Hi Gracie,

There were two minor updates made to the WDP after it went through further review.
Please review and provide a response on the two WDP updates by **12pm tomorrow January 24, 2025.**

- Term and Condition 9 was added because it was previously missing. It references the periodic monitoring requirements.
- Term and Condition 10 was customized to add the date of the PBR Supplemental Table that was provided.

Please provide a response even if you have no further comment.

Thank you,

Gaby

Good morning,

After further review from our technical specialist, it was identified that an OP-PBR SUP is required for any PBRs that are registered or claimed at each permit renewal. Please refer to the OP-PBR SUP form instructions in the TCEQ website located here: [TCEQ Form 20875 - OP-PBR SUP](#).

Please submit a complete **OP-PBR SUP** through STEERS as soon as possible or by **December 4, 2024**.

Please notify me when the form has been submitted in STEERS.

Thank you,

Gaby

Gabriel,

We have reviewed your comment below and do not believe an OP-PBRSUP is required. PBR 106.359, as identified on OP-REQ1 Page 87, is associated with the Facility's MSS emissions. As MSS is a source type that does not need to be included in the FOP application, we do not believe an OP-PBRSUP is required.

Please let us know if there are any additional comments or questions.

Good morning Gracie,

Upon further review, it was identified that the OP-PBR SUP form is missing in the full application. The OP-PBR SUP form is required for all renewal applications. Once we receive this, we can continue preparing and reviewing the PNAP before it is sent out.

Please submit an updated OP-PBR SUP through STEERS by Wednesday **November 20, 2024**.

Thank you for your time,

Good morning Gracie,

I have conducted a technical review of the renewal application for DCP Operating Company LP, West Beaumont Gas Plant. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **October 21, 2024**.

Please verify that the site coordinates are correct.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified

application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Gaby

Gabriela,

Please see attached and below for updates to the OP-UA12 submitted previously. Let me know if you have any questions before I upload into STEERS along with the OP-UA12, page 186.

Updates include:

- Unit ID: F-01 construction modification date updated to "11-" on page 188 (pre-dates NSPS OOOO applicability)
- Unit ID: F-01-OOOO added on page 188

I've also added an updated OP-SUMR for your review. The only update being the Unit/Process Applicable form to "OP-UA12" (instead of the originally submitted OP-UA1) for Unit ID F-01-OOOO.

Good morning,

Thank you. The updated OP-UA12, page 186 looks correct.

Upon further review, the following was also noted:

- For the updated OP-UA12, page 188 that was submitted on 8/17/2024 in STEERS, should the unit ID number be F-01-OOOO instead of F-01? The OP-SUMR states that the unit ID, F-01-OOOO, are area fugitives subject to NSPS OOOO. Please verify the correct unit ID number and **submit an updated OP-UA12, page 188** in addition to page 186.

Once we receive these two pages, I will move forward with preparing the working draft permit.

Thank you,

C-03A not an existing unit, and it is not in the OP-SUMR.

The updated OP-UA12, Table 20 has been submitted through STEERS.

No changes to the OP-SUMR are being made, and no OP-2, Table 2 is being provided. The units are pre-existing; they were just typed incorrectly on the form with the last update. Additionally, a thorough review was done as a part of the application process, and no changes in applicability or new sources identified for inclusion in the OP-2, Table 2.

Subject: RE: Technical Review -- FOP O2802/Project 36714, DCP Operating Company LP/West Beaumont Gas Plant

Gabriela,

Please see below for updates. The updated forms have been submitted through STEERS.

- For OP-UA2, Table 2a, page 4, the code submitted for Stationary RICE Type is "4SRB", however in the previous renewal the code was "4SRBR" for remote sources. Please verify the correct code and resubmit OP-UA2, page 4.
 - [An updated OP-UA2, Table 2a is attached. Stationary RICE type has been updated to 4SRBR.](#)
- Verify the correct code for Crankcase in OP-UA2, Table 2c, page 6. There was no code provided, but in the previous renewal, the code submitted for Crankcase was "No".
 - [With the Stationary RICE type updated \(as noted above\), Tables 2b and 2c are no longer required.](#)

Resubmit OP-UA2, Table 4a, page 8 with correct Unit ID Numbers. Unit C-06B is listed while unit C-09B is missing. C-06B is not an existing unit and the OP-SUMR does not indicate it is a new unit.

