Good afternoon Mr. Zukor,

Thank you for allowing me the time to look into this question.

Regarding the 2nd emergency generator, authorized under the Oil and Gas Standard Permit (116.620) No. 56582, the emission and operation limitation representations associated with its authorization are federally enforceable.

- [Form APD-CERT](#) submitted through the ePermits system via STEERS may be used by companies to lower and/or establish federally enforceable emission limits for emission sources authorized by Standard Exemptions, claimed PBRs, registered PBRs, and/or de minimis facilities or sources. So the 2nd generator would not need to be included on the APD-CERT submittal.
- [Form PI-7-CERT](#) submitted through the ePermits system via STEERS may be used by companies to register PBRs (or update previously registered PBRs) and, at the same time, make emission limits in the PBR registration federally enforceable. The PBR (PI-7-CERT) registration will identify the federally enforceable emission limits for emission sources covered under the PBR (or for the entire site).

So, standard permits and NSR construction permits cannot use an APD-CERT; through their permitting action, they are already certified. The APD-CERT is reserved for emission sources authorized by Standard Exemptions, claimed PBRs, registered PBRs, and/or de minimis facilities or sources. The PI-7-CERT is for registered PBRs.

Only the 3rd engine would need to be included on the APD-CERT submittal. I hope this helps clear things up. Let me know if you have any further questions.

Sincerely,

Kyle J. Murray

Subject: RE: Working Draft Permit -- FOP O3065/Project 36641, Texas Eastern Transmission LP/Mont Belvieu Compressor Station

Hey Kyle – Yes, I did have an ancillary question for you.

At the Mont Belvieu, TX compressor station there are 3 emergency generator engines – each engine is limited to 52 hrs of operation per year to be exempt from 30 TAC Ch 117:

- One unit was authorized and emissions “certified” via PBR 106.511 Registration No. 150297.
- The 2nd unit was authorized under the existing Oil & Gas Standard Permit (116.620) No. 56582.
- The 3rd unit was authorized under PBR 106.511 internal documentation.

Based on your previous question about federally enforceable emission limitations, I realized that the 3rd emergency generator engine should have an enforceable limitation mechanism, such as submitting an APD-CERT form for the 3rd engine.

However, I am not sure if I should also include the 2nd emergency generator engine on the APD-CERT submittal?

Are emissions and operation limitation representations provided in the application for the Oil & Gas Standard Permit (116.620) No. 56582 considered to be “federally enforceable”?

I want to make sure if the APD-CERT submittal should include only the 3rd engine or include both the 2nd & 3rd engines?

The APD-CERT would limit the emergency generator engine annual hours of operation to 52 hours per year (and the corresponding annual emissions).

I look forward to your insight on this matter – Thanks!

Good afternoon Mr. Zukor,

I hope you enjoyed yourself over the holidays! I wanted to inquire about question No. XI.C.1 on the OP-REQ1. We want to make sure the question was answered correctly (current answer is no) since there are two PBR registration numbers listed on the OP-PBRSUP. I have included a snip of the question below for your reference. Please provide a response by COB Tuesday January 7th if possible. Thank you!

Subject: RE: Working Draft Permit -- FOP O3065/Project 36641, Texas Eastern Transmission LP/Mont Belvieu Compressor Station

Good morning Mr. Zukor,

Thank you for reaching out. As none of the centrifugal compressors have been assigned a FIN or EPN, it is possible for us to use the same unit IDs for both engines and compressors. After a few discussions with management, I am moving forward with the project and am leaving the permit as is with the NSPS OOOOa and OOOOb documented on the OP-REQ2. In the future, it is our preference that distinguishing IDs and/or unit names be used for the compressors since they have unique applicability.

Regarding your statement in option 1 about negative applicability being not mandatory, I would disagree as per §122.132(d)(2)(A) that potentially applicable requirements are required to be included in an application. Thank you for your time. I hope you have a Merry Christmas / Happy Holidays.

Sincerely,

Kyle J. Murray

Kyle – I’ve had a chance to discuss with my consultant, Melissa Ryan /Trinity Consultants. But we are both limited on time before holiday vacations begin.

