Mark, that sounds fine.

We will submit an alteration request for the NSR permit and a concurrent Title V minor revision request.

Thanks.

Mr. Keil,

If I am understanding you correctly, the updated AMOC has not yet been addressed in the NSR permit, we cannot incorporate the 3/19/2025 issuance of the updated AMOC into the TV permit until it has been addressed in the NSR. Thus, unfortunately, this will have to wait for a separate minor revision action.

The PNAP should be issued this week for the TV renewal (Project 36880).

Thank you.

Mark, if you are able to incorporate the updated AMOC, the NSR permit date of 11/15/24 is still appropriate.

However, Topsoe is required to revise the NSR permit to incorporate the updated AMOC, which then again, will require another Title V minor revision and a new NSR permit date.

Good morning,

Received – and acknowledged.

Please allow me to look into the possible incorporation of the updated AMOC into this action and I will advise. Should it work out that the updated AMOC is included as part of this renewal, will the referenced issuance date of NSR No. 9203 (currently 11/15/2024) need to be updated accordingly?

Thank you.

Mark, this is in response to your recent request for the Form OP-CRO1 for the referenced project. The form was submitted in STEERS yesterday and is attached. The copy of record is also attached.

Topsoe reviewed the draft permit and found no problems, except that the permit's AMOC has been recently updated. The updated

copy is attached if you want to replace it. Otherwise, if it is too late in the process to incorporate this document, we will submit it in a separate minor revision request.

Thanks for your help.

Mark, thanks for your questions about the permit renewal. Topsoe's responses to your questions are provided as follows:

- 1) The most recent date is the most appropriate date for the NSR permit issuance, namely 11/15/2024. An updated OP-REQ1 page 89 is attached.
- 2) Regarding PBR Registration Nos. 136292 and 123327, these registrations are still identified in the NSR on-line records as being effective and complete for Topsoe, Inc. A note indicating that they have been transferred was not found on-line in the Topsoe records. Nevertheless, Topsoe has advised the agency that these exemptions are not effective for Topsoe.

As you requested, the updated OP-PBRSUP is attached without the footnote.

- 3) Regarding your statements about public notice, Topsoe will try to be as expeditious as possible in moving forward after receiving the authorization to publish.

Thanks for your help in these matters.

Good afternoon,

Now that the pending minor revision (Project 37149) is in the announcement period, we can begin focusing on the pending renewal (Project 36880).

Please address as appropriate for each of the following:

1. The submitted OP-REQ indicates the issuance date of NSR No. 9203 as 3/21/2024. Since the renewal application submittal in July 2024, two additional amendments have been issued for NSR No. 9203: one on 9/11/2024 and one on 11/15/2024. Please advise as to which issuance date is the proper date to reference in the renewal. If needed, please submit an updated OP-REQ1 pg. 89 (of the newest form version dated 09/24).

2. Regarding the "Note" inserted at the bottom of Table A of the submitted OP-PBR SUP stating "PBR Registration Nos. 136292 and 123327 are identified in the NSR on-line records as being effective for Topsoe, Inc., but the DeNOx Unit (Permit No. 43752) that pertains to these units was sold to Umicore Catalyst USA, LLC (RN110070760). The NSR on-line records for Umicore also identify these same PBR registrations, and so, they simply need to be removed from the Topsoe records" Please be advised the registrations are no longer considered "effective" for Topsoe as the NSR database indicates the "Permit Status" under RN101211498 (for Topsoe) as "Transfer." This is the final, official step in such a scenario as you described, and as such, the authorizations are no longer associated with Topsoe.

Accordingly, please submit a revised OP-PBR SUP with the Note removed.

Please be reminded that anytime the OP-PBR SUP is submitted, it must be submitted in-total (i.e., all four Tables) and indicate a new date.

