the permit.

Commented [JW10]: This unit does not exist in the permit and no OP-UA13 was provided.

Commented [JT11R10]: Filled out OP-UA13 for this group of cooling towers.

Commented [JW12R10]: This unit was not added since the site is not documented as a Major Source of HAPS.

Commented [JW13]: This unit does not exist in the permit and no OP-UA13 was provided.

Commented [JW14]: Not a valid Version No./Date. I have left it as 09/04/2000. Please confirm.

Commented [JT15R14]: Version No./Date corrected to 09/04/2000.

Commented [JW16]: This description goes over the character limit. I have left it as "DIESEL IC EQUIPMENT > 600HP"

Commented [JT17R16]: "DIESEL IC EQUIPMENT > 600HP" will work for this source.

Commented [JW18R16]: updated

Commented [JW26]: This unit was previously removed from permit. See comments for SU001

Commented [JW27]: Not a valid unit ID. Is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements?

Commented [JT28R27]: This unit is being removed. Added to PBRSUP.

Commented [JW29]: Is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT30R29]: Added to PBRSUP.

Commented [JT31R29]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for them, we can call them CC001 and CC002."

Mr. Walker, would this suffice?

Commented [JW32R29]: The Units should match EPNs if in a NSR/PBR Registration permit only or it should match Unit IDs from the Title V permit (if they are documented in the Title V permit).

Requesting to be removed if not documented in the Title V permit.

Commented [JW33]: is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT34R33]: Added to OP-PBRSUP.

Commented [JT35R33]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for each of them, we can call them CC001 and CC002."

Mr. Walker, would this suffice?

Commented [JW36R33]: See comment above.

Commented [JW37]: is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT38R37]: CT001 is on OP-PBRSUP.

Commented [JW39R37]: See note above in regard to being major for HAPS for MACT Q applicability. Requesting to be removed from Form OP-SUMR if not documented in the Title V permit.

PBR No.: 106.454	Version No./Date: 03/14/1997
	[Intentionally left blank]

Commented [JT1]: Added to this form due to SU003 on OP-SUMR Preconstruction Authorization: 106.261/09/11/2002[52124].

Commented [JW2R1]: 09/11/2002 is not a valid Version No./Effective Date for PBR 106.261 per the Texas Administrative Code Chapter 106. The date should be either 03/14/1997, 12/24/1998, 09/04/2000, or 11/01/2003. 09/11/2002 seems to be the Registration Date for PBR Registration 52124.

Since the PBR is already added with the effective date 11/01/2003, I have left it as 11/01/2003 unless there is a different Version No./Effective Date for PBR Registration 52124. Please confirm.

Commented [JW3]: This should be removed per your comment on the Working Draft Permit where you confirmed the Correct Effective date is 11/01/2001.

Commented [JW4]: This is not a valid Version No./Effective Date. Per the Texas Administrative Code Chapter 106, the date should be 03/14/1997, 07/08/1998, or 09/04/2000. Please confirm the correct date.

	[Intentionally left blank]

Commented [JW5]: This is not a valid Version No./Effective Date. Per the Texas Administrative Code Chapter 106, there is only one date and that is 07/04/2004. Since that date is already documented in the entry above, I have removed this from the permit. You should also remove this entry from Form OP-REQ1.

Date:	1/10/2025

Good Afternoon,

Thank you for the submittal. I am available for a meeting anytime on Friday 01/24/2024. I would schedule earlier in the week but we might have some severe weather that could impact services.

Please let me know if you have additional questions.

Sincerely,

John Walker

Hello Mr. Walker,

See revised forms attached. Could we set a meeting with you sometime next week on the morning of Tuesday or Wednesday or any time on Friday to discuss these forms? Please let us know what works best for you.

1. Please provide Form OP-UA3 Table 3 for NSPS Kb applicability for Unit IDs ST001A and ST001B. The code "NONE3" was provided for WW TANK Control. "NONE3" is not a valid code but "NONE" is. Was the code "NONE" the intended code? Please confirm.

   Correct. "NONE" was intended here.

2. If the code is intended to be "NONE", additional codes are required per the Form OP-UA3 Table 3 instructions. A code is required for Maximum TVP and additional codes may be required for Storage vessel description and AMEL ID. No. per the Form OP-UA Form Instructions. I have attached the most recently provided OP-UA3 for reference.

   OP-UA3 attached.

