Emilio,

Thank you for your patience, as we have reviewed the working draft permit. Please see the attached word document with tracked changes denoting our revisions. Our only major revision is on the cover page where we replaced the NAICS code description for the facility, it should be 337110 for Wood Kitchen Cabinet and Countertop Manufacturing instead of 811121 - Automotive Body. Please let us know if you have any questions, or if any additional documentation is required for the completion of the application process.

Thank you,

Hello Jeremy

I have conducted a technical review of *initial issuance* application for *Burrows Cabinets LLC*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by *May 21 2024*.

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Good morning,

After further review, the following items are needed to complete this review and due by May 13, 2025:

- Please send an updated OP-REQ1: Page 80 for Question XI.H.1. should have said "Yes". I noticed that you submitted an OP-REQ2 but on the OP-REQ1 marked "No" to the question "A permit shield for negative applicability entries on Form OP-REQ2 (Negative Applicable Requirement Determinations) is being requested or already exists in the permit."
- Send an updated OP-REQ1: page 55, regarding the question VIII.S.1 for 40 CFR Part 63, Subpart JJ, this response should have said "N/A" on the OP-REQ1 if the site is not a major source of HAPs. Which will remove the Special Term and Condition that references 40 CFR Part 63, Subpart JJ.
- Send an updated OP-REQ1: page 85, regarding the question XII.B.1 for standard permits. This response should be "No", due to the fact this is not a standard permit.

Subject: Technical Review - FOP O4579/Project 35944 Burrows Cabinets LLC/Waxahachie Cabinet Facility

Mr. Jeremy Hargrave:

I have been recently assigned to the Federal Operating Permit (FOP) initial application of Permit No. O4579 for Burrows Cabinets LLC/Waxahachie Cabinet Facility. Please address all correspondence pertaining to this permit application, including any updates, to me via email from this point on, and use both the Permit and Project reference numbers above to facilitate tracking.

I do appreciate your patience at this time for I will be conducting a full thorough review of this application since its reassignment to me.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to the [OP-PBRSUP](#) and [OP-REQ1](#) form instructions.

Please review the “[SOP Technical Review Fact Sheet](#)”. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.
2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

- A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
 - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
- A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the “Applicable Requirements Summary” attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as

required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
 - (4) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- C. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.
- D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
 - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
 - (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)
 - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)
- 4. For wood furniture manufacturing operations specified in 40 CFR Part 63, Subpart JJ, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.410 incorporated by reference):
 - A. Title 40 CFR § 63.800(d) (relating to Applicability), for applicability of the General Provisions of Subpart A
 - B. Title 40 CFR § 63.806(a) (relating to Recordkeeping Requirements)
 - C. Title 40 CFR § 63.807(a) (relating to Reporting Requirements)
- 5. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local

air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

November 16, 2023

THE HONORABLE BOB HALL
TEXAS SENATE
PO BOX 12068

Re: Accepted Federal Operating Permit Initial Issuance Application
Project Number: 35944
Permit Number: O4579
Burrows Cabinets, Llc

Waxahachie, Ellis County
Regulated Entity Number: RN101467447
Customer Reference Number: CN605714161

Dear Senator Hall:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-96.825833,32.373055&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

1. EXECUTIVE SUMMARY

Burrows Cabinets, LLC (Burrows) currently owns and operates a cabinet surface coating facility located in Waxahachie, Texas (Waxahachie Cabinet Facility). Burrows has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 605714161. The Waxahachie Cabinet Facility has been assigned TCEQ Regulated Entity Reference Number (RN) 101467447. The Waxahachie Cabinet Facility is currently authorized via NSR Permit No. 158887. Burrows is submitting this application for an initial site operating permit (SOP) since the Waxahachie Cabinet Facility's potential emissions for Volatile Organic Compounds (VOCs) exceed the major source threshold for a facility located in a severe ozone attainment area (25 tons per year (tpy)). With this application at the end of this section, Burrows is submitting a Core Data Form requesting a name change to the RN to reflect the Waxahachie Cabinet Facility.