3. Finally, with the EPA Review Period scheduled to end 3/21/2025 for the pending minor revision (Project 37149), the project should be issued on/before 3/28/2025. The PNAP for the renewal will then be able to be finalized and issued. Accordingly, we respectively request that Topsoe be proactive and arrange in advance with both the English and Spanish publications so that the notices can be published at the soonest opportunity once the PNAP is issued, hopefully by the end of the first week in April. We are working on and considering methods to allow for review of the WDP prior to the issuance of the minor revision (Project 37149) in order to assist with a very quick turnaround for the notice publications and beginning of the EPA Review period. The goal is to issue the renewal on or before 7/15/2025.

Please do not hesitate to contact me should you have any questions or would like to discuss.

Thank you in advance for your assistance and support.

Good morning,

I have been assigned the submitted SOP Renewal application for Topsoe, Inc. and the HTI Bayport Facility (Permit O1217). The application has been assigned Project No. 36880 and was submitted via STEERS on 7/16/2024.

As I am sure you are aware, the SOP renewal application will not be able to be fully processed and go to public notice until the pending SOP minor revision (Project 36222) is issued. The pending SOP minor revision is of course pending the issuance of the pending amendment to NSR No. 9203. Currently, the most recent issuance date of NSR No. 9203 is March 21, 2024. This date will be updated to reflect the issuance date of the pending NSR amendment once that project is issued.

A quick review of the submittal seems to indicate the only requested change with this renewal application for permit O1217 is the addition of new unit CSC-1 and its related requirements. Also, Form OP-PBRSUP is being submitted for the first time for this permit.

I will certainly contact you should I have any questions or require additional information during the review process. That said, please do not hesitate to contact me at any time should you have any questions.

As always, I look forward to working with you during the review process.

Dear Senator Middleton:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.059166,29.610555&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Re: Alternative Method of Compliance (AMOC) No. 232
TK3 Catalyst Manufacturing Plant
Hot Water System §117 Alternative Compliance Demonstration
Regulated Entity Number: RN101211498
Customer Reference Number: CN600132435
Associated Permit Numbers: 9203 and O1217

Dear Mr. Mayo:

This correspondence is in response to Topsoe, Inc.'s (Topsoe's) November 29, 2023 request for alternative compliance demonstration methods for the Hot Water System Heater in the TK3 Catalyst Manufacturing Plant and use an AMOC to comply with 30 TAC 117 Control of NOx, Subchapter B Combustion control at major industrial, commercial, and institutional sources in ozone nonattainment areas, Division 3 Houston-Galveston-Brazoria Ozone Nonattainment Areas and Subchapter G, General Monitoring and Testing Requirements, Division 1 Compliance Stack Testing and Report Requirements as well as 30 TAC 101, Subchapter H Emissions Banking and Trading Program, Division 3 Mass Emissions Cap and Trade Program.

Due to unique design and operational characteristics, Topsoe has proposed to demonstrate initial and on-going compliance with NOx, CO and NH₃ state regulatory requirements applicable to the Hot Water Heater System ((FIN HWSB-1) following alternative methods. This heater shares a co-mingled exhaust and emissions control system with other combustion devices which are not subject to 30 TAC 117. The monitoring of the NOx control system is also complicated by the manufacturing of certain catalyst products. The company has proposed alternative locations for initial exhaust testing of NOx and CO, and, if applicable, NH₃. Based on the results of this testing, the company further has proposed to alternative methods to monitor on-going compliance of these air contaminants.

The Texas Commission on Environmental Quality (TCEQ) Executive Director has made a decision to approve the initial performance testing alternatives. Attached is an AMOC Plan with Conditions stipulating the initial testing requirements as well as the expectations of on-going compliance methods and techniques based on the outcome of the testing. The initial performance testing may proceed and be relied upon for a full AMOC application. Once completed, the Test Report results shall be submitted as an AMOC Revision and a full review of the Hot Water System alternative compliance methods under 30 TAC 117 regulations will continue.

