**Subject:** RE: Working Draft Permit -- FOP 02766/Project 37235, Hobas Pipe USA, Inc./ Houston Plant

Good Morning Bridget,

After Team Leader Review, a few updates are required as listed below,

1. Form OP-REQ1

- Page 18-
  - Please review Section VI , you answered Yes for Question VI.A.1 however, looking at the draft permit, you do not have any units applicable to 40 CFR Part 60 Subparts. The only units you have listed related to this Subpart are for non-applicability. If you are not applicable to 40 CFR Part 60 Subparts, you should answer Question VI.A.1 as no and leave the rest of the section blank. By answering no, this will remove Special Terms and Condition 6 from the draft permit. Please submit an updated Form OP-REQ1.  
**Response: OP-REQ1 Section VI, Pages 17- 25 have been revised and are attached.**
- Page 87-
  - SP 172865 – According to our database, this Standard Permit was cancelled on 02/18/2025, please remove 172865 from form OP-REQ1 .  
**Response: Standard Permit 172865 was cancelled after the RTO was incorporated into NSR Permit No. 55013, after the submittal of this Title V permit revision application in October of 2024. The attached OP-REQ1, Page 87 has been updated.**
  - SP 174376 – According to our database, this Standard Permit was cancelled on 11/21/2024, please remove 174376 from form OP-REQ1.  
**Response: Standard Permit 174376 was cancelled by mistake on 11/21/24 and TCEQ was notified immediately to reverse the cancellation. The email below from APIRT confirms that Standard Permit No. 174376 was reactivated. I can forward the email chain to you upon request.**

Good Afternoon Bridget,

Thank you for submitting the updated forms. After reviewing the forms, there is one update required.

- Form OP-MON
  - Unit ID. FWP2. According to [Form OP-MON Instructions](#) on Page 7, RTO for “Control Device ID No.” row is correct. However, code “DIRFLM” should be listed as the corresponding control device type.

Please submit the updated form by noon on **June 13, 2025**.

Sincerely,

***Liam Lin***

**Subject:** RE: Working Draft Permit -- FOP 02766/Project 37235, Hobas Pipe USA, Inc./ Houston Plant

Good Afternoon Dennis,

A few updates are required with the application which is listed below.

**1. Form OP-MON**

- Please review the guidance found at [TCEQ Compliance Assurance Monitoring](#) to determine if Unit ID FWP2 meets the criteria for CAM. If this Unit requires CAM, a control device is required to be listed. Please submit an updated OP-MON.

**Response:** An updated OP-MON is attached.

- Unit ID. FWP2 – You listed the main standard in Section III as 115.122(2)(1)(a). Based on the attributes provided for this unit in the application, the main standard should be 115.122(a)(1). Please update this section.

**Response:** This revision was previously made and the updated OP-MON was emailed to you

on 03/08/25. An updated OP-MON is attached.

## 2. Form OP-REQ1

- Page 87 – For NSR 55013, you listed the issuance date of 04/16/2024. Looking at our database, I see a more recent issuance date of 01/31/2025. Would you like to incorporate the most recent amendment into the permit? If so, please update form OP-REQ1 page 87.

Response: This SOP revision application was submitted on 10/03/2024, approximately 4 months prior to the 01/31/2025 NSR issuance. An updated OP-REQ1, Page 87 is attached.

- Page 88 – PBR 106.266 with the effective date 09/04/2000 is in the draft permit for Unit IDs DC-4 through DC-6. However, it was not included on form OP-REQ1 page 88. Please submit an updated Form OP-REQ1 page 88.

Response: According to the OP-REQ1 instructions beginning on Page 128, PBR 106.266 is not required to be listed on Page 88. However, 106.266 has been added to OP-REQ1, Page 88. An updated Page 88 is attached.

## 3. Process Description

- The process description included in this minor revision application is only for FWP Line 2 Manufacturing Operations, please submit the full process description for this facility which also includes Pipe Manufacturing Process, Pipe Coupling Manufacturing Process, Repairs and Fitting Manufacturing Process and Pipe End Modification Process.

Response: A full process description is attached.

## 4. OP-CRO1

- The above referenced project is currently going through management review, at this time I would like to ask you to certify the updates submitted in this project through STEERS. Please let me know by email once this step has been completed.

Response: We respectfully request that your management complete the review before we certify changes in the event that you have additional changes.

Please submit the updated forms by Noon on **June 16, 2025**.

Sincerely,

*Liam Lin*

## **GENERAL PROCESS DESCRIPTION**

Hobas Pipe USA (Hobas) operates a glass fiber reinforced, aggregate-fortified, thermosetting resin pipe manufacturing plant at their property located at 1413 E. Richey Road in Houston, Harris County. At this location, the Hobas facility manufactures both circular and non-circular cross-sectional pipes ranging in nominal diameter from 12 inches to 126 inches. The site includes the following pipe manufacturing operations: centrifugal casting plant (Casting), a non-circular winding plant (NC Pipe), a coupling plant (FWC), a continuous winding plant (FWP Line 1), the Secondary finishing operation, and the Fitting shop.

### **Pipe Manufacturing Process**

Pure resin composition and filled resin composition pipes are manufactured at the Hobas plant. Described below is the manufacturing process for a filled resin composition pipe. The pure resin pipe manufacturing process is identical to the filled resin manufacturing process, except that the filled resin step is eliminated and the amount of body resin is increased.

Polyester resin is delivered by tanker truck and offloaded into one of the twelve resin storage tanks.

Resin is pumped through a closed pipe system to the resin pump room. The resin pump room includes several pumps controlled and operated by a computer system. The resin pumps run only when the feeders need to provide resin to the mold. The promoter, inhibitor, and specialty resins are located in a separate room from the resin pump room. All three materials are pumped through a closed system (welded steel pipe).

The filled resin is a mixture of filler, resin, and inhibitor. The mixing process occurs in the filled resin room in one of four filled resin mix tanks. The filled resin mixture is then pumped through a closed system (welded steel pipe) to each feeder.