- [An updated OP-UA2, Table 4a is attached.](#)
- Submit OP-UA12, Table 20 for unit F-01-00001. UA tables have been developed for NSPS 0000 since the last renewal. Submitting F-01-00001 in OP-UA1 is not necessary.
 - [An OP-UA12, Table 20 is attached.](#)

Thanks,

Gracie Nguyen

Good afternoon,

I have conducted a technical review of the renewal SOP application and found that additional information is needed.

Please submit the following by **August 16, 2024**.

- For OP-UA2, Table 2a, page 4, the code submitted for Stationary RICE Type is "4SRB", however in the previous renewal the code was "4SRBR" for remote sources. Please verify the correct code and resubmit OP-UA2, page 4.
- Verify the correct code for Crankcase in OP-UA2, Table 2c, page 6. There was no code provided, but in the previous renewal, the code submitted for Crankcase was "No".
- Resubmit OP-UA2, Table 4a, page 8 with correct Unit ID Numbers. Unit C-06B is listed while unit C-09B is missing. C-06B is not an existing unit and the OP-SUMR does not indicate it is a new unit.
- Submit OP-UA12, Table 20 for unit F-01-00001. UA tables have been developed for NSPS 0000 since the last renewal. Submitting F-01-00001 in OP-UA1 is not necessary.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information is required. After final review, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

Thank you,

Gaby

Subject: Technical Review -- FOP O2802/Project 36714, DCP Operating Company LP/West Beaumont Gas Plant

Good afternoon,

I have been assigned to the Federal Operating Permit (FOP) initial renewal application of Permit No. O2802 for DCP Operating Company LP, West Beaumont Gas Plant. This application has been assigned Project No. 36714. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Please review the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Gaby

Biography

State Representative Christian Manuel is a native of Southeast Texas. Born in Nederland, he and his family are rooted in Port Arthur. He is the eldest of six siblings, four brothers and two sisters. Rep. Manuel's passion for politics is deeply ingrained in his life, thanks to his family's involvement and leadership in political activism. As a child, he grew up engaged in politics with the understanding of its impact on the community and state.

Representative Manuel has nearly two decades of professional experience in Texas state politics. As a veteran staffer, his role was pivotal in ensuring triumphs for the district. He started working for former State Representative Joseph Deshotel at the age of eighteen. Over time he progressed to Chief of Staff—a position he held for a decade. He gained the ability to maneuver within the complicated Texas political scene of congressmen, lobbyists, and industry experts with a sagacity that only comes with years of hard work and dedication.

In his first session as State Representative, he was recognized as Freshman of the Year by the Texas Legislative Black Caucus as he sent six bills to the Governor's desk. He successfully passed into law HB 3250/ HB 5012, which allows Beaumont to receive certain tax revenue derived from a hotel and convention center project and to pledge certain tax revenue for the payment of obligations related to the project. This legislation will boost the local economy by bringing in tourism revenue, increasing local business activity, creating job opportunities for residents, and generating tax revenue. Overall this will contribute to the development and appeal of the district, benefiting the local community while providing economic growth for Southeast Texas. Rep. Manuel has worked diligently to bring home victories for House District 22 and will continue to work tirelessly to help execute legislation for Jefferson County.

The following sections provide a process description, a summary of pre-construction authorizations, and potentially applicable State and Federal Requirements in support of this application.

SECTION 2.0 PROCESS DESCRIPTION

The Facility is designed to remove carbon dioxide (“CO₂”) and natural gas liquids (“NGLs”) from an inlet gas stream. Wet field gas enters the plant through an inlet separator where entrained liquids are removed from the gas stream. The liquids are routed to a flash tank separator (V-255) where they are separated into hydrocarbon liquid and produced water. Flash gas from V-255 is routed to a vapor recovery unit (“VRU”) where it is compressed and routed to either the plant inlet or the gathering system. Produced water from V-255 is routed to a knockout drum (V-315). Hydrocarbon liquid from V-255 is routed through a filter to the condensate stabilizer system to reduce the Reid Vapor Pressure (“RVP”) of the condensate to a level required for sale of the condensate to prospective customers. Light end hydrocarbons from the condensate stabilizer system are compressed by a VRU and routed back to the plant inlet.

