Hello,

Mr. Moran is the Responsible Official, but an OP-DEL was submitted with the application to assign Mr. Farkis as the Duly Authorized Representative so he could also sign/submit FOP documents.

Does that authorization not apply until the permit is actually issued?

Stepanie,

My apologies for the inconvenience. Our system is informing us that Mr. Bryant Moran is only authorized to sign the OP-CRO1. It could be how it was set up for the initial submittal by whom ever created the application. Please resubmit the OP-CRO1 with his signature to avoid any further delay in the processing of this permit.

Okay, apologies for any confusion on my part. I'm not able to submit the updates via STEERS since I'm a consultant, is that correct? If Mr. Farkis submits the attachments via STEERS, then they are acceptable. Otherwise the original signed OP-CRO1 has to be mailed. Am I on the right track now?

Received, thank you.

We cannot accept the OP-CRO1 provided, it does not include the original signature.

Please note that prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form is required which includes the date range of all submitted application documentation that was not previously certified.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Good morning,

I've reviewed the WDP with the client and the only edit we noted is on the "New Source Review Authorization References" table on page 13.

The Issuance Date for Authorization No.: 72887 is now 02/07/2025 instead of 11/30/2017. The facility's NSR permit was in the process of being renewed/amended when this Title V application was submitted and has since been issued.

New Source Review Authorization References

The New Source Review authorizations listed in the table below are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Title 30 TAC Chapter 116 Permits, Special Permits, and Other Authorizations (Other Than Permits By Rule, PSD Permits, or NA Permits) for the Application Area.

Good afternoon, Mr. John,

I have conducted a technical review of *initial issuance* application for *Avanzar Interior Technologies, Ltd., Avanzar Interior Technologies Building 41 Expansion*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **May 9, 2025**.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

June 24, 2024

THE HONORABLE ROLAND GUTIERREZ
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Initial Issuance Application
Project Number: 36758
Permit Number: O4651
Avanzar Interior Technologies, Ltd.
Avanzar Interior Technologies Building 41 Expansion
San Antonio, Bexar County
Regulated Entity Number: RN105885446
Customer Reference Number: CN602966723

Dear Senator Gutierrez:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-98.32536,29.15384&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Roland Gutierrez

Texas Commission on Environmental Quality

Public Involvement Plan Form for Permit and Registration Applications

The Public Involvement Plan is intended to provide applicants and the agency with information about how public outreach will be accomplished for certain types of applications in certain geographical areas of the state. It is intended to apply to new activities; major changes at existing plants, facilities, and processes; and to activities which are likely to have significant interest from the public. This preliminary screening is designed to identify applications that will benefit from an initial assessment of the need for enhanced public outreach.

All applicable sections of this form should be completed and submitted with the permit or registration application. For instructions on how to complete this form, see TCEQ-20960-inst.

Section 1. Preliminary Screening

New Permit or Registration Application

New Activity - modification, registration, amendment, facility, etc. (see instructions)

If neither of the above boxes are checked, completion of the form is not required and does not need to be submitted.

Section 2. Secondary Screening

Dear Mr. Bowers,

The Avanzar Interior Technologies, LTD (Avanzar), facility in San Antonio, Texas, is in the process of renewing and amending NSR Permit #72887. Once approved and issued, the federally enforceable allowable emissions rate for VOC will exceed 100 tons per year, which is the current VOC major source threshold for Bexar County.

Avanzar is submitting this initial application for a Federal Operating (Title V) permit to ensure the permit review process is underway before the Permit #72887 amendment is issued. Avanzar understands that a federal operating permit application must be submitted before operating any change that results from the amendment of Permit #72887.

IV. PROCESS DESCRIPTION

Overview of Avanzar Interior Technologies Operations

Avanzar Interior Technologies, LTD is an international automotive manufacturing and assembly company in San Antonio, Texas. Avanzar specializes in automotive interior parts and is an on-site supplier of seat systems, door systems and overhead systems for the vehicles manufactured at the Toyota Motor Manufacturing plant in San Antonio, Texas.

A broad overview of operations at the Avanzar facility include:

Plastic Parts Manufacturing

- As part of the overall manufacturing process, Avanzar produces plastic parts
- These parts are produced by injection molding equipment
- The plastic pellets used in the injection molding process are received in totes or other containers and loaded into the injection molding equipment.