After the full AMOC review, any AMOC approval may supersede certain requirements or representations in Permit Nos. 9203. To ensure effective and consistent enforceability, Topsoe will be required to incorporate any completed and approved AMOC into the permit through submittal of an Alteration no later than 90 days after that action. That full AMOC review will also change applicable requirements for the site, which are identified in the site operating permit (SOP) O1217 and at that time, a submittal of a SOP Revision will be needed. Additionally, if approved, the full AMOC will also be required to be attached to each annual MEET report.

A. General Requirements

1. This AMOC Plan Authorization shall apply at the Topsoe, Inc., TK3 Catalyst Plant located in Pasadena, Harris County and identified by Regulated Entity Number RN101211498. Under Title 30 Texas Administrative Code (TAC) Section 117.325 (§ 117.325) this plan authorizes the alternate compliance demonstrations for the Hot Water Heater System.
2. A copy of the AMOC application and the AMOC Plan provisions must be kept on-site or at a centralized location and made available at the request of personnel from the TCEQ or any pollution control agency with jurisdiction. The AMOC application is defined by the application received November 30, 2023 and supporting documentation submitted through January 31, 2024.
3. This authorization is granted under § 117.325 for emissions sources regulated by:
 - 30 TAC Chapter 117, Control of NO_x, Subchapter B Combustion Control at Major Industrial, Commercial, and Institutional Sources in Ozone Nonattainment Areas, Division 3 Houston-Galveston-Brazoria Ozone Nonattainment Areas;
 - 30 TAC Chapter 117, Control of NO_x, Subchapter G, General Monitoring and Testing Requirements, Division 1 Compliance Stack Testing and Report Requirements; and

B. Specific Requirements

1. **NO_x Performance Testing & MECT Annual Demonstration**
 - a. Following the procedures of NSR Permit No. 9203, Special Condition No. 21, an initial NO_x and O₂ performance test shall be performed at an alternative sample-port location of the Hot Water Heater exhaust prior to comingling with the other process streams or any control portion of the DeNO_x Unit. This testing is in addition to the DeNO_x exhaust stack testing required by NSR Permit No. 9203, Special Condition No. 21 [§§ 117.325(a) and 117.335(b)].
 - b. If the measured NO_x concentration (ppmv) at this alternative sample location demonstrates that the Hot Water Heater uncontrolled exhaust concentration is less than or equal to the NSR Permit No. 9203 Hot Water Heater burner representation of 70 ppmv (corrected to 3% O₂), follow (1)(d)-(f) to demonstrate compliance with the requirements of 30 TAC 101 and 117.

If the measured NO_x concentration (ppmv) from the alternative sample location is not less than or equal to 70 ppmv corrected to 3% O₂, follow (1)(c)-(e). The annual MECT quantification method in (f) is not applicable in this situation and will be determined as outlined in (d).

- c. The measured NO_x concentration (ppmv) from the initial stack testing at the DeNO_x outlet as required by NSR Permit No. 9203, Special Condition No. 21 and all associated operating parameters of the Hot Water Heater and DeNO_x system shall be submitted for review to determine if sufficient for the initial compliance demonstration [§ 117.355(b)] and establish an appropriate calculation method for annual MECT reporting [§ 101.352(b)] following paragraph (d).
- d. The alternative location test report for NO_x (and, if applicable, the DeNO_x exhaust test report) shall be submitted following the schedule in NSR Permit No. 9203, Special Condition No. 21.E., i.e., 60 days after sampling is completed. Test Reports shall be submitted with an AMOC Revision for the Executive Director to review and confirm MECT quantification and compliance method(s) within 30 days of the Test Report(s) submittal.
- e. The heater's combustion settings determined during the initial tuning and performance testing shall be maintained at all times and any adjustments shall be documented. If any combustion parameter is adjusted greater than 10%, testing shall be repeated.
- f. The measured NO_x outlet (ppmv or lb/MMBtu) from (1)(b) above shall be used in conjunction with actual annual fuel usage of the Hot Water Heater to meet the annual MECT allowance (0.3 tpy) [§§ 117.340(l)(2) and 117.340(a)]. A copy of the AMOC Approval and Plan shall be attached to each annual MECT report [§§ 101.352(b) and 101.354(b)(1)].