FYI – None of the centrifugal compressors have been assigned a FIN or EPN. So none of our NSR, Standard Permits, or Title V permits at our other compressor stations in TX have centrifugal compressors separated out by FIN or EPN.

Option 1 – Having the OOOOa & OOOOb negative applicability is not “mandatory” but is convenient to point to the TV permit showing the NSPS do not apply. All of the sources that we have requested OOOOa & OOOOb negative applicability have NOT had any physical changes after the respective NSPS applicability dates, so none of the sources have triggered these NSPS. So if that is something you can remove at your end and proceed forward without further input from Texas Eastern could work.

Option 2 – To properly edit all the necessary forms to create new IDs, and update the other applicable Title V forms is going to require more time for Texas Eastern. Especially to document the changes for both OOOOa and OOOOb. My best estimate for providing these forms would be mid-Jan 2025.

I am open to any other suggestion you may have? Please feel free to either email me or call me on my cell: 713-819-9501. – Thank you!

Subject: RE: Working Draft Permit -- FOP O3065/Project 36641, Texas Eastern Transmission LP/Mont Belvieu Compressor Station

Good afternoon Mr. Zukor,

My technical specialist pointed out an additional issue upon review of your application. The permit has an existing permit shield for NSPS OOOOa for engines (GRP-ENG), and a new shield for NSPS OOOOb was requested for the same group. These rules are not potentially applicable to engines. You may be looking at the engine and the compressor driven by the engine as a single entity, but they are separate units to which different rules apply. NSPS OOOOa and OOOOb do have requirements for compressors, which is what we are assuming the shield was requested for. Would you like to use distinguishing IDs and/or unit names for the compressors since they have unique applicability? This would be our preference, especially if the compressors have their own Facility Identification Numbers (FINs). If so, submit these two units (grouped or ungrouped) on Forms OP-2, OP-SUMR, and either OP-UA12 or OP-REQ2 (which ever applies), and I will move the permit shields for NSPS OOOOa and NSPS OOOOb to the compressors. Please let me know if you have any questions. Thank you!

Please provide a response by **Friday, December 6th**.

Sincerely,

Kyle J. Murray

Good morning Mr. Zukor,

I just wanted to point out that an OP-CRO1 is required to certify the previous email correspondence. Emails from June 14th for the RFI response and from August 6th and 9th for the WDP response need to be certified. An OP-CRO1 can be submitted in STEERS with a date range using the time period option on the form or the specific dates option to cover those dates. The STEERS submittal would need to be performed by the DAR, Diana Goff, or the RO, Robert Huffman. If preferred, an OP-CRO1 signed by either individual could also be mailed to me at the address below. Please complete this by **Friday, September 27, 2024**. Thank you!

Sincerely,

Mr. Zukor,

Exploring this further, these are not typos. While the same emission limits apply for this unit, whether above or below 100 HP, we have different versions of the textual description due to differences within other citations. Please note as mentioned in the permit that the textual descriptions are not enforceable and are merely helpful descriptions for the reader. For **MBEL ENGEN 03**, the associated OP-UA2 form in our records specifies a horsepower range of "25-100E". If the horsepower for this unit is larger than 100, please submit an updated OP-UA2 form with a different answer for Horsepower. Please provide these updates by **Friday, August 16, 2024**.

Horsepower:

Select one of the following options to indicate the maximum engine power in horsepower (HP). Enter the code on the form.

For SI ICE that are emergency use only

Code	Description
25-E	Maximum engine power less than or equal to 25 HP
25-100E	Maximum engine power greater than 25 HP and less than or equal to 100 HP
100-130E	Maximum engine power greater than 100 HP and less than 130 HP
130-500E	Maximum engine power greater than or equal to 130 HP and less than 500 HP
500+E	Maximum engine power greater than or equal to 500 HP

Dear Kyle – If its not too late, the only comment I have are what appears to be two typos. See image below.

For emergency engines under NSPS JJJJ, the horsepower (HP) threshold is 130 HP, not 100 HP.