The injection molding equipment is authorized by Permit by Rule 106.394 – Plastic Compression and Injection Molding.

Foam Production

- Manufactures polyurethane foam pieces that are used in the vehicle seat cushions and backrests
- Foam manufacturing process involves:
 - Preparation of foam molds
 - Mixing of various raw materials (TOI, polyol, diethanolamine) within the foam molding equipment
 - Curing of the foam and storage of the foam product
- Raw materials are stored in several aboveground tanks located in the tank room adjacent to the foam production area.

Emissions from this operation are VOCs from the various materials used in the foam manufacturing step. A more detailed description of foam production is included in the Foam Production Process Description section below.

Vehicle Interior Overhead Assembly

- Produces the overhead system that is installed on the interior portion of a vehicle's roof
- System includes the fabric material (headliner) and miscellaneous components (i.e., wire harness, dome lamp visors)

No VOCs are emitted during this assembly process.

Vehicle Door Assembly

- The vehicle door assembly area involves the assembly of the interior portion of a vehicle door
- Process does not involve the metal portion of the door

- Area includes equipment that allows for the assembly of the weather strip, upper panel assembly, kimi-komi ornament handle, armrest, map pocket and bracket to the lower door panel

No VOCs are emitted during this assembly process. The only cleaning product used during this operation is a biodegradable, nonvolatile cleaner.

Vehicle Seat Assembly

- The vehicle seat assembly area involves the assembly of the foam seat to the metal frame

Small amounts of solvent will be manually applied for cleaning during the assembly operations. These operations meet the requirements of a de minimis facility or source found in 30 TAC 116.119 (a)(1) - Manual application of cleaning or stripping solutions or coatings. Manual application includes application using brushes, cloth, pads, sponges, droppers, tube dispensing equipment, or spray bottles and pump-up sprayers without aerosol propellants.

Foam Production Process Description

Since the primary source of potential air pollutant emissions will occur from the use of mold release materials and the actual foam manufacturing process, a more detailed explanation of these production processes are outlined below. The foam manufacturing process involves the preparation of foam molds, the mixing of various raw materials (TDI, MDI, polyol, diethanolamine) within the foam molding equipment, curing of the foam, crushing of the foam and storage of the foam product. No blowing agents or cleanup materials are used in this process.

The existing foam line / operation contains 52 mold carriers, as shown in Figure 1. A mold carrier represents a mold that can produce a foam product.

FIGURE 1 – Foam Parts Racetrack

The foam line / operation involves:

- Manufacturing polyurethane foam pieces that are used in the vehicle seat cushions and backrests;
- Preparation of foam molds (use of mold release materials);
- Mixing of raw materials (80/20 blend of TDI/MDI, MDI, polyol, diethanolamine, catalyst and surfactants} within the foam molding equipment; and
- Curing of the foam and storage of foam product.

Raw materials such as polyols and isocyanates are stored in several aboveground vertical storage tanks located in the indoor tank room adjacent to the foam production area. Raw materials are received by truck and then pumped into the individual storage tanks. The remaining raw materials (mold releases, catalysts, surfactants) are received in totes, drums or pails. Mold releases are used to prepare the molds, while foam product raw materials are pumped to the foam molds and mixed at a certain ratio to achieve the desired foam product. There are 52 molds carriers on the foam operation where raw materials can be sent from these tanks to produce the foam product.

The exhaust vents on the indoor storage tanks are connected to piping that is designed to take any displaced vapors from these tanks (primarily during the loading process) and send those displaced vapors to a drum containing carbon. The air passing through the drum is then vented external to the building. The carbon is used to capture any isocyanates prior to exhausting to the outside environment. The drum containing carbon is employed by Avanzar to avoid any isocyanates being released into the building's work areas.

The process of making foam can be simplified to the following steps:

Step 1 - Molds are prepared in the mold application area where a mold release material is manually sprayed on to the mold using high-volume low-pressure spray (HVLP) applicators. The spray applicators are supported by a material feed system that provides the mold release material to the spray applicators. The mold release materials utilized in the mold preparation process contain VOCs and their purpose is to provide a protective coating on the mold that allows for the actual foam product to be easily removed from the mold itself

Step 2 - After the mold release material is applied the operation moves to the next step where a specific mix of raw materials are piped from the raw material storage tanks and injected into the sealed mold and a chemical reaction occurs that results in a foam part being produced. The mold production system has 52 carriers or mold stations that can be used to make the foam product. No blowing agents are used in the foam manufacturing process.