   Completed "Maximum TVP" for storage vessels where "Storage Capacity" is "20K-40K" or "40K+" or "420K+".
   Completed "Storage Vessel Description" for storage vessels where "WW Tank Control" is "NONE", "IFR", or "EFR."
   Completed "Guidepole" for storage vessels where "WW Tank Control" is "IFR".

3. Please review my comments on the WDP. I believe Form OP-REQ1 Page 88 for PBRs should be provided to correct the Version No./Date of a PBR. This update should also occur on Form OP-SUMR and OP-2.

   WDP attached.
   Form OP-REQ1 Page 88 attached.
   OP-2 attached.

4. Please review my comments on the most recent Form OP-SUMR provided (04/15/2024). There were many inconsistencies provided on the Form. Please review my comments and make any necessary corrections. If any additional changes are needed, please provide the appropriate forms. I would ensure that the most recent OP-2 and OP-SUMR are consistent. It seems that changes that occurred throughout the life of the project were not reflected on Form OP-SUMR and outdated information was provided. Please review my comments and confirm. If you have any questions about my comments, please contact me.

   OP-SUMR attached.
   OP-UA13 attached.

5. Please provide an updated Form OP-1 Section VII. for updating the Technical Contact Identifying Information. Based on prior discussions with Mr. Michael Clark, Mr. Clark has replaced Mr. Robert Kennedy as the technical contact.

   OP-1 attached.

6. If there are any changes required to Form OP-PBRSUP based on changes made to Form OP-SUMR or any other form, please provide them. I believe we are still waiting on the Form OP-PBRSUP that was requested in my 03/18/2024 email.

   Please ensure that Form OP-PBRSUP is filled out correctly. Any units within the Title V permit that have a PBR as a PCA should be identified on Form OP-PBRSUP. However, there may be many units provided on Form OP-PBRSUP that are not documented in the Title V permit because they have no Title V requirements. Form OP-PBRSUP is a supplemental form for all PBRs used. That said, if there are units on Form OP-PBRSUP that are not documented in the Title V permit because they don't have Title V requirements, that is perfectly normal. In fact, those units should not be documented on any Title V forms (Forms OP-2, OP-SUMR, etc.), however, if you want them documented on Form OP-2 that is fine. One revision line item stating you are adding units to Form OP-PBRSUP is acceptable.

   Updated OP-PBRSUP form attached.

7. Please provide a status update for the ongoing resolution of issues identified with PBR Registration No. 54052.

   Michael Clark has reached out to American Water. We have had trouble connecting with them. We will keep reaching out to them. This would be one of the items we would like to discuss with TCEQ on a call.
   Our request for American Water is straight-forward: American Water should be able to revise their PBR 54052 within STEERS without needing to sort out their Core Data Form entry with the Central Registry. Their login and revision request for that PBR is necessary for Fort Cavazos's Title V renewal.

Please let us know if you need anything else.

Thank you,

Jim L. Timmons

Commented [JW3]: For Unit IDs SC004, SC005, SC006, and SC007 (revision items 121, 123, 125, and 127), PBR Registration No. 24538 was provided however there is no PBR Registration No. 24538. There is a NSR permit 24538. I have left the preconstruction authorization as NSR 24538.

Should PBR 106.433 also be documented as a preconstruction authorization for these units? Please look at the OP-SUM excel sheet because the other SC* units also have NSR 24538 documented as a PCA, though some have PBR 106.433.

Commented [JT4R3]: This should be in format referring to NSR 24538.

Commented [JW5]: There is no revision 137 on the April 15, 2024 OP-2. I believe this was changed at another date. I am unsure of where this unit came from.

Commented [JT6R5]: Revision 137 on OP-2 corrected to show SC016.

Commented [JW54]: This was requested to be deleted in revision #168

Commented [JT55R54]: Correct. Deleted.

Commented [JW56]: Not a valid Version No./Date. I have interpreted it as 09/04/2000. Please confirm.

Commented [JT57R56]: Version No./Date corrected to 07/04/2004.

Commented [JW58]: Unit is on OP-UA4

Commented [JT59R58]: Corrected to OP-UA4

Commented [JW60]: Not a valid Version No./Effective Date. I have left it as 03/14/1997.

Commented [JT61R60]: Version No./Date corrected to 11/01/2003.

Commented [JW62]: Not a valid Version No./Effective date. I have left it as 09/04/2000. Please confirm.

