Good afternoon Samantha - After further review, we agree that FUG126 should not be grouped with GRP-FUGS due to their differing applicable requirements. Additionally, we can confirm the tanks (Units 130V377, 130V378, 130V379, 130V383, 130V384, and 130V385) have been moved to NSR Permit Number 24875. We are submitting a signed OP-CRO1 through STEERS certifying the updates to the application and the approval of the WDP. Please let us know if you have any further questions.

Good afternoon,

I hope this email finds you well.

I have received your comments and changes requested regarding the draft permit and am currently working on making the updates.

Further information is required regarding the following changes:

- In the unit summary section, the unit 126FUG was requested to be added to group GRP-FUGS.
 - However, unit 126FUG is also applicable to regulation 40 CFR 60, Subpart VVa.

- This unit cannot be added, as it stands, to GRP-FUGS due to obtaining different applicable requirements aside from the group regulation 40 CFR Part 63, Subpart H.
- Additionally, I want to confirm that in the NSR Authorization References by Emission Units section, NSR Authorization number 24875 is replacing 29966 for the ACH Storage Vessel Units.
 - Please confirm if this is correct.

Furthermore, an OP-CRO1 is needed to certify all application updates, including comments to the draft permit and newly updated forms sent via email. Please submit the OP-CRO1 via STEERS or to me via email by **February 7, 2025**.

If you have any questions or concerns, please do not hesitate to contact me!

Thank you for your cooperation!

Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the

source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular

instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Subject: Working Draft Permit -- FOP 02009/Project 37230, OQ Chemicals Bishop LLC/Bishop Plant
Attachments: Working Draft Permit.docx

Good afternoon,

I have conducted a technical review of the *renewal* application for *OQ Chemicals Bishop LLC, Bishop Plant*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **February 11, 2025**. Additionally, please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

 - E. Emission units subject to 40 CFR Part 63, Subparts F, G, and H, as identified in the attached Applicable Requirements Summary table, are subject to 30 TAC Chapter 113,

Subchapter C, §113.110, §113.120, and §113.130, respectively, which incorporates the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
 - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
 - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the “Applicable

Requirements Summary” attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer’s eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the

source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- C. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
 - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
 - (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)
 - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

Ms. Mendez,

We reviewed the potential requirements for units FUG, 126FILTER, and BG LOADING. We have attached an OP-UA12 form to cover the applicable federal requirements for FUG and 126FILTER. The PBR authorizing BG LOADING (Registration Number 155452) has been voided due to the discontinuation of the project. All references to BG LOADING have been removed from the applicable forms. Please let us know if you have any additional questions or if you need any other information.

Thank you,

EXTERNAL EMAIL CAUTION: KINDLY ENSURE THE SENDER IS KNOWN AND THE CONTENT IS SAFE

Good afternoon,

I hope this email finds you well.

I was wondering if these units (FUG, 126FILTER, and BG LOADING) are wanting to be added to the permit. Due to the fact there is an OP-PBRSUP selection in the applicable form, these units are not subjected to state or federal air regulatory requirements defined as applicable requirements (other than NSR requirements).

Please respond by **January 16, 2025**. Thank you again for your cooperation!

Sincerely,

Samantha Mendez

Ms. Mendez,

We have reviewed your comments and attached the updated forms here. Please see the comments below in red for further details. Please let us know if you have any questions or if you need any other information.

Thank you,

I have attached the draft response items and response for TCEQ. The brief overview of the changes are as follows:

1. TCEQ recently released a new OP-REQ1 form. The permit reviewer wanted to confirm that no changes to the answers were made.

2. TCEQ already had the name changes for the various units. So we do not need to include that change in the summary of revisions. Those items were removed from the OP-2 and the OP-SUMR.
3. We entered the wrong year in error for one of the PBRs.
4. We did not remove the PBR 106.478 from the OP-REQ1 when we removed it from your OP-PBRSUP.

Please let us know if you have any questions or comments on this response.

Good afternoon,

During my review of the SOP Renewal application, I noted that there are some deficiencies in the application and clarifications required.

- On form OP-REQ1, page 83 is not up to date with the latest version 9/2024.
 - There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
 - I want to confirm that the answer you submitted on this page for XI.J.5 is “NO” on the current version as well.
The requested updated OP-REQ1 pages has been attached. There has been no changes to the answers selected.
- On form OP-2, the EPN’s for multiple units were requested to be changed on Table 2, however they seem to have already been altered to the requested format prior to this renewal.
 - Would you like us to disregard these changes requested on existing units 126V161, 126V1680, 126V1684, 126V3075, 126V3076, 126V732, 126V733, and 126V734 respectively?
 - Please clarify if new changes to the EPN’s of these units are still needed, and if so, please submit a new OP-2 Table 2.
Please disregard the changes regarding the name change for the units listed above. An updated OP-2 has been attached with these changes.

- On form OP-SUMR, the unit ID BG Loading obtains a Preconstruction authorization date of 09/03/2000 for PBR 106.427.
 - I believe the date should be listed as 09/04/2000, followed by PBR Registration No. [147499].
 - Please clarify which date should be listed on this form for the respective unit.
 - If changes are required, please submit a revised OP-SUMR.
- On form OP-PBRSUP, PBR 106.478 is not listed. However, it is included on form OP-REQ1.
 - Please submit an updated OP-PBRSUP to include PBR 106.478.

Please see the attached updated OP-SUMR with the corrected dates.

The facility does not have a PBR 106.478 active onsite. An updated PBR list in OP-REQ1 has been included with this change.

Please submit the updated forms by January 3, 2025. Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

If you have any additional questions, please let me know. Thanks!

Good afternoon,

I hope this email finds you well.

I was wondering if these units (FUG, 126FILTER, and BG LOADING) are wanting to be added to the permit. Due to the fact there is an OP-PBRSUP selection in the applicable form, these units are not subjected to state or federal air regulatory requirements defined as applicable requirements (other than NSR requirements).

Please respond by **January 16, 2025**. Thank you again for your cooperation!

Sincerely,

Ms. Mendez,

We have reviewed your comments and attached the updated forms here. Please see the comments below in red for further details. Please let us know if you have any questions or if you need any other information.

Thank you,

I have attached the draft response items and response for TCEQ. The brief overview of the changes are as follows:

1. TCEQ recently released a new OP-REQ1 form. The permit reviewer wanted to confirm that no changes to the answers were made.
2. TCEQ already had the name changes for the various units. So we do not need to include that change in the summary of revisions. Those items were removed from the OP-2 and the OP-SUMR.
3. We entered the wrong year in error for one of the PBRs.
4. We did not remove the PBR 106.478 from the OP-REQ1 when we removed it from your OP-PBR SUP.