The filler is delivered to the plant by closed-hopper trucks and pneumatically offloaded into the calcium carbonate silo. The loading of the calcium carbonate results in fugitive particulate emissions to the atmosphere.

The silica sand used for aggregate is stored in a silo. The silica sand is delivered by closed-hopper truck and pneumatically offloaded into the silo. The silica sand is then transferred to day

hoppers. Emissions generated by the material handling of sand are captured and filtered by a cartridge filtration system. The silica sand is gravity fed into the feeders prior to starting a new pipe.

The fiberglass is supplied in spools delivered on pallets and is placed on each feeder where the fiberglass is fed into the end of the feeder arm.

The catalyst is delivered in small plastic containers and is stored in the chemical building. The catalyst is poured in containers then pumped through tubing to the end of the feeder arm for dispersal into the mold.

The raw materials application process is controlled by electronic flow metering systems and weight sensor systems. The feeders and the molds are all computer controlled and operations are continuously observed by feeder operators. A software program controls the dispersal of all raw materials into the mold by regulating the flows of raw materials through the use of metering pumps and electronic flow sensors.

After cool-down, the pipe is extracted by a pipe-puller. The barrel is sent to the end-cutting saw/grinder and onto the secondary shop for final completion. Emissions generated by the sawing operations are captured and filtered prior to exhaust.

The emissions produced by the pipe manufacturing process are captured by a forced air flow system and conveyed through a closed duct system to a regenerative thermal oxidizer. This is accomplished by forcing fresh air into the feeder bay (positive pressure) through the molds (negative pressure).

### **Pipe Coupling Manufacturing Process**

There are three basic types of couplings: filament wound closure (FWC), low-profile bell spigot, and flush-bell spigot.

The FWC coupling is manufactured by winding stranded glass mixed with resin around a coupling mold. Heat is applied with electric infrared heaters to cure the coupling. The FWC platforms are air swept to collect the emissions and route them to the regenerative thermal oxidizer.

The low-profile bell spigot is constructed directly on the pipe by using a steel mold which is secured to the end of the pipe. The pipe and mold are then rotated and a mixture of resin, chopped stranded mat, and woven mat are placed by hand on the mold. The mixture is allowed to cure, then the mold is removed and the bell coupling is trimmed using a hand grinder.

The flush-bell spigot is a thin section of pipe with the same outside diameter pressed onto the end of a pipe.

### **Repairs and Fitting Manufacturing Process**

Repairs are either cosmetic or structural in nature and are made to the pipe in the secondary shop or fitting shop. First, the pipe surface is roughened to allow for a mechanical bond. The defected area is removed (if necessary) and repairs are manually placed using a mixture of catalyzed resin, or resin and chopped/woven strand mat. Dust generated by the hand grinding operation is captured and routed to cartridge filtration systems.

Pipe fittings are constructed by miter cutting the pipe and joining them to form the required fitting. The joints (both sides) are then laid up by hand using mixtures of resin and chopped/woven strand glass.

### **Pipe End Modification Process**

The pipe ends may be modified by grinding the pipe ends to a specific depth and shape. The dust is controlled with water collecting the dust into a slurry mixture. This mixture is strained and the thickened slurry is dried and properly disposed.

### **Non-Circular (NC) Pipe**

Hobas manufactures Non-Circular Pipe (NC cross section pipe). The NC pipe has various oval cross-sectional profiles that are ideal for relining old city sewers. The NC pipe is a sewer pipe system with the lower, narrower section of the pipe ensuring good water flow sewage and the upper, wider profile of the pipe allowing higher volume when necessary. The operation may also produce circular cross-sectional pipe per Hobas' discretion. The process for the manufacture of NC or circular pipe at this plant is the same.

Polyester resin is delivered by tanker truck and offloaded into one of the three resin bulk storage tanks. Each tank has a storage capacity of 8,400 gallons. These three storage tanks are located in a climate-controlled room and are hard pipe vented to the existing RTO. The resin is then pumped from the bulk tanks to one of the four day-use resin mix tanks, where resin is mixed with the catalyst cobalt. Two of the mix tanks have storage capacities of 3,000 liters while the other two have storage capacities of 1,500 liters. The resin mix tanks are located inside the main NC Pipe building, but not inside the climate-controlled room. From the day-use mix tanks, the resin is metered to the NC Pipe machine.

Sand used as a filler in the NC pipe construction is delivered by closed-hopper truck and pneumatically offloaded into a sand silo, located in the same climate-controlled room as the resin bulk storage tanks. The sand is transferred by a sand conveyor to the sand hopper atop the NC Pipe Machine. Particulate emissions generated by the loading of the sand into the silo are abated by a Donaldson Torit TD-573 bin vent cartridge filtration system and are emitted from the dust collector into the building interior atmosphere.

The NC Pipe machine applies resin, silica sand, fiberglass, and catalyst/additives onto a mandrel to manufacture pipes. This process occurs in the resin application enclosure, which vents to the RTO. Once the pipe forming process inside the enclosure is complete, the pipe is transferred into an adjacent enclosure where pipe end cutting occurs. Particulate emissions generated from pipe end cutting is captured and abated by a cartridge filtration system.

### **Continuous Winding Plant (FWP Line 1)**

The Winding Pipe Plant continuously manufactures glass reinforced plastic pipes and sleeves. This process is an open molding resin application technique that uses a rotating mandrel as a mold to produce pipes with high corrosion resistance for sewer and wastewater applications. Polyester resin, styrene, and sand are received by truck and individually unloaded into three resin bulk storage tanks, one styrene bulk storage tank, and two sand silos located inside the climate-controlled Bulk Storage Room. The VOC generated from the resin and styrene storage tanks are hard pipe vented to the RTO. Each sand silo is equipped with a bin vent that exhausts to a Donaldson-Torit Dust Collector.

