1.0 INTRODUCTION

Formosa Plastics Corporation, Texas (FPC TX) currently operates a number of chemical plants at their chemical complex near Point Comfort, in Calhoun and Jackson Counties, Texas. FPC TX's Energy/Steam Generating Facility in Calhoun County, Texas is currently authorized by Air Quality Permit Nos. 76044, PSDTX1053, and Title V Site Operating Permit (SOP) No. O3421.

The Energy/Steam Generating Facility consists of two gas-fired boilers (previously referred to as circulating fluidized bed units) and ancillary support facilities. The electrical power generated at the Energy/Steam Generating Facility is used to satisfy the general power demand at FPC TX's integrated chemical complex. The boilers are authorized to fire natural gas. The Energy/Steam Generating Facility is permitted for continuous (8,760 hour per year) operation at maximum load.

FPC TX submitted a Title V SOP minor revision application for the Energy/Steam Generating Facility FOP Permit to incorporate the Energy/Steam Generating Facility's NSR Permit No. 76044 renewal issued on February 4, 2021. The Title V SOP minor revision was approved April 10, 2024.

FPC TX is submitting this Title V SOP renewal application to request permit renewal prior to expiration. This application is being submitted according to the timeline required for SOP renewals specified in 30 TAC 122.133(4) and it contains the following updated information required by the SOP application procedures specified in 30 TAC 122.132:

- Site location map and plot plan with emission units designated;
- Description of the processes and associated process flow diagrams;
- General and administrative forms OP-CRO1, OP-1, OP-2, OP-ACPS, OP-MON, OP-PBR SUP, and OP-SUMR (*Appendix A*);
- Area-wide applicable requirements form OP-REQ1 (*Appendix B*);
- Unit attribute forms OP-UA6 and OP-UA15 (*Appendix C*)

FPC TX is requesting to make the following changes with this renewal application:

- Add periodic monitoring related to annual visible emission monitoring for the cooling tower (Unit ID: CT) via the OP-MON form.
- Add a subpart to General Condition no. 3 of the SOP related to 30 TAC Chapter 111 requirements for stationary vents with flow rates greater than 100,000 actual cubic feet per minute.
- Incorporate citation-level regulatory applicability for 40 CFR Part 63, Subpart DDDDD to replace the current high-level applicability for the boilers.

Sections 2.0, 3.0, and 4.0 of this application include site descriptive information such as the site location map, plot plan, and process information. Section 5.0 and the related appendices include the necessary TCEQ application forms.

2.0 SITE LOCATION

The Energy/Steam Generating Facility is located at the FPC TX Point Comfort Site, which is immediately east of Farm Road 1593, west of Cox Creek, and north of State Highway 35. The Energy/Steam Generating Facility is located in Calhoun County.

A scaled area map that shows the location of the Energy/Steam Generating Facility is included in this section.

4.0 PROCESS DESCRIPTION AND FLOW DIAGRAM

Provided in this section of the application are the process flow diagrams and process description for the Energy/Steam Generating Facility.

The Energy/Steam Generating Facility consists of two gas-fired boilers and ancillary support facilities. The following describes the processes involved in generating electricity from the boilers. Sources of emissions are referenced by their EPN or FIN designations.

Overall Description

FPC TX is authorized to operate an energy generating facility, Energy/Steam Generating Facility, which consists of two gas-fired boilers (EPNs CFB-S1 and CFB-S2) and ancillary support facilities. The electricity generated at the Energy/Steam Generating Facility is used to satisfy the general power demand at FPC TX's integrated chemical complex. The boilers are authorized to fire natural gas. The Energy/Steam Generating Facility is permitted for continuous (8,760 hour per year) operation at maximum load, firing natural gas.

Steam Handling and Condensing

High-pressure boiler feed water centrifugal pumps will continuously supply water to each boiler, which, in turn, will serve one steam generator. The steam drum will receive both sub-cooled feedwater from the economizer and a mixture of water and saturated steam from the furnace. From the turbine generators, steam will be condensed to water and returned to the boilers. Water used to cool the steam will, in turn, be cooled in a bank of cooling tower cells designed with fan-assisted air flow. These cooling towers will be a source of particulate emissions (EPNs CT-1/12) to the atmosphere as the drift droplets evaporate, releasing the dissolved solids in the water. The steam also has the option to be routed to the EG2 process for heating purposes. Condensate water from the EG2 process is recovered and routed to the CFB cooling towers.