The only locations are for emission unit:

- **MBEL ENGEN 03** under SOP Index No. **60JJJJ-02**.
- Please change the 100 HP value to 130 HP.

All other conditions and requested changes have been incorporated. Thanks!

Subject: Working Draft Permit -- FOP O3065/Project 36641, Texas Eastern Transmission LP/Mont Belvieu Compressor Station

Good afternoon,

I have conducted a technical review of the renewal application for Texas Eastern Transmission LP, Mont Belvieu Compressor Station. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **Monday, July 29, 2024**.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_facsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require

the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Dear Ms. Brown,

Upon evaluation of your federal operating permit application, we have determined that additional information is necessary to complete our review. Below is a list of permit application deficiencies which must be resolved by 06/24/2024. These are the requested revisions to be made:

- PBR numbers and effective dates for each preconstruction authorization (PCA) listed on the OP-REQ1 and OP-PBRSUP should match and also reflect the corresponding effective dates listed on the TCEQ website. Please review the forms and make any necessary revisions. Additionally, our database lists three PBRs that are not provided on your submitted OP-REQ1 or OP-PBRSUP forms. These PBRs

should be reviewed and listed with their associated unit IDs on the OP-REQ1, OP-PBRSUP, and OP-SUMR and are listed as follows:

- 106.183 (30 TAC 106/116, 09/04/2000)
- 106.359 (30 TAC 106/116, 09/10/2013)
- 106.473 (30 TAC 106/116, 09/04/2003)

Please review and revise the OP-REQ1 and OP-PBRSUP forms accordingly.

Response: As part of this renewal effort, our review of existing records indicated that the 3 above listed PBRs are not being claimed at the Mt. Belvieu, TX compressor station. Thus, the 3 above PBRs (106.183, 106.359, and 106.473) were removed/omitted from the applicable TCEQ TV renewal forms. The claimed PBRs are correctly listed on Form OP-REQ1 (page 88) and Form OP-PBRSUP. Please delete/remove/update that PBRs (106.183, 106.359, and 106.473) are not currently claimed at this station.

- The unit ID numbers on form OP-2 – Table 2 for revision numbers 2 and 3 are listed as “401-V5” and “401-V5-OF”, respectively. We would like to verify that these unit ID numbers are typos, and that the correct ID numbers are “410-V5” and “410-V5-OF”, as listed in our database.

Response: You are correct, the Unit IDs for Revision Nos. 2 and 3 were typos. The correct Unit IDs are “410-V5” and “410-V5-OF,” respectively. Attached is a PDF file of a revised page for Form OP-2, Table 2.

- Revision No. 12 requests an update to the NSR authorization number and index number. Our database lists PBR 106.511/09/04/2000 as a current authorization for this unit, ID No. 41036. We would like to confirm that you would like to remove this authorization and replace it with NSR authorization 56582.

Response: Please update the authorization for ID No. 41036 (63 hp Kohler emergency engine) to NSR authorization 56582 (the O&G Std Permit). As part of this renewal effort, our review of existing records indicated an incorrect authorization of PBR 106.511 was previously listed. The correct NSR authorization is 56582 (the O&G Std Permit).

Thank you for your cooperation in this matter. Please contact me if you have any questions.

Sincerely,

I have been assigned to the Federal Operating Permit (FOP) renewal application of Permit No. O3065 for Texas Eastern Transmission LP, Mont Belvieu Compressor Station. This application has been assigned Project No. 36641. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency – please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered efficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

1. EXECUTIVE SUMMARY

Texas Eastern Transmission, LP (TETLP) owns and operates an existing natural gas pipeline compressor station located near Mont Belvieu, in Chambers County, Texas (Mont Belvieu Compressor Station [CS]). The primary operations at the Mont Belvieu CS are natural gas compression and transmission through pipelines. TETLP has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Reference Number CN600126221 and the Mont Belvieu CS operates under TCEQ Regulated Entity Reference Number RN102173390. The site operates under TCEQ Account No. CI-0056-G. All emission sources at the Mont Belvieu CS are authorized via the following air permits:

- ▶ Title V Site Operating Permit (SOP) Number (No.) O-3065,
- ▶ New Source Review (NSR) Permit No. 56619,
- ▶ Oil and Gas Standard Permit No. 56582,
- ▶ Non-Rule Pollution Control Project (PCP) Standard Permit No. 145904,
- ▶ Permit by Rule (PBR) Registration Nos. 123665 and No. 150297, and
- ▶ Non-registerable Permits by Rule (PBRs).