Resin and styrene are pumped from the Bulk Storage Room to the mix tanks where the resin is mixed with an accelerant. The operation of the mix tanks results in the release of low levels of VOCs into the Winding Building emitted to the atmosphere as building fugitives. The

resin/accelerant mixture is pumped from the day tanks, mixed with catalyst and other additives, then routed through a static mixer prior to being applied to the rotating mandrel on the Winder Machine. Glass fiber filament is also added to the Winder Machine during this process. All process emissions from resin mixture application and curing on the Winder Machine are captured and hard pipe routed to the RTO for abatement.

Sand is transferred from the Sand Silos in the Bulk Storage Room using a sand pressure vessel conveyor to the Sand Hopper located above the Winder Machine. Particulate emissions generated from the loading of the sand hopper system are routed to the Dust Collector for abatement. The sand in the hopper is gravity fed to the Winder Machine below.

The pipe exits the Winder Machine and undergoes the various finishing operations listed below. Particulate emissions from these finishing operations are captured and routed to the Dust Collector for abatement.

1. Online Grinding and Cutting System
2. Online Chamfer/Calibration Machine

The WP Dust Collector is a Donaldson Torit DGE DC System DFE 4-48 Model unit. This dust collector design is the newest, best in class dust collector design equipped with a dropout zone allowing pre-separation of heavy dust particles. The dust collector is also equipped with a Maxpulse cleaning system designed to distribute the cleaning energy of the pulse air more effectively.

Good Morning Dennis,

An updated version of the WDP has been attached for your review. Since this is a follow-up review to the previously submitted and reviewed WDP, only comments concerning changes since the last WDP may be considered by TCEQ. Any comments outside the scope of the most recent changes should be submitted as a separate project. Please review this updated version of the WDP and submit any comments you may have by Noon on **April 29, 2025**, please respond to this email with your approval of the WDP if you do not have any comments.

Sincerely,

*Liam Lin*

**Subject:** RE: Working Draft Permit -- FOP 02766/Project 37235, Hobas Pipe USA, Inc./ Houston Plant

Good morning:

I have the following comments and questions on the above referenced draft FOP Special Terms & Conditions (ST&C).

- ST&C 9A is not entirely filled out. In addition, we are not able to fully understand the CAM compliance date as written in this Special Condition. **This is in regards to ST&C 9A, you answered Form OP-REQ1 XI.L.5 Question as units have a CAM implementation plan and schedule but I did not see one attached to the OP-MON. Please verify that the OP-REQ1 answers are correct and if needed provide the CAM Implementation plan and schedule. Please refer to the [OP-MON Instructions Page 1](#).**  
**A revised OP-REQ1 form is attached. We were unaware, and the OP-REQ1 application form does not provide guidance, regarding the distinction between 'CAM adoption' and 'CAM implementation'.**
- A revised Form OP-REQ1 is attached to correct a misrepresentation in SP&C XI.L.12 on Form Page 84 in the previously submitted version of this form. **I have updated this question and the change should be reflected in the next draft permit.**  
**Thank you.**
- ST&C 10: There are not any Periodic Monitoring requirements referenced in this draft SOP. Is ST&C 10 required to be included in the SOP? **This ST&C will be removed from the Permit.**  
**Thank you.**
- Does Hobas have a requirement to update the pending draft SOP for Off-Permit change notifications and PBR registrations that became effective since the SOP Revision was submitted? If so, please advise what application forms are required to be submitted.  
**Hobas does not have a requirement to update the pending draft SOP for Off-Permit change and PBR registrations during a revision application. However, if you would like to make an update during this revision in order for the change to be reflected in the permit, you may do so. If you would like to make an update, please submit an updated form OP-REQ1 page 87.**  
**Hobas has no plans to update the pending draft SOP for Off-Permit change and PBR registrations as part of this permit action.**

Contact me if you have questions. Thank you for your help.

**Subject:** RE: Working Draft Permit -- FOP O2766/Project 37235, Hobas Pipe USA, Inc./ Houston Plant

Good Morning Dennis,

An updated version of the WDP has been attached for your review. Since this is a follow-up review to the previously submitted and reviewed WDP, only comments concerning changes since the last WDP may be considered by TCEQ. Any comments outside the scope of the most recent changes should be submitted as a separate project. CAM Special Terms and Conditions has been added to the permit. In regards to your question below, if you would like to establish a Control Device ID. No. and Control Device Type, you would need to submit an updated form OP-MON with a completed Section V. Please review this updated version of the WDP and submit any comments you may have by Close of Business (C.O.B) on **April 17, 2025**, please respond to this email with your approval of the WDP if you do not have any comments.

Thank you

Sincerely,

*Liam Lin*

Title V OP-NOTIFY

<b>OP-NOTIFY#: 1</b>	
Notification Type:	OFFPMT
Date of Change:	04/04/2025
Emission Units Affected:	NCBLDGFUG
Authorization Type:	REGPBR
Is this change part of an annual PBR 106.261 registration submittal involving emissions of less than 5 tpy?	No
Select the applicable Permit by Rule (PBR) registration:	179424
Select the associated project for the PBR selected above:	390197 - INITIAL - 31-MAR-25
Description of Change:	Installation of a Restraint Joint Coupling water grinder with a double bell and rubber gasket seal system, utilizing a nylon locking key to transfer longitudinal thrust from one pipe section to another. The water grinder is equipped with a rotating grinding wheel. A high-volume water wash is used for cooling at the grinding action site and to abate particulate emissions generated because of this activity. This water grinding process will produce debris consisting of pipe and abrasive wheel grindings. However, most of the grindings have aerodynamic diameters greater than PM100 and any potential particulate emissions are reduced due to the application of a high-volume stream of water at the grinding location. Emission levels from this process are negligible.

Good afternoon:

Your requested form changes are uploaded into Title V STEERS and are certified. A Copy of Record documenting the STEERS submittal is attached.

For your convenience, a pdf version of these forms is included with this email.

I reviewed the permit and have a follow-up question.

What does TCEQ need to establish a Control Device ID. No. and Control Device Type in the CAM Summary on Revised Draft Page 24?

We are not able to request issuance of this draft permit until we review the next draft which will likely include additional requirements associated with the CAM emissions capture system.