Please let us know if you have any questions or comments on this response.

Good afternoon,

During my review of the SOP Renewal application, I noted that there are some deficiencies in the application and clarifications required.

- On form OP-REQ1, page 83 is not up to date with the latest version 9/2024.
 - There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
 - I want to confirm that the answer you submitted on this page for XI.J.5 is “NO” on the current version as well.
The requested updated OP-REQ1 pages has been attached. There has been no changes to the answers selected.
- On form OP-2, the EPN's for multiple units were requested to be changed on Table 2, however they seem to have already been altered to the requested format prior to this renewal.

- Would you like us to disregard these changes requested on existing units 126V161, 126V1680, 126V1684, 126V3075, 126V3076, 126V732, 126V733, and 126V734 respectively?
 - Please clarify if new changes to the EPN's of these units are still needed, and if so, please submit a new OP-2 Table 2.

Please disregard the changes regarding the name change for the units listed above. An updated OP-2 has been attached with these changes.
- On form OP-SUMR, the unit ID BG Loading obtains a Preconstruction authorization date of 09/03/2000 for PBR 106.427.
 - I believe the date should be listed as 09/04/2000, followed by PBR Registration No. [147499].
 - Please clarify which date should be listed on this form for the respective unit.
 - If changes are required, please submit a revised OP-SUMR.

Please see the attached updated OP-SUMR with the corrected dates.
- On form OP-PBRSUP, PBR 106.478 is not listed. However, it is included on form OP-REQ1.
 - Please submit an updated OP-PBRSUP to include PBR 106.478.

The facility does not have a PBR 106.478 active onsite. An updated PBR list in OP-REQ1 has been included with this change.

Please submit the updated forms by January 3, 2025. Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Good afternoon,

During my review of the SOP Renewal application, I noted that there are some deficiencies in the application and clarifications required.

1. On form OP-REQ1, page 83 is not up to date with the latest version 9/2024.
 1. There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
 1. I want to confirm that the answer you submitted on this page for XI.J.5 is “NO” on the current version as well.
2. On form OP-2, the EPN’s for multiple units were requested to be changed on Table 2, however they seem to have already been altered to the requested format prior to this renewal.
 1. Would you like us to disregard these changes requested on existing units 126V161, 126V1680, 126V1684, 126V3075, 126V3076, 126V732, 126V733, and 126V734 respectively?
 1. Please clarify if new changes to the EPN’s of these units are still needed, and if so, please submit a new OP-2 Table 2.
3. On form OP-SUMR, the unit ID BG Loading obtains a Preconstruction authorization date of 09/03/2000 for PBR 106.427.
 1. I believe the date should be listed as 09/04/2000, followed by PBR Registration No. [147499].
 1. Please clarify which date should be listed on this form for the respective unit.
 2. If changes are required, please submit a revised OP-SUMR.
4. On form OP-PBRSUP, PBR 106.478 is not listed. However, it is included on form OP-REQ1.
 1. Please submit an updated OP-PBRSUP to include PBR 106.478.

Please submit the updated forms by January 3, 2025. Application updates may now be submitted through Title V STEERS. Subject: Technical Review -- FOP O2009/Project 37230, OQ Chemicals Bishop LLC/Bishop Plant

Good afternoon,

I have been assigned to the Federal Operating Permit (FOP) initial issuance/renewal/revision application of Permit No. O2009 for OQ Chemicals Bishop LLC, Bishop Plant. This application has been assigned Project No. 37230. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Optional: Request any information that may have been noted as deficient or out-of-date during a preliminary project review (e.g. OP-1 with current contact data, current OP-REQ1, etc.), and include a deadline.

Please review the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_facsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Dear Senator Lamantia:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.825,27.5675&level=13>.

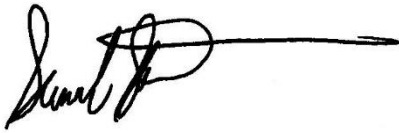

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

1. EXECUTIVE SUMMARY

OQ Chemicals Bishop, LLC (OQ) owns and operates an oxochemical production facility located on U.S. Highway Business 77 two miles south of Bishop, Nueces County, Texas (Bishop Plant). OQ has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Number (CN) 603160979. The Bishop Plant has been assigned TCEQ Regulated Entity Number (RN) 105467039 and a TCEQ Air Quality Account Number NE-A011-K. All emissions sources at the Bishop Plant are authorized via the following air permits:

- ▶ Title V Site Operating Permit (SOP) Number (No.) O-2009;
- ▶ New Source Review (NSR) Permit Nos. 19340 (Trimethylpropane [TMP] production unit), 24875 (Acetaldehyde [Ach] unloading operations), 29966 (1,3-Butylene Glycol [BG] production unit), and 83848 (site-wide maintenance, start-up, and shutdown [MSS] activities);
- ▶ Registered Permits by Rule (PBRs) Nos. 147499, 153683, 155452, 82682, 90887, and 172583; and
- ▶ Non-registerable PBRs.

Nueces County is currently classified as an attainment or unclassified area for all criteria pollutants.¹ The Bishop Plant is a minor source with respect to the Prevention of Significant Deterioration (PSD) program. The site is a major source with respect to the federal operating permits (Title V) program and operates under Federal Operating Permit No. O-2009, which expires April 22, 2025. In addition to the Title V renewal, OQ is requesting the following revisions, which collectively represented an off permit change to the existing Title V Site Operating Permit (SOP) and are now being included in the renewal:

- ▶ Add a new filter installation and maintenance operations permitted by PBR 172583;
- ▶ Updated Company Name details; and
- ▶ Renamed EPNs based on PBR Registration No. 147499.

OQ is submitting this Title V SOP renewal application before October 22, 2024 to represent a timely application as specified in §122.241(b); at least six months, but no earlier than 18 months, before the date of permit expiration. OQ is providing updates to the information used in determining site-wide requirements. This document was prepared in accordance with TCEQ's SOP Renewal Application Guidance, and the requirements listed in 30 TAC §122.132, Application and Required Information for Initial Permit Issuance, Reopening, Renewal, or General Operating Permits.

The enclosed Title V SOP application for the Bishop Plant consists of all required forms and supplemental information.

2. PROCESS DESCRIPTION

The following sections describe the BG and TMP production processes at the Bishop Plant.