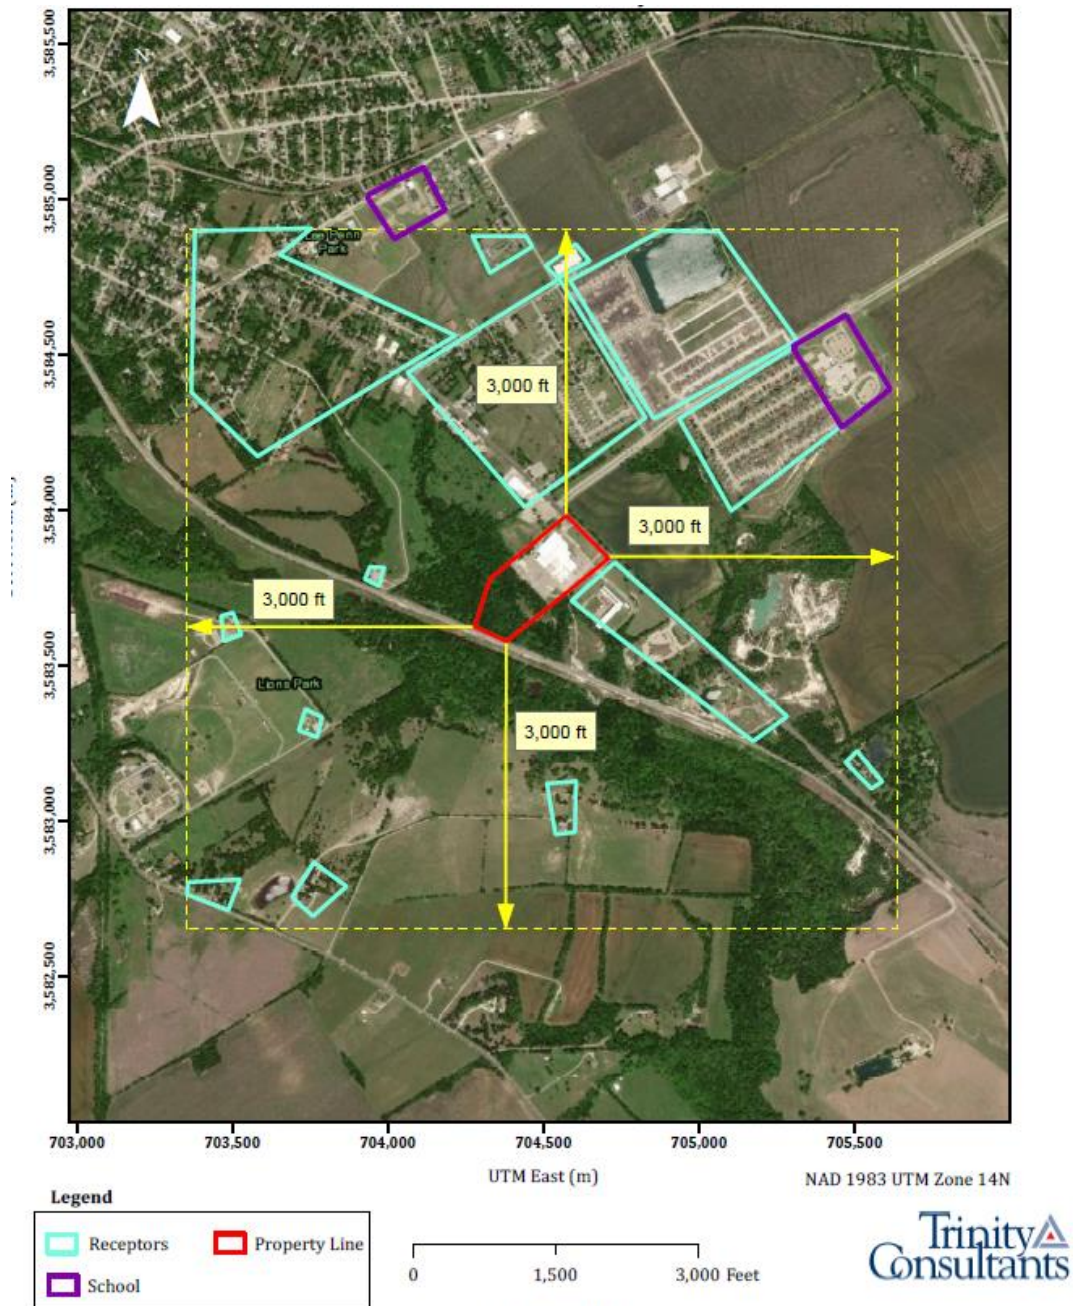

This application for an initial SOP is submitted in accordance with 30 TAC Section (§) 122.132 and through the TCEQ State of Texas Environmental Electronic Reporting System (STEERS). This SOP application submittal contains the following required items, according to the TCEQ guidance for SOP applications:

- ▶ Section 5. TCEQ Form OP-CRO1
- ▶ Section 6. TCEQ Form OP-1
- ▶ Section 7. TCEQ Form OP-SUM
- ▶ Section 8. TCEQ Form OP-DEL
- ▶ Section 9. TCEQ Form OP-UA18
- ▶ Section 10. TCEQ Form OP-REQ1
- ▶ Section 11. TCEQ Form OP-REQ2
- ▶ Section 12. TCEQ Form OP-REQ3
- ▶ Section 13. TCEQ Form OP-ACPS
- ▶ Section 14. TCEQ Form OP-PBRSUP
- ▶ Section 15. TCEQ Form Public Involvement Plan