Step 3 - Once the foam parts have been foamed, the next step involves removing those foam parts from the mold. Foam parts are removed from the mold and then sent to the crushing operation. The crushing operation is used to apply pressure to each molded part, which opens air pockets in the foam so that the desired thickness can be achieved. The method to be used to open the foam cells involves "crushing" the foam by passing it through a set of rollers. If the foam is not crushed (i.e., pressed) it will not maintain its shape and will collapse.

Step 4 – Once foam parts have been removed from the mold, built up wax on the molds is removed by heating and then wiping the material out with a rag. No cleaning solvents are used to clean the molds.

After the foam has been crushed, the finished foam product is then sent for storage and shipment to the customer.

There are three stacks that provide exhaust for the foam operations. The first stack will be used to exhaust air from the mold release application area. This process area will release a majority of the VOC and PM emissions from the surface coating of the foam molds. The other two stacks are associated with the mold forming process and the foam crushing step. The polyols and isocyanates used in the foam manufacturing process are consumed in the process and are therefore considered not emitted per the TCEQ Classification of Coating Constituents internal guidance.

Any volatile components of catalysts or surfactants used in the foam process are included in the emissions calculations of VOCs and particulate matter, as appropriate. TCEQ's internal guidance on classifying volatility based on vapor pressure, boiling point and molecular weight was used to determine whether the components contribute to VOC or particulate emissions.

The site operates with an emission cap for EPN: PARTSMF which includes emissions from mold release, foam manufacturing and foam crusher operations.

