Subject: Working Draft Permit - FOP 04078/Project 35423, Sawyer Oilfield Products LLC/Brownwood Facility

Aslyn,

I have conducted a full review of the renewal application for Sawyer Oilfield Products LLC's Brownwood Facility. I have attached a copy of the final SOP draft that will be going to Public Notice. Additionally, I noticed that there was an OP-CRO1 submitted on April 16, 2024, certifying the submittal of an updated OP-REQ1, this form contained a specific date and not a date range and I will therefore need a final OP-CRO1 certifying the updated OP-UA66 that was sent to the previous reviewer on December 28, 2023.

In addition to the final OP-CRO1, I will need an updated OP-REQ1 page 2 with an appropriate answer to question I.C.1 for Non-agricultural processes.

To avoid any further delays, I suggest that you use a date range starting from the date this application was submitted to TCEQ, to today's date, this will encompass all updates requested/made since the application's submittal including the revised OP-REQ1 page 2 that I have requested.

I do apologize for the delay in processing your application and thank you for your patience.

Please submit all necessary documents at your earliest convenience, but no later than **August 22, 2024**.

Best,

Subject: Technical Review - FOP 04078/Project 35423, Sawyer Oilfield Products LLC/Brownwood Facility

Mr. Roger Reyna:

I have been recently assigned to the Federal Operating Permit (FOP) renewal application of Permit No. 04078 for Sawyer Oilfield Products LLC/Brownwood Facility. Please address all correspondence pertaining to this permit application, including any updates, to me via email from this point on, and use both the Permit and Project reference numbers above to facilitate tracking.

I do appreciate your patience at this time for I will be conducting a full thorough review of this application since its reassignment to me.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to the [OP-PBRSUP](#) and [OP-REQ1](#) form instructions.

Please review the “[SOP Technical Review Fact Sheet](#)”. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Hello Aslyn,

Upon further review of the op-req1 question I.A.4 is not correct because the stationary vents were not addressed on OP-UA15. Please update question I.A.4 to no which will generate the site wide term and condition for stationary vents that was in your previous version of your permit that includes the option to do visible emission observations prior to performing a test method 9 reading.

Please provide an updated OP-REQ1 and OP-CRO1 by 4/15.

Hello Aslyn

The language in the special terms and conditions is based off of OP-REQ1 responses. If that language is not correct then a New OP-REQ1 should be provided. Regarding the WWWW requirements, the language in the Textual description is not enforceable per special term and condition 1.B. If there are additional operating scenario that have different requirements for this unit, then please identify those operating scenarios on the appropriate Unit Attribute form.

If you have additional questions feel free to reach out.

Hi Emilio,

There are a couple things I want to bring to your attention to discuss. For the opacity monitoring, I see in the draft that it has been changed to require Method 9 for determining opacities. We are able to determine visible emissions first before doing a Method 9, and that has been standard with these types of facilities. Can you please clarify why this change has been implemented in the permit and why Method 9 would be necessary? It also appears the permit language is confining us to a weighted average for Subpart WWWW Subchapter C. We would like to keep the other compliance options available to us in case it is necessary.

Thank you,

Hello Aslyn,

I have conducted a technical review of *renewal* application for *Sawyer Oilfield Products LLC*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit **by April 3, 2024**.

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_facsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Subject: Technical Review -- FOP O4078/Project 35423, Sawyer Oilfield Products LLC

Hello Aslyn,

I have been assigned to the Federal Operating Permit (FOP) renewal application of Permit No. O4078 for Sawyer Oilfield Products LLC. This application has been assigned Project No. 35423.

Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional

office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Optional: Request any information that may have been noted as deficient or out-of-date during a preliminary project review (e.g. OP-1 with current contact data, current OP-REQ1, etc.), and include a deadline.

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,
Emilio Jamerlan

Permit Renewal Application Purpose

Sawyer Oilfield Products, LLC (henceforth, Sawyer Oilfield) is a major source authorized under state NSR Permit 149982 and Title V Federal Operating Permit O-4078. Permit O-4078 will expire on February 6, 2024. In accordance with applicable requirements for complete and timely renewal of the federal permit, the facility has contracted R2M Engineering, LLC to prepare and submit the following application for renewal of Permit O-4078.

