Tusar – Can you confirm if we have a DAR for this permit? We submitted an OP-DEL to assign Kristi Patteson to permit O4818, but I do not have any forms in my files assigning her as the DAR for O1400. It shows Ms. Patteson as a DAR option in STEERS for O1400. Please let me know so we can confirm who needs to sign the OP-CRO1 and submit the STEERS submittal.

Subject: RE: Working Draft Permit -- FOP O1400/Project 35497, INEOS Acetyles Chemicals Texas City/Methanol and Acetic Acid Units - Respond by 4/3/2026

Hi Tusar – There are some comments on the draft. I am also attaching updated forms associated with the comments. All updated forms to date will be submitted via STEERS once finalized. The comments are as follows:

1. It is noted that, OP-PBRSUP (dated 09/18/2025) Table A, Registration number 76074 was voided on 2/16/2026. So please update, re-date and resubmit all 4 tables of OP-PBRSUP. Please note that all 4 tables are treated as a set. All the items in Table A and B must be in Table D. If it is not applicable, please use N/A. The information provided here must be consistent with information provided in OP-REQ1 (page 89) and OP-SUM. Please follow the instructions closely.

The PBRSUP has been updated along with page 89 of the OP-REQ1 and the OP-SUMR.

2. Also, since the site is not major for HAP anymore, there is no MACT G applicability for 50D201, 50D202, 50D203, and 50V101 (OP-UA15, Table 6) for which you submitted attribute values.

An update to the OP-REQ1 is included as an update to change answers regarding the site as a major or area source of HAPs. Updated answers are highlighted in yellow. Due to the length of the form, the updated form is submitted in its entirety.

3. Please provide a most recent version process description for the site.

A process description is included with the updated forms.

4. This is the final round of review. If you have no issues, please accept the draft. If there are comments, I will be happy to address them in the final draft

50FUG is complying with MACT H; however, the unit is complying with Subpart H voluntarily to meet the requirements of NSPS VV. A revised OP-REQ2 is submitted to address the change in applicability. Please revise the permit shield for 50FUG NSPS VV.

Change the NSR Authorization for 50D209 to 18742. An updated OP-SUMR is attached.

Once I review the OP-PBRSUP I will advice you to certify everything for the duration

Process Description – Acetic Acid Unit

Eastman operates the Acetic Acid Manufacturing Unit located at Eastman TCO in Texas City, Texas in Galveston County. The process description contained in this section includes the most significant unit operations. The level of detail provided in this process description is intended to support the permit application review and does not include every piece of equipment or in-process recycle flows that have no impact on emissions other than for fugitive equipment leaks.

Acetic acid is produced by the carbonylation of methanol. The reaction of carbon monoxide (CO) and methanol (MeOH) occurs in a continuous, stirred reactor operating at moderate temperatures and pressures with a catalyst. Liquid reactor effluent is withdrawn continuously and purified.

A crude by-product stream is withdrawn from the acetic acid product column. This crude stream, known as mixed acid or unpurified mixed acid, is then sent through a stripping column and then to a final purification column. The finished by-product is referred to as purified mixed acid and consists of approximately one quarter acetic acid and three quarters propionic acid. Note that crude mixed acid is occasionally brought into the plant for processing in the stripping column and final purification column mentioned above.

Off-gases from the reactor and purification systems are treated with cold acetic acid (HoAc) in absorption columns. The gases are then treated with chilled methanol in additional absorption columns and sent to the plant fuel gas header for combustion at the utility boilers, which are authorized under TCEQ NSR Permit No. 5260B, or to the unit flare (50Z501). The off-gases are managed in the plant fuel header preferentially and only go to flare during start-ups or when they cannot be burned as fuel.

There are two operating scenarios for venting of these gas streams to Flare 50Z501. Under the first scenario, the gas vent streams go through a chiller system and methanol absorbers to remove any remaining acetic acid before venting to Flare 50Z501. Thus, the resulting volatile organic compound (VOC) emissions from Flare 50Z501 contain only methanol. However, when the chiller system is down, the gas streams are vented directly to Flare 50Z501 after the acetic acid absorption system without going through the chiller and methanol absorption system. This second scenario results in flare VOC emissions that consist of acetic acid and methyl acetate (MeAc) and contain no methanol.