2. CO Performance Testing

- a. Following the procedures of NSR Permit No. 9203, Special Condition No. 21, an initial CO performance test shall be performed at an alternative sample-port location of the Hot Water Heater exhaust prior to comingling with the other process streams or any control portion of the DeNO_x Unit. This testing is in addition to the CO testing at the exhaust of the DeNO_x co-mingled exhaust stack as required by NSR Permit No. 9203, Special Condition No. 21 [§§ 117.325(a) and 117.335(b)].
- b. If the measured CO concentration (ppmv) at the alternative sample location demonstrates that the Hot Water Heater uncontrolled exhaust concentration is less than or equal to 400 ppmv corrected to 3% O₂ [§§ 117.335(b) and 117.310(c)(1)], then the company shall follow (2)(d)-(e) below.

If the measured NO_x concentration (ppmv) from the alternative sample location is not less than or equal to 400 ppmv corrected to 3% O₂, follow (2)(c)-(e).

- c. The measured CO concentration (ppmv) from the initial stack testing at the DeNO_x outlet as required by NSR Permit No. 9203, Special Condition No. 21 and all associated operating parameters of the Hot Water Heater and DeNO_x system shall be submitted for the initial compliance demonstration and shall be less than or equal to 400 ppmv corrected to 3% O₂ [§§ 117.335(b) and 117.310(c)(1)].
- d. The alternative location test report for CO (and, if applicable, the DeNO_x exhaust test report) shall be submitted following the schedule in NSR Permit No. 9203, Special Condition No. 21.E., i.e., 60 days after sampling is completed. Test Reports shall be submitted with an AMOC Revision for the Executive Director to review and confirm compliance method(s) within 30 days of the Test Report submittal.
- e. On-going compliance requirements will be met by rechecking the CO concentrations when any DeNO_x system exhaust NO_x CEMS RATA are subsequently performed [§ 117.8120(2)(B)].

3. NH₃ Initial Performance Testing and Monitoring

- a. If the NO_x concentrations from the alternate location performance testing demonstrates compliance with the limit in (1)(b) and this result is confirmed by the TCEQ after the company submits an AMOC Revision for review following (1)(d), NH₃ monitoring under §117 is not required and no other NH₃ conditions apply [§ 117.310(c)(2)].

If the NO_x concentrations from the alternate location performance testing are not less than or equal to 70 ppmv corrected to 3% O₂, follow (3)(b) – (e).

- b. The measured NH₃ concentration (ppmv) from the initial stack testing at the DeNO_x outlet during acid-based catalyst production as required by NSR Permit No. 9203, Special Condition No. 21 and all associated operating parameters of the Hot Water Heater and DeNO_x system shall be submitted for the initial compliance demonstration with the NH₃ 10 ppmv limit [§§ 117.335(b), 117.310(c)(2), and NSR Permit].
- c. During acid-based catalyst production, use one of the monitoring methods described in NSR Permit No. 9203 Special Condition No. 23 to monitor NH₃ at the DeNO_x outlet to demonstrate continuous compliance of the Hot Water Heater with 10 ppmv limit [§§ 117.335(b) and 117.310(c)(2)].
- d. During ammonia-based catalyst production, maintain pre-set operating temperatures and excess oxygen levels for the heater as determined at initial startup (or adjusted during a performance test) to ensure efficient combustion. If any combustion parameter is adjusted greater than 10%, update records accordingly and include any performance testing justification for the change. Monitor and record NH₃ injection rates of the DeNO_x system [§ 117.8130(4)].
- e. The NH₃ performance test report shall be submitted following the schedule in NSR Permit No. 9203, Special Condition No. 21.E., i.e., 60 days after sampling is completed. Test Reports shall be submitted along with an AMOC Revision within 30 days of the Test Report(s) to confirm future compliance method(s). If applicable, the AMOC revision shall detail the specific NH₃ monitoring method to be used for DeNO_x outlet NH₃ monitoring and justify any variations or review needed as established in § 117.8130(1) - (4).

