Furthermore, we normally do not include units in the Draft Permit that do not have any other applicable requirements. The four units that qualify for De Minimis requirements can be listed in the New Source Review Authorization References by Emission Units Table as requested, however they will not be listed in the Unit Summary Table. The Unit Summary Table is only for units that appear in the Applicable Requirements Summary Table.

I have attached the revised working draft permit for your review. Please let me know if you have any comments on this by **February 27, 2025.**

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Samantha Mendez, TCEQ Envr. Permit Specialist:

American Polymer Company is submitting updated information and has prepared comments for the Working Draft Permit (WDP) of Air Quality Federal Operating Permit (FOP O4701) for its facility located in Jourdanton, Texas via the State of Texas Environmental Electronic Reporting System (STEERS). American Polymer is submitting a response to TCEQ's technical review, received January 9, 2025 by email and WDP received January 27, 2025.

OP-REQ1 Question XI.J.5
TCEQ has requested clarification regarding TCEQ's form, OP-REQ1, Version 09/2024, Question XI.J.5. The question on the form is, "The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area where the facilities previously had a collected uncontrolled design capacity to emit 10 tpy or more of NOx and is subject to 101.351(c)." American Polymer's confirms the answer to the Question XI.J.5 is "No," because Atascosa County is not included in the referenced nonattainment area.

OP-REQ1 NSR Authorization 172595
TCEQ has requested clarification regarding TCEQ's form, OP-REQ1, Version 11/2020, Question XII.H on p. 87. TCEQ's is requesting confirmation that the NSR Authorization 172595 should be listed under Section H rather than Section G. Section H is for Title 30 Texas Administrative Code (TAC) Chapter 116 Permits, Special Permits, Standard Permits, Other Authorizations (Other Than Permits By Rule, PSD Permits, NA Permits) for the Application Area. American Polymer certifies NSR Authorization 172595 should be listed under section H on the OP-REQ1 form. The revised OP-REQ1 Version 09/24 lists section H on p. 89.

OP-SUM Preconstruction Authorization Date
An updated OP-SUM form is included in the submittal that provides the preconstruction authorization date of 09/04/2000 for Permit by Rule (PBR) 106.392.

OP-PBRSUP
An updated OP-PBRSUP form is included in the submittal. The following PBR's have been removed from Table B:

- PBR 106.474 associated with hydrochloric acid storage,
- PBR 106.373 associated with refrigerant systems, and
- PBR 106.231 manufacturing, refinishing and restoring wood products.

The OP-PBRSUP form, Table D has been updated to include Unit ID numbers rather than "site-wide", where relevant.

WDP FOP O4701, Initial Issuance (Red-Lined)
On draft page 7, CONVEY1, BIN1, BIN2 and BIN3 are added to the Unit Summary to reflect the forms OP-UA1 dated 9/30/2024 and OP-SUM, Table 1 (unchanged from original submission). On draft page 13, CONVEY1, BIN1, BIN2 and BIN3 are added to the New Source Review Authorization References by Emissions Unit table to correspond to the aforementioned forms and NSR permit 172595.

On draft page 12, the red-lined initial Federal Operating Permit No. O4701, please strike 30 TAC Chapter 106 PBR's 106.474, 106.373 and 106.231, as noted on the updated form OP-PBRSUP.

If you have any questions or require additional information, please contact me at 786-877-4690 or via email at sean@apcunderground.com.

Good afternoon,

I have conducted a technical review of *initial issuance* application for *American Polymer Company/American Polymer Company*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by ***February 10, 2025***

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction.

This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Subject: Technical Review -- FOP O4701/Project 37328, American Polymer Company/American Polymer Company

Good afternoon,

I have been assigned to the Federal Operating Permit (FOP) initial issuance application of Permit No. O4701 for American Polymer Company/American Polymer Company. This application has been assigned Project No. 37328. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

I have conducted a technical review and found the noted the following deficiencies during my review of the initial issuance application. **Please respond to the following by February 07, 2025**.