Operation of the Mont Belvieu CS is authorized by Title V SOP No. O-3065, which was last renewed on November 13, 2019. In addition to the Title V renewal, TETLP is requesting the following changes, which collectively represent a significant revision to the existing Title V SOP:

- ▶ Request a permit shield for “negative applicability” for Title 40 of the Code of Federal Regulations (40 CFR) Part 60, New Source Performance Standards (NSPS) OOOOb.
- ▶ Adding Standard Permit 145904 to the list of NSR authorizations for engines 41001 – 41005.
- ▶ Updating Chapter 117 SOP Index Number and updating NSR authorization for engine 41036.

This Title V SOP permit expires on November 13, 2024. Therefore, this Title V SOP renewal and significant revision application is being submitted in a timely fashion as specified in §122.241(b). This document was prepared in accordance with TCEQ’s SOP Renewal Application Guidance, and the requirements listed in Title 30 of the Texas Administrative Code (30 TAC) §122.132, Application and Required Information for Initial Permit Issuance, Reopening, Renewal, or General Operating Permits.

Chambers County is currently classified as a severe ozone nonattainment area for the 2008 ozone standard and an attainment or unclassified area for all other criteria pollutants. The Mont Belvieu CS is an existing minor source with respect to the Prevention of Significant Deterioration (PSD) program and an existing major source with respect to the Title V Federal Operating Permits program and the nonattainment new source review (NNSR) program. The site is a major source for Title V due to site-wide hazardous air pollutant (HAP), volatile organic compounds (VOC), and nitrogen oxides (NO_x) emissions being greater than 25 tpy.

The enclosed Title V SOP application for the Mont Belvieu CS consists of the following forms and supplemental information:

- ▶ Section 2. Process Description and Flow Diagram
- ▶ Section 3. TCEQ Form OP-1
- ▶ Section 4. TCEQ Form OP-2
- ▶ Section 5. TCEQ Form OP-CRO1
- ▶ Section 6. TCEQ Form OP-SUMR
- ▶ Section 7. TCEQ Form OP-DEL

- ▶ Section 8. TCEQ Form OP-ACPS
- ▶ Section 9. TCEQ Form OP-UA3
- ▶ Section 10. TCEQ Form OP-REQ1
- ▶ Section 11. TCEQ Form OP-REQ2
- ▶ Section 12. TCEQ Form OP-REQ3
- ▶ Section 13. TCEQ Form OP-PBRSUP

2. PROCESS DESCRIPTION AND FLOW DIAGRAM

As natural gas travels through interstate pipelines, gas pressure is lost due to fluid friction inside the pipe's walls. At several points along the pipeline, natural gas must be recompressed to increase pipeline pressure to ensure the natural gas moves at sufficient volumes along the pipeline and delivered to customers at serviceable pressures. This is accomplished by additional compressor stations, like the Mont Belvieu CS. The natural gas enters the compressor station, where it is compressed by up to five (5) reciprocating engines. In general, the primary air emission sources at compressor stations are the compressor engines. Air emissions from these sources consist of typical natural gas combustion by-products: carbon monoxide (CO), nitrogen oxides (NO_x), sulfur dioxide (SO₂), particulate matter (PM), particulate matter with an aerodynamic diameter of 10 microns or less (PM₁₀), particulate matter with an aerodynamic diameter of 2.5 microns or less (PM_{2.5}), volatile organic compounds (VOC), and HAP. The Mont Belvieu CS also includes additional emission sources such as: inlet gas filtration and separation, storage of petroleum-based materials, truck loading operations, emergency electrical generation, heaters, natural gas releases associated with equipment operation and maintenance activities, and equipment piping components. A process flow diagram is included at the end of this section for reference.