Renewal Application

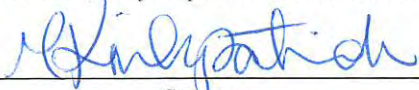

The source has no permit revisions to request at this time. The attached permit renewal application has been prepared in accordance with available TCEQ guidance that indicates all SOP renewals require, at a minimum, Forms OP-1, OP-2, OP-CRO1, OP-ACPS, and OP-REQ1. At this time, it is our judgment that no updates are necessary which require the submittal of any additional forms, with the exception of Form OP-PBRSUP, which is attached. Regulations and applicable requirements currently listed in the Unit Summary and Applicable Requirements Summary of Permit O-4078 are still accurate, and no new requirements are applicable. No emission units have been added or modified. Note that no Core Data Form is included, as the CN and RN already exist for this facility, and no core data has changed since the last submittal of the form.

The application for renewal of Permit O-4078 is hereby attached for your review. Should you have questions or require any additional information, please address inquiries to either of the following contacts at:

Process Description and Flow Diagram

Fiberglass Operations Process Description

Sawyer Oilfield will manufacture fiberglass storage tanks, primarily those for use in the oil and gas industry. The manufacturing process for these tanks requires the use of resins, gelcoats, and fiberglass strands and mats. Most resin application will occur via non-atomized spray equipment in fiberglass winding and fiberglass chop processes, but manual layup will be used for small parts and outfitting of the tanks. Gelcoats will be applied via non-atomized spray guns. Acetone will be used as a cleanup solvent. The process results in emissions of VOC (primarily styrene, also methyl methacrylate (MMA)) and exempt solvent. These emissions will be fully contained within the manufacturing building and will be exhausted through a vertical stack, EPN FG-STK.

Materials Receiving, Handling, and Storage

Resins and gelcoats to be utilized in the proposed fiberglass operation will be received and stored in plastic totes and/or steel drums and will be kept inside the manufacturing building. Acetone will be received and stored in steel drums. All material containers will remain closed when not in use. Waste products will be collected and stored in closed containers while awaiting proper disposal.