- I noted that OP-REQ1 page 83 is not up to date with the latest version 09/2024.
    - There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
        - I want to confirm that the answer you submitted on this page for XI.J.5 is "NO" on the current version as well.
- Additionally, NSR Authorization 172595, on page 87 of form OP-REQ-1 requires clarification.
    - This Authorization number is listed in section G on page 87 of formOP-REQ-1.
        - I would like to certify with you that this authorization number should be listed under section H on page 87 of form OP-REQ-1.
- On form OP-SUM, the preconstruction authorization date is listed incorrectly for PBR 106.392.
    - The preconstruction authorization date should be 09/04/2000 for PBR 106.392.
        - Please submit a revised OP-SUM.
- Furthermore, on form OP-PBRSUP, Table A, Table B, and Table D were filled out incorrectly.
    - Table A on form OP-PBRSUP should have been left blank, and Table B should have been filled out with resemblance to how Table A was originally filled out.
    - Table D currently has all Unit ID numbers listed as "site-wide", when not all PBRs listed on Table D are supposed to be site-wide.
        - Please submit a revised OP-PBRSUP.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

Thank you for your cooperation. If you have any questions, please feel free to contact me!

1.0 SUMMARY

1.1 PURPOSE

American Polymer Company (APC) is applying for its initial Air Quality Federal Operating Permit (FOP) or Title V air permit. The facility is located at 167 Old Pearsall Rd in Atascosa County, Texas.

1.2 REGULATORY BACKGROUND

APC was issued New Source Review (NSR) Air Permit Number 172595 on March 22, 2024. The NSR permit expires on March 22, 2034.

APC potential emissions of individual hazardous air pollutants (HAPs) are greater than 10 tpy but the total facility HAPs are less than 25 tpy making it a major source of HAPs. Therefore, the facility is considered a major source of HAPs when looking at applicable National Emission Standards for Hazardous Air Pollutants (NESHAP) requirements.

APC operations will be subject to NESHAP WWWW National Emissions Standards for Hazardous Air Pollutants: Reinforced Plastic Composites Production with further discussion provided in Section 3.

2.0 FACILITY DESCRIPTION

2.1 PROCESS DESCRIPTION

APC has purchased an 11-acre site to manufacture polymer concrete casted utility vaults. The location is northwest of Jourdanton, TX. APC polymer concrete products are manufactured using aggregate and a proprietary resin system. All vault enclosures manufactured are reinforced with fiberglass pieces for added strength and rigidity. Polymer concrete is the superior material choice for precast solutions, compared to traditional concrete because it is lighter in weight, higher in strength, and corrosion resistant. APC vault enclosures are used for pull-boxes, hand-holes, splice boxes and other equipment enclosures for many various applications. APC vault enclosure products offer easy access for underground services, including but not limited to electrical, communications, water, gas, and other industrial systems.

The process will be housed in the building as shown on the Facility Map (Appendix B). The roads for material deliveries, shipping outgoing product and employee access have existing paved surfaces. APC plans to pave the parking area.

2.2 APPLICABLE EMISSION UNITS

The planned emission sources are listed in Table 2.1.

Table 2.1 Summary of Emission Units

Emission Point Number	Emission Unit Description
EU1	Weigh Hopper, Filling the Mold and Polymer Casting
CONVEY1	Conveying to Mixer (four conveyors total)
BIN1	Rock (Aggregate) Bin Filling
BIN2	Sand Bin Filling
BIN3	Calcium Carbonate Bin Filling

2.3 CONVEYING TO MIXING

Rock (aggregate), sand and calcium carbonate are stored in bins and individually conveyed to the main conveyor which feeds the mixer. The rates for the solids additions are based on appropriate ratios for the resin usage.

2.4 MIXING SYSTEM

The Autocon Mixing System rate is determined by the resin usage for the polymer concrete casting of vaults.

2.5 POLYMER CASTING

The polymer concrete casting rate is based on a maximum polymer resin throughput of 3,737 tons/year.

2.6 BIN FILLING

Bin filling throughput is determined by the materials needed to match the resin usage.

3.0 REGULATORY REVIEW

3.1 NATIONAL EMISSIONS STANDARDS FOR HAZARDOUS AIR POLLUTANTS (NESHAP)

The National Emissions Standards for Hazardous Air Pollutants (NESHAP) that is applicable to the facility is described in the following section.

3.1.1 Subpart WWWW

APC will be subject to NESHAP Subpart A General Provisions and NESHAP WWWW for Reinforced Plastic Composites Production.

