Good afternoon all,

In a final review of your application before moving to public notice, my team leader identified an additional minor issue with the OP-PBRSUP in your application. Please address the following item by **noon Friday, March 14th**.

- There are 16 PBRs listed between Tables A & B and 17 PBRs listed on Table D. It appears that the claimed (not registered) PBR that is on Table C was included on Table D, but this is not correct. Please remove the additional PBR (Unit ID No. AIRSEP) from Table D and provide me with an updated OP-PBRSUP. You are correct that no recordkeeping is required under 106.372, but this PBR should only be included on Table C.

Kindly redate and include all four tables of the OP-PBRSUP in your submission. This update will need to be certified and submitted through STEERS as you have done with previous updates. Thank you for your assistance and let me know if you have any questions.

Sincerely,

Kyle J. Murray

Hi Kyle, apologies on missing this deadline for you. I think I got a little turned around by thinking the Petra Nova and Cottonwood were both due back to you today.

We can move forward with this application. The WDP looks good to us. Thank you for allowing us to review the citation.

Good afternoon all,

I investigated why the citations for SO2 for GRPHRSG were not included in the permit and have found the reason why. There are some answers still required on Form OP-UA6 for NSPS Da for this unit. From the initial answers on the UA6 in your application, we will need an answer for PM Monitoring Type, Opacity Monitoring Type, and SO2 Monitoring Type. SO2 Monitoring Type should be "NONE" but we will still need answers for the other two questions.

Please provide me with a revised Form OP-UA6 for GRPHRSG, Index No. 60Da-01 by **Monday, January 27th**. Let me know if you have any questions or comments, and I would be happy to help. Thank you!

Sincerely,

Kyle J. Murray

Hi Kyle,

Thank you for the opportunity to review the WDP for the Cottonwood Energy Company. We have one comment regarding the detailed citations for GRPHRSG for NSPS Da. The detailed citations for NOx were included and are correct; however, the permit is missing citations for SO2.

In response to your requests in your email dated 11/7/2024, we have submitted a revised OP-UA4-Table 1a via STEERS. In addition, we confirm that the negative applicability reason for 40 CFR Part 60, Subpart JJJJ for EMGEN1 is still valid and agree with the permit shield for regulation NSPS JJJJ as shown in the WDP.

Please let me know if you have questions or need additional information.

Thank you,

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good afternoon Ms. Sump,

I have conducted a technical review of the renewal application for Cottonwood Energy Company, LP. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **Tuesday, December 10, 2024**.

In addition, upon further evaluation of your federal operating permit application, we have identified some potential discrepancies that need to be addressed to finalize the permit. Please submit responses to the following items in concurrence with your WDP comments.

- **Form OP-UA4 – Table 1a** - Unit ID VOCUNLD-OC requires an answer choice for True Vapor Pressure. I have not made any changes to the previously provided value of “0.5-” as this was correct. Please provide a revised and redated OP-UA4 that confirms this existing value or updates other attribute choices to follow the form instructions.
- **Unit ID EMGEN1** – I have removed the permit shield for 40 CFR Part 60, Subpart IIII from unit ID EMGEN1 and would like to confirm that the previous negative applicability for NSPS IIII for Unit ID EMGEN no longer applies to EMGEN1 since construction or modification has occurred after July 11, 2005, according to the OP-UA2 submitted in your application. I would also like to confirm that the negative applicability reason for 40 CFR Part 60, Subpart JJJJ for this unit is still valid. The permit shield for regulation NSPS JJJJ has tentatively been included in the WDP.
- As a side note, I am not able to update the Emission Point No. in the Major NSR Summary Table “EMGEN” to “EMGEN1” to reflect the update in your permit. This update can be requested at the next permitting action involving this NSR permit.

Please review the second portion of the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_facsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Kyle J. Murray

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good morning Ms. Sump,

I have been assigned to the Federal Operating Permit (FOP) renewal application of Permit No. O2338 for Cottonwood Energy Company, LP, Cottonwood Energy Project. This application has been assigned Project No. 37081. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency – please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Please review the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_facsheet.pdf. 1.0 INTRODUCTION

Cottonwood Energy Company, LP owns and operates the Cottonwood Energy Project, an electric generating plant located in the City of Deweyville, in both Newton and Orange Counties, Texas. The facility is currently authorized under New Source Review (NSR) Permit No. 43890/PSDTX965, Standard Permit Registration No. 113225, and Permit by Rule (PBR) Registration No. 71264.

Cottonwood Energy Company, LP is submitting the following application to renew Federal Operating Permit (FOP) No. O2338. This renewal application submittal constitutes a timely renewal as it will be submitted at least six months, but no earlier than 18 months, before the date of expiration of the authorization (March 5, 2025) per the requirements in 30 TAC §122.133.

The following documentation is provided with this application: all required Texas Commission on Environmental Quality (TCEQ) FOP renewal application forms, including forms addressing application certification, administrative information, site-wide applicability information, and unit attribute information. The Major NSR Summary Table currently in the Title V Permit needs to be updated with current emission rates and issuance date (July 22, 2021).

2.0 PROCESS DESCRIPTION

The Cottonwood Energy Project is a natural gas-fired combined cycle power generation facility located entirely in Newton County except for a remote raw water pump station located in Orange County. The primary sources of criteria pollutants associated with the facility are four natural gas-fired combustion turbines, each equipped with a heat recovery steam generator (HRSG) with a duct burner, a steam turbine, and ancillary equipment. The four units are each capable of producing a nominal 320 megawatts (MW) of electricity. An auxiliary boiler authorized under Standard Permit Registration No. 113225 is used to supply additional steam for turbine startup and various other equipment needs.

The combustion turbines and HRSG duct burners are fired exclusively with pipeline-quality natural gas which minimizes emissions of volatile organic compounds (VOCs), particulate matter, and sulfur dioxide. Emission control systems include burners coupled with selective catalytic reduction (SCR) for control of NO_x and good combustion practices for abatement of carbon monoxide (CO) and VOCs.

Footnotes:

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3)
 - VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
 - NO_x - total oxides of nitrogen
 - SO₂ - sulfur dioxide
 - PM - total particulate matter, including PM₁₀ and PM_{2.5} as represented
 - PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}, as represented
 - PM_{2.5} - total particulate matter equal to or less than 2.5 microns in diameter
 - CO - carbon monoxide
 - NH₃ - ammonia
- (4) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.
- (5) Except for planned MSS activities, the concentration limits for the gas turbines listed in the permit conditions apply and may be a more stringent requirement than the mass emission rate limits listed in this table.
- (6) These emissions are permitted under PSD.
- (7) For each pollutant whose emissions during planned MSS activities are measured using a CEMS, during any clock hour that includes one or more minutes of planned MSS activities, the pollutant's hourly emission limits that apply during planned MSS activities shall apply during that clock hour.
- (8) The tpy emission limit specified in the MAERT for this facility includes emissions from the facility during both normal operations and planned MSS activities.
- (9) Unless otherwise stated, the lb/hr emission limit specified in the MAERT for this facility includes emissions from the facility during both normal operations and planned MSS activities.
- (10) This short-term emission rate applies during planned MSS activities.