Flare 50Z501 also receives small continuous vapor flows from the process analyzers, from the process decontamination system (when being utilized), and from the acetic acid product column.

The off-gases from the Acetic Acid Unit that are sent to Flare 50Z501 and utility boilers also include trace levels of methyl iodide (MeI) which upon combustion is converted to hydrogen iodide (HI).

Methanol is supplied through four Day Storage Tanks (50T101-1, 50T101-2, 50T101-3, and 50T101-4), which are all equipped with internal floating roofs. By-product acetic/propionic acid is stored in the two Mixed Acid Storage Tanks (50T206-1 and 50T206-2) that are controlled by a scrubber. The Mixed Acid tanks can also be controlled by small Carbon Adsorbers during periods of scrubber downtime or during maintenance, startup, and shutdown. Product acetic acid is stored in two Day Storage Tanks (50T502-1 and 50T502-3) and three Shore Storage Tanks (50T508-1, 50T508-2, 50T508-3, and 50T508-4). Off-specification and in-process acetic acid is stored in Acetic Acid Storage Tank (50T509) prior to recycle. Water scrubbers control emissions from the acetic acid tanks.

Acetic acid is loaded into tank cars and tank trucks. The vapors generated from this land-based loading are routed to a water scrubber. There are no uncollected emissions because the vapor collection system is equipped with a blower that creates vacuum conditions above the loaded liquid.

Acetic acid is loaded into barges. The vapors generated from this marine loading are routed to a water scrubber. Acetic acid is loaded into ships. The vapors generated from this marine loading are routed to a water scrubber. There are no uncollected emissions because the vapor collection system is equipped with a blower that creates vacuum conditions above the loaded liquid.

Acetic acid can also be delivered to customers via pipeline.

Aaron:

Please see the updated draft.

1. It is noted that, OP-PBRSUP (dated 09/18/2025) Table A, Registration number 76074 was voided on 2/16/2026. So please update, re-date and resubmit all 4 tables of OP-PBRSUP. Please note that all 4 tables are treated as a set. All the items in Table A and B must be in Table D. If it is not applicable, please use N/A. The information provided here must be consistent with information provided in OP-REQ1 (page 89) and OP-SUM. Please follow the instructions closely.
2. Also, since the site is not major for HAP anymore, there is no MACT G applicability for 50D201, 50D202, 50D203, and 50V101 (OP-UA15, Table 6) for which you submitted attribute values.
3. Please provide a most recent version process description for the site.
4. This is the final round of review. If you have no issues, please accept the draft. If there are comments, I will be happy to address them in the final draft
5. Once I review the OP-PBRSUP I will advice you to certify everything for the duration 10/7/2025 thru the current date through STEERS.

Subject: RE: Working Draft Permit -- FOP O1400/Project 35497, INEOS Acetyles Chemicals Texas City/Methanol and Acetic Acid Units - Respond by 1/26/2026

Hi Tusar – Please see the following responses. If you approve of the forms, then I can coordinate with the site on submitting them via STEERS. Please let me know if you have any further questions.

(1) WMALDG – This Unit ID is not in OP-SUMR. Then we will evaluate the requested permit shields provided in OP-REQ2.

There is a typo in the REQ2. I have updated the OP-REQ2 form so the Unit ID is consistent with the OP-2 and OP-SUMR. The Unit ID should be 50WMALDG.

(2) OP-SUMR – The effective date for PBRs 106.262 and 106.472 need to update for unit Ids 50T206-2 and 50T206-1. You have provided the PBR Registration date. The correct effective dates are 106.262/11/01/2003 [76074] and 106.472/09/04/2000 [76074]

These corrections and the other comments you provided have been updated in the OP-SUMR.

(3) 50D201, 50D202, 50D203, and 50V101 (OP-UA15, Table 6 – MACT G) – Please submit an updated OP-UA15 (Table 6) as the form is updated as of 10/25 and new attribute values are required. Please follow the instructions closely. I think it will pick up the correct applicable requirements.