Polymer casting is exempted from WWWW according to 40 CFR 63.5790(b). However, mixing is subject to NESHAP WWWW according to 40 CFR 63.5805(c). APC will not be required to calculate or report emissions nor meet the organic HAP emissions limits in Table 3 for the subpart. Also, APC is not required to follow the work practice standards in Table 4 of the subpart. Footnote 1 to Table 4 mentions, "For polymer casting mixing operations, containers with a surface area of 500 square inches or less may be open while active mixing is taking place." The surface area of the mixing chamber is 177 square inches. Therefore, no work practice standards apply to the facility. However, APC is required to submit an initial startup notification (electronic filing on CEDR) showing the mixing process is subject to Subp. WWWW. This notification was submitted on September 9th, 2024 to the Air Section Manager, Region 13 – San Antonio. Therefore, although NESHAP WWWW applies to the facility, the facility has no additional compliance requirements under this standard.

Since the APC operations are included in a 40 CFR 63 source category, case-by-case review requirements under 40 CFR 63.42(c) are not applicable.

3.2 NEW SOURCE PERFORMANCE STANDARDS (NSPS)

3.2.1 Evaluation of Other Subparts

The following subpart was evaluated and determined to not be applicable to the facility:

- **Subpart Kb**: Volatile Organic Liquid (VOL) Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced After July 23, 1984 (60.110b). The polymer resin totes at the facility have a storage capacity of 330 gallons or 1.25 m^3. Subpart Kb does not apply to storage vessels with a capacity less than 75 m^3 (19,800 gallons). Therefore, Subpart Kb is not applicable to these VOL storage totes or containers.

3.3 PREVENTION OF SIGNIFICANT DETERIORATION (PSD)

APC has potential emissions less than 250 tons per year of all PSD pollutants and is therefore a minor source under Prevention of Significant Deterioration (PSD) requirements. Please see the potential emissions in the NSR Permit for a comparison of total facility emissions against the PSD threshold.

3.4 COMPLIANCE ASSURANCE MONITORING (CAM)

Under 40 CFR 64.2, a Compliance Assurance Monitoring (CAM) plan is required for any emissions unit in a facility that is required to have a Part 70 permit, where the emissions unit has uncontrolled emissions above a major source threshold (10 tpy for a HAPs) and relies upon air pollution control equipment to meet an applicable emission limit. The APC facility does not utilize any control equipment. The bins and material handling for aggregate, sand, and calcium carbonate are uncontrolled. Therefore, APC is not required to prepare and submit a CAM Plan.

