CAUTION

Good afternoon,

I have completed the technical review of the submitted renewal application and please find attached the Working Draft Permit for your review and approval, and/or comments.

During the technical review, the following items surfaced which require explanation, clarification, and/or additional information:

1. The application indicates the applicable issuance date for NSR No. 156081 as 7/12/2023. Since the submittal of the application, two subsequent actions have been completed for the standard permit: an amendment issued 10/4/2024, and a revision issued 10/31/2024. **Please advise/confirm** on the proper issuance date to reference in the permit. **Please note that the second date provided in your comment (10/4/2024) is the submittal date for the last permitting action, not the issuance date. The proper issuance date is 11/7/2024. Please find attached page 89 of the newest Form OP-REQ1 with this information.**
2. There is discussion in the Tech Summ for the Title V minor revision issued 1/14/2022 (Project 31821) related to the previously existing permit shield for unit GRP-PRO-AMINE and NSPS OOOOa being "rescinded" and the permit shield being removed from the permit. There is no other information provided, including an explanation for the removal. Do you have any explanation/contest? Reviewing the issue, it seems to me that the permit shield may be pertinent, but it would help to have more context. Any background explanation you can provide is appreciated. Also, the UA10 was revised in August 2022 and now had tables for OOOOa. Please complete and submit a UA10 for the unit and NSPS OOOOa. **As indicated in the attached previous Minor Revision Submittal dated 02/05/2021, due to the construction date and since the facility is not a natural gas processing plant, the amine sweetening unit is not subject to NSPS OOOOa and Midcoast does not want a permit shield. As requested, a new Form OP-UA10 has also been included with this submittal.**
3. Per the submitted UA12 for units FUG-1 and FUG-2 and NSPS OOOOa, the previously existing high-level requirements, though not specifically requested, have been replaced with low-level requirements, and are now indicated in the permit. **OK**
4. Somewhat relatedly, the previously existing manual build for unit R-COMPS and NSPS OOOO has been replaced with the requirements per the submitted updated UA12 based on the recent completion of RRT for the rule. **OK**
5. Recordkeeping citation 60.4245(a) is included in the permit for units COMP-1, COMP-2 COMP-3, and COMP-4, for three pollutants associated with NSPS JJJJ. There was discussion documented in the Tech Summ for the minor revision project issued 1/14/2022 (Project 31821) that per your comments, the citation was removed as being "redundant" since the citations §§ 60.4245(a)(1), 60.4245(a)(2) and 60.4245(a)(4) are included. However, the citation is pertinent, is not redundant and should remain in the permit. The 60.4245(a) citation states "Owners and operators of all stationary SI ICE must keep records of the information in paragraphs (a)(1) through (4) of this section." This citation provided the direct, specific required action, i.e., "must keep records." Leaving this citation out and only including (a)(1), (a)(2), and (a)(4), does not provide any meaning or direction as, for instance, (a)(2) states "Maintenance conducted on the engine", which, if left standing alone, does not provide meaning. **OK**

Please review the WDP and provide your approval and/or comments, and confirmation of the appropriate issuance date to be referenced for the standard permit, at your earliest opportunity, but please not later than COB on 3/5/2025.

Please do not hesitate to contact me should you have any questions.

Thank you.

[EXTERNAL]

Good morning,

I have been assigned the submitted SOP Renewal application for Midcoast G & P East Texas LP and the Horseshoe Treater (Permit O4135). The application has been assigned Project No. 36950 and was submitted via STEERS on 8/1/2024.

Please note that EPA has, on occasion, objected to Title V permits based on one or more of the following:

- NSR permit and PBR monitoring sufficiency. Please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- High-level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- Accuracy of PBR information provided on the supplemental table and in the permit. Please refer to the instructions for Forms OP-PBRSUP and OP-REQ1.

If you have any questions or concerns on any of these items, or think you need to submit any updates, please advise and we can discuss further.

I will contact you should I have any questions or require additional information during the review process. That said, please do not hesitate to contact me at any time should you have any questions.

I look forward to working with you during the review process.

Thank you.

Horseshoe Treater (RN110735826)
Midcoast G & P (East Texas) L.P. (CN603573817)
Air Account No.: TBA**

To Whom It May Concern:

Midcoast G & P (East Texas) L.P. (Midcoast) is submitting the enclosed Title V Site Operating Permit (SOP) Minor Revision Application to the Texas Commission on Environmental Quality (TCEQ) for Midcoast's Horseshoe Treater (Facility) located near San Augustine, Texas in San Augustine County.