2. AREA MAP

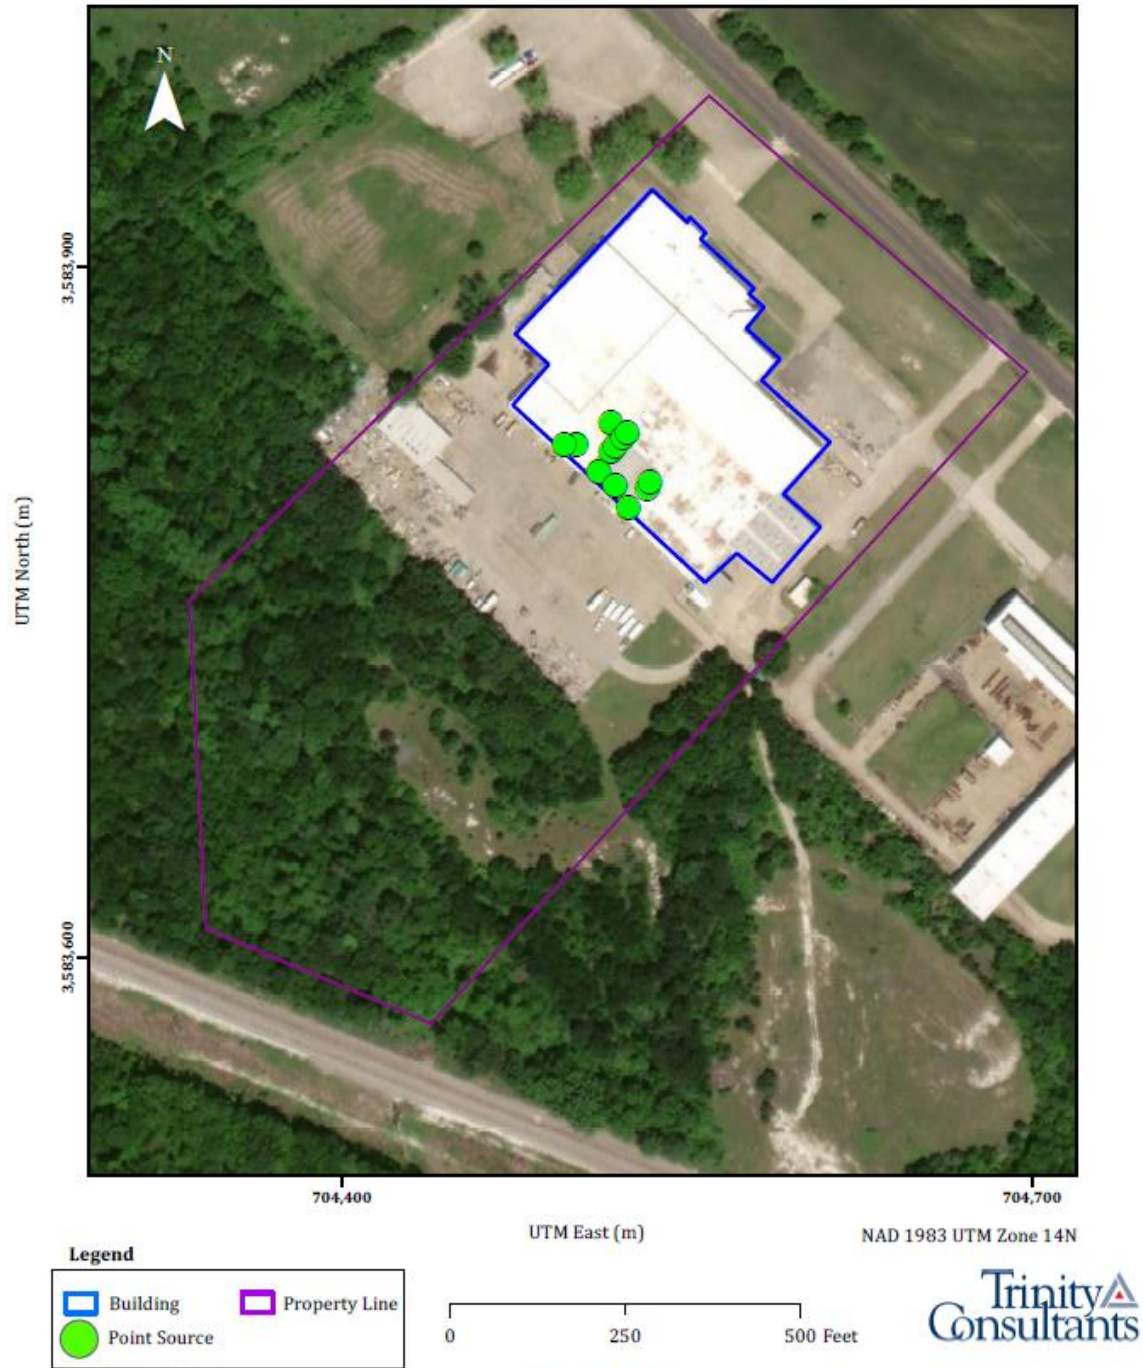

An area map is included in this section to graphically depict the location of the facility with respect to the surrounding topography. This figure is an area map centered on the Waxahachie Facility that extends out at least 3,000 feet from the property line in all directions. The map depicts the fence line/property line with respect to predominant geographic features (such as highways, roads, streams, and railroads). The image shows there is one school within 3,000 feet of the facility boundary.

4. PROCESS DESCRIPTION & PROCESS FLOW DIAGRAM

The Waxahachie Cabinet Facility coats wood kitchen cabinets and kitchen doors. Once the wood parts are manufactured, wood components are then placed on a continuous hanging conveyor line and are ready to be coated. Coatings are received into the facility and stored remotely in closed containers until ready for daily use. No paint mixing occurs as the products received are used as-is.