Stabilized condensate from the condensate stabilizer system is routed to process vessel V-104 for temporary storage. Process vapors and working and breathing losses from V-104 are routed to the process flare (EPN: FLARE-1). Condensate is loaded out to trucks as required for shipment to customers. Vapors generated during loading of condensate to tank trucks are captured with an efficiency of 98.7% and sent to the flare (EPN: FLARE-1). Uncollected vapors from truck loading are emitted as fugitives at the unloading location (EPN: TL-1).

After liquids separation, the inlet gas is compressed by natural gas fired internal combustion engines (EPNS: C-05A and C-07B) driving natural gas compressors. The gas stream is dehydrated in a mole sieve dehydrator. The mole sieve beds must be periodically regenerated to remove the absorbed water. A portion of the dehydrated residue gas is heated and used for mole sieve bed regeneration. The regeneration gas is heated by the process heater (EPN: H-01). The wet regeneration gas flows through a flash separator and is then blended back into the residue gas stream.

After dehydration the inlet gas enters the cryogenic unit, where the NGLs are removed by cooling and expanding the inlet gas stream, thereby condensing the NGL components and producing a high methane content residue gas stream. The process utilizes a propane refrigeration system to cool the gas stream and improve NGL recovery. The propane refrigerant is compressed using natural gas fired internal combustion engines (EPNS: C-01A and C-02A) to drive the gas compressors. The cool gas stream from the cryogenic unit is sent to a demethanizer tower for further separation into gas (primarily methane) and NGL. The residue gas stream is recompressed using natural gas fired internal combustion engines (EPNS: C-08B and C-09B) driving natural gas compressors.

The NGL stream exits the bottom of the demethanizer tower and is passed through a diethanolamine (“DEA”) contact tower for sweetening (removal of CO₂) prior to being sold via pipeline as NGL product. After CO₂ removal, the rich amine is passed through a hot oil heat exchanger where the DEA is heated and the CO₂ is driven off and released through the amine still vent (EPN: AM-01). In addition to the CO₂, a small amount of volatile organic compounds (“VOCs”) present in the DEA stream are driven off and emitted from the still vent. The hot oil used to regenerate the DEA is heated by a 26.25 million British Thermal Units per hour (“MMBtu/hr”) process heater (EPN: H-01).

Figure 2 contains a process flow diagram for the Facility.

SECTION 3.0 CONSTRUCTION PERMIT AUTHORIZATIONS

The Facility is authorized by TCEQ Standard Permit Registration (“SP”) No. 80778, issued on August 4, 2016.

Maintenance, Startup, and Shutdown (“MSS”) operations are authorized by unregistered Permit by Rule (“PBR”) 106.359. A detailed listing of the authorizations can be found at the end of the OP-REQ1 form.

SECTION 4.0 STATE AND FEDERAL REGULATORY SUMMARY

The following sub sections provide a summary of State and Federal Regulatory applicability.

SECTION 4.1 STATE REGULATORY APPLICABILITY

Section 4.1.1 Preconstruction Authorization

The Facility is authorized by SP #80778, issued on February 5, 2007. The most recent renewal date of the SP is August 4, 2016. The Facility currently complies with the applicable terms and conditions of the SP.

Section 4.1.2 30 TAC 101 Applicability

The Facility is subject to the Emissions Inventory Requirements of 30 TAC §101.10 as the account is a Major source of criteria pollutants and holds an active Title V SOP. Actual Facility emissions will be evaluated and reported as appropriate.

Section 4.1.3 30 TAC 111 Applicability

The Facility is subject to the visible emissions requirements of 30 TAC §111.111 and will not exceed the applicable opacity limits for each respective source.

Section 4.1.4 30 TAC 115 Applicability

The Facility is subject to the storage vessel working pressure requirements of 30 TAC §115.112 and will comply with these requirements.

Section 4.1.5 30 TAC 116 Applicability

The Facility will comply with the requirements of 30 TAC § 116.611, §116.615, and §116.620.

Section 4.1.6 30 TAC 117 Applicability

The Facility is located in the Beaumont-Port Arthur Nonattainment area and will comply with the compliance schedule requirements according to 30 TAC § 117.9000.

Section 4.1.7 30 TAC 122 Applicability

As the Facility meets the definition of a “Major source” per 30 TAC §122.10 (13)(D), it is applying for a Federal Operating Permit (FOP) renewal.