Best Regards,

Dennis McCormick

**Subject:** RE: Working Draft Permit -- FOP O2766/Project 37235, Hobas Pipe USA, Inc./ Houston Plant

Good Morning Dennis,

I have conducted a technical review of *revision* application for *Hobas Pipe USA, Inc., Houston Plant, Area Name*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me the updates and any comments you have on the working draft permit by Noon on **March 28, 2025**.

There are a few updates needed which is listed below.

1. Form OP-REQ1

- a. Page 82, Section K.2- You answered this question as yes, however, since there is no periodic monitoring listed in the permit, please update this question to no. (This question will affect Special Terms and Conditions 9 "Additional Monitoring Requirements".)

- b. Page 83, Section L - Since you submitted an OP-MON for CAM in the update dated December 16, 2024, please update the "Compliance Assurance Monitoring" Section.
2. OP-MON – For Unit ID FWP2, in form OP-MON, you listed the citation as 115.122(2)(1)(A), however, the correct citation should be 115.122 (a)(1). Please update form OP-MON.

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at [http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title\\_V/sop\\_wdp\\_factsheet.pdf](http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf). This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

**As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at [R6AirPermitsTX@epa.gov](mailto:R6AirPermitsTX@epa.gov) and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).**

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

*Liam Lin*

**B. Materials Handling, Construction, Roads, Streets, Alleys, and Parking Lots**

1. Items a - d determines applicability of any of these requirements based on geographical location.

◆	a. The application area is located within the City of El Paso.	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO
◆	b. The application area is located within the Fort Bliss Military Reservation, except areas specified in 30 TAC § 111.141.	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO
◆	c. The application area is located in the portion of Harris County inside the loop formed by Beltway 8.	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO
◆	d. The application area is located in the area of Nueces County outlined in Group II state implementation plan (SIP) for inhalable particulate matter adopted by the TCEQ on May 13, 1988.	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO

*If there is any "YES" response to Questions I.B.1.a - d, answers Questions I.B.2.a - d. If all responses to Questions I.B.1.a-d are "NO," go to Section I.C.*

2. Items a - d determine the specific applicability of these requirements.

◆	a. The application area is subject to 30 TAC § 111.143.	<input type="checkbox"/> YES <input type="checkbox"/> NO
◆	b. The application area is subject to 30 TAC § 111.145.	<input type="checkbox"/> YES <input type="checkbox"/> NO
◆	c. The application area is subject to 30 TAC § 111.147.	<input type="checkbox"/> YES <input type="checkbox"/> NO
◆	d. The application area is subject to 30 TAC § 111.149.	<input type="checkbox"/> YES <input type="checkbox"/> NO

**C. Emissions Limits on Nonagricultural Processes**

◆	1. The application area includes a nonagricultural process subject to 30 TAC § 111.151.	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
	2. The application area includes a vent from a nonagricultural process that is subject to additional monitoring requirements. <i>If the response to Question I.C.2 is "NO," go to Question I.C.4.</i>	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO
	3. All vents from nonagricultural process in the application area are subject to additional monitoring requirements.	<input type="checkbox"/> YES <input type="checkbox"/> NO

<b>VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)</b>	
<b>AA. Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON) (continued)</b>	
13. Group 1 wastewater streams are transferred to an offsite treatment facility meeting the requirements of 40 CFR § 63.138(h). <i>If the response to Question VIII.AA.13 is "NO," go to Question VIII.AA.15.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
14. The option to document in the notification of compliance status report that the wastewater will be treated in a facility meeting the requirements of 40 CFR § 63.138(h) is elected.	<input type="checkbox"/> YES <input type="checkbox"/> NO
15. Group 1 wastewater streams or residuals with a total annual average concentration of compounds in Table 8 of 40 CFR Part 63, Subpart FFFF less than 50 ppmw are transferred offsite. <i>If the response to Question VIII.AA.15 is "NO," go to Question VIII.AA.17.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
16. The transferor is demonstrating that less than 5 percent of the HAP in Table 9 of 40 CFR Part 63, Subpart FFFF is emitted from waste management units up to the activated sludge unit.	<input type="checkbox"/> YES <input type="checkbox"/> NO
17. The application area includes waste management units that receive or manage a Group 1 wastewater stream, or a residual removed from a Group 1 wastewater stream prior to shipment or transport.	<input type="checkbox"/> YES <input type="checkbox"/> NO
18. The application area includes containers that receive, manage, or treat a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream.	<input type="checkbox"/> YES <input type="checkbox"/> NO
19. The application area includes individual drain systems that receive or manage a Group 1 wastewater stream, or a residual removed from a Group 1 wastewater stream. <i>If the response to Question VIII.AA.19 is "NO," go to Question VIII.AA.22.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
20. The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of cover and, if vented, closed vent systems and control devices.	<input type="checkbox"/> YES <input type="checkbox"/> NO

**Subject:** RE: Technical Review -- FOP O2766/Project 37235, Hobas Pipe USA, Inc./ Houston Plant

Good Morning Dennis,

There are some updates needed with the application which is listed below.

1. Form OP-REQ1 , (Page 78) Question XI.B.1 and XI.B.2 – In the answer you mentioned that 40 CFR 63 Subpart WWWW does not have a unit attribute form, which is incorrect. Form OP-UA66 is the Unit Attribute form associated with this regulation. Please update question XI.B.1 to no and leave XI.B.2 blank.

**Response:** The text box in question X1.B.1 of the attached Form OP-REQ1

(Page 78) has been changed from “YES” to “NO” and the response in question XI.B.2 is erased.

2. Form OP-UA66 – Since Unit ID FWP2 is subject to 40 CFR 63 Subpart WWW, please submit [form OP-UA66](#) for Unit ID. FWP2.

Response: The applicable table from Form OP-UA66 is attached to this email in accordance with your request.

3. Form OP-UA1 – Please include an updated from OP-UA1 with a strikethrough over Unit ID FWP2.

Response: All reference to Unit ID FWP2 in the attached updated OP-UA1 are annotated with a strikethrough font.