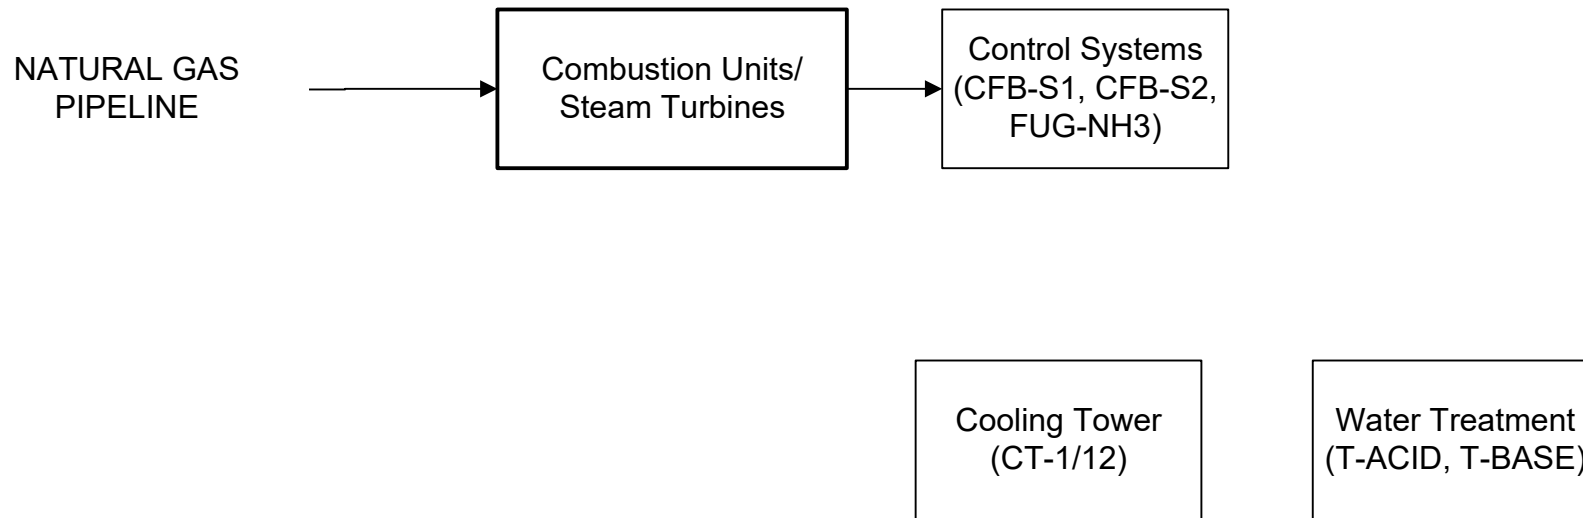

Flue Gas Handling and Emissions Controls

The flue gas from each boiler will be directed through a selective non-catalytic reduction (SNCR) system, in which aqueous ammonia will be injected into the combustion stream, reducing a portion of the NO_x to molecular nitrogen. Gases will then pass into the convection section of the boiler where most of the heat is absorbed to generate steam.

Inorganic Liquid Storage Tanks

Aqueous ammonia will be stored in a storage tank that will be shared by the two units. The ammonia tank will be equipped with a pressure relief valve for emergency situations only; however, piping and fittings associated with the tank and the transfer of ammonia to the boilers will be sources of fugitive emissions (EPN: FUG-NH₃). In addition, a sulfuric acid tank (EPN: T-ACID) and a tank (EPN: T-BASE) for storing bases (e.g., NaOH and NaOCl) will be installed for use in boiler water treatment. Each of these fixed roof tanks will be small, will store low vapor pressure materials and will produce negligible emissions.

I. Identifying Information

Periodic Monitoring Text:

Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.

If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

July 1, 2024

THE HONORABLE LOIS KOLKHORST
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 36772
Permit Number: O3421
Formosa Plastics Corporation, Texas
Energy/steam Generating Facility
Point Comfort, Calhoun County
Regulated Entity Number: RN100218973
Customer Reference Number: CN600130017

Dear Senator Kolthorst:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-96.547222,28.688888&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Lois Kolkhorst