2.1 BG Production Process

OQ produces 1,3-Butylene Glycol (BG) at their Bishop, Texas facility in a continuous process using dedicated process equipment and storage vessels, as authorized under NSR Permit No. 29966. The OQ BG process is certified to the ISO 9001:2015 and ISO 14001:2015 standards in all facets. The basic raw material for the production of BG is acetaldehyde (AcH). OQ receives AcH in dedicated acetaldehyde rail cars, as authorized under NSR Permit No. 24875.

The BG process has four basic steps shown below: Aldol Condensation, Hydrogenation, Finishing (Purification), and Product Storage/Shipping. In the Aldol Condensation reaction step, AcH is catalytically self-reacted to make acetaldol. In the Hydrogenation step the acetaldol is catalytically hydrogenated to form a “crude” BG reaction mixture. The crude BG product contains the side products formed in the two BG reactions (Aldol Condensation and Hydrogenation).

The crude BG reaction mixture is purified in Finishing to make the final BG products. Finishing is a series of mostly distillation steps using proprietary techniques to remove low and high boiling point impurities yielding the Industrial Quality BG. The low odor Cosmetic Quality product is produced by subjecting the Industrial Quality product to additional proprietary treatments.

Figure 2-1. BG Process

After purification, the Industrial and Cosmetic Quality products are diverted to dedicated storage tanks. Stored products are approved by QC before it is released for shipments. The storage tanks are additionally analyzed

on a frequent basis to assure quality is maintained. Finally, samples are taken from each railcar and tanker truck leaving the production facility just before they are closed and sealed with tamper-proof seals.

The following sections detail the Aldol Condensation, Hydrogenation, and Finishing processes in the BG production unit.

2.1.1 Aldol Condensation

The Aldol Condensation is the first reaction in the BG process. Temperature, pressure, and pH control are carefully controlled to minimize side reactions. If these variables are not properly controlled, the downstream processes can also be negatively affected, and the production rate of BG will be lowered due to low raw material efficiencies. The major system components that form the Aldol Condensation System are described below.

2.1.1.1 Aldol Condensation Reactor (V3006)

Purified AcH from Storage Vessel V-875 is fed to the Aldol Condensation reactor V-3006. Liquid catalyst solution is fed to the reactor at a controlled rate to set the degree of reaction completion. AcH reacts with itself to make Acetaldehyde in this reaction. The aldol condensation is not allowed to go to completion to avoid undesired side reactions. The aldol condensation is exothermic and requires the use of an external cooling loop to control reactor temperature. The reactor has a split range controller to allow venting to a scrubber (unusual) or nitrogen addition (normal) to control pressure.

2.1.1.2 AcH Stripper (T219)

The aldol condensation reaction mixture from V3006 goes to an AcH Stripper (T219) to recover the excess AcH. The feed to T219 is pH adjusted, and then stripped in T219 using live steam directly injected into the bottom of T219. Additional water is added to T219 to discourage undesired side reactions. The AcH, small amounts of side products and a small amount of water go overhead. The vent from the overhead condenser is sent to a scrubber (T220). This "crude AcH" is purified in the AcH Purification Distillation Tower (T135) for recycle back to the Aldol Condensation reactor (V3006). The residue from T219 is mostly aldol and water with a small amount of other side products. The T219 Residue is sent to the Hydrogenation reactor (T221).

2.1.1.3 AcH Scrubber (T220)

A water scrubber (T220) is used to scrub the vents from the Aldol Reactor (V3006) and the AcH Stripper (T219) overhead condenser. Chilled, distilled Water is used as the scrubbing fluid. The scrubber liquid (residue) is mostly water and AcH. It is sent back to the T-219 Overhead receiver so the AcH can be recovered in the AcH Purification Distillation Tower (T135).

2.1.1.4 AcH Recovery Column (T135)

"Crude AcH" (T219 Overhead) and some or all of the fresh AcH is sent to T-135 to purify the AcH used in the aldol condensation reactor (V3006). T135 is a distillation tower operating under pressure. The T135 residue is mostly water, some reaction side products and a very small amount of AcH. It is sent to Wastewater Treatment.

2.1.2 Hydrogenation System

The hydrogenation system converts the Acetaldehyde formed in the Aldol Condensation system to BG by reacting the Acetaldehyde with hydrogen.

2.1.2.1 Hydrogenation Reactor (T221)

The hydrogenation occurs in one tower. The feed (T219 Residue) enters at the base of T221 and Hydrogen is fed into T221 through spargers. This reaction takes place in the presence of a solid catalyst entrained in the liquid stream flowing through T221. The reaction is complete with some reaction side products before the liquid exits T221. The material from T221 feeds the separator where the gas and liquid is separated.

2.1.2.2 Hydrogen and Catalyst Separators (V882 and V883)²

The hydrogenation products exit T221 and go to a gas/liquid separator (V882). Some of the excess Hydrogen is purged from the Hydrogenation System to remove trace side products, and is sent to the Closed Vent System (CVS) to incinerators/boilers. The remainder of the hydrogen is compressed and recycled back to the Hydrogenation reactors. The hydrogenation product is in a liquid state and is sent to a liquid/solid settler (V883) to recover the solid catalyst. The solid catalyst settles to the bottom and is sent back to the Hydrogenation reactor (T221). The liquid hydrogenation product is sent to the Finishing System.

2.1.3 Finishing System

The aqueous hydrogenation product is purified in the Finishing System to make the BG product. Some of the by-products created in the reactions have very similar physical properties to BG. The Finishing System is a series of five columns, one flash evaporator are used to purify the BG product.

2.1.3.1 Light Ends Tower (T223)

T223 is the first tower in Finishing. It is an atmospheric pressure distillation tower that separates the water and light organic side products from the BG. This tower is fed by the hydrogenation product and a small recycle stream (T227 overhead). The light ends are distilled overhead and are sent to Wastewater Treatment. The BG and heavy ends exit T223 as residue and are sent to a vacuum flash evaporator (V-778) for further purification. The vent from the T223 Overhead Condenser goes to HE-1137 to cool the vent to reduce the VOC's emitted to the atmosphere.

2.1.3.2 Vacuum Flash Evaporator (V778)

The Flash Evaporator (V778) is operated under vacuum and is used to remove the small amount of heavy VOC's created in the BG process. BG is distilled overhead and the heavy VOC side products exit V778 as residue. The final V778 System Residue is mixed with water and sent to Wastewater Treatment. The overhead product from V778 feeds the Heavy Ends Tower (T226). V778 evaporator vents to the atmosphere through the Hoppe Head vent from the V778 vacuum system.