There are two separate process tracks that can occur at the Waxahachie Cabinet Facility. The first process track is a traditional process for coating cabinets, with the following booths involved. The cabinets are first automatically coated with stain in one (1) automated spray booth (Facility Identification Number [FIN] K1; Emission Point Number [EPN] K1). Stain can be applied in Booth 1 as an alternate to K1 (FIN BTH-1, EPNs BTH-1-STK1, BTH-1-STK2). The stain is assumed to be dry prior to the wood panel moving to the next booth where sealer is applied (FIN BTH-2; EPN BTH-2). Finally, panels are routed to one of two (2) existing manual spray booths (FIN BTH-4; EPNs BTH-4-STK1 and BTH-4-STK2) for application of topcoat. The second process (non-traditional) track is for pigmented, or painted, cabinets. The cabinets are first coated with primer in one of two automated spray booths (FIN BTH-1 or BTH-3; EPNs BTH-1-STK1, BTH-1-STK2, BTH-3). The primer is assumed to be dry prior to the cabinet moving to the next booth where sealer is applied (FIN BTH-2; EPN BTH-2). The cabinets can then either proceed to the next step or go to one (1) of the two topcoat booths for pigmented topcoat (FIN BTH-3 or BTH-4; EPN BTH-3 or BTH-4-STK1, BTH-4-STK2).