Compliance Assurance Monitoring (CAM) Applicability

CAM is required for any air emission source operating under an SOP if the source meets all of the following criteria, as described in Title 30 TAC 122.604:

- 122.604(b)(1) - The emission unit is subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement.
- 122.604(b)(2) - The emission unit uses a control device to achieve compliance with the emission limitation or standard.
- 122.604(b)(3) - The emission unit has pre-control device potential to emit greater than or equal to the amount in tons per year required for a site to be classified as a major source.

Even if the three criteria above are met, CAM does not apply to the following:

- 122.604(c)(1) - Emission limitations or standards proposed by the EPA after November 15, 1990, under FCAA, 111 (Standards of Performance for New Stationary Sources) or 112 (Hazardous Air Pollutants).
- 122.604(c)(2) - Emission limitations or standards under FCAA, Title VI (Stratospheric Ozone Protection).
- 122.604(c)(3) - Emission limitations or standards under FCAA, Title IV (Rain Program).
- 122.604(c)(4) - Emission limitations or standards that apply solely under an emissions trading program approved or promulgated by the EPA under the FCAA that allows for trading emissions.
- 122.604(c)(5) Emission caps that meet the requirements specified in 40 Code of Federal Regulations (CFR) 70.4(b)(12) (State Program Submittals and Transition).
- 122.604(c)(6) - Emission limitations or standards for which an applicable requirement specifies a continuous compliance determination method, unless the applicable compliance method includes an assumed control device emission reduction factor that could be affected by the actual operation and maintenance of the control device.
- 122.604(c)(7) - Other emission limitations or standards specified as exempt by the EPA.

The Facility is not subject to the CAM requirements of §122.604 as follows:

1. E-07B, C-08B, C-09B – pre-control device NO_x emissions are greater than major source levels – subject.

2. V-104 – pre-control device VOC emissions are more than major source levels – subject.

PM Applicability

PM applies to an emission unit at a site provided the emission unit is subject to an emission limitation or standard in an applicable requirement, as described in Title 30 TAC 122.604. PM does not apply to emission limitations or standards where the applicable requirement includes sufficient monitoring that will provide reliable data for the relevant time period associated with compliance with the applicable requirement, as described in Title 30 TAC 122.602(b). Emissions limitations or standards that do not require PM include, but are not limited to, the following:

- 122.602(b)(1) - Emission limitations or standards proposed by the EPA after November 15, 1990 under FCAA, 111 (Standards of Performance for New Stationary Sources) or 112 (Hazardous Air Pollutants).
- 122.602(b)(2) - Emission limitations or standards under FCAA, Title IV (the Acid Rain Program).
- 122.602(b)(3) - Emission limitations or standards for which an applicable requirement specifies a continuous compliance determination method, unless the applicable compliance method includes an assumed control device emission reduction factor that could be affected by the actual operation and maintenance of the control device.
- 122.602(b)(4) - Other emission limitations or standards specified as exempt by the EPA.

There are no applicable sources at the Facility.

SECTION 4.2 POTENTIALLY APPLICABLE FEDERAL REGULATIONS

Section 4.2.1 40 CFR Part 60 Subpart A - General Provisions

The General Provisions of the New Source Performance Standards (NSPS) apply to all sources with applicable NSPS Subparts and detail the general notification, recordkeeping, testing, monitoring, and reporting requirements that are common to affected NSPS sources. Individual NSPS Subparts detail the specific applicability of the Subpart A General Provisions.

Specific control device requirements pertaining to flares are detailed in 40 CFR §60.18(b).

Section 4.2.2 40 CFR Part 60 Subpart Dc – Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units

The heater (FIN H-01) was manufactured after June 9, 1989 and has a maximum design heat input capacity of 2.9-29 megawatts (MW) and is subject to the requirements of this rule. DCP will comply with the applicable requirements as discussed in 40 CFR §60.40c(a).

Section 4.2.3 40 CFR Part 60 Subpart Kb – Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels)

The DEA tank (TK-02), antifreeze (TK-320), hot oil storage (TK-03) and lube oil tanks (TK-04, TK-319, TK-321, TK-322) have a storage capacity less than 75 cubic meters (“m³”) [19,800 gal]. Therefore, in accordance with 40 CFR §60.110b(a), this subpart is not applicable. The used lube oil/stormwater storage tank (TK-01) has a storage capacity greater than 75 m³. However, the contents of tank TK-01 have a maximum true vapor pressure of the VOC fraction (based on Tanks 4.09d) of 0.0731 kPa (equal to 0.0106 psia) which is less than 27.6 kPa. Therefore TK-01 is not subject to this subpart.