With this revision application, Midcoast is requesting the Facility's Title V permit (O4135) be corrected to reflect the removal of the permit shield for the amine units (Unit ID GRP-PRO-AMINE). This revision request was included in the previous Title V Minor Revision Application (Project 30595) and GRP-PRO-AMINE was correctly not listed on the permit shield in the final Working Draft Permit (WDP) that Midcoast approved during the project technical review. Unfortunately, the amine units were left in the permit shield in the version of the WDP that was published in the public announcement, and subsequently, in the issued Title V permit, thus, the permit shield is not correct. As was stated in the previous Title V Minor Revision Application, the basis of determination on the permit shield states the amine units (Unit ID GRP-PRO-AMINE) are not subject to New Source Performance Standards (NSPS) Subpart OOOOa, since the Facility isn't a natural gas processing plant or a compressor station. However, the Facility is a compressor station; therefore, the amine unit permit shield basis is incorrect, and Midcoast is requesting that this entry be removed from the permit shield as shown on the enclosed form OP-REQ2. The OP-REQ2 is also being used to document the correct basis of determination for the amine units' negative applicability to NSPS Subpart OOOOa. Midcoast does not want the revised basis to be added to the permit shield. The negative applicability documentation is shown for informational purposes only.

Subsequent to issuance of the revised Title V permit on December 23, 2020, standard permit registration number 156081 was revised; therefore, Midcoast is also requesting to update the issuance date for the standard permit registration to December 30, 2020.

The application includes the following attachments:

- Attachment 1 – Administrative Forms
- Attachment 2 – Applicability Determination Forms

Midcoast would like to thank you in advance for the review and approval of this SOP Revision Application. If you have any questions or comments regarding this letter and enclosure, please contact me at (903) 323-4350 or via email at jeffrey.white@midcoastenergy.com.

Sincerely,

Midcoast G&P (East Texas) L.P.

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.
 - E. Emission units subject to 40 CFR Part 63, Subparts HH and ZZZZ, as identified in the attached Applicable Requirements Summary table, are subject to 30 TAC Chapter 113,

Subchapter C, §§ 113.390 and 113.1090, respectively, which incorporate the 40 CFR Part 63 Subparts by reference.

- F. For the purpose of generating discrete emission reduction credits through 30 TAC Chapter 101, Subchapter H, Division 4 (Discrete Emission Credit Banking and Trading), the permit holder shall comply with the following requirements:
- (i) Title 30 TAC § 101.372 (relating to General Provisions)
 - (ii) Title 30 TAC § 101.373 (relating to Discrete Emission Reduction Credit Generation and Certification)
 - (iii) Title 30 TAC § 101.374 (relating to Mobile Discrete Emission Reduction Credit Generation and Certification)
 - (iv) Title 30 TAC § 101.378 (relating to Discrete Emission Credit Banking and Trading)
 - (v) The terms and conditions by which the emission limits are established to generate the discrete reduction credit are applicable requirements of this permit

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
- A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
 - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
- A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit

holder shall comply with the following requirements for stationary vents at the site subject to this standard:

- (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(1)(E)
- (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
- (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:
 - (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
 - (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
 - (3) Records of all observations shall be maintained.
 - (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet

prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)
- (iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources

operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- C. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).
- D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
 - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
 - (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)
 - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)
- E. Outdoor burning, as stated in 30 TAC § 111.201, shall not be authorized unless the following requirements are satisfied:

- (i) Title 30 TAC § 111.205 (relating to Exception for Fire Training)
- (ii) Title 30 TAC § 111.207 (relating to Exception for Recreation, Ceremony, Cooking, and Warmth)
- (iii) Title 30 TAC § 111.219 (relating to General Requirements for Allowable Outdoor Burning)
- (iv) Title 30 TAC § 111.221 (relating to Responsibility for Consequences of Outdoor Burning)

4. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

- A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)
- B. Title 40 CFR § 60.8 (relating to Performance Tests)

- H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

5. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

6. For oil and natural gas production facilities as specified in 40 CFR Part 63, Subpart HH, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.390 incorporated by reference):

- A. Title 40 CFR § 63.760(c) (relating to Applicability and Designation of Affected Source)

New Source Review Authorization Requirements

7. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule (including the terms, conditions, monitoring, recordkeeping, and reporting identified in registered PBRs and permits by rule identified in the PBR Supplemental Tables dated August 1, 2024 in the application for project 36950), standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

- A. Are incorporated by reference into this permit as applicable requirements
- B. Shall be located with this operating permit

Commented [KD1]: Please add the following language which seems to have been inadvertently left out of the draft WDP: "7. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit."