The Mont Belvieu CS does not include production, natural gas liquids fractionation, or glycol dehydration equipment as part of its existing operations.

There are five (5) Clark HBA-8 natural gas-fired reciprocating engines [Emission Point Numbers (EPNs) 41001 through 41005]. Each reciprocating engine is rated at 2,050 hp and drives a centrifugal compressor, which boosts the pressure of natural gas in the pipeline. Increasing the pressure of the natural gas allows it to move through the transmission pipeline. The reciprocating engines will use natural gas from the pipeline as fuel. Under the PCP Standard Permit authorization issued on April 27, 2017, TETLP will achieve NO_x, CO, and VOC emissions reductions through the installation of clean burn technologies and oxidation catalysts on all 5 of the existing reciprocating engines [EPNs 41001 through 41005].

In support of the clean burn project, one (1) Cummins GTA28 natural gas-fired reciprocating emergency generator was installed (EPN MBEL ENGEN 04). The emergency generator is a 4-stroke rich-burn engine rated at 701 bhp (450 kW) to provide electrical power during emergency electrical utility outages. An additional emergency generator was installed (EPN MBEL ENGEN 03) to provide power to the building during an outage. The building generator is a 4 stroke lean-burn engine rated at 40 bhp (22 kW). One (1) other emergency generator is also on site (EPN 41036), rated at 63 hp (47 kW).