The stabilized condensate storage tank (FIN V-104) has a storage capacity greater than 75 cubic meters (m³) and stores volatile organic liquid with a maximum true vapor pressure greater than 76.6 kilopascals (“kPa”). Therefore, Subpart Kb is applicable and the tank must be equipped with a closed vent system and control device or similar, per 40 CFR §60.112b(a)(3). Tank V-104 is equipped with a hard piped connection to the flare which meets the requirements of §60.18 and therefore meeting this requirement.

Section 4.2.4 40 CFR Part 60 Subpart KKK - Equipment Leaks of VOC From Onshore Natural Gas Processing Plants

Fugitive equipment leaks at the Facility are subject to this Subpart. The Facility will comply with the requirements of Subpart KKK.

Section 4.2.5 40 CFR Part 60 Subpart LLL - Standards of Performance for SO₂ Emissions

The amine sweetening unit was constructed after January 20, 1984 and before August 23, 2011 and the resulting acid gas is vented. However, the unit has a design capacity less than 2 long tons/day (LT/D) and will comply with recordkeeping requirements of §60.647(c).

Section 4.2.6 40 CFR Part 60 Subpart JJJJ - Stationary Spark Ignition Internal Combustion Engines

The compressor engines (FINs C-01A, C-02A, C-05A, C-07B, C-08B, C-09B) were constructed prior to July 1, 2007 and are therefore not subject to the requirements of this rule.

Section 4.2.7 40 CFR Part 60 Subpart OOOO - Crude Oil and Natural Gas Production, Transmission and Distribution

Fugitive components constructed in 2014 were constructed after the applicable date of August 23, 2011 and before September 18, 2015. Therefore, these components are subject to this subpart and comply through a fugitive monitoring program as a new "unit".

Section 4.2.8 40 CFR Part 60 Subpart OOOOa - Crude Oil and Natural Gas Facilities

There are no units at the Facility constructed on or after September 18, 2015 or on or before December 6, 2022; therefore, the Facility is not subject to this subpart.

Section 4.2.9 40 CFR Part 61 Subpart A – General Provisions

The Facility does not operate sources subject to the National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 61.

Section 4.2.10 40 CFR Part 63 Subpart A – General Provisions

The Facility does not operate sources subject to the National Emission Standards for Hazardous Air Pollutants under 40 CFR Part 63.

Section 4.2.11 40 CFR Part 63 Subpart HH - Oil and Natural Gas Production Facilities

The Facility is an Area source of Hazardous Air Pollutants (HAP) and does not operate a triethylene glycol (TEG) dehydration unit. Therefore, the Facility is not subject to this Subpart.

Section 4.2.12 40 CFR Part 63 Subpart ZZZZ - Stationary Reciprocating Internal Combustion Engines

The Facility operates reciprocating internal combustion engines that are subject to this Subpart. Compressor engines (FINs C-01A, C-02A, C-05A, C-07B, C-08B, C-09B) will comply with the requirements of Subpart ZZZZ for existing RICE located at an Area source of HAPs, therefore consistent with 40 CFR 63.6590 (c). There are no further requirements that apply to the engines.

Section 4.2.13 40 CFR Part 63 Subpart DDDDD - Industrial, Commercial, and Institutional Boilers and Process Heaters Major Sources

The Facility is an Area source of HAPs, therefore this Subpart does not apply.

Section 4.2.14 40 CFR Part 63 Subpart JJJJJ - Industrial, Commercial, and Institutional Boilers Area Sources

The Facility is an Area source of HAPs but operates no units subject to this Subpart.

Section 4.2.15 40 CFR Part 64 Compliance Assurance Monitoring

The Facility is subject to the CAM requirements as discussed in the 30 TAC 122 applicability section above.

Section 4.2.16 40 CFR Part 68 Chemical Accident Prevention Provisions

The Facility is not subject to the Chemical Accident Prevention Provisions of 40 CFR Part 68 as the Facility does not contain more than a threshold quantity of a regulated substance in a process.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

June 11, 2024

THE HONORABLE ROBERT NICHOLS
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 36714
Permit Number: O2802
DCP Operating Company, LP
West Beaumont Gas Plant
Beaumont, Jefferson County
Regulated Entity Number: RN100542349
Customer Reference Number: CN601229917

Dear Senator Nichols:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.119444,30.010833&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Robert Nichols