2.1.3.3 Heavy Ends Tower (T226)

The Heavy Ends Tower (T226) is operated under vacuum and is fed with the V778 Overhead and a very small recycle stream from T227 Residue. T226 is used to remove the very small amounts of heavy ends found in the V778 Overhead fed to T226. The T226 Residue is recycled back to V778 to remove the heavy ends. The T226 Overhead contains the BG product and is sent to the Finishing Tower (T227). T226 vents to the atmosphere through the Hoppe Head vent from the T226 vacuum system.

² Note that this permit does not cover emissions from vessels V639, V875, V879, V882, and V883, which are controlled by process vents that are directed to a closed vent system (CVS) located on adjacent property operated by Ticona Polymers, Inc. (Ticona, CN600124184, RN101625721).

2.1.3.4 Finishing Tower (T227)

The Finishing Tower (T227) is operated under vacuum and is fed with the T226 Overhead and a very small recycle stream from T218 Overhead. T227 has three outlet streams - the overhead, side stream and residue. The T227 Overhead contains BG, water and trace amounts of light organics and is sent back to T223 for recovery of the BG. T227 Residue is mostly BG with trace heavy organics. The T227 Residue is sent to T226 for recovery of the BG. The T227 Side Stream is the Industrial Quality BG Product. The T227 Side Stream is split with some going to the Industrial Quality BG storage tanks (V-3075, V-90127, V901 and V902) and the rest is sent for further processing in T218 to make Cosmetic Quality BG. The Industrial Quality BG can be stored in V-732 and V-733 during product loading or packaging operations. T227 vents to the atmosphere through the Hoppe Head vent from the T227 vacuum system.

2.1.3.5 Low Odor Tower (T218)

The Low Odor Tower (T218) is operated under vacuum and is fed with the T227 Side Stream. T218 is used to improve the odor of the BG product. The T218 Overhead is recycled back to T227 to recover the BG. The T218 Residue is the Cosmetic Quality BG product. The Cosmetic Quality BG product is sent to storage vessels V-161, V-741 or V742. The Cosmetic Quality BG can be stored in V-1684, V-734 and V-1680 during product loading or packaging operations. T218 vents to the atmosphere through the Hoppe Head vent from the T218 vacuum system.

2.2 TMP Production Process

OQ also has the authorization under NSR Permit No. 19340 to produce TMP as one of the products at the Bishop Facility. The TMP production process is divided into three stages: the Reaction Stage, the Extraction Stage, and the Finishing stage.

In the Reaction Stage, formaldehyde and butyraldehyde in the presence of sodium hydroxide (or potassium hydroxide) react in an exothermic reaction to produce crude TMP. The reacted TMP process stream is neutralized with acetic acid. From the reaction system, the reacted TMP process stream is pumped to the formaldehyde recovery step.

In the Extraction Stage, crude TMP and sodium formate (or potassium formate, if potassium hydroxide is used as a catalyst in the Reaction Stage) are separated from the extractor feed mixture by dual solvent counter-current extraction. Concentrated sodium formate (or potassium formate) solution, the by-product of the TMP production, is stored in the storage tank and shipped offsite by tank car. The crude TMP stream is also separated from ethyl acetate prior to the finishing stage.

The purpose of the finishing system is to produce specification TMP by removing heavy ends and light ends from the crude TMP. The TMP finished product is sold in two ways: as molten liquid or as a flake. The molten product is stored in the rundown tanks or is stored in tanks as premium product for molten shipment.

Good afternoon Samantha - After further review, we agree that FUG126 should not be grouped with GRP-FUGS due to their differing applicable requirements. Additionally, we can confirm the tanks (Units 130V377, 130V378, 130V379, 130V383, 130V384, and 130V385) have been moved to NSR Permit Number 24875. We are submitting a signed OP-CRO1 through STEERS certifying the updates to the application and the approval of the WDP. Please let us know if you have any further questions.

Good afternoon,

I hope this email finds you well.

I have received your comments and changes requested regarding the draft permit and am currently working on making the updates.

Further information is required regarding the following changes:

- In the unit summary section, the unit 126FUG was requested to be added to group GRP-FUGS.
 - However, unit 126FUG is also applicable to regulation 40 CFR 60, Subpart VVa.

- This unit cannot be added, as it stands, to GRP-FUGS due to obtaining different applicable requirements aside from the group regulation 40 CFR Part 63, Subpart H.
- Additionally, I want to confirm that in the NSR Authorization References by Emission Units section, NSR Authorization number 24875 is replacing 29966 for the ACH Storage Vessel Units.
 - Please confirm if this is correct.

Furthermore, an OP-CRO1 is needed to certify all application updates, including comments to the draft permit and newly updated forms sent via email. Please submit the OP-CRO1 via STEERS or to me via email by **February 7, 2025**.

If you have any questions or concerns, please do not hesitate to contact me!

Thank you for your cooperation!

EXTERNAL EMAIL CAUTION: KINDLY ENSURE THE SENDER IS KNOWN AND THE CONTENT IS SAFE

Good afternoon,

I have conducted a technical review of the *renewal* application for *OQ Chemicals Bishop LLC, Bishop Plant*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **February 11, 2025**. Additionally, please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are

provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Good afternoon,

I hope this email finds you well.

I have received your comments and changes requested regarding the draft permit and am currently working on making the updates.

Further information is required regarding the following changes:

- In the unit summary section, the unit 126FUG was requested to be added to group GRP-FUGS.
 - However, unit 126FUG is also applicable to regulation 40 CFR 60, Subpart VVa.
 - This unit cannot be added, as it stands, to GRP-FUGS due to obtaining different applicable requirements aside from the group regulation 40 CFR Part 63, Subpart H.
- Additionally, I want to confirm that in the NSR Authorization References by Emission Units section, NSR Authorization number 24875 is replacing 29966 for the ACH Storage Vessel Units.
 - Please confirm if this is correct.

Furthermore, an OP-CRO1 is needed to certify all application updates, including comments to the draft permit and newly updated forms sent via email. Please submit the OP-CRO1 via STEERS or to me via email by **February 7, 2025**.

If you have any questions or concerns, please do not hesitate to contact me!

Thank you for your cooperation!