Fiberglass Tank Fabrication Processes & Cleanup

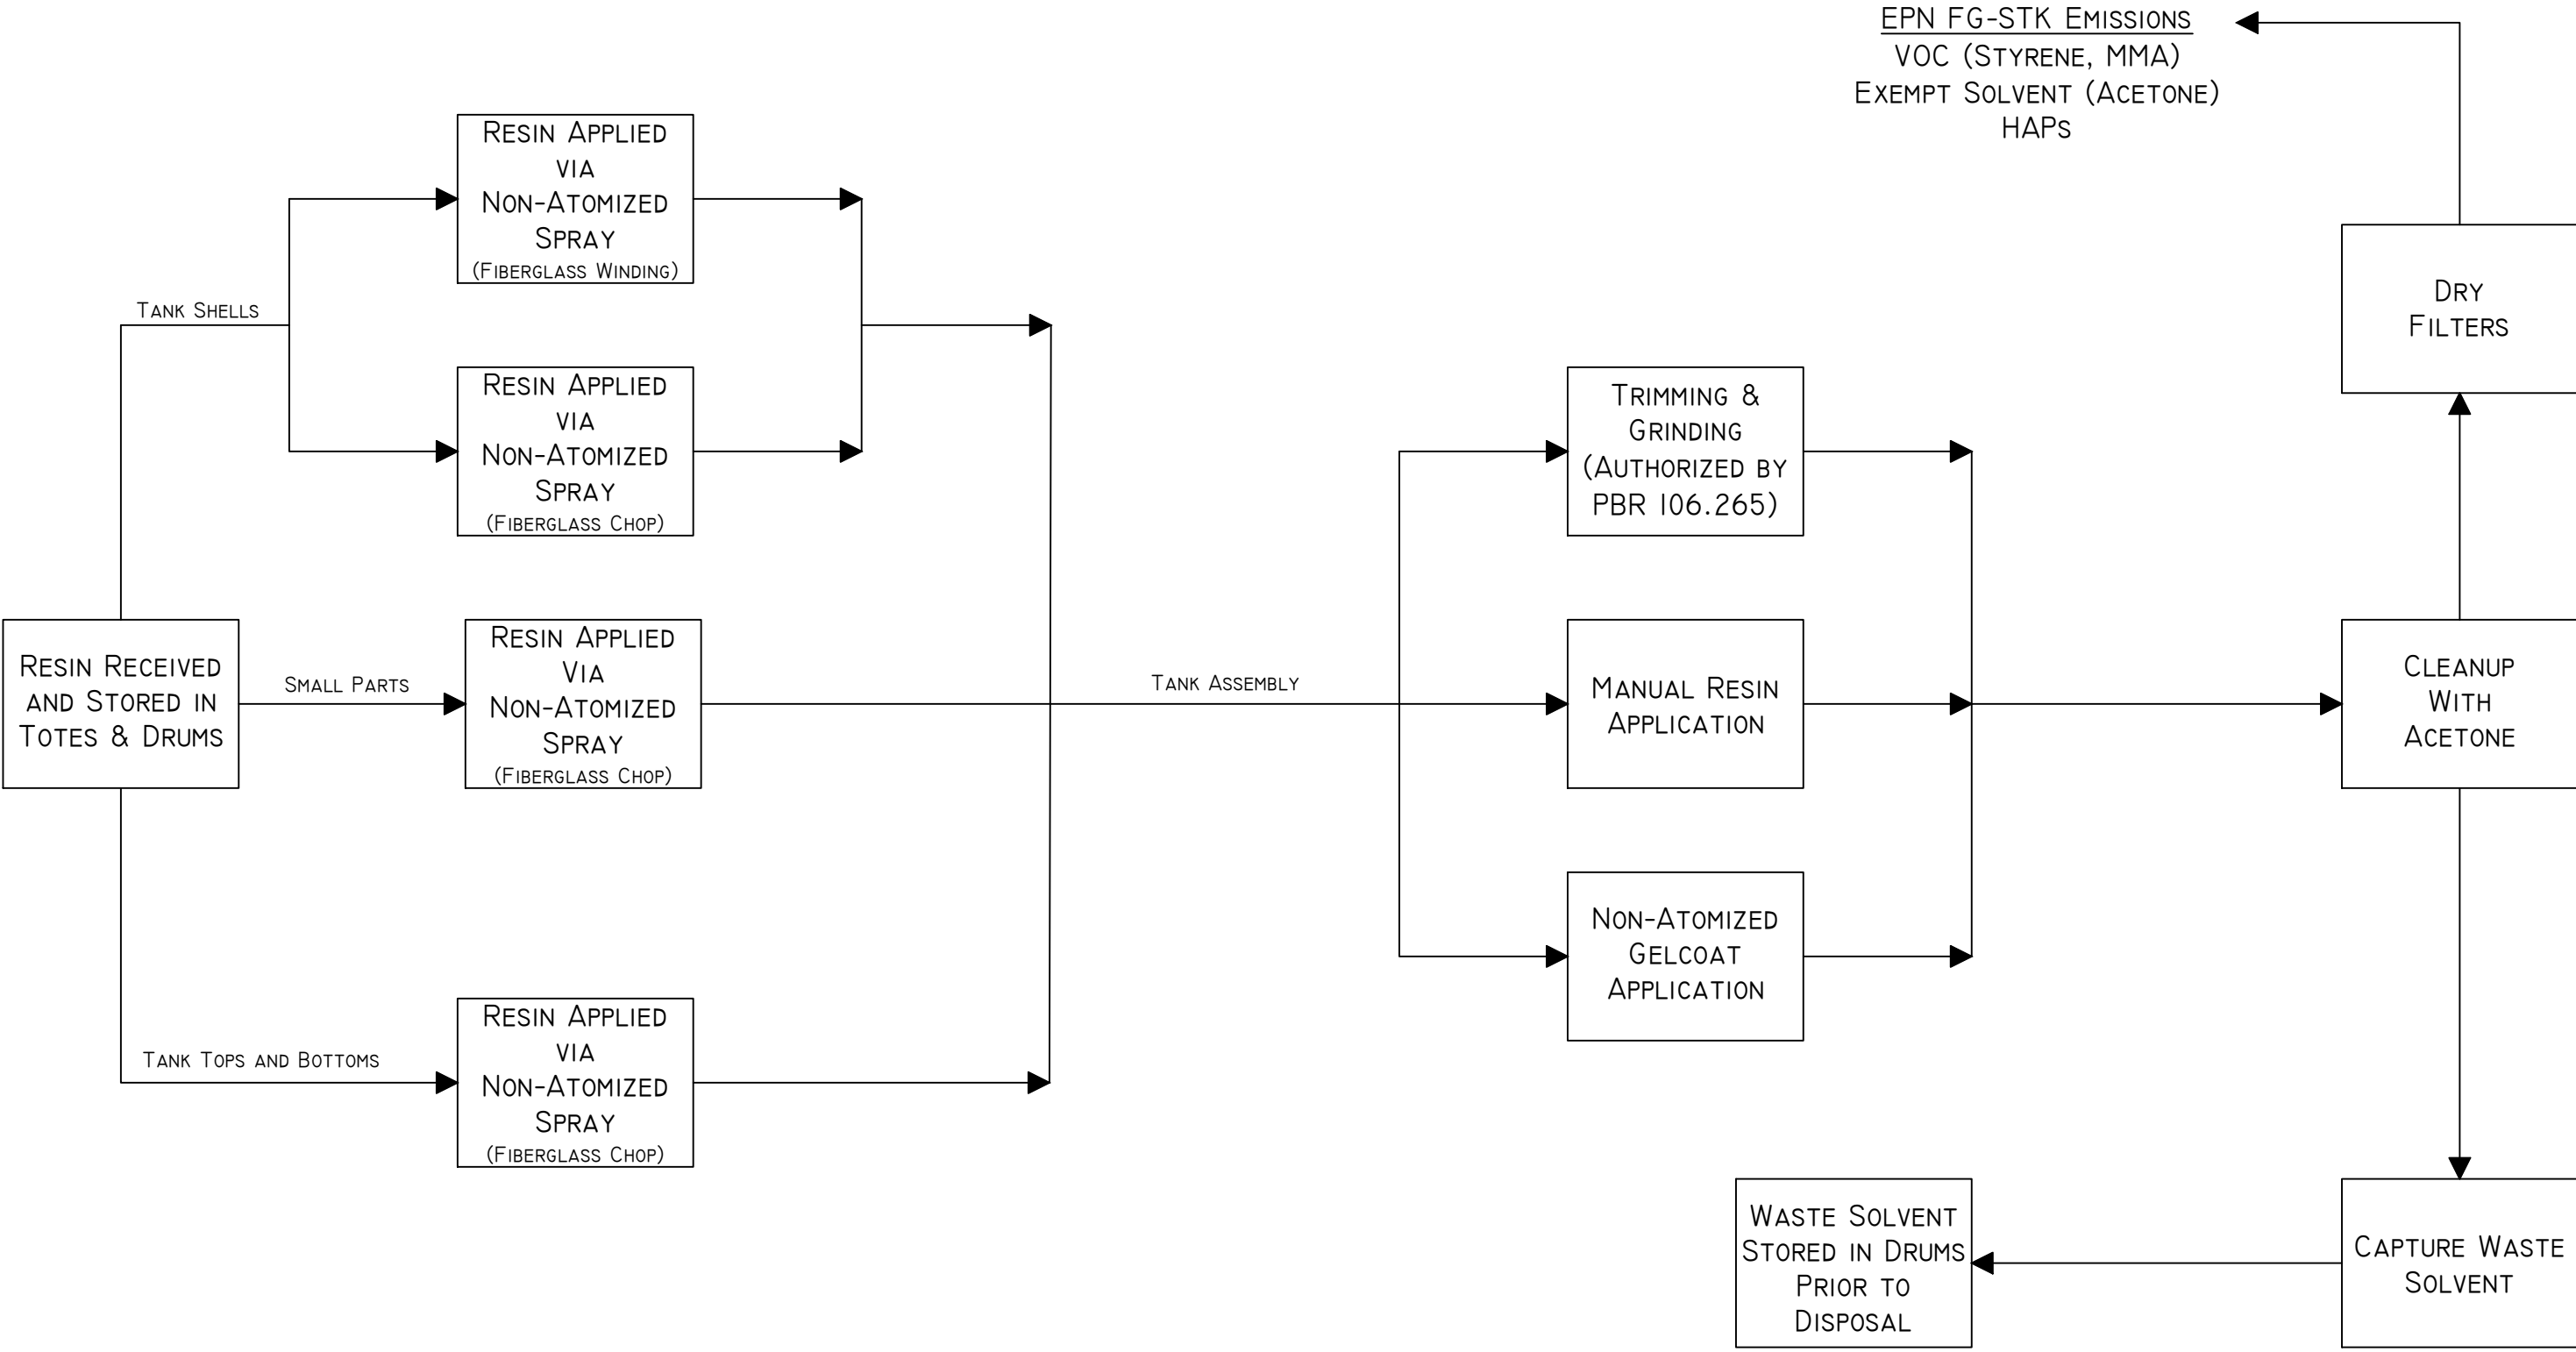

The production of each fiberglass tank requires three main processes: construction of the tank shell, construction of the tank top and bottom, and assembly and outfitting of the final tank. Each of these processes can be operated independently of the others, so they do not have to occur simultaneously on every operational day. This allows the facility to estimate projected resin and gelcoat usage and to plan their production days in such a way that they can maintain the necessary production schedule while complying with the emission limits set forth by their permit.

The tank shell is the main component of each tank. Several layers of catalyzed resin and fiberglass filament will be applied to a rotating steel mandrel that has been pre-wrapped with Mylar or a similar plastic (to aid in the eventual removal of the cured