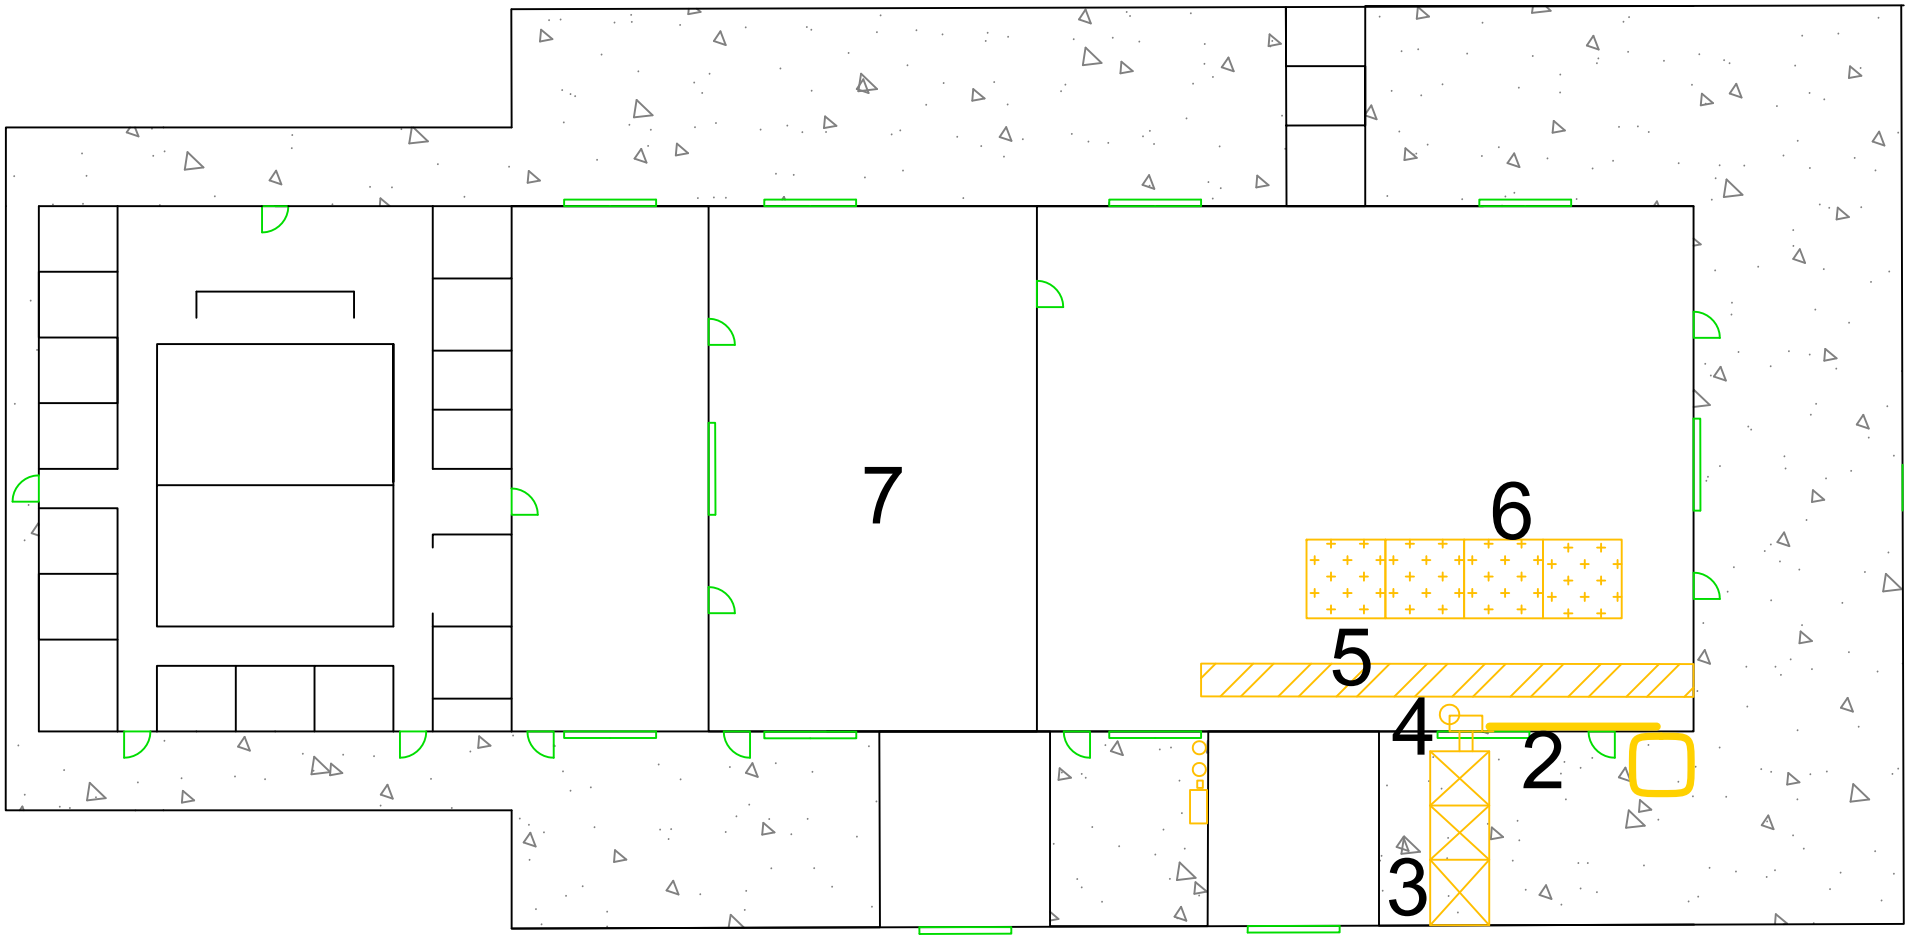
Process Plan Layout



Jourdanton Layout and Process Plan

The numbers below correspond to the plan, process descriptions included:

1. Removed from plan (no resin tank).
2. Resin movement. Resin is moved from the tote directly into the mixer, only at the exact amount needed per part. This is the start of the batching and pouring process
3. Aggregate batch plant. Rock, Sand, and Calcium Carbonate are stored in hoppers outside. Like the resin the aggregates are moved directly from the hoppers into the mixer, only at the exact amount needed per part.
4. Mixer – Autocon OS-10. All material is moved into the mixing unit, which is classified as a continuous mixer. The mixer combines all the necessary materials and pours into the product molds in a single step. Specifications attached.
5. Part molds are moved along a conveyor, when they are moved under the mixer they are filled with mix, moved down the conveyor line to make space for the next mold to be poured.
6. Finished parts are moved to the station where they are removed from the molds. The finished product moves to finishing/packaging and the empty molds are set back up and placed back onto the conveyor lines.
7. Finishing and packaging area. Products are combined and/or assembled into finished goods and prepared for shipment.