Re: Alternative Method of Compliance (AMOC) No. 232
TK3 Catalyst Manufacturing Plant
Hot Water System §117 Alternative Compliance Demonstration
Regulated Entity Number: RN101211498
Customer Reference Number: CN600132435
Associated Permit Numbers: 9203 and O1217

Dear Mr. Mayo:

This correspondence is in response to Topsoe, Inc.'s (Topsoe's) November 29, 2023 request for alternative compliance demonstration methods for the Hot Water System Heater in the TK3 Catalyst Manufacturing Plant and use an AMOC to comply with 30 TAC 117 Control of NOx, Subchapter B Combustion control at major industrial, commercial, and institutional sources in ozone nonattainment areas, Division 3 Houston-Galveston-Brazoria Ozone Nonattainment Areas and Subchapter G, General Monitoring and Testing Requirements, Division 1 Compliance Stack Testing and Report Requirements as well as 30 TAC 101, Subchapter H Emissions Banking and Trading Program, Division 3 Mass Emissions Cap and Trade Program.

Due to unique design and operational characteristics, Topsoe has proposed to demonstrate initial and on-going compliance with NOx, CO and NH₃ state regulatory requirements applicable to the Hot Water Heater System ((FIN HWSB-1) following alternative methods. This heater shares a co-mingled exhaust and emissions control system with other combustion devices which are not subject to 30 TAC 117. The monitoring of the NOx control system is also complicated by the manufacturing of certain catalyst products. The company has proposed alternative locations for initial exhaust testing of NOx and CO, and, if applicable, NH₃. Based on the results of this testing, the company further has proposed to alternative methods to monitor on-going compliance of these air contaminants.

The Texas Commission on Environmental Quality (TCEQ) Executive Director has made a decision to approve the initial performance testing alternatives. Attached is an AMOC Plan with Conditions stipulating the initial testing requirements as well as the expectations of on-going compliance methods and techniques based on the outcome of the testing. The initial performance testing may proceed and be relied upon for a full AMOC application. Once completed, the Test Report results shall be submitted as an AMOC Revision and a full review of the Hot Water System alternative compliance methods under 30 TAC 117 regulations will continue.

After the full AMOC review, any AMOC approval may supersede certain requirements or representations in Permit Nos. 9203. To ensure effective and consistent enforceability, Topsoe will be required to incorporate any completed and approved AMOC into the permit through submittal of an Alteration no later than 90 days after that action. That full AMOC review will also change applicable requirements for the site, which are identified in the site operating permit (SOP) O1217 and at that time, a submittal of a SOP Revision will be needed. Additionally, if approved, the full AMOC will also be required to be attached to each annual MEET report.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Alternative Method of Control (AMOC) Plan, AMOC No.: AMOC232

Topsoe, Inc.