part from the mandrel). Resin will be applied via an automatic, non-atomized spray gun that travels on a carriage down the length of the mandrel as the fiberglass filaments are wound (this process is referred to in the emissions calculations as fiberglass winding). The apparatus will also include a high-volume chopper gun that may be used for chop-spray application of fiberglass strands and resin. When the appropriate number of layers has been applied, the tank shell will be left on the mandrel to cure.

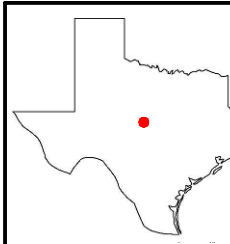

Tank tops and bottoms will be constructed by applying numerous layers of resin and fiberglass via non-atomized chop spray onto a mold of specific diameter set on a rotating table. Rollers may be used between layers to remove air pockets and compress the glass and resin for additional strength. The molds used in this process have been prepared with a small amount of non-VOC wax to facilitate easy removal of the cured parts.

After a tank shell has been fabricated, while it is still on the mandrel, a tank bottom will be attached to the tank shell using non-atomized chop spray application. Some minor trimming and grinding, performed manually with hand tools, may be required to prepare the tank for the addition of the top. The top will then be attached to the tank with manually applied resin. After assembly, a tank will be ready for final outfitting, which will include installation of valves, hatches, and manholes. Some additional trimming, grinding, and manual application of resin and fiberglass may be required during the outfitting of a tank. Trimming and grinding of the cured parts will be performed manually, and these activities are authorized under 30 TAC §106.265. Finished tanks will then typically receive an exterior coating of gelcoat, applied via non-atomized spray.