- C. Are not eligible for a permit shield
- 8. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.
- 9. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).
- 10. The permit holder shall comply with the following requirements for Air Quality Standard Permits:
 - A. Registration requirements listed in 30 TAC § 116.611, unless otherwise provided for in an Air Quality Standard Permit
 - B. General Conditions listed in 30 TAC § 116.615, unless otherwise provided for in an Air Quality Standard Permit
 - C. Applicable requirements of 30 TAC § 116.620 for Installation and/or Modification of Oil and Gas Facilities based on the information contained in the registration application.

Compliance Requirements

- 11. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.
- 12. Use of Discrete Emission Credits to comply with the applicable requirements:
 - A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:
 - (i) Title 30 TAC Chapter 115
 - (ii) Title 30 TAC Chapter 117
 - (iii) If applicable, offsets for Title 30 TAC Chapter 116
 - (iv) Temporarily exceed state NSR permit allowables
 - B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:
 - (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

- (ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4
- (iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)
- (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122
- (v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Permit Location

13. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit at the Midcoast Longview Office, 2020 Bill Owens Parkway, Suite 100, Longview, Texas 75604.

Permit Shield (30 TAC § 122.148)

14. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

August 2, 2024

THE HONORABLE ROBERT NICHOLS
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 36950
Permit Number: O4135
Midcoast G & P (East Texas) L.P.
Horseshoe Treater
San Augustine, San Augustine County
Regulated Entity Number: RN110735826
Customer Reference Number: CN603573817

Dear Senator Nichols:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.235277,31.498611&level=13>.

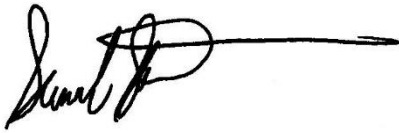

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Robert Nichols

Regulated Entity Number: RN110735826

Dear Representative Ashby:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.235277,31.498611&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site.

This letter is being sent to you for information only and no action is required. If you need further information, please contact me at (512) 239-1250.

Sincerely,

A handwritten signature in black ink, appearing to read "Samuel Short", followed by a long horizontal line.

Air Account No.: SB-A002-B**

To Whom It May Concern:

Midcoast G & P (East Texas) L.P. (Midcoast) is submitting the enclosed Title V Site Operating Permit (SOP) Renewal application to the Texas Commission on Environmental Quality (TCEQ) for Midcoast's Horseshoe Treater (Facility) located near San Augustine, Texas in San Augustine County. The Facility is currently authorized to operate under SOP No. O4135 (Permit). The Permit is scheduled to expire on February 4, 2025. This SOP Renewal application is being submitted prior to the regulatory deadline of August 4, 2024, in accordance with Title 30 of the Texas Administrative Code (30 TAC) Chapter 122.

The Facility is currently authorized under Standard Permit (SP) Registration No. 156081 and a couple of Permit by Rule (PBR) claims. With this SOP Renewal, Midcoast is requesting that the Permit be revised to:

- Renew regulatory applicability for the engines, reciprocating compressors, flare, dehydration units, and fugitives with current versions of the respective Unit Attribute Forms;
- Remove one (1) generator, two (2) hot oil heaters, and one (1) dehydration unit;
- Add two (2) new hot oil heaters;
- Include the emergency generator on form OP-PBRSUP to incorporate its PBR requirements; and
- Note that the Facility's reboilers, thermal oxidizer, amine units, liquid storage tanks and associated loading, and maintenance, startup and shutdown (MSS) activities continue to have no potential federal or state regulatory applicability, are considered off-permit sources, and are not addressed further in this application, with the exception of MSS, which is only addressed on form OP-PBRSUP.

Midcoast would like to thank you in advance for the review and approval of this SOP Renewal application. If you have any questions or comments regarding this letter and enclosure, please contact me at (903) 323-4350 or via email at jeffrey.white@momentummidstream.com.