TK3 Catalyst Plant

Pasadena, Harris County

Regulated Entity Number: RN101211498

A. General Requirements

1. This AMOC Plan Authorization shall apply at the Topsoe, Inc., TK3 Catalyst Plant located in Pasadena, Harris County and identified by Regulated Entity Number RN101211498. Under Title 30 Texas Administrative Code (TAC) Section 117.325 (§ 117.325) this plan authorizes the alternate compliance demonstrations for the Hot Water Heater System.
2. A copy of the AMOC application and the AMOC Plan provisions must be kept on-site or at a centralized location and made available at the request of personnel from the TCEQ or any pollution control agency with jurisdiction. The AMOC application is defined by the application received November 30, 2023 and supporting documentation submitted through January 31, 2024.
3. This authorization is granted under § 117.325 for emissions sources regulated by:
 - 30 TAC Chapter 117, Control of NO_x, Subchapter B Combustion Control at Major Industrial, Commercial, and Institutional Sources in Ozone Nonattainment Areas, Division 3 Houston-Galveston-Brazoria Ozone Nonattainment Areas;
 - 30 TAC Chapter 117, Control of NO_x, Subchapter G, General Monitoring and Testing Requirements, Division 1 Compliance Stack Testing and Report Requirements; and
 - 30 TAC Chapter 101 General Air Quality Rules, Subchapter H Emissions Banking and Trading, Division 3 Mass Emissions Cap and Trade Program.

This AMOC shall apply in lieu of the requirements in these state regulations, as applicable. Compliance with this AMOC is independent of Topsoe's obligation to comply with all other applicable requirements of 30 TAC Chapters 101 and 117, TCEQ permits, and applicable state and federal laws.

4. All representations submitted for this AMOC, as well as the provisions listed here, become conditions upon which this AMOC Plan is issued. It is unlawful to vary from the emission limits, control requirements, monitoring, testing, reporting or recordkeeping requirements of this Plan.

B. Specific Requirements

1. **NO_x Performance Testing & MECT Annual Demonstration**
 - a. Following the procedures of NSR Permit No. 9203, Special Condition No. 21, an initial NO_x and O₂ performance test shall be performed at an alternative sample-port location of the Hot Water Heater exhaust prior to comingling with the other process streams or any control portion of the DeNO_x Unit. This testing is in addition to the DeNO_x exhaust stack testing required by NSR Permit No. 9203, Special Condition No. 21 [§§ 117.325(a) and 117.335(b)].
 - b. If the measured NO_x concentration (ppmv) at this alternative sample location demonstrates that the Hot Water Heater uncontrolled exhaust concentration is less than or equal to the NSR Permit No. 9203 Hot Water Heater burner representation of 70 ppmv (corrected to 3% O₂), follow (1)(d)-(f) to demonstrate compliance with the requirements of 30 TAC 101 and 117.

If the measured NO_x concentration (ppmv) from the alternative sample location is not less than or equal to 70 ppmv corrected to 3% O₂, follow (1)(c)-(e). The annual MECT quantification method in (f) is not applicable in this situation and will be determined as outlined in (d).

- c. The measured NO_x concentration (ppmv) from the initial stack testing at the DeNO_x outlet as required by NSR Permit No. 9203, Special Condition No. 21 and all associated operating parameters of the Hot Water Heater and DeNO_x system shall be submitted for review to determine if sufficient for the initial compliance demonstration [§ 117.355(b)] and establish an appropriate calculation method for annual MECT reporting [§ 101.352(b)] following paragraph (d).
- d. The alternative location test report for NO_x (and, if applicable, the DeNO_x exhaust test report) shall be submitted following the schedule in NSR Permit No. 9203, Special Condition No. 21.E., i.e., 60 days after sampling is completed. Test Reports shall be submitted with an AMOC Revision for the Executive Director to review and confirm MECT quantification and compliance method(s) within 30 days of the Test Report(s) submittal.
- e. The heater's combustion settings determined during the initial tuning and performance testing shall be maintained at all times and any adjustments shall be documented. If any combustion parameter is adjusted greater than 10%, testing shall be repeated.
- f. The measured NO_x outlet (ppmv or lb/MMBtu) from (1)(b) above shall be used in conjunction with actual annual fuel usage of the Hot Water Heater to meet the annual MECT allowance (0.3 tpy) [§§ 117.340(l)(2) and 117.340(a)]. A copy of the AMOC Approval and Plan shall be attached to each annual MECT report [§§ 101.352(b) and 101.354(b)(1)].