To: sean@apcunderground.com <sean@apcunderground.com>

Good morning,

I have been assigned to the Federal Operating Permit (FOP) initial issuance/renewal/revision application of Permit No. O4701 for American Polymer Company/American Polymer Company. This application has been assigned Project No. 37328. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.

b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.

c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.

d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

Optional: *Request any information that may have been noted as deficient or out-of-date during a preliminary project review (e.g. OP-1 with current contact data, current OP-REQ1, etc.), and include a deadline.*

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Dear Senator Gutierrez:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. https://gisweb.tceq.texas.gov/LocationMapper/?marker=-98.575353,28.96072&level=13.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

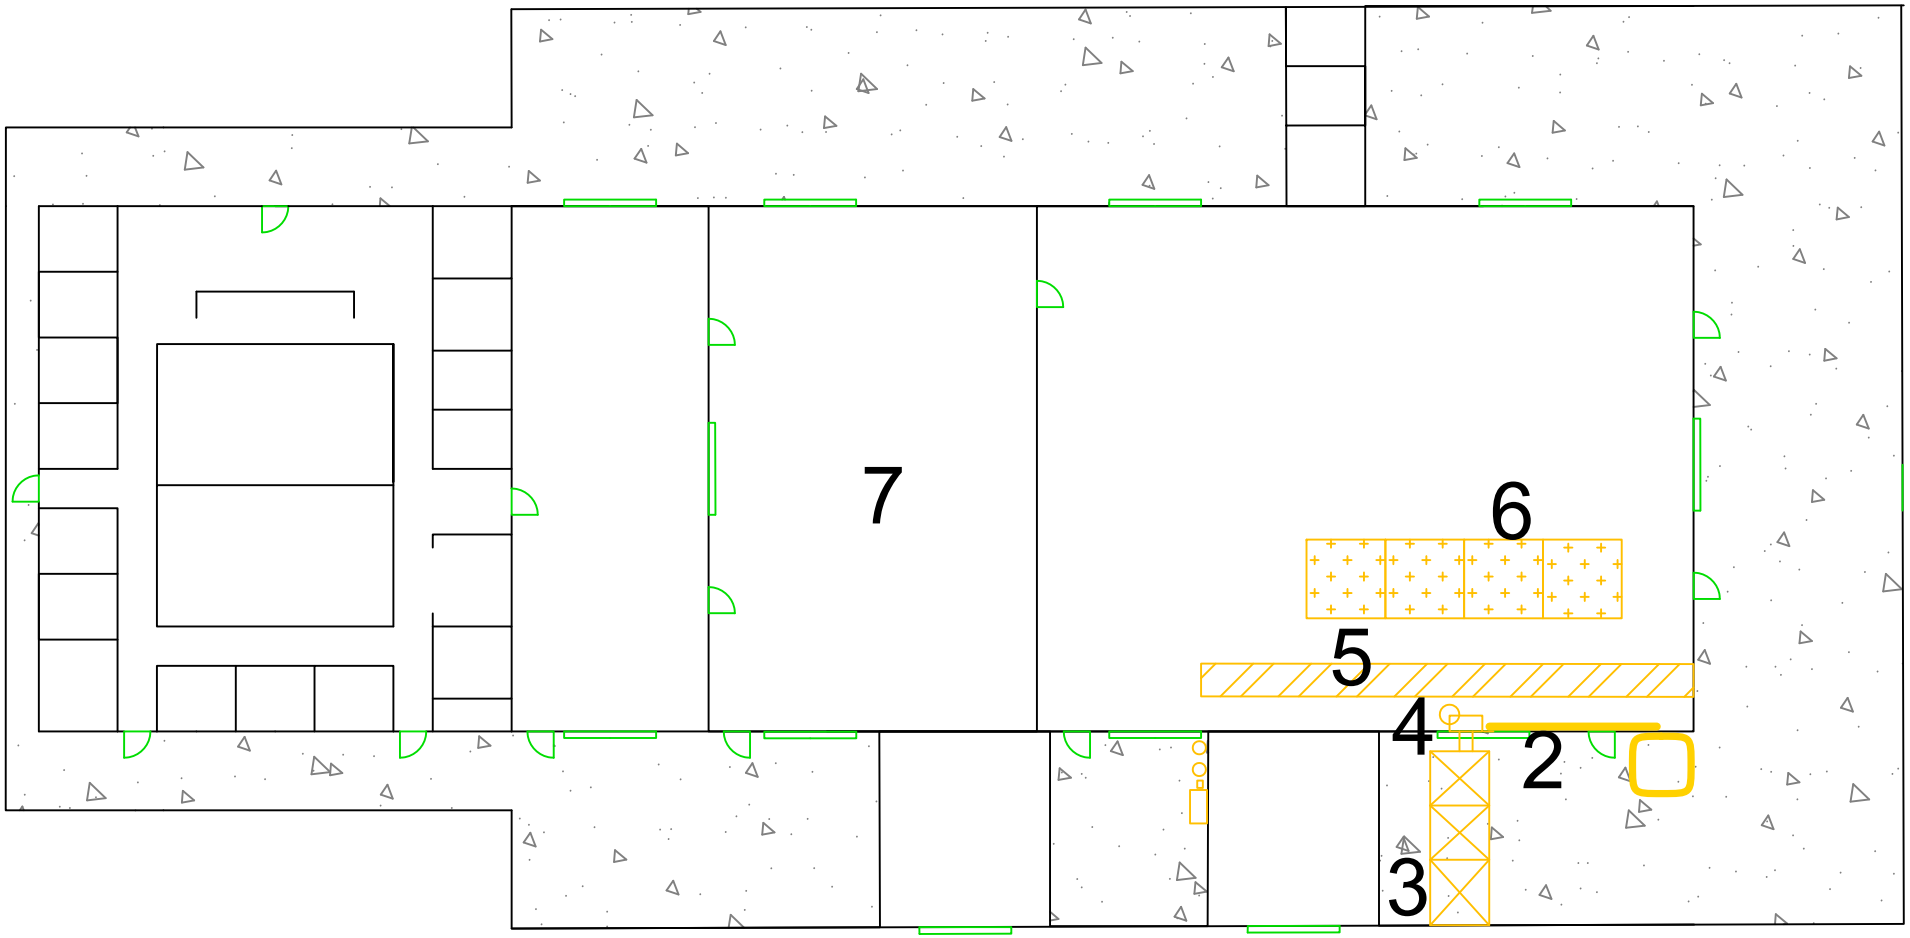
Process Plan Layout



Jourdanton Layout and Process Plan

The numbers below correspond to the plan, process descriptions included:

1. Removed from plan (no resin tank).
2. Resin movement. Resin is moved from the tank directly into the mixer, only at the exact amount needed per part. This is the start of the batching and pouring process
3. Aggregate batch plant. Rock, Sand, and Calcium Carbonate are stored in hoppers outside. Like the resin the aggregates are moved directly from the hoppers into the mixer, only at the exact amount needed per part.