There is a separate offline booth (FIN OFF-STAIN; EPN OFF-STAIN) where sealer, stain, and topcoat can be applied. There is another offline booth (FIN OFF-PAINT; EPN OFF-P-STK1, OFF-P-STK2) where pigmented paint can be applied. A flat line booth (FIN BTH-SKINS; EPN BTH-SKINS) is used for tall cabinets with crown molding or finished ends. Lacquer is applied, skins are added to the cabinet, and then painted with a topcoat lying flat on a surface. The cabinets enter this booth after staining.

Another path the cabinets can take is being coated in the trim booth, which is located behind the main process booths. The cabinets enter the trim booth (FIN BTH-TRIM; EPN BTH-TRIM) after staining laying flat. Prior to application, the sealers and topcoats are agitated using five (5) gallon pails. The cabinets dry lying flat in the booth.

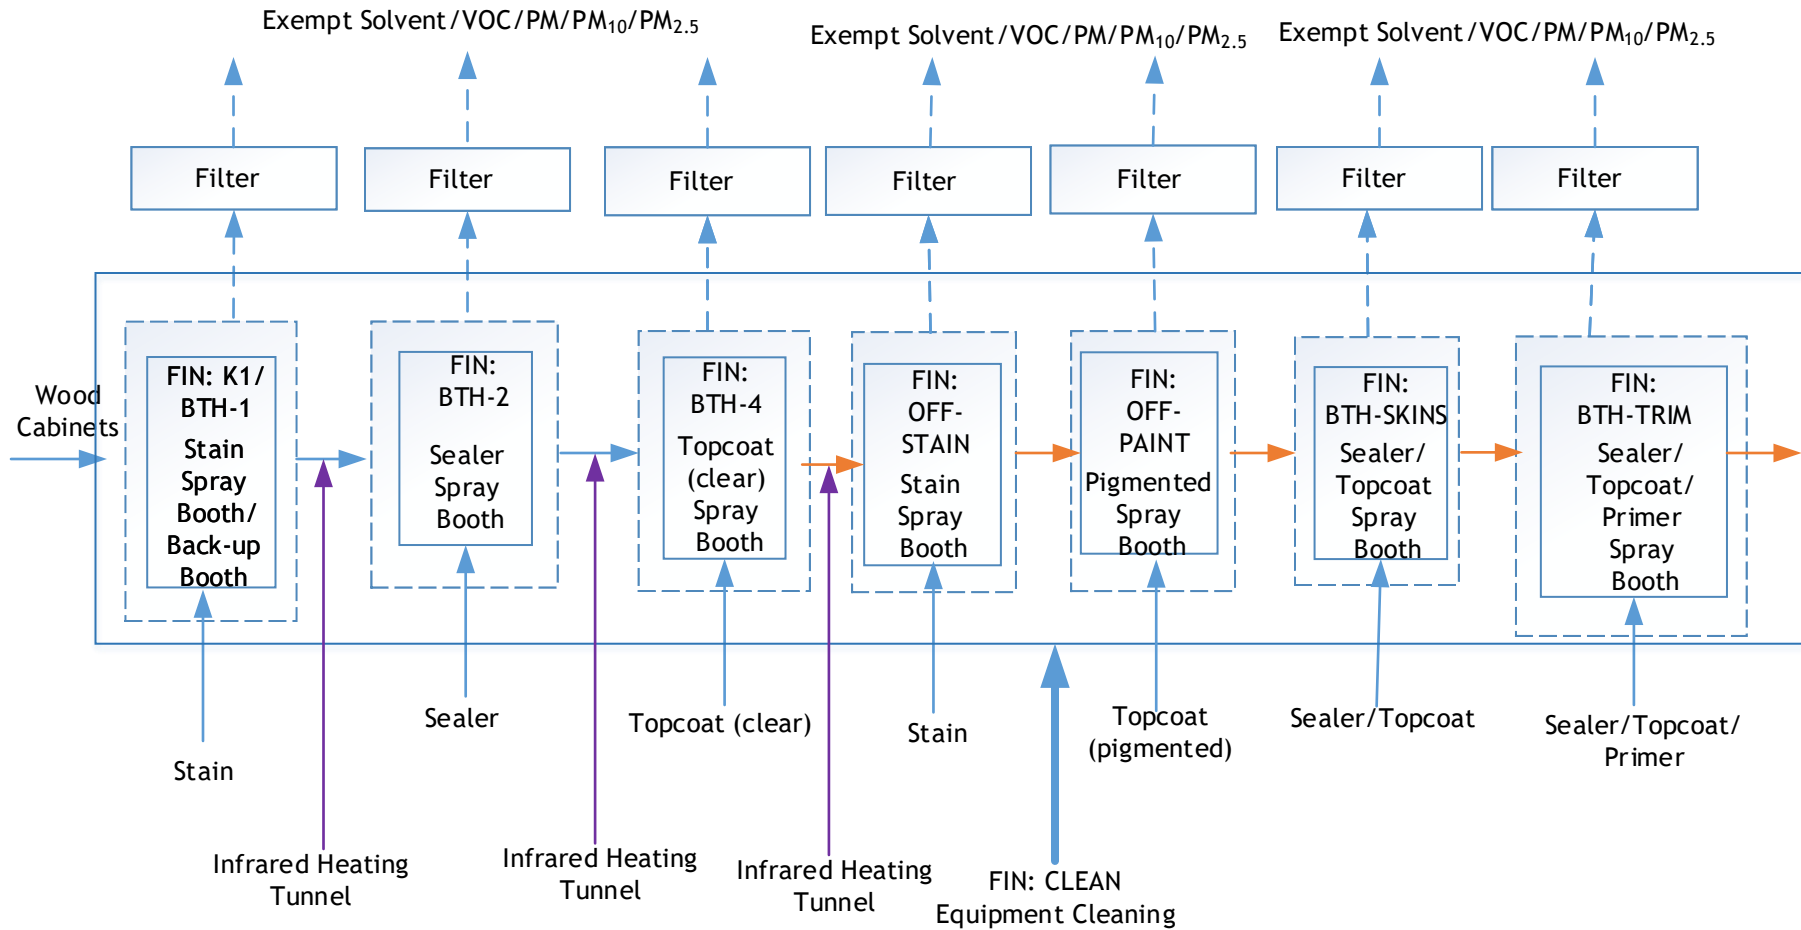

For spray gun cleanup, the lines are purged, and gun parts are cleaned using paint thinner/solvent (FINSOLV, EPN CLEAN).

There are three (3) infrared (IR) heating tunnels the cabinets go through after staining, sealer application, and topcoat application. After each pass through the IR tunnels, the cabinet is sanded by hand with sandpaper. There are no natural gas fired ovens used for drying cabinets. In addition, there is no abrasive blasting.

The stains, sealers, and topcoats arrive on site in 55-gallon drums. Occasionally the items will arrive in 5 gallon drums. Touch-up applications are in small containers on site.

All coating application occurs inside the paint booths with high-volume, low-pressure (HVLP) atomizing spray guns. It is assumed based on transfer efficiency based on similar coating facilities that 20% of the PM emissions occur in the paint booths. Overspray is collected as needed and disposed of properly. Spray booths include particulate filters that control particulate emissions with at least 99% efficiency. PM emissions occur within the spray booths only and exit vent to the atmosphere. Paint booth filters are changed per manufacturer's guidelines and are handled in a manner that minimizes emissions then disposed of properly.