FIGURE 2: PLASTIC PARTS MANUFACTURING OVERVIEW

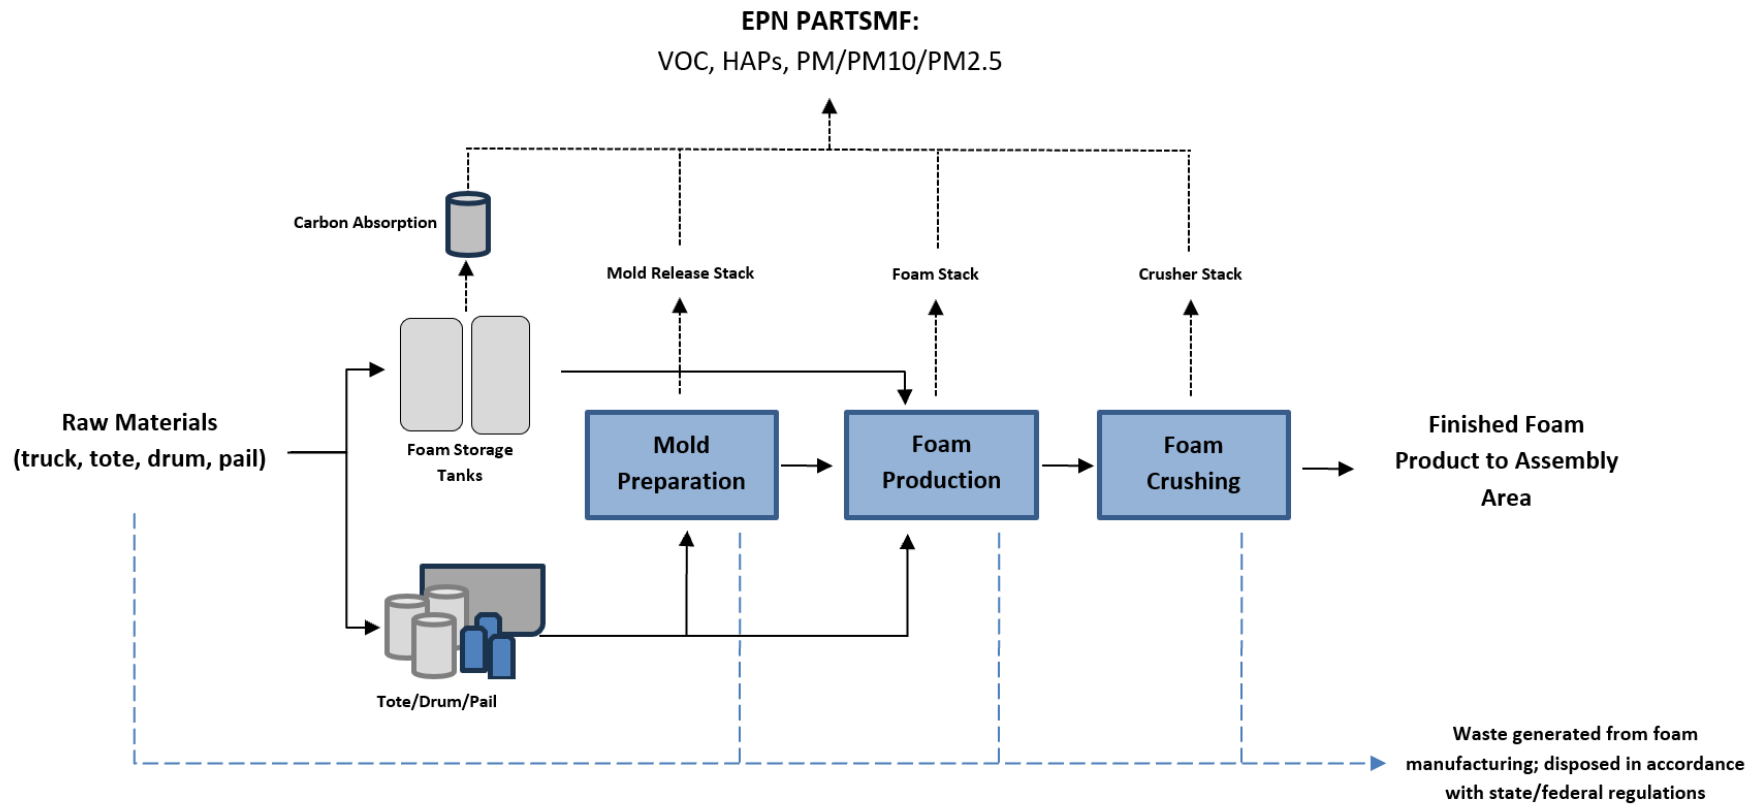

OPERATIONS

- Injection molding involves the receiving, storage and transferring of plastic pellets for the injection molding machines.
- Plastic parts formed through injection molding will be used in the vehicle door assembly process and the assembly of some vehicle seats.
- Injection molding operations are authorized by PBR 106.394. No registration or recordkeeping is required for this authorization.

2. The coal preparation and processing plant has a design capacity greater than 200 tons per day (tpd). <i>If the response to Question VI.B.2 is "NO," go to Section VI.C.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
3. The plant has an option to enforceably limit its operating level to less than 200 tpd and is choosing this option. <i>If the response to Question VI.B.3 is "YES," go to Section VI.C.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
4. The plant contains an open storage pile, as defined in § 60.251, as an affected facility. <i>If the response to Question VI.B.4 is "NO," go to Section VI.C.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
5. The open storage pile was constructed, reconstructed or modified after May 27, 2009.	<input type="checkbox"/> YES <input type="checkbox"/> NO
C. Subpart GG - Standards of Performance for Stationary Gas Turbines (GOP applicants only)	
◆ 1. The application area includes one or more stationary gas turbines that have a heat input at peak load greater than or equal to 10 MMBtu/hr (10.7GJ/hr), based on the lower heating value of the fuel fired. <i>If the response to Question VI.C.1 is "NO" or "N/A," go to Section VI.D.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO <input type="checkbox"/> N/A
◆ 2. One or more of the affected facilities were constructed, modified, or reconstructed after October 3, 1977 and prior to February 19, 2005. <i>If the response to Question VI.C.2 is "NO," go to Section VI.D.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
◆ 3. One or more stationary gas turbines in the application area are using a previously approved alternative fuel monitoring schedule as specified in 40 CFR § 60.334(h)(4).	<input type="checkbox"/> YES <input type="checkbox"/> NO
◆ 4. The exemption specified in 40 CFR § 60.332(e) is being utilized for one or more stationary gas turbines in the application area.	<input type="checkbox"/> YES <input type="checkbox"/> NO