Acetone will be used as a cleaning solvent for the resin and gelcoat application equipment. It will be sprayed through the application equipment and dispensed into a bucket. Hand tools will be immersed in solvent for cleaning. The used acetone will be reclaimed and reused until it is no longer an effective cleaner, at which time it will be placed in sealed drums to await proper disposal through a waste company.

12. **There** may be additional special conditions attached to a permit upon issuance or modification of the permit. Such conditions in a permit may be more restrictive than the requirements of Title 30 of the Texas Administrative Code. [30 TAC § 116.115(c)]
13. **Emissions** from this facility must not cause or contribute to "air pollution" as defined in Texas Health and Safety Code (THSC) §382.003(3) or violate THSC § 382.085. If the executive director determines that such a condition or violation occurs, the holder shall implement additional abatement measures as necessary to control or prevent the condition or violation.
14. **The** permit holder shall comply with all the requirements of this permit. Emissions that exceed the limits of this permit are not authorized and are violations of this permit.¹

¹ Please be advised that the requirements of this provision of the general conditions may not be applicable to greenhouse gas emissions.

Special Conditions

Permit Number 149982

1. This permit authorizes the construction and operation of facilities used for the manufacturing of fiberglass storage tanks. These facilities are located at 2700 Virgil Gray Drive, Brownwood, Brown County. This permit covers only those sources of emissions listed on the maximum allowable emission rates table (MAERT) and those sources are limited to the emission limits and other conditions specified in the attached table. The annual rates are based on any consecutive 12-month period.
2. This permit does not include the facilities or maintenance, startup, or shutdown (MSS) activities at the site listed in Attachment I, except as noted in the MAERT. Instead, these facilities are authorized by a permit-by-rule (PBR) under Title 30 Texas Administrative Code (30 TAC) Chapter 106, standard exemption, exemption from permitting, or are a de minimis source listed under 30 TAC § 116.119. The lists provided in Attachment I are not intended to be all-inclusive and can be altered at the site without modifications to this permit.
3. A copy of this permit shall be kept at the site and made available at the request of personnel from the Texas Commission on Environmental Quality (TCEQ) or any other air pollution control agency with jurisdiction.
4. With the exception of fugitive sources, the holder of this permit shall clearly label all equipment at the property that has the potential of emitting air contaminants. Permitted emission points shall be clearly labeled corresponding to the emission point numbering on the MAERT.

Emissions Limitations

5. The fiber reinforced plastic composites manufacturing operations at the site shall comply with the applicable requirements of Title 40 Code of Federal Regulations Part 63 (40 CFR Part 63), Subpart WWW, National Emission Standards for Hazardous Air Pollutants: Reinforced Plastic Composites Production.
6. Emissions from the facilities shall comply with 30 Texas Administrative Code (30 TAC) § 101.4 regarding nuisance. If compliance with 30 TAC § 101.4 so requires, the permit shall be amended to control nuisance-causing emissions either through process controls or additional emission controls.

Operational Limitations

7. This permit prohibits the use of PBRs or any other authorizations which will increase styrene emissions. An amendment to this permit will be required for any increases in styrene emissions in excess of those reflected on the MAERT.
8. Manual (hand layup), non-atomized spray equipment, and high volume low pressure (HVLP) chopper equipment or other equipment that is demonstrated to reach the same or higher transfer efficiency shall be used. This equipment shall be operated and maintained within the limits set forth by the manufacturer.

10. Emissions from fiberglass storage tank manufacturing and cleanup operations shall be captured and exhausted vertically through an elevated stack (EPN FG-STK) with a minimum height from ground level of 85 feet. In addition, no stack shall be equipped with rain protection that causes restrictions or obstructions to vertical flow.
11. The storage tank manufacturing building shall be maintained under negative pressure in order for the ventilation system (EPN FG-STK) to achieve 100 percent capture of emissions. The openings of the building must meet one of the following scenarios, except during normal ingress and egress of personnel and equipment:
 - A. The 30' x 35' overhead door shall only be open halfway (17.5 ft from ground level). A ruler shall be painted next to the overhead door to determine the opening height;