4. Form OP-SUMR – Please update the “Unit/Process Applicable Form” for Unit ID. FWP2 to include OP-UA15 and OP-UA66.

Response: The reference to “OP-UA1” in the “Unit/Process Applicable Form” box on the Form OP-SUMR (Table 1) is changed to “OP-UA66” in the attached updated form.

5. Form OP-MON – CAM is required for Unit ID FWP2, Index Number R5122, 30 TAC Chapter 115, Vent Gas Controls. Please Submit an updated form OP-MON.

Response: The requested Form OP-MON is attached.

6. Form OP-CRO1 - All of the updated forms may be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Response: For efficiency purposes, we plan to submit a single certified Form OP-CRO1 with a date range to cover all application updates.

Please submit the updated forms by **noon on December 16, 2024.**

Thank you for your cooperation in this matter.

Sincerely,

*Liam Lin*

**Subject:** Technical Review -- FOP O2766/Project 37235, Hobas Pipe USA, Inc./ Houston Plant

Good Afternoon Mr. Gutierrez,

I have been assigned to the Federal Operating Permit (FOP) revision application of Permit No. O2766 for Hobas Pipe USA, Inc, Houston Plant. This application has been assigned Project No. 37235. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

**As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at [R6AirPermitsTX@epa.gov](mailto:R6AirPermitsTX@epa.gov) and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).**

Please review the "SOP Technical Review Fact Sheet" located at [http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title\\_V/sop\\_wdp\\_factsheet.pdf](http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf). This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

*Liam Lin*

## **INTRODUCTION**

The purpose of this application submittal is to provide the TCEQ with the information required to revise Site Operating Permit (SOP) O2766 to codify the applicable requirements associated with a second Filament Winding Pipe manufacturing operation (FWP2) at the Hobas Pipe facility in Houston, Harris County.

The specific revisions requested in this application are as follows.

Revisions 1, 2: Codify the applicable compliance requirements associated with the new Filament Winding Machine (EU: FWP2) in the SOP.

Revisions 3, 4, 5, 6: Codify the applicable compliance requirements associated with the new four resin mix storage tanks (EU: FWP2-MIXER1, FWP2-MIXER2, FWP2-MIXER3, FWP2-MIXER4) in the SOP.

Revision 7: Incorporate the four FWP2 resin mix tanks into a new SOP Emission Group (GRPFWP2MIX). The applicable requirements for these four tanks are identical.

This application provides all the forms required to be contained in a SOP permit revision application. The TCEQ General and Administrative forms are included in Attachment 1 of this document. Unit Attribute forms are enclosed in Attachment 2 of this document. Attachment 3 contains the TCEQ Applicable Requirements Compliance and Monitoring forms: Form OP-REQ1 and Form OP-REQ3. An updated SOP process flow schematic and a description of the FWP2 process are enclosed in Attachment 4. A copy of the current SOP is included in Attachment 5 for reference.

- Part 1 of this form must be submitted with all initial FOP applications and renewal applications.
- The Responsible Official must use Form OP-CRO1 (Certification by Responsible Official) to certify information contained in this form in accordance with 30 TAC § 122.132(d)(8).

**Part 1**

<b>A. Compliance Plan — Future Activity Committal Statement</b>	
<p>The <i>Responsible Official</i> commits, utilizing reasonable effort, to the following:          As the responsible official it is my intent that all emission units shall continue to be in compliance with all applicable requirements they are currently in compliance with, and all emission units shall be in compliance by the compliance dates with any applicable requirements that become effective during the permit term.</p>	
<b>B. Compliance Certification - Statement for Units in Compliance*</b> (Indicate response by entering an "X" in the appropriate column)	
1. With the exception of those emission units listed in the Compliance Schedule section of this form (Part 2, below), and based, at minimum, on the compliance method specified in the associated applicable requirements, are all emission units addressed in this application in compliance with all their respective applicable requirements as identified in this application?	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
2. Are there any non-compliance situations addressed in the Compliance Schedule Section of this form (Part 2)?	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO
3. If the response to Item B.2, above, is "Yes," indicate the total number of Part 2 attachments included in this submittal. <i>(For reference only)</i>	
<p>* For Site Operating Permits (SOPs), the complete application should be consulted for applicable requirements and their corresponding emission units when assessing compliance status. For General Operating Permits (GOPs), the application documentation, particularly Form OP-REQ1 should be consulted as well as the requirements contained in the appropriate General Permits portion of 30 TAC Chapter 122.</p> <p>Compliance should be assessed based, at a minimum, on the required monitoring, testing, record keeping, and/or reporting requirements, as appropriate, associated with the applicable requirement in question.</p>

## Process Description

## **PROCESS DESCRIPTION**

### **FWP LINE 2 MANUFACTURING OPERATIONS**

Hobas is authorized to install a second Filament Winding Machine (EU: FWP2) to continuously manufacture glass reinforced plastic pipes and sleeves. This process is an open molding resin application technique that uses a rotating mandrel as a mold to produce pipes with high corrosion resistance for sewer and wastewater applications.

Polyester resin, styrene, and sand is received by truck and individually unloaded into three bulk resin storage tanks, one bulk styrene storage tank, and two sand silos located inside the climate-controlled Bulk Storage Room. The VOC generated from the resin and styrene storage tanks is hard pipe vented to the plant Regenerative Thermal Oxidizer. Each sand silo will be equipped with a bin vent that will exhaust to an existing Donaldson-Torit Dust Collector.

Resin and styrene will be pumped from the Bulk Storage Room to the resin mix day tanks (EU: GRPFWP2MIX) where the resin will be blended with an accelerant. The operation of the mix day tanks will result in the release of low levels of VOCs that is captured and routed to the RTO for abatement. The resin/accelerant mixture will be pumped from the day tanks, mixed with catalyst and other additives, then routed through a static mixer prior to being applied to the rotating mandrel on the Winder Machine 2. Glass fiber filament will be added to the Winder Machine during this process. All process emissions from the resin mixture application and curing on the Winder Machine2 will be captured and hard pipe to the RTO for abatement.