Sincerely,
Midcoast G & P (East Texas) L.P.

The following process information is included in this section:

- Process Description

PROCESS DESCRIPTION

The Horseshoe Treater (Facility) is designed to remove carbon dioxide (CO₂), hydrogen sulfide (H₂S), and water from a produced gas stream to meet pipeline quality specifications. The gas enters the Facility via a gathering system into slug catchers. Liquids from the slug catchers are routed to a low-pressure separator. The flash gas from the low-pressure separator is routed to the thermal oxidizer. When the thermal oxidizer is not in operation, the flash gas is routed to a flare (Unit ID: FL-1) as an alternate operating scenario (AOS). The gas from the slug catchers is routed to either the compressors (Unit IDs: R-COMPS, COMP-1 through COMP-5), the Facility's dehydration units (Group ID: GRP-GLYCOL) for further processing for sales or for use as fuel gas in the Facility, or two (2) amine units for removal of CO₂ and H₂S. Some of the gas enters the bottom of the amine contactors where it encounters the lean amine solution in counter-current flow. The CO₂ and H₂S contained in the natural gas are absorbed in the amine. The sweetened natural gas exits the top of the amine contactors and some of the gas is then sent to the compressors (Unit IDs: R-COMPS, COMP-1 through COMP-5), and some of the gas flows to the Facility's dehydration units (Group ID: GRP-GLYCOL) prior to being routed back for compression and sales and/or for use as fuel gas in the Facility.

The rich amine containing the absorbed CO₂ and H₂S flows to the amine flash tanks where entrained natural gas vapors are separated from the rich amine. The rich amine then enters the amine stills where it is heated to drive off the CO₂ and H₂S. The lean amine is pumped from the bottom of the stills to the amine contactors to start the process again. Acid gas and flash gas from this process are routed to the thermal oxidizer. When the thermal oxidizer is not in operation, the acid gas and flash gas are routed to a flare (Unit ID: FL-1) as an AOS.

As mentioned above, some of the treated gas is directed to three (3) triethylene glycol (TEG) dehydration units (Group ID: GRP-GLYCOL) where gas comes in contact with lean glycol (low water) in the contactors. Rich glycol (water saturated) is then flashed, and the flashed gases are routed to the thermal oxidizer. The glycol is then heated, and water is removed, so the glycol can be reused. The glycol dehydrators' still vent vapors are routed to the thermal oxidizer. When the thermal oxidizer is not in operation, the dehydration units' still vents and flash gas streams are routed to a flare (Unit ID: FL-1) as an AOS.

When the plant portion of the Facility is not operating, one (1) dehydration unit (Unit ID: PRO-GLYCOL 4) is operating as an AOS to process the gas for use as fuel gas for the equipment in the Facility. During this AOS, the still vent and flash gas vapors from this dehydration unit and the low-pressure separator vapors are only routed to the flare (Unit ID: FL-1).

Liquids from the low-pressure separator are routed to four (4) atmospheric produced water storage tanks (Unit IDs: TK 1301, TK 1302, TK 1303, and TK 1304). The liquids from the produced water storage tanks are loaded into tank trucks for removal from the Facility. Vapors that exit the produced water tanks and vapors from the truck loading operation are vented to atmosphere.

The Facility generates fugitive emissions due to equipment components such as piping, fittings, pumps, and valves (Unit IDs: FUG-1 and FUG-2). Heat for the amine units and glycol dehydration units is supplied by four (4) boilers/heaters (Unit IDs: HTR-1A, HTR-2A, and two (2) glycol reboilers, respectively) which emit products of combustion to the atmosphere. Several associated process tanks, specifically a slop storage tank (Unit ID: TK 1300), amine storage tank (Unit ID: TK 1305), two (2) glycol storage tanks (Unit IDs: TK 1306 and TK 1307), two (2) lube oil tanks, two (2) antifreeze tanks, three (3) sump tanks, and a thermal oxidizer knockout tank are also present at the Facility.

One (1) natural gas-driven emergency generator (Unit ID: GEN-6) is also located at the Facility. Planned maintenance, startup, and shutdown (MSS) activities will be present at the Facility but are considered off-permit sources. Both the emergency generator and MSS are authorized under Permit by Rule (PBR) claims.