Commented [JT63R62]: Version No./Date corrected to 09/04/2000.

Commented [JW64]: Not a valid PBR Registration No.

Commented [JT65R64]: Deleted 24583. This is the NSR Permit number that authorizes surface coating operations.

Commented [JW66]: Group ID SU001 (which included many ARO** units) was removed from the permit due to the site not being major for HAPS as stated in 11/3/2023 email.

Commented [JT67R66]: Deleted this row since Group ID SU001 was removed from the permit.

Commented [JW85]: This unit was not provided on Form OP-UA1 or any other UA Form. I am not sure where this unit came from or what applicable requirements need to be document. If the unit only needs to be on Form OP-PBRSUP, it should be removed from Form OP-SUMR.

Commented [JT86R85]: WL001 is sitewide welding. Removed it from OP-SUMR and just have this source on Form OP-PBRSUP.

Commented [JT87]: Could we use "AVN WOODWORKING AND MANUFACTURING OPERATIONS – 731" ?

Commented [JW88]: The unit description is not consistent with the descriptions provided in revisions 1-4 for the BLR36071-* units. I have kept the descriptions provided in revisions 1-4. Please confirm which is the appropriate description.

Commented [JT89R88]: STEAM BOILERS – BLDG 36071 is the correct description.

Commented [JW90]: The unit description is not consistent with the descriptions provided in revisions 1-4 for the BLR36071-* units. I have kept the descriptions provided in revisions 1-4. Please confirm which is the appropriate description.

Commented [JT91R90]: STEAM BOILERS – BLDG 36071 is the correct description.

Commented [JW92]: The unit description is not consistent with the descriptions provided in revisions 1-4 for the BLR36071-* units. I have kept the descriptions provided in revisions 1-4. Please confirm which is the appropriate description.

Commented [JT93R92]: STEAM BOILERS – BLDG 36071 is the correct description.

Commented [JW94]: The unit description is not consistent with the descriptions provided in revisions 1-4 for the BLR36071-* units. I have kept the descriptions provided in revisions 1-4. Please confirm which is the appropriate description.

Commented [JT95R94]: STEAM BOILERS – BLDG 36071 is the correct description.

Commented [JW96]: This unit was previously removed from permit. See comments for SU001

Commented [JW97]: Not a valid unit ID. Is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements?

Commented [JT98R97]: This unit is being removed. Added to PBRSUP.

Commented [JW99]: Is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT100R99]: Added to PBRSUP.

Commented [JT101R99]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for them, we can call them CC001 and CC002."

Mr. Walker, would this suffice?

Commented [JW102]: is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT103R102]: Added to OP-PBRSUP.

Commented [JT104R102]: Per Mike Clark - "There are two aerosol can crushers but they both fall under the MO007 EPN – if we had to create a Unit ID for each of them, we can call them CC001 and CC002."

Mr. Walker, would this suffice?

Commented [JW105]: is this a process that should be listed on Form OP-PBRSUP and has no Title V requirements? Unit is not in permit, no Title V requirements provided.

Commented [JT106R105]: CT001 is on OP-PBRSUP.

Texas Commission on Environmental Quality
Federal Operating Permit Program
Application for Permit Revision/Renewal
Form OP-2-Table 1

Date:	1/109/20252
Permit No.:	O1659
Regulated Entity No.:	RN101612083
Company Name:	US Department of the Army

For Submissions to EPA	
Has a copy of this application been submitted (or is being submitted) to EPA?	☒ YES ❑ NO

I. Application Type

Indicate the type of application:

☒Renewal ❑ Streamlined Revision (Must include provisional terms and conditions as explained in the instructions.)

❑ Significant Revision ❑ Revision Requesting Prior Approval ❑ Administrative Revision ❑ Response to Reopening

II. Qualification Statement		
For SOP Revisions Only	The referenced changes qualify for the marked revision type.	☒ YES ❑ NO
For GOP Revisions Only	The permitted area continues to qualify for a GOP.	☐ YES ❑ NO

III. Major Source Pollutants (Complete this section if the permit revision is due to a change at the site or change in regulations.)

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	VOC	NO_X	SO_2	PM_{10}	CO	Pb	HAPs	Other
Major at the site *(YES/NO)*:	YES	YES	NO	NO	YES	NO	NO	

IV. Reference Only Requirements *(For reference only)*	
Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ❑ NO ❑ N/A

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.