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.
 - E. Emission units subject to 40 CFR Part 63, Subparts F, G, and H, as identified in the attached Applicable Requirements Summary table, are subject to 30 TAC Chapter 113,

Subchapter C, §113.110, §113.120, and §113.130, respectively, which incorporates the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
 - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
 - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
 - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable

Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the

source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

- (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
- (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)
- (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

- 4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: "Storage of Volatile Organic Compounds," the permit holder shall comply with the requirements of 30 TAC § 115.112(b)(1).
- 5. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:
 - A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

- 15. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular

instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

16. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule (including the terms, conditions, monitoring, recordkeeping, and reporting identified in registered PBRs and permits by rule identified in the PBR Supplemental Tables dated MON DAY, YYYY in the application for project XXXXX), standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:
 - A. Are incorporated by reference into this permit as applicable requirements
 - B. Shall be located with this operating permit
 - C. Are not eligible for a permit shield
17. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.
18. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

19. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.
20. Use of Discrete Emission Credits to comply with the applicable requirements:
 - A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:
 - (i) Title 30 TAC Chapter 115
 - (ii) Title 30 TAC Chapter 117

- (iii) If applicable, offsets for Title 30 TAC Chapter 116
 - (iv) Temporarily exceed state NSR permit allowables
- B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:
- (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)
 - (ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4
 - (iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)
 - (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122
 - (v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

21. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

22. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:
- A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.
 - B. The permit holder shall comply with 40 CFR Part 82, Subpart F related to the disposal requirements for appliances using Class I or Class II (ozone-depleting) substances or non-exempt substitutes as specified in 40 CFR §§ 82.150 - 82.166 and the applicable Part 82 Appendices.

Permit Location

23. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

24. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Subject: Working Draft Permit -- FOP 02009/Project 37230, OQ Chemicals Bishop LLC/Bishop Plant
Attachments: Working Draft Permit.docx

Good afternoon,

I have conducted a technical review of the *renewal* application for *OQ Chemicals Bishop LLC, Bishop Plant*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **February 11, 2025**. Additionally, please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation!

Sincerely,

Samantha Mendez

The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.
 - E. Emission units subject to 40 CFR Part 63, Subparts F, G, and H, as identified in the attached Applicable Requirements Summary table, are subject to 30 TAC Chapter 113,

Subchapter C, §113.110, §113.120, and §113.130, respectively, which incorporates the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
 - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
 - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
 - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the “Applicable

Requirements Summary” attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer’s eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the

source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

Ms. Mendez,

We reviewed the potential requirements for units FUG, 126FILTER, and BG LOADING. We have attached an OP-UA12 form to cover the applicable federal requirements for FUG and 126FILTER. The PBR authorizing BG LOADING (Registration Number 155452) has been voided due to the discontinuation of the project. All references to BG LOADING have been removed from the applicable forms. Please let us know if you have any additional questions or if you need any other information.

EXTERNAL EMAIL CAUTION: KINDLY ENSURE THE SENDER IS KNOWN AND THE CONTENT IS SAFE

Good afternoon,

I hope this email finds you well.

I was wondering if these units (FUG, 126FILTER, and BG LOADING) are wanting to be added to the permit. Due to the fact there is an OP-PBRSUP selection in the applicable form, these units are not subjected to state or federal air regulatory requirements defined as applicable requirements (other than NSR requirements).

Please respond by **January 16, 2025**. Thank you again for your cooperation!

Sincerely,

Samantha Mendez

Ms. Mendez,

We have reviewed your comments and attached the updated forms here. Please see the comments below in red for further details. Please let us know if you have any questions or if you need any other information.

Thank you,

I have attached the draft response items and response for TCEQ. The brief overview of the changes are as follows:

1. TCEQ recently released a new OP-REQ1 form. The permit reviewer wanted to confirm that no changes to the answers were made.

2. TCEQ already had the name changes for the various units. So we do not need to include that change in the summary of revisions. Those items were removed from the OP-2 and the OP-SUMR.
3. We entered the wrong year in error for one of the PBRs.
4. We did not remove the PBR 106.478 from the OP-REQ1 when we removed it from your OP-PBRSUP.

Please let us know if you have any questions or comments on this response.

Good afternoon,

During my review of the SOP Renewal application, I noted that there are some deficiencies in the application and clarifications required.

- On form OP-REQ1, page 83 is not up to date with the latest version 9/2024.
 - There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
 - I want to confirm that the answer you submitted on this page for XI.J.5 is “NO” on the current version as well.
The requested updated OP-REQ1 pages has been attached. There has been no changes to the answers selected.
- On form OP-2, the EPN’s for multiple units were requested to be changed on Table 2, however they seem to have already been altered to the requested format prior to this renewal.
 - Would you like us to disregard these changes requested on existing units 126V161, 126V1680, 126V1684, 126V3075, 126V3076, 126V732, 126V733, and 126V734 respectively?
 - Please clarify if new changes to the EPN’s of these units are still needed, and if so, please submit a new OP-2 Table 2.
Please disregard the changes regarding the name change for the units listed above. An updated OP-2 has been attached with these changes.

- On form OP-SUMR, the unit ID BG Loading obtains a Preconstruction authorization date of 09/03/2000 for PBR 106.427.
 - I believe the date should be listed as 09/04/2000, followed by PBR Registration No. [147499].
 - Please clarify which date should be listed on this form for the respective unit.
 - If changes are required, please submit a revised OP-SUMR.
- On form OP-PBRSUP, PBR 106.478 is not listed. However, it is included on form OP-REQ1.
 - Please submit an updated OP-PBRSUP to include PBR 106.478.

Please see the attached updated OP-SUMR with the corrected dates.

The facility does not have a PBR 106.478 active onsite. An updated PBR list in OP-REQ1 has been included with this change.

Please submit the updated forms by January 3, 2025. Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

If you have any additional questions, please let me know. Thanks!

Good afternoon,

I hope this email finds you well.

I was wondering if these units (FUG, 126FILTER, and BG LOADING) are wanting to be added to the permit. Due to the fact there is an OP-PBR SUP selection in the applicable form, these units are not subjected to state or federal air regulatory requirements defined as applicable requirements (other than NSR requirements).

Please respond by **January 16, 2025**. Thank you again for your cooperation!

Ms. Mendez,

We have reviewed your comments and attached the updated forms here. Please see the comments below in red for further details. Please let us know if you have any questions or if you need any other information.

Thank you,

I have attached the draft response items and response for TCEQ. The brief overview of the changes are as follows:

1. TCEQ recently released a new OP-REQ1 form. The permit reviewer wanted to confirm that no changes to the answers were made.
2. TCEQ already had the name changes for the various units. So we do not need to include that change in the summary of revisions. Those items were removed from the OP-2 and the OP-SUMR.
3. We entered the wrong year in error for one of the PBRs.
4. We did not remove the PBR 106.478 from the OP-REQ1 when we removed it from your OP-PBR SUP.

Please let us know if you have any questions or comments on this response.

Good afternoon,

During my review of the SOP Renewal application, I noted that there are some deficiencies in the application and clarifications required.

