Good afternoon,

During the QAQC review, we noticed that a few issues in the permit:

- In the Permit, there was no indication of Chapter 111 term. Please provide an updated OP-REQ1 that indicates that the facility complies with Chapter 111. The facility must have 111.111(a)(1)(B) AND/OR unit specific requirements for 111.111(a)(1)(A), (a)(1)(B) and/or (a)(1)(C).
- OP-PBR SUP: There are several PBRs listed in the permit that have not been identified on the OP-PBR SUP. Please provide an updated OP-PBR SUP form with all the PBRs listed in the permit.

Please provide the information by **February 4, 2025**

Good afternoon,

I have conducted a technical review of *renewal* application for *Sekisui Specialty Chemicals America LLC/Pasadena Plant*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **January 21, 2025**.

Additionally, the following deficiencies has been identified:

- In Unit ID: 900-10.10 - Index Number: 634F-10.10 (OP-UA03 Form), Please provide the missing information in Table 21d (Slotted Guidepole) regarding this index number.
- In Unit ID: 900-10.20 - Index Number: 634-GRPPTKS-02 (OP-UA03 Form), Please provide the missing information Page 56 regarding this index number.

Note- Some units/modifications/requested items where not include in the Working Draft Permit due to deficiencies being found in the application/permit.

Please review the second portion of the “SOP Technical Review Fact Sheet” located at [http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title V/sop_wdp_factsheet.pdf](http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf). This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This

submission information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Subject: Technical Review - FOP 02308/Project 36728 Sekisui Specialty Chemicals America LLC/Pasadena Plant

Ms. Jenna Timtiman:

I have been recently assigned to the Federal Operating Permit (FOP) renewal application of Permit No. 02308 for Sekisui Specialty Chemicals America LLC/Pasadena Plant. This application has been assigned Project No. 36728. Please address all correspondence pertaining to this permit application, including any updates, to me via email and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to the [OP-PBRSUP](#) and [OP-REQ1](#) form instructions.

Please review the “[SOP Technical Review Fact Sheet](#)”. This guidance contains important information regarding the review process and application update procedures. Subject: Technical Review - FOP O2308/Project 36728 Sekisui Specialty Chemicals America LLC/Pasadena Plant

Ms. Jenna Timtiman:

I have been recently assigned to the Federal Operating Permit (FOP) renewal application of Permit No. O2308 for Sekisui Specialty Chemicals America LLC/Pasadena Plant. This application has been assigned Project No. 36728. Please address all correspondence pertaining to this permit application, including any updates, to me via email and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to the [OP-PBRSUP](#) and [OP-REQ1](#) form instructions.

Please review the “[SOP Technical Review Fact Sheet](#)”. This guidance contains important information regarding the review process and application update procedures. Contact me if you

have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Periodic Monitoring Text:

A common way to control VOC emissions is to route emissions to a boiler or process heater with a design heat input capacity of 44 MW or greater with minimum temperatures of 1100 °C and residence times greater than one second. Boilers and process heaters with the stated design have demonstrated to meet 98% reduction efficiency; therefore, it is only necessary to document the period of operation of the control equipment. Additionally, in the October 21, 1983, preamble to 40 CFR Part 60, Subpart III, (48 FR 48945), the EPA determined that installing a steam generating unit, with a design heat input capacity of 44 MW or greater, to control VOC emissions, is an acceptable means of demonstrating compliance with 40 CFR Part 60, Subpart III and waived the requirement for a performance test on such devices. Monitoring the period of operation of a boiler/process heater greater than 44 MW is commonly required in federal rules, including: 40 CFR Part 60, Subparts III and NNN; 40 CFR Part 61, Subpart BB; 40 CFR Part 63, Subpart G.