The UA15 form in Excel format is attached. The codes have not changed.

(4) Please start the void process of the inactive PBRs. It should be done by the time PNAP goes out.

INEOS Acetyls will begin working on voiding the inactive PBRs.

Good afternoon, Aaron:

I have reviewed the 12/29 submittals. Please see attached comments. I am in the process of making all the updates. I see following issues with your submittal.

1. WMALDG – This Unit ID is not in OP-SUMR. Then we will evaluate the requested permit shields provided in OP-REQ2.
2. OP-SUMR – The effective date for PBRs 106.262 and 106.472 need to update for unit Ids 50T206-2 and 50T206-1. You have provided the PBR Registration date. The correct effective dates are 106.262/11/01/2003 [76074] and 106.472/09/04/2000 [76074]
3. 50D201, 50D202, 50D203, and 50V101 (OP-UA15, Table 6 – MACT G) – Please submit an updated OP-UA15 (Table 6) as the form is updated as of 10/25 and new attribute values are required. Please follow the instructions closely. I think it will pick up the correct applicable requirements.
4. Please start the void process of the inactive PBRs. It should be done by the time PNAP goes out.

Once all documents are finalized you have to submit it through STEERS. Looking forward

to hear from you by Jan 26, 2026 so that we can finalize the draft and move forward.

Thanks.

Tusar - We have reviewed the Title V permit and have the following comments. Updated forms are attached. If you agree with the changes in the forms, then we can submit them via STEERS.

- 50D209 - Add 30 TAC 115 Vent Gas to permit shield. The vent is subject to NSPS NNN.
 - See revised OP-REQ2, OP-2, OP-SUMR
- Storage Tanks subject to MACT G - Change citation 63.11 to 63.11(b), which applies to flare-controlled sources.
 - 50D201, 63G113-2
 - 50D202, 63G113-2
 - 50D203, 63G113-1
 - 50V101, 63G113-2
- Correct NSR Authorization on NSR Authorization Reference by Emission Unit table. See updated OP-SUMR
 - 50T206-1 - 18742, 106.262/06/21/2005[76074], 106.472/06/21/2005[76074]
 - 50T206-2 - 18742, 106.262/06/21/2005[76074], 106.472/06/21/2005[76074]
 - 50T508-1 - 18742
 - 50T508-4 - 18742
 - 50D209 - 18742
- Permit shields missing for WMALDG - see OP-REQ2 submitted with application
 - NSPS XX, MACT R, MACT Y, NESHAP BB, MACT CC, MACT G, MACT CCCCCC,

MACT FFFF

- An updated UA4 is submitted with corrected codes based on your comments.
- The OP-PBR SUP that was submitted on 09/18/2025 is the complete list of PBRs associated with this Title V permit. We have reviewed the list of PBRs associated with the RN number for the site, and a majority of the PBRs are associated with process units that are no longer in operation or associated with one of the site's three Title V permits. I can coordinate with INEOS Acetyls on a plan to void all inactive PBRs, but it will not be completed during this NOD review cycle. If you would prefer to discuss this item via a phone call, please let us know.
- Remove Unit ID 44Z701, Flare, from the permit. The EPN has already been removed from the NSR permit 5260B. The flare was permanently shut down. The deletion has been codified on the updates in forms OP-2, OP-SUMR, and OP-UA7.
- Remove Unit ID 44FUG from the permit. The Unit ID is a redundant fugitive ID and can be deleted from the permit. The deletion has been codified on the updates in forms OP-2 and OP-SUMR.

Please let us know if you have any questions.

City/Methanol and Acetic Acid Units - Respond by 12/10/2025

Calvin:

Good afternoon. I have conducted a technical review of *renewal* application for , INEOS Acetyles Chemicals Texas City/Methanol and Acetic Acid Units. An electronic copy of

the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application dated 08/08/2023, and updates provided on 09/18/2025.

Please review the WDP and submit to me any comments you have on the working draft permit by **December 10, 2025**.

Following issues still need to be resolved.