- On form OP-REQ1, page 83 is not up to date with the latest version 9/2024.
 - There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
 - I want to confirm that the answer you submitted on this page for XI.J.5 is “NO” on the current version as well.
The requested updated OP-REQ1 pages has been attached. There has been no changes to the answers selected.
- On form OP-2, the EPN's for multiple units were requested to be changed on Table 2, however they seem to have already been altered to the requested format prior to this renewal.

- Would you like us to disregard these changes requested on existing units 126V161, 126V1680, 126V1684, 126V3075, 126V3076, 126V732, 126V733, and 126V734 respectively?
 - Please clarify if new changes to the EPN's of these units are still needed, and if so, please submit a new OP-2 Table 2.

Please disregard the changes regarding the name change for the units listed above. An updated OP-2 has been attached with these changes.
- On form OP-SUMR, the unit ID BG Loading obtains a Preconstruction authorization date of 09/03/2000 for PBR 106.427.
 - I believe the date should be listed as 09/04/2000, followed by PBR Registration No. [147499].
 - Please clarify which date should be listed on this form for the respective unit.
 - If changes are required, please submit a revised OP-SUMR.

Please see the attached updated OP-SUMR with the corrected dates.
- On form OP-PBRSUP, PBR 106.478 is not listed. However, it is included on form OP-REQ1.
 - Please submit an updated OP-PBRSUP to include PBR 106.478.

The facility does not have a PBR 106.478 active onsite. An updated PBR list in OP-REQ1 has been included with this change.

Please submit the updated forms by January 3, 2025. Application updates may now be submitted through Title V STEERS. Ms. Mendez,

We have reviewed your comments and attached the updated forms here. Please see the comments below in red for further details. Please let us know if you have any questions or if you need any other information.

Thank you,

I have attached the draft response items and response for TCEQ. The brief overview of the changes are as follows:

1. TCEQ recently released a new OP-REQ1 form. The permit reviewer wanted to confirm that no changes to the answers were made.
2. TCEQ already had the name changes for the various units. So we do not need to include that change in the summary of revisions. Those items were removed from the OP-2 and the OP-SUMR.
3. We entered the wrong year in error for one of the PBRs.
4. We did not remove the PBR 106.478 from the OP-REQ1 when we removed it from your OP-PBR SUP.

Please let us know if you have any questions or comments on this response.

Good afternoon,

During my review of the SOP Renewal application, I noted that there are some deficiencies in the application and clarifications required.

- On form OP-REQ1, page 83 is not up to date with the latest version 9/2024.
 - There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
 - I want to confirm that the answer you submitted on this page for XI.J.5 is “NO” on the current version as well.

The requested updated OP-REQ1 pages has been attached. There has been no changes to the answers selected.
- On form OP-2, the EPN’s for multiple units were requested to be changed on Table 2, however they seem to have already been altered to the requested format prior to this renewal.
 - Would you like us to disregard these changes requested on existing units 126V161, 126V1680, 126V1684, 126V3075, 126V3076, 126V732, 126V733, and 126V734 respectively?
 - Please clarify if new changes to the EPN’s of these units are still needed, and if so, please submit a new OP-2 Table 2.

Please disregard the changes regarding the name change for the units listed above. An updated OP-2 has been attached with these changes.
- On form OP-SUMR, the unit ID BG Loading obtains a Preconstruction authorization date of 09/03/2000 for PBR 106.427.
 - I believe the date should be listed as 09/04/2000, followed by PBR Registration No. [147499].
 - Please clarify which date should be listed on this form for the respective unit.
 - If changes are required, please submit a revised OP-SUMR.

Please see the attached updated OP-SUMR with the corrected dates.
- On form OP-PBRSUP, PBR 106.478 is not listed. However, it is included on form OP-REQ1.
 - Please submit an updated OP-PBRSUP to include PBR 106.478.

The facility does not have a PBR 106.478 active onsite. An updated PBR list in OP-REQ1 has been included with this change.

Good afternoon,

I have been assigned to the Federal Operating Permit (FOP) initial issuance/renewal/revision application of Permit No. O2009 for OQ Chemicals Bishop LLC, Bishop Plant. This application has been assigned Project No. 37230. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.

Dear Senator Lamantia:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.825,27.5675&level=13>.

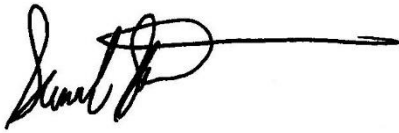

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

1. EXECUTIVE SUMMARY

OQ Chemicals Bishop, LLC (OQ) owns and operates an oxochemical production facility located on U.S. Highway Business 77 two miles south of Bishop, Nueces County, Texas (Bishop Plant). OQ has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Number (CN) 603160979. The Bishop Plant has been assigned TCEQ Regulated Entity Number (RN) 105467039 and a TCEQ Air Quality Account Number NE-A011-K. All emissions sources at the Bishop Plant are authorized via the following air permits:

- ▶ Title V Site Operating Permit (SOP) Number (No.) O-2009;
- ▶ New Source Review (NSR) Permit Nos. 19340 (Trimethylpropane [TMP] production unit), 24875 (Acetaldehyde [Ach] unloading operations), 29966 (1,3-Butylene Glycol [BG] production unit), and 83848 (site-wide maintenance, start-up, and shutdown [MSS] activities);
- ▶ Registered Permits by Rule (PBRs) Nos. 147499, 153683, 155452, 82682, 90887, and 172583; and
- ▶ Non-registerable PBRs.

Nueces County is currently classified as an attainment or unclassified area for all criteria pollutants.¹ The Bishop Plant is a minor source with respect to the Prevention of Significant Deterioration (PSD) program. The site is a major source with respect to the federal operating permits (Title V) program and operates under Federal Operating Permit No. O-2009, which expires April 22, 2025. In addition to the Title V renewal, OQ is requesting the following revisions, which collectively represented an off permit change to the existing Title V Site Operating Permit (SOP) and are now being included in the renewal:

- ▶ Add a new filter installation and maintenance operations permitted by PBR 172583;
- ▶ Updated Company Name details; and
- ▶ Renamed EPNs based on PBR Registration No. 147499.

OQ is submitting this Title V SOP renewal application before October 22, 2024 to represent a timely application as specified in §122.241(b); at least six months, but no earlier than 18 months, before the date of permit expiration. OQ is providing updates to the information used in determining site-wide requirements. This document was prepared in accordance with TCEQ's SOP Renewal Application Guidance, and the requirements listed in 30 TAC §122.132, Application and Required Information for Initial Permit Issuance, Reopening, Renewal, or General Operating Permits.