4. Mixer – Autocon OS-10. All material is moved into the mixing unit, which is classified as a continuous mixer. The mixer combines all the necessary materials and pours into the product molds in a single step. Specifications attached.
5. Part molds are moved along a conveyor, when they are moved under the mixer they are filled with mix, moved down the conveyor line to make space for the next mold to be poured.
6. Finished parts are moved to the station where they are removed from the molds. The finished product moves to finishing/packaging and the empty molds are set back up and placed back onto the conveyor lines.
7. Finishing and packaging area. Products are combined and/or assembled into finished goods and prepared for shipment.

Public Involvement Plan Form for Permit and Registration Applications

The Public Involvement Plan is intended to provide applicants and the agency with information about how public outreach will be accomplished for certain types of applications in certain geographical areas of the state. It is intended to apply to new activities; major changes at existing plants, facilities, and processes; and to activities which are likely to have significant interest from the public. This preliminary screening is designed to identify applications that will benefit from an initial assessment of the need for enhanced public outreach.

All applicable sections of this form should be completed and submitted with the permit or registration application. For instructions on how to complete this form, see TCEQ-20960-inst.

Section 1. Preliminary Screening

1.0 SUMMARY

1.1 PURPOSE

American Polymer Company (APC) is applying for its initial Air Quality Federal Operating Permit (FOP) or Title V air permit. The facility is located at 167 Old Pearsall Rd in Atascosa County, Texas.