Periodic Monitoring Text:

It is widely practiced and accepted to monitor the VOC concentration at the outlet of a control device by use of a portable analyzer with procedures such as EPA Test Method 25A or a VOC CEMS. The measured concentration along with stack flow rate or AP-42 factors and fuel consumption records may be used to demonstrate compliance with an underlying emission limit or standard. Outlet VOC concentration has been used as an indicator of VOC emissions in many federal rules including 40 CFR Part 60, Subpart III, 40 CFR Part 60, Subpart NNN, 40 CFR Part 60, Subpart RRR, 40 CFR Part 61, Subpart BB, 40 CFR Part 61, Subpart FF, 40 CFR Part 63, Subpart R, 40 CFR Part 63, Subpart DD, and 40 CFR Part 63, Subpart HH.

I. Identifying Information

Periodic Monitoring Text:

It is widely practiced and accepted to use work practice as a monitoring option to demonstrate compliance. Preventive maintenance and visual inspections of control equipment, as recommended by the manufacturer, conducted by the owner or operator can ensure that the unit is operating properly. The work practice requirements prescribe that preventive maintenance and/or visual inspections be performed and recorded in a log. This option assures that the owner or operator is adequately maintaining the control equipment.

I. Identifying Information

Periodic Monitoring Text:

To comply with the applicable emission limit, a minimum water flow rate must be supplied to the scrubber to absorb a given amount of VOC in the gas streams, given the size of the tower and height of the stack. The liquid to gas (L/G) ratio is a key operating parameter of the scrubber. If the L/G ratio decreases below the minimum, sufficient mass transfer of the pollutant from the gas phase to the liquid phase will not occur. The minimum liquid flow required to maintain the proper L/G ratio at the maximum gas flow and vapor loading through the scrubber can be determined.

The deviation limit was selected based on engineering calculations using ASPEN® process modeling software. Computer modeling of the scrubber system was performed to demonstrate that at a minimum liquid flow of 60 gallons per hour, the scrubber achieves the 99% collection efficiency.

It is widely practiced and accepted to monitor the VOC concentration at the outlet of a control device by use of a portable analyzer with procedures such as EPA Test Method 25A or a VOC CEMS. The measured concentration along with stack flow rate or AP-42 factors and fuel consumption records may be used to demonstrate compliance with an underlying emission limit or standard. Outlet VOC concentration has been used as an indicator of VOC emissions in many federal rules including 40 CFR Part 60, Subpart III, 40 CFR Part 60, Subpart NNN, 40 CFR Part 60, Subpart RRR, 40 CFR Part 61, Subpart BB, 40 CFR Part 61, Subpart FF, 40 CFR Part 63, Subpart R, 40 CFR Part 63, Subpart DD, and 40 CFR Part 63, Subpart HH.

Periodic Monitoring Text:

It is widely practiced and accepted to use work practice as a monitoring option to demonstrate compliance. Preventive maintenance and visual inspections of control equipment, as recommended by the manufacturer, conducted by the owner or operator can ensure that the unit is operating properly. The work practice requirements prescribe that preventive maintenance and/or visual inspections be performed and recorded in a log. This option assures that the owner or operator is adequately maintaining the control equipment.

I. Identifying Information

Periodic Monitoring Text:

To comply with the applicable emission limit, a minimum water flow rate must be supplied to the scrubber to absorb a given amount of VOC in the gas streams, given the size of the tower and height of the stack. The liquid to gas (L/G) ratio is a key operating parameter of the scrubber. If the L/G ratio decreases below the minimum, sufficient mass transfer of the pollutant from the gas phase to the liquid phase will not occur. The minimum liquid flow required to maintain the proper L/G ratio at the maximum gas flow and vapor loading through the scrubber can be determined.

The deviation limit was selected based on engineering calculations using ASPEN® process modeling software. Computer modeling of the scrubber system was performed to demonstrate that at a minimum liquid flow of 60 gallons per hour, the scrubber achieves the 99% collection efficiency.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

June 18, 2024

THE HONORABLE CAROL ALVARADO
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 36728
Permit Number: O2308
Sekisui Specialty Chemicals America, LLC
Pasadena Plant
Pasadena, Harris County
Regulated Entity Number: RN103012183
Customer Reference Number: CN603507849

Dear Senator Alvarado:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.200277,29.731666&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Carol Alvarado