The enclosed Title V SOP application for the Bishop Plant consists of all required forms and supplemental information.

2. PROCESS DESCRIPTION

The following sections describe the BG and TMP production processes at the Bishop Plant.

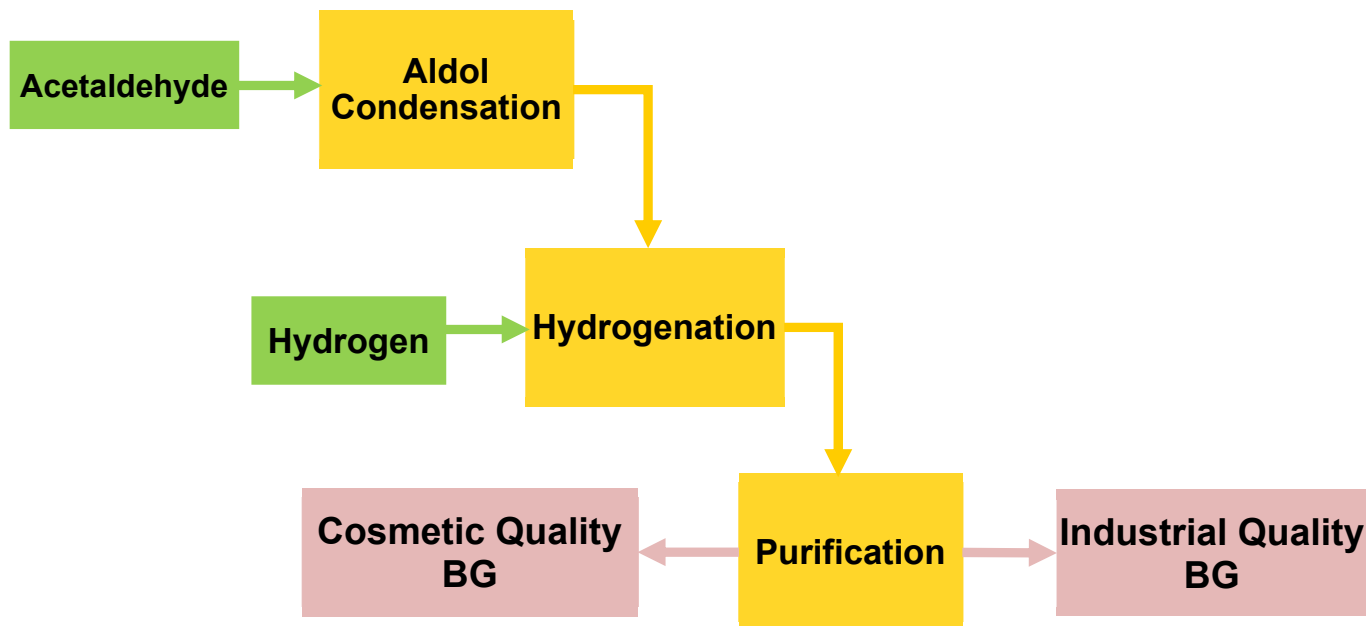

2.1 BG Production Process

OQ produces 1,3-Butylene Glycol (BG) at their Bishop, Texas facility in a continuous process using dedicated process equipment and storage vessels, as authorized under NSR Permit No. 29966. The OQ BG process is certified to the ISO 9001:2015 and ISO 14001:2015 standards in all facets. The basic raw material for the production of BG is acetaldehyde (AcH). OQ receives AcH in dedicated acetaldehyde rail cars, as authorized under NSR Permit No. 24875.

The BG process has four basic steps shown below: Aldol Condensation, Hydrogenation, Finishing (Purification), and Product Storage/Shipping. In the Aldol Condensation reaction step, AcH is catalytically self-reacted to make acetaldol. In the Hydrogenation step the acetaldol is catalytically hydrogenated to form a “crude” BG reaction mixture. The crude BG product contains the side products formed in the two BG reactions (Aldol Condensation and Hydrogenation).

The crude BG reaction mixture is purified in Finishing to make the final BG products. Finishing is a series of mostly distillation steps using proprietary techniques to remove low and high boiling point impurities yielding the Industrial Quality BG. The low odor Cosmetic Quality product is produced by subjecting the Industrial Quality product to additional proprietary treatments.

Figure 2-1. BG Process

After purification, the Industrial and Cosmetic Quality products are diverted to dedicated storage tanks. Stored products are approved by QC before it is released for shipments. The storage tanks are additionally analyzed

on a frequent basis to assure quality is maintained. Finally, samples are taken from each railcar and tanker truck leaving the production facility just before they are closed and sealed with tamper-proof seals.

The following sections detail the Aldol Condensation, Hydrogenation, and Finishing processes in the BG production unit.

2.1.1 Aldol Condensation

The Aldol Condensation is the first reaction in the BG process. Temperature, pressure, and pH control are carefully controlled to minimize side reactions. If these variables are not properly controlled, the downstream processes can also be negatively affected, and the production rate of BG will be lowered due to low raw material efficiencies. The major system components that form the Aldol Condensation System are described below.

2.1.1.1 Aldol Condensation Reactor (V3006)

Purified AcH from Storage Vessel V-875 is fed to the Aldol Condensation reactor V-3006. Liquid catalyst solution is fed to the reactor at a controlled rate to set the degree of reaction completion. AcH reacts with itself to make Acetaldehyde in this reaction. The aldol condensation is not allowed to go to completion to avoid undesired side reactions. The aldol condensation is exothermic and requires the use of an external cooling loop to control reactor temperature. The reactor has a split range controller to allow venting to a scrubber (unusual) or nitrogen addition (normal) to control pressure.

2.1.1.2 AcH Stripper (T219)

The aldol condensation reaction mixture from V3006 goes to an AcH Stripper (T219) to recover the excess AcH. The feed to T219 is pH adjusted, and then stripped in T219 using live steam directly injected into the bottom of T219. Additional water is added to T219 to discourage undesired side reactions. The AcH, small amounts of side products and a small amount of water go overhead. The vent from the overhead condenser is sent to a scrubber (T220). This "crude AcH" is purified in the AcH Purification Distillation Tower (T135) for recycle back to the Aldol Condensation reactor (V3006). The residue from T219 is mostly aldol and water with a small amount of other side products. The T219 Residue is sent to the Hydrogenation reactor (T221).