1.2 REGULATORY BACKGROUND

APC was issued New Source Review (NSR) Air Permit Number 172595 on March 22, 2024. The NSR permit expires on March 22, 2034.

APC potential emissions of individual hazardous air pollutants (HAPs) are greater than 10 tpy but the total facility HAPs are less than 25 tpy making it a major source of HAPs. Therefore, the facility is considered a major source of HAPs when looking at applicable National Emission Standards for Hazardous Air Pollutants (NESHAP) requirements.

APC operations will be subject to NESHAP WWWW National Emissions Standards for Hazardous Air Pollutants: Reinforced Plastic Composites Production with further discussion provided in Section 3.

2.0 FACILITY DESCRIPTION

2.1 PROCESS DESCRIPTION

APC has purchased an 11-acre site to manufacture polymer concrete casted utility vaults. The location is northwest of Jourdanton, TX. APC polymer concrete products are manufactured using aggregate and a proprietary resin system. All vault enclosures manufactured are reinforced with fiberglass pieces for added strength and rigidity. Polymer concrete is the superior material choice for precast solutions, compared to traditional concrete because it is lighter in weight, higher in strength, and corrosion resistant. APC vault enclosures are used for pull-boxes, hand-holes, splice boxes and other equipment enclosures for many various applications. APC vault enclosure products offer easy access for underground services, including but not limited to electrical, communications, water, gas, and other industrial systems.

The process will be housed in the building as shown on the Facility Map (Appendix B). The roads for material deliveries, shipping outgoing product and employee access have existing paved surfaces. APC plans to pave the parking area.

2.2 APPLICABLE EMISSION UNITS

The planned emission sources are listed in Table 2.1.

Table 2.1 Summary of Emission Units

Emission Point Number	Emission Unit Description
EU1	Weigh Hopper, Filling the Mold and Polymer Casting
CONVEY1	Conveying to Mixer (four conveyors total)
BIN1	Rock (Aggregate) Bin Filling
BIN2	Sand Bin Filling
BIN3	Calcium Carbonate Bin Filling

2.3 CONVEYING TO MIXING

Rock (aggregate), sand and calcium carbonate are stored in bins and individually conveyed to the main conveyor which feeds the mixer. The rates for the solids additions are based on appropriate ratios for the resin usage.

2.4 MIXING SYSTEM

The Autocon Mixing System rate is determined by the resin usage for the polymer concrete casting of vaults.

2.5 POLYMER CASTING

The polymer concrete casting rate is based on a maximum polymer resin throughput of 3,737 tons/year.

2.6 BIN FILLING

Bin filling throughput is determined by the materials needed to match the resin usage.

3.0 REGULATORY REVIEW

3.1 NATIONAL EMISSIONS STANDARDS FOR HAZARDOUS AIR POLLUTANTS (NESHAP)

The National Emissions Standards for Hazardous Air Pollutants (NESHAP) that is applicable to the facility is described in the following section.

3.1.1 Subpart WWWW

APC will be subject to NESHAP Subpart A General Provisions and NESHAP WWWW for Reinforced Plastic Composites Production.

Polymer casting is exempted from WWWW according to 40 CFR 63.5790(b). However, mixing is subject to NESHAP WWWW according to 40 CFR 63.5805(c). APC will not be required to calculate or report emissions nor meet the organic HAP emissions limits in Table 3 for the subpart. Also, APC is not required to follow the work practice standards in Table 4 of the subpart. Footnote 1 to Table 4 mentions, "For polymer casting mixing operations, containers with a surface area of 500 square inches or less may be open while active mixing is taking place." The surface area of the mixing chamber is 177 square inches. Therefore, no work practice standards apply to the facility. However, APC is required to submit an initial startup notification (electronic filing on CEDR) showing the mixing process is subject to Subp. WWWW. This notification was submitted on September 9th, 2024 to the Air Section Manager, Region 13 – San Antonio. Therefore, although NESHAP WWWW applies to the facility, the facility has no additional compliance requirements under this standard.

Since the APC operations are included in a 40 CFR 63 source category, case-by-case review requirements under 40 CFR 63.42(c) are not applicable.