1. You need to resubmit all the 4 Table of OP-PBR SUP – The submittals dated 09/18/2025 seems not complete. There are many PBR registration numbers associated with this RN number (More than 15 - I lost count). You have provided only one 76074. I looked up an additional permit O1936 (Project #34997 – 08/07/2024) associated with this site; it has only listed on PBR Registration number 99202. I noted another initial project just came in. So, many PBR registration numbers are missing. You must address this. All inactive PBR Registration numbers must be voided. All PBR Registration numbers must be in OP-PBR SUP in Table A or B. All items in Table A and B must be in Table D. All information provided in OP-PBR SUP must be cross checked with information provided in OP-REQ1 (page 88/89) and OP-SUMR. The information must be consistent across all the forms. Please follow the instructions closely.
[TCEQ Form 20875 - OP-PBR SUP - Instructions Permit By Rule Supplemental Table](#)
2. OP-REQ1 – You must provide complete information in page 89 (XII.H) and XII.I.
[TCEQ 10043 Instructions - OP-REQ1 - Application Area-Wide Applicability Determinations and General Information](#)

4. Unit ID 50WMALDG -OP-UA4, R5211-1 – There is an issue with the attribute values. For question Alternate Control Requirement ACR (1-3) the answer provide was "NONE" . However, for question True Vapor Pressure TVP (1-7) the answer provided "0.5-11S" which can only be used if "213B" had been entered for ACR (1-3). So please revisit the response, for the completion of the draft we changed ACR response NONE to 213B.

You may submit me an advance copy by email. Once they are reviewed and okeyed you may submit the final documents via STEERS.

Please review the second portion of the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit. Wishing you all a Happy Thanksgiving Holidays. Thank you for your cooperation.

Hi Mr. Tusar – Updates to the OP-SUMR, OP-PBRSUP, and the OP-REQ1 will be submitted via STEERS.

Regarding the contact spreadsheet you sent, the only contact that is still valid is Andy Venables (RO row 2). Kristi Patteson is the DAR. INEOS has submitted an OP-DEL to give her signature authority. What do you need to add her to the list?

Also – Calvin Greene II and Samuel Brown are the technical contacts at the site. Do you need a form or updated form to make them the technical contacts?

If you did submit ownership change forms (**core data forms , OP-1 all pages**) please email me those old documents. All latest updates you may send an advance copy and send it through STEERS where they are auto certified. Also, I need the following documents to get started.

1. OP-SUMR – make sure the if there is a PBR Registration involved it is represented in correct format. PBR/Version date [PBR Registration Number]
2. OP-REQ1 (09/24) – Please resubmit latest version of the form all pages. Section XII needs update.
3. OP-PBR SUP – noted that some of the PBR registration numbers eg 144537, 134001 are voided. So please submit all 4 tables A, B, C, D with new date at the top. If there is not applicable (e.g. Table C) please use N/A. Also note that all items in Table A and B must be in Table C. The information provided in OP-PBR SUP. OP-SUMR and OP-REQ1 (last page), must be consistent.
4. You may submit any other updates as you see fit as it has been 2 years.

Please follow the instructions closely. Please resubmit all requested documents by 9/5. I am motivated to move this project forward, need your help and cooperation.

Sincerely,

Tusar Swami, P.E.

Foluke:

Good morning. I have been re-assigned to the Federal Operating Permit (FOP) renewal application of Permit No. O1400 for , Eastman Chemical Texas City Inc/Methanol and Acetic Acid Units. Please note that Vasant is no longer with the agency and that you will be the permit reviewer moving forward on their project. From Vasant's note I gather that possibly there is a name or ownership change to (Ineos), but I have not seen any documentation. If that is the case, please send a core data form and OP-1 etc via STEERS or to me directly if it is already submitted. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Please review the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

A quick acknowledgement to this email will be very much appreciated. Thank you for your cooperation.

morning Aaron,

I apologize for the project running behind, this has been an unusually busy time. Since DFW is now considered a severe nonattainment area, many more sites are now subject to Title V regulations, which has caused our section to be extremely busy. Dear Senator Middleton:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.893611,29.380833&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.