Sand will be transferred from the Sand Silos in the Bulk Storage Room using a sand pressure vessel conveyor to the Sand Hopper located above the Winder Machine. Particulate emissions generated from the loading of the sand hopper system will be routed to an existing Dust Collector for abatement. The sand in the hopper will be gravity fed to the Winder Machine 2 below.

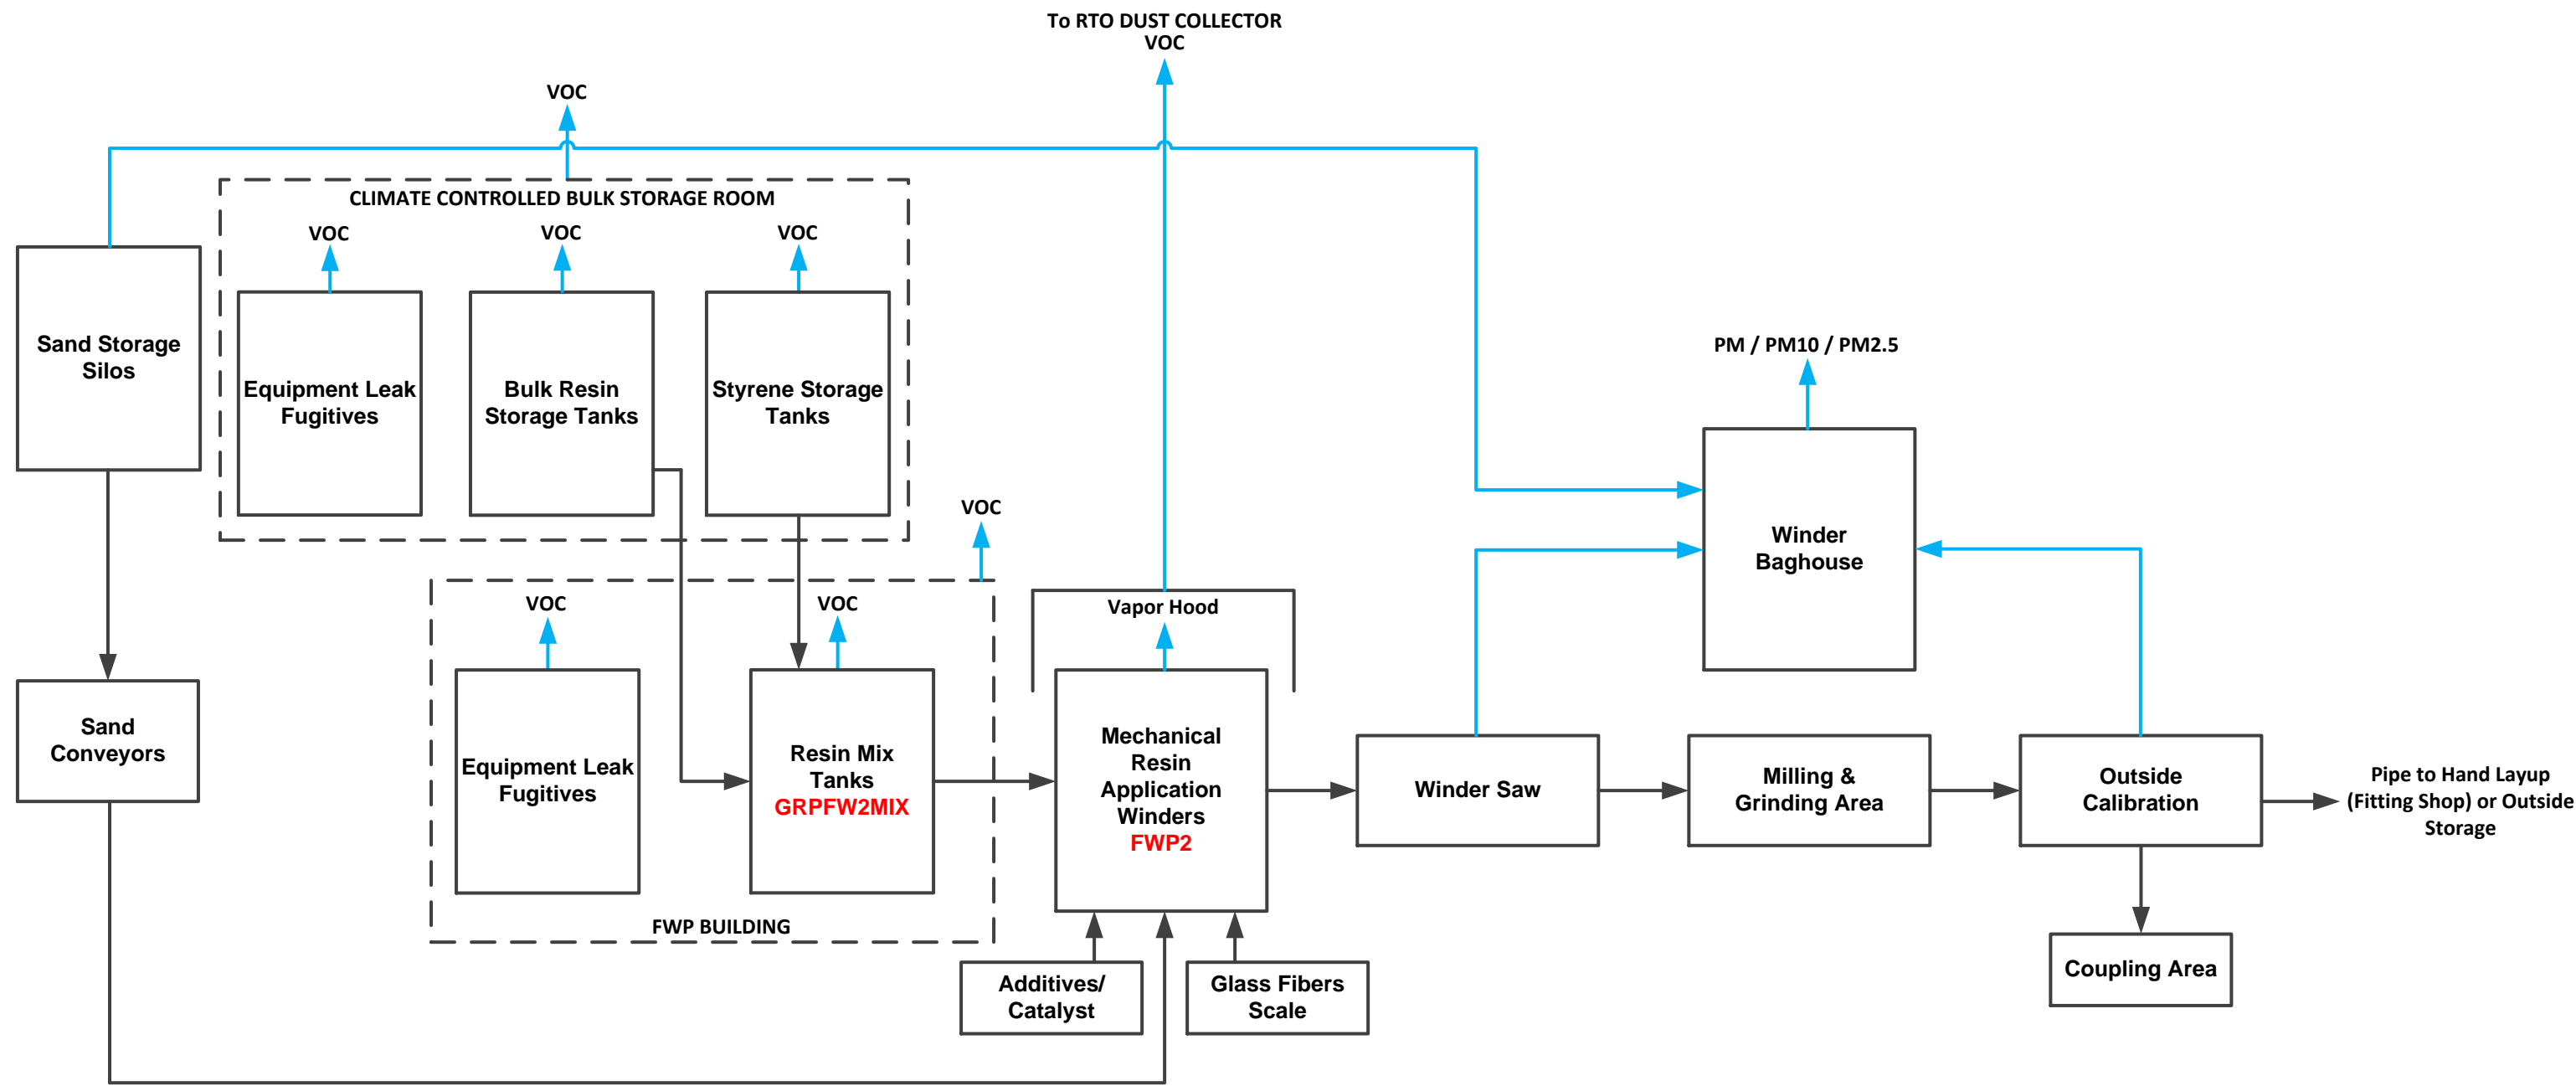

The pipe will exit Winder Machine 2 and undergo the finishing operations listed below. Particulate emissions from these finishing operations will be captured and routed to the Dust Collector for abatement.

**CURRENT SITE OPERATING PERMIT**

# FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO  
Hobas Pipe USA, Inc.

AUTHORIZING THE OPERATION OF  
Houston Plant  
Plastics Pipe and Pipe Fitting Manufacturing

LOCATED AT  
Harris County, Texas  
Latitude 29° 59' 53" Longitude 95° 23' 15"  
Regulated Entity Number: RN102540812

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: 02766 Issuance Date: July 27, 2022

For the Commission

## **General Terms and Conditions**

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

## **Special Terms and Conditions:**

### **Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting**

1. Permit holder shall comply with the following requirements:
  - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
  - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
  - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
  - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.
  - E. Emission units subject to 40 CFR Part 63, Subparts WWWW, ZZZZ, and DDDDD as identified in the attached Applicable Requirements Summary table are subject to 30 TAC

Chapter 113, Subchapter C, §113.1060, §113.1090, and §113.1130, respectively, which incorporate the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
  - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
  - B. Title 30 TAC § 101.3 (relating to Circumvention)
  - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
  - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
  - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
  - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
  - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
  - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
  - I. Title 30 TAC § 101.222 (relating to Demonstrations)
  - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
  - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
    - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
    - (ii) Title 30 TAC § 111.111(a)(1)(E)
    - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
    - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO<sub>x</sub>, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that

does not obstruct the transmission of light. Vents, as specified in the “Applicable Requirements Summary” attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
  - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
  - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is

determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO<sub>x</sub>, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
  - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
  - (2) Records of all observations shall be maintained.
  - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
    - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
    - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- C. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
  - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
  - (ii) Sources with an effective stack height ( $h_e$ ) less than the standard effective stack height ( $H_e$ ), must reduce the allowable emission level by multiplying it by  $[h_e/H_e]^2$  as required in 30 TAC § 111.151(b)
  - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)
4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).
5. The permit holder shall comply with the following requirements of 30 TAC Chapter 117:
  - A. For stationary reciprocating engines exempt from Subchapter D, Division 1 at minor sources of  $\text{NO}_x$  under 30 TAC § 117.2003(a), the permit holder shall comply with 30 TAC §§ 117.2030(c), 117.2035(g), 117.2045(b) and 117.2045(c).
6. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:
  - A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)
  - B. Title 40 CFR § 60.8 (relating to Performance Tests)
  - C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