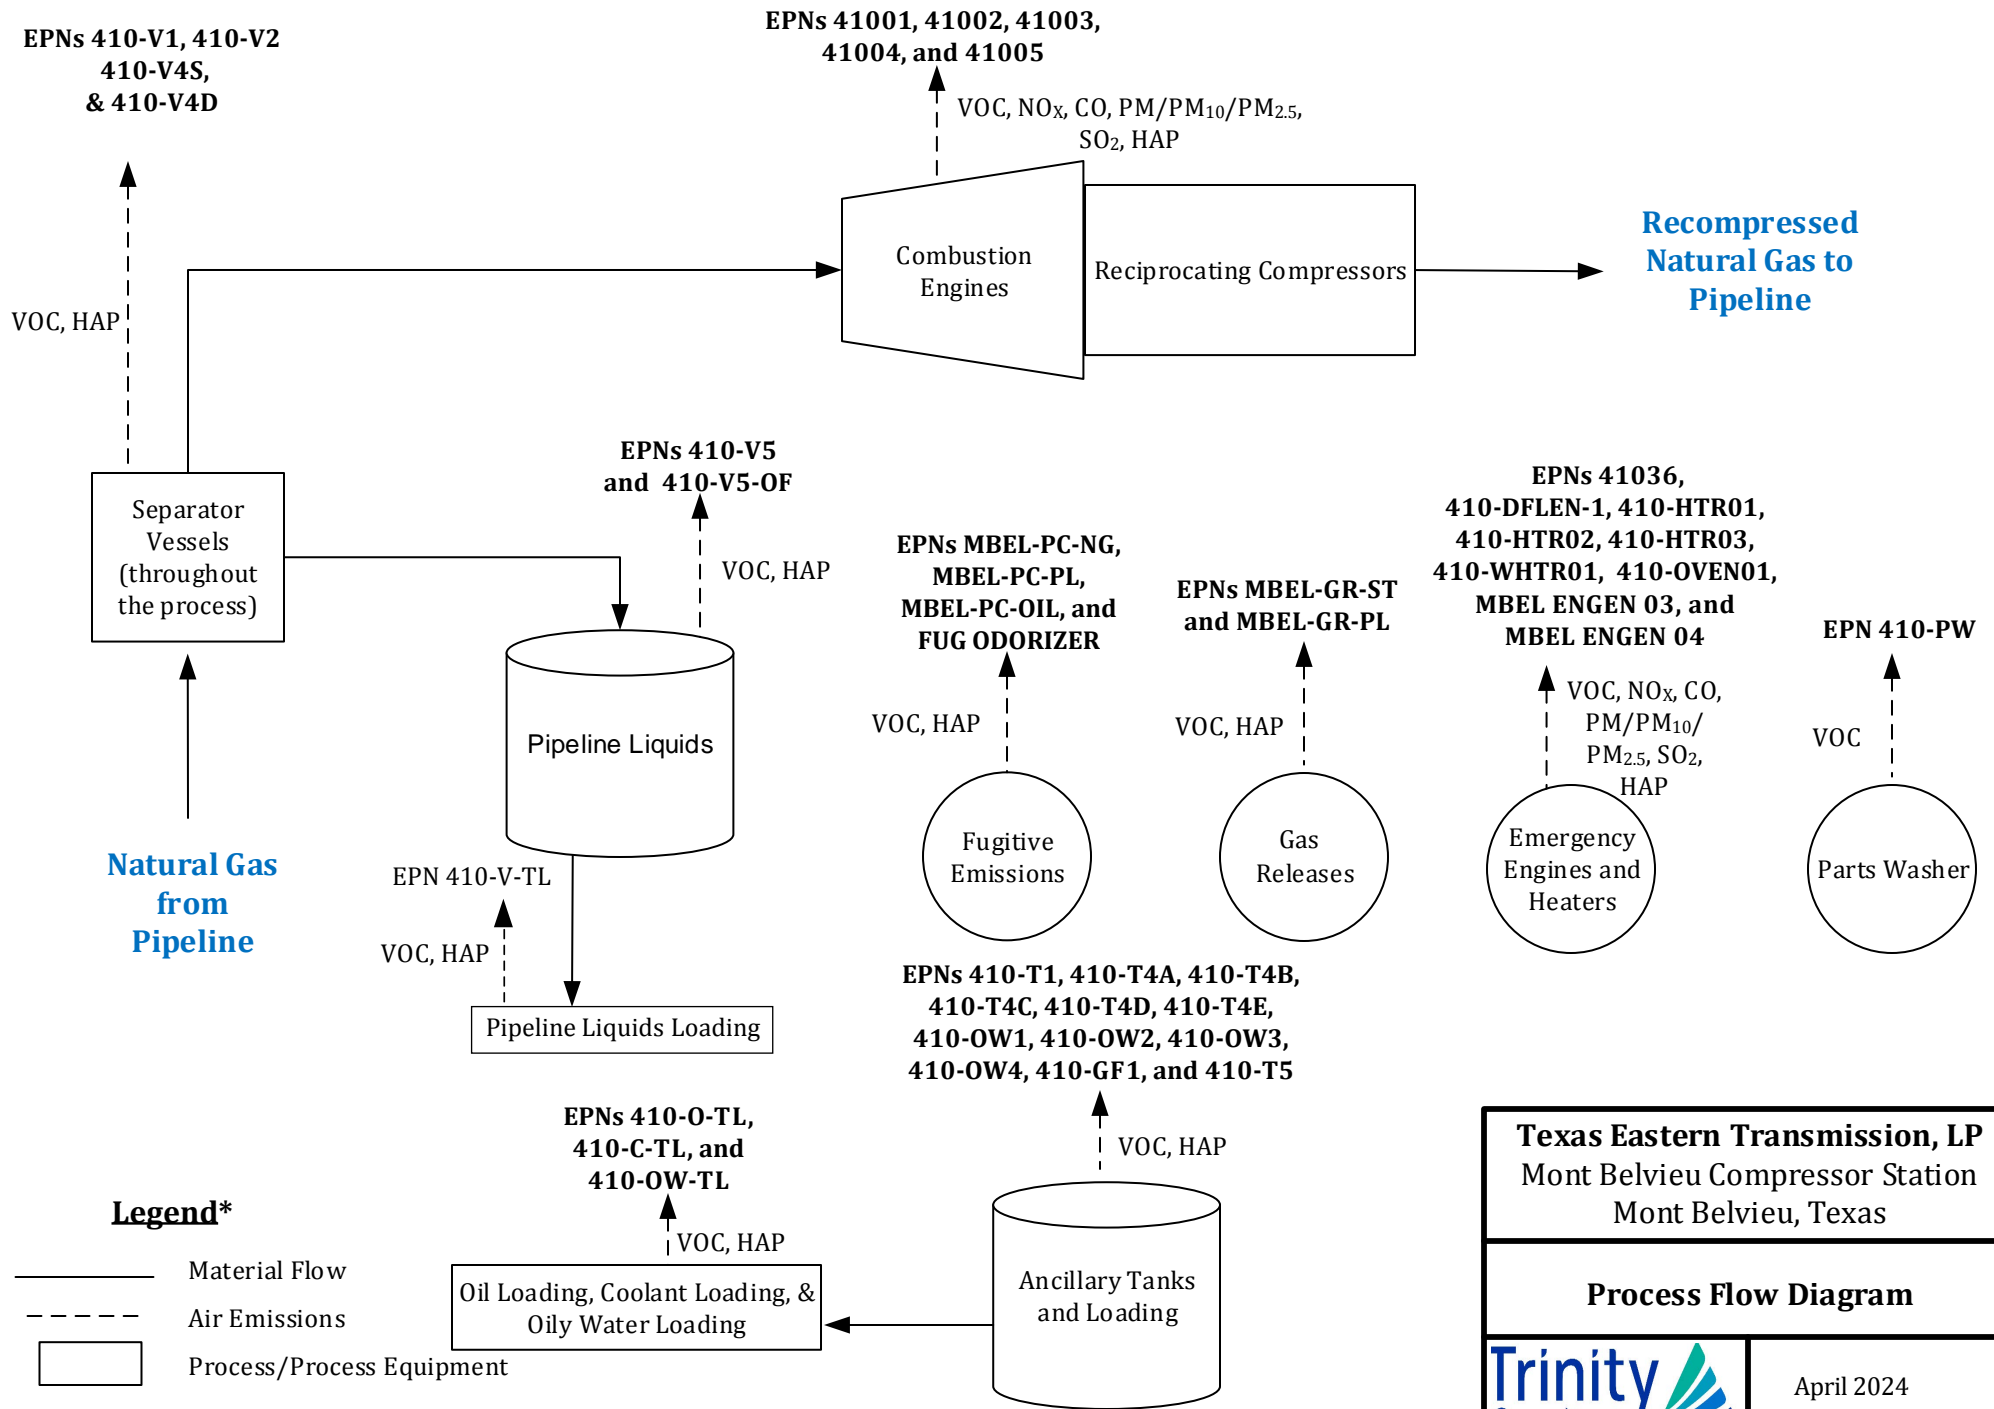

There are several small natural-gas fired heaters at the Mont Belvieu CS (EPNs 410-HTR01, 410-HTR02, 410-HTR03, 410-WHTR01 and 410-OVEN01).

Storage tanks and separator vessels at the Mont Belvieu CS include:

- ▶ Six (6) pipeline liquid separator vessels/storage tanks (EPNs 410-V1, 410-V2, 410-V4D, 410-V4S, 410-V5, and 410-V5-OF)
- ▶ One (1) engine oil storage tank (EPN 410-T1)
- ▶ Five (5) engine coolant storage tanks (EPNs 410-T4A, 410-T4B, 410-T4C, 410-T4D, and 410-T4E)
- ▶ Six (6) miscellaneous storage tanks (EPNs 410-OW1, 410-OW2, 410-OW3, 410-OW4, 410-GF1, 410-T5)

Loading operations associated with the ancillary tanks include engine oil, coolant, and pipeline liquids loading (EPNs 410-O-TL, 410-C-TL, 410-V-TL).

Fugitive emissions at the Mont Belvieu CS include equipment leaks from all piping connections, flanges, and valves on-site (EPN 410-PC-FUG). As well as miscellaneous gas releases associated with maintenance activities (EPNs 410-V1, 410-V2, 410-V4D, 410-V4S, 410-V5, and 410-V5-OF). Additional fugitive components were added from the installation of an odorizer (EPN FUG ODORIZER).

*EPNs correspond to nomenclature used in the New Source Review Permit, Standard Permit, and Permits by Rule and may differ from IDs used in the Title V Permit.