2. CO Performance Testing

- a. Following the procedures of NSR Permit No. 9203, Special Condition No. 21, an initial CO performance test shall be performed at an alternative sample-port location of the Hot Water Heater exhaust prior to comingling with the other process streams or any control portion of the DeNO_x Unit. This testing is in addition to the CO testing at the exhaust of the DeNO_x co-mingled exhaust stack as required by NSR Permit No. 9203, Special Condition No. 21 [§§ 117.325(a) and 117.335(b)].
- b. If the measured CO concentration (ppmv) at the alternative sample location demonstrates that the Hot Water Heater uncontrolled exhaust concentration is less than or equal to 400 ppmv corrected to 3% O₂ [§§ 117.335(b) and 117.310(c)(1)], then the company shall follow (2)(d)-(e) below.

If the measured NO_x concentration (ppmv) from the alternative sample location is not less than or equal to 400 ppmv corrected to 3% O₂, follow (2)(c)-(e).

- c. The measured CO concentration (ppmv) from the initial stack testing at the DeNO_x outlet as required by NSR Permit No. 9203, Special Condition No. 21 and all associated operating parameters of the Hot Water Heater and DeNO_x system shall be submitted for the initial compliance demonstration and shall be less than or equal to 400 ppmv corrected to 3% O₂ [§§ 117.335(b) and 117.310(c)(1)].
- d. The alternative location test report for CO (and, if applicable, the DeNO_x exhaust test report) shall be submitted following the schedule in NSR Permit No. 9203, Special Condition No. 21.E., i.e., 60 days after sampling is completed. Test Reports shall be submitted with an AMOC Revision for the Executive Director to review and confirm compliance method(s) within 30 days of the Test Report submittal.
- e. On-going compliance requirements will be met by rechecking the CO concentrations when any DeNO_x system exhaust NO_x CEMS RATA are subsequently performed [§ 117.8120(2)(B)].

3. NH₃ Initial Performance Testing and Monitoring

- a. If the NO_x concentrations from the alternate location performance testing demonstrates compliance with the limit in (1)(b) and this result is confirmed by the TCEQ after the company submits an AMOC Revision for review following (1)(d), NH₃ monitoring under §117 is not required and no other NH₃ conditions apply [§ 117.310(c)(2)].

If the NO_x concentrations from the alternate location performance testing are not less than or equal to 70 ppmv corrected to 3% O₂, follow (3)(b) – (e).

- b. The measured NH₃ concentration (ppmv) from the initial stack testing at the DeNO_x outlet during acid-based catalyst production as required by NSR Permit No. 9203, Special Condition No. 21 and all associated operating parameters of the Hot Water Heater and DeNO_x system shall be submitted for the initial compliance demonstration with the NH₃ 10 ppmv limit [§§ 117.335(b), 117.310(c)(2), and NSR Permit].
- c. During acid-based catalyst production, use one of the monitoring methods described in NSR Permit No. 9203 Special Condition No. 23 to monitor NH₃ at the DeNO_x outlet to demonstrate continuous compliance of the Hot Water Heater with 10 ppmv limit [§§ 117.335(b) and 117.310(c)(2)].
- d. During ammonia-based catalyst production, maintain pre-set operating temperatures and excess oxygen levels for the heater as determined at initial startup (or adjusted during a performance test) to ensure efficient combustion. If any combustion parameter is adjusted greater than 10%, update records accordingly and include any performance testing justification for the change. Monitor and record NH₃ injection rates of the DeNO_x system [§ 117.8130(4)].
- e. The NH₃ performance test report shall be submitted following the schedule in NSR Permit No. 9203, Special Condition No. 21.E., i.e., 60 days after sampling is completed. Test Reports shall be submitted along with an AMOC Revision within 30 days of the Test Report(s) to confirm future compliance method(s). If applicable, the AMOC revision shall detail the specific NH₃ monitoring method to be used for DeNO_x outlet NH₃ monitoring and justify any variations or review needed as established in § 117.8130(1) - (4).