- D. Title 40 CFR § 60.12 (relating to Circumvention)
  - E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)
  - F. Title 40 CFR § 60.14 (relating to Modification)
  - G. Title 40 CFR § 60.15 (relating to Reconstruction)
  - H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)
7. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.
  8. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

#### **New Source Review Authorization Requirements**

9. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule (including the terms, conditions, monitoring, recordkeeping, and reporting identified in registered PBRs and permits by rule identified in the PBR Supplemental Tables dated June 2, 2023 in the application for project 34014), standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:
  - A. Are incorporated by reference into this permit as applicable requirements
  - B. Shall be located with this operating permit
  - C. Are not eligible for a permit shield
10. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.
11. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating

noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

12. The permit holder shall comply with the following requirements for Air Quality Standard Permits:
  - A. Registration requirements listed in 30 TAC § 116.611, unless otherwise provided for in an Air Quality Standard Permit
  - B. General Conditions listed in 30 TAC § 116.615, unless otherwise provided for in an Air Quality Standard Permit
  - C. Requirements of the non-rule Air Quality Standard Permit for Pollution Control Projects

### **Compliance Requirements**

13. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.
14. Use of Emission Credits to comply with applicable requirements:
  - A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:
    - (i) Title 30 TAC Chapter 115
    - (ii) Title 30 TAC Chapter 117
    - (iii) Offsets for Title 30 TAC Chapter 116
  - B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:
    - (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)
    - (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1
    - (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)
    - (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122
    - (v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)
15. Use of Discrete Emission Credits to comply with the applicable requirements:

- A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:
  - (i) Title 30 TAC Chapter 115
  - (ii) Title 30 TAC Chapter 117
  - (iii) If applicable, offsets for Title 30 TAC Chapter 116
  - (iv) Temporarily exceed state NSR permit allowables
- B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:
  - (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)
  - (ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4
  - (iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)
  - (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122
  - (v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

### **Protection of Stratospheric Ozone**

- 16. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:
  - A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

### **Permit Location**

- 17. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

### **Permit Shield (30 TAC § 122.148)**

- 18. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than

90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Note: A “none” entry may be noted for some emission sources in this permit’s “Applicable Requirements Summary” under the heading of “Monitoring and Testing Requirements” and/or “Recordkeeping Requirements” and/or “Reporting Requirements.” Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

### Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
BOILER	N/A	40 CFR Part 60, Subpart Dc	Boiler is less than 10 MMBtu/hr
DTANK	N/A	40 CFR Part 60, Subpart Kb	Tank has a capacity of less than 19,800 gallons.
GEN	N/A	40 CFR Part 60, Subpart IIII	Constructed or modified/reconstructed before 7/11/2005.
GRPCASTMIX	FR-MIXER1, FR-MIXER2, FR-MIXER3, FR-MIXER4	40 CFR Part 60, Subpart Kb	Tanks have capacities of less than 19,800 gallons.
GRPCASTRTK	RTK1, RTK2, RTK3, RTK4, RTK5, RTK6, RTK7, RTK8	40 CFR Part 60, Subpart Kb	Tanks have capacities of less than 19,800 gallons.
GRPCFLEXTK	RFLXTK1, RFLXTK2, RFLXTK3, RFLXTK4	40 CFR Part 60, Subpart Kb	Tanks have capacities of less than 19,800 gallons.
GRPNCMIX	NCMIX1, NCMIX2, NCMIX3, NCMIX4	40 CFR Part 60, Subpart Kb	Tanks have capacities of less than 19,800 gallons.
GRPNCRTK	NCRTK1, NCRTK2, NCRTK3	40 CFR Part 60, Subpart Kb	Tanks have capacities of less than 19,800 gallons.
GTANK	N/A	30 TAC Chapter 115, Storage of VOCs	Tank has a capacity of less than 1000 gallons.
GTANK	N/A	40 CFR Part 60, Subpart Kb	Tank has a capacity of less than 19,800 gallons.
PARTWASH	N/A	30 TAC Chapter 115, Degreasing Processes	Solvent vapor pressure is less than 0.6 psia at 100 degrees Fahrenheit.

## Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM .....	actual cubic feet per minute
AMOC .....	alternate means of control
ARP .....	Acid Rain Program
ASTM .....	American Society of Testing and Materials
B/PA .....	Beaumont/Port Arthur (nonattainment area)
CAM .....	Compliance Assurance Monitoring
CD .....	control device
CEMS .....	continuous emissions monitoring system
CFR .....	Code of Federal Regulations
COMS .....	continuous opacity monitoring system
CVS .....	closed vent system
D/FW .....	Dallas/Fort Worth (nonattainment area)
EP .....	emission point
EPA .....	U.S. Environmental Protection Agency
EU .....	emission unit
FCAA Amendments .....	Federal Clean Air Act Amendments
FOP .....	federal operating permit
gr/100 scf .....	grains per 100 standard cubic feet
HAP .....	hazardous air pollutant
H/G/B .....	Houston/Galveston/Brazoria (nonattainment area)
H <sub>2</sub> S .....	hydrogen sulfide
ID No. ....	identification number
lb/hr .....	pound(s) per hour
MACT .....	Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr .....	Million British thermal units per hour
NA .....	nonattainment
N/A .....	not applicable
NADB .....	National Allowance Data Base
NESHAP .....	National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)
NO <sub>x</sub> .....	nitrogen oxides
NSPS .....	New Source Performance Standard (40 CFR Part 60)
NSR .....	New Source Review
ORIS .....	Office of Regulatory Information Systems
Pb .....	lead
PBR .....	Permit By Rule
PEMS .....	predictive emissions monitoring system
PM .....	particulate matter
ppmv .....	parts per million by volume
PRO .....	process unit
PSD .....	prevention of significant deterioration
psia .....	pounds per square inch absolute
SIP .....	state implementation plan
SO <sub>2</sub> .....	sulfur dioxide
TCEQ .....	Texas Commission on Environmental Quality
TSP .....	total suspended particulate
TVP .....	true vapor pressure
U.S.C. ....	United States Code
VOC .....	volatile organic compound