2.1.1.3 AcH Scrubber (T220)

A water scrubber (T220) is used to scrub the vents from the Aldol Reactor (V3006) and the AcH Stripper (T219) overhead condenser. Chilled, distilled Water is used as the scrubbing fluid. The scrubber liquid (residue) is mostly water and AcH. It is sent back to the T-219 Overhead receiver so the AcH can be recovered in the AcH Purification Distillation Tower (T135).

2.1.1.4 AcH Recovery Column (T135)

"Crude AcH" (T219 Overhead) and some or all of the fresh AcH is sent to T-135 to purify the AcH used in the aldol condensation reactor (V3006). T135 is a distillation tower operating under pressure. The T135 residue is mostly water, some reaction side products and a very small amount of AcH. It is sent to Wastewater Treatment.

2.1.2 Hydrogenation System

The hydrogenation system converts the Acetaldehyde formed in the Aldol Condensation system to BG by reacting the Acetaldehyde with hydrogen.

2.1.2.1 Hydrogenation Reactor (T221)

The hydrogenation occurs in one tower. The feed (T219 Residue) enters at the base of T221 and Hydrogen is fed into T221 through spargers. This reaction takes place in the presence of a solid catalyst entrained in the liquid stream flowing through T221. The reaction is complete with some reaction side products before the liquid exits T221. The material from T221 feeds the separator where the gas and liquid is separated.

2.1.2.2 Hydrogen and Catalyst Separators (V882 and V883)²

The hydrogenation products exit T221 and go to a gas/liquid separator (V882). Some of the excess Hydrogen is purged from the Hydrogenation System to remove trace side products, and is sent to the Closed Vent System (CVS) to incinerators/boilers. The remainder of the hydrogen is compressed and recycled back to the Hydrogenation reactors. The hydrogenation product is in a liquid state and is sent to a liquid/solid settler (V883) to recover the solid catalyst. The solid catalyst settles to the bottom and is sent back to the Hydrogenation reactor (T221). The liquid hydrogenation product is sent to the Finishing System.

2.1.3 Finishing System

The aqueous hydrogenation product is purified in the Finishing System to make the BG product. Some of the by-products created in the reactions have very similar physical properties to BG. The Finishing System is a series of five columns, one flash evaporator are used to purify the BG product.

2.1.3.1 Light Ends Tower (T223)

T223 is the first tower in Finishing. It is an atmospheric pressure distillation tower that separates the water and light organic side products from the BG. This tower is fed by the hydrogenation product and a small recycle stream (T227 overhead). The light ends are distilled overhead and are sent to Wastewater Treatment. The BG and heavy ends exit T223 as residue and are sent to a vacuum flash evaporator (V-778) for further purification. The vent from the T223 Overhead Condenser goes to HE-1137 to cool the vent to reduce the VOC's emitted to the atmosphere.

2.1.3.2 Vacuum Flash Evaporator (V778)

The Flash Evaporator (V778) is operated under vacuum and is used to remove the small amount of heavy VOC's created in the BG process. BG is distilled overhead and the heavy VOC side products exit V778 as residue. The final V778 System Residue is mixed with water and sent to Wastewater Treatment. The overhead product from V778 feeds the Heavy Ends Tower (T226). V778 evaporator vents to the atmosphere through the Hoppe Head vent from the V778 vacuum system.

2.1.3.3 Heavy Ends Tower (T226)

The Heavy Ends Tower (T226) is operated under vacuum and is fed with the V778 Overhead and a very small recycle stream from T227 Residue. T226 is used to remove the very small amounts of heavy ends found in the V778 Overhead fed to T226. The T226 Residue is recycled back to V778 to remove the heavy ends. The T226 Overhead contains the BG product and is sent to the Finishing Tower (T227). T226 vents to the atmosphere through the Hoppe Head vent from the T226 vacuum system.

² Note that this permit does not cover emissions from vessels V639, V875, V879, V882, and V883, which are controlled by process vents that are directed to a closed vent system (CVS) located on adjacent property operated by Ticona Polymers, Inc. (Ticona, CN600124184, RN101625721).

2.1.3.4 Finishing Tower (T227)

The Finishing Tower (T227) is operated under vacuum and is fed with the T226 Overhead and a very small recycle stream from T218 Overhead. T227 has three outlet streams - the overhead, side stream and residue. The T227 Overhead contains BG, water and trace amounts of light organics and is sent back to T223 for recovery of the BG. T227 Residue is mostly BG with trace heavy organics. The T227 Residue is sent to T226 for recovery of the BG. The T227 Side Stream is the Industrial Quality BG Product. The T227 Side Stream is split with some going to the Industrial Quality BG storage tanks (V-3075, V-90127, V901 and V902) and the rest is sent for further processing in T218 to make Cosmetic Quality BG. The Industrial Quality BG can be stored in V-732 and V-733 during product loading or packaging operations. T227 vents to the atmosphere through the Hoppe Head vent from the T227 vacuum system.

2.1.3.5 Low Odor Tower (T218)

The Low Odor Tower (T218) is operated under vacuum and is fed with the T227 Side Stream. T218 is used to improve the odor of the BG product. The T218 Overhead is recycled back to T227 to recover the BG. The T218 Residue is the Cosmetic Quality BG product. The Cosmetic Quality BG product is sent to storage vessels V-161, V-741 or V742. The Cosmetic Quality BG can be stored in V-1684, V-734 and V-1680 during product loading or packaging operations. T218 vents to the atmosphere through the Hoppe Head vent from the T218 vacuum system.

2.2 TMP Production Process

OQ also has the authorization under NSR Permit No. 19340 to produce TMP as one of the products at the Bishop Facility. The TMP production process is divided into three stages: the Reaction Stage, the Extraction Stage, and the Finishing stage.

In the Reaction Stage, formaldehyde and butyraldehyde in the presence of sodium hydroxide (or potassium hydroxide) react in an exothermic reaction to produce crude TMP. The reacted TMP process stream is neutralized with acetic acid. From the reaction system, the reacted TMP process stream is pumped to the formaldehyde recovery step.

In the Extraction Stage, crude TMP and sodium formate (or potassium formate, if potassium hydroxide is used as a catalyst in the Reaction Stage) are separated from the extractor feed mixture by dual solvent counter-current extraction. Concentrated sodium formate (or potassium formate) solution, the by-product of the TMP production, is stored in the storage tank and shipped offsite by tank car. The crude TMP stream is also separated from ethyl acetate prior to the finishing stage.

The purpose of the finishing system is to produce specification TMP by removing heavy ends and light ends from the crude TMP. The TMP finished product is sold in two ways: as molten liquid or as a flake. The molten product is stored in the rundown tanks or is stored in tanks as premium product for molten shipment.