3.2 NEW SOURCE PERFORMANCE STANDARDS (NSPS)

3.2.1 Evaluation of Other Subparts

The following subpart was evaluated and determined to not be applicable to the facility:

- **Subpart Kb**: Volatile Organic Liquid (VOL) Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced After July 23, 1984 (60.110b). The polymer resin totes at the facility have a storage capacity of 330 gallons or 1.25 m^3. Subpart Kb does not apply to storage vessels with a capacity less than 75 m^3 (19,800 gallons). Therefore, Subpart Kb is not applicable to these VOL storage totes or containers.

3.3 PREVENTION OF SIGNIFICANT DETERIORATION (PSD)

APC has potential emissions less than 250 tons per year of all PSD pollutants and is therefore a minor source under Prevention of Significant Deterioration (PSD) requirements. Please see the potential emissions in the NSR Permit for a comparison of total facility emissions against the PSD threshold.

3.4 COMPLIANCE ASSURANCE MONITORING (CAM)

Under 40 CFR 64.2, a Compliance Assurance Monitoring (CAM) plan is required for any emissions unit in a facility that is required to have a Part 70 permit, where the emissions unit has uncontrolled emissions above a major source threshold (10 tpy for a HAPs) and relies upon air pollution control equipment to meet an applicable emission limit. The APC facility does not utilize any control equipment. The bins and material handling for aggregate, sand, and calcium carbonate are uncontrolled. Therefore, APC is not required to prepare and submit a CAM Plan.

- Additionally, please submit a revised OP-REQ1 page 87 to formally show the change of moving NSR Authorization 172595 from Section G to Section H.
- Please submit a revised OP-REQ1 page 83 as well to reflect the applicants answer of “No” to the new question listed on XI.J.5.

Furthermore, we normally do not include units in the Draft Permit that do not have any other applicable requirements. The four units that qualify for De Minimis requirements can be listed in the New Source Review Authorization References by Emission Units Table as requested, however they will not be listed in the Unit Summary Table. The Unit Summary Table is only for units that appear in the Applicable Requirements Summary Table.

I have attached the revised working draft permit for your review. Please let me know if you have any comments on this by **February 27, 2025.**

Thank you for your cooperation!

Good afternoon,

I hope this email finds you well.

After reviewing the documents and Working Draft Permit (WDP) comments, I noticed that an OP-REQ1 was not included.

- Please submit a revised OP-REQ1 page 88 to remove the three PBRs mentioned in the Working Draft Permit (WDP) comments.
- Additionally, please submit a revised OP-REQ1 page 87 to formally show the change of moving NSR Authorization 172595 from Section G to Section H.
- Please submit a revised OP-REQ1 page 83 as well to reflect the applicants answer of "No" to the new question listed on XI.J.5.

Furthermore, we normally do not include units in the Draft Permit that do not have any other applicable requirements. The four units that qualify for De Minimis requirements can be listed in the New Source Review Authorization References by Emission Units Table as requested, however they will not be listed in the Unit Summary Table. The Unit Summary Table is only for units that appear in the Applicable Requirements Summary Table.

I have attached the revised working draft permit for your review. Please let me know if you have any comments on this by **February 27, 2025.**

Thank you for your cooperation!

Sincerely,

Samantha Mendez

Samantha Mendez, TCEQ Envr. Permit Specialist:

American Polymer Company is submitting updated information and has prepared comments for the Working Draft Permit (WDP) of Air Quality Federal Operating Permit (FOP O4701) for its facility located in Jourdanton, Texas via the State of Texas Environmental Electronic Reporting System (STEERS). American Polymer is submitting a response to TCEQ's technical review, received January 9, 2025 by email and WDP received January 27, 2025.

OP-REQ1 Question XI.J.5
TCEQ has requested clarification regarding TCEQ's form, OP-REQ1, Version 09/2024, Question XI.J.5. The question on the form is, "The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area where the facilities previously had a collected uncontrolled design capacity to emit 10 tpy or more of NOx and is subject to 101.351(c)." American Polymer's confirms the answer to the Question XI.J.5 is "No," because Atascosa County is not included in the referenced nonattainment area.

OP-REQ1 NSR Authorization 172595
TCEQ has requested clarification regarding TCEQ's form, OP-REQ1, Version 11/2020, Question XII.H on p. 87. TCEQ's is requesting confirmation that the NSR Authorization 172595 should be listed under Section H rather than Section G. Section H is for Title 30 Texas Administrative Code (TAC) Chapter 116 Permits, Special Permits, Standard Permits, Other Authorizations (Other Than Permits By Rule, PSD Permits, NA Permits) for the Application Area. American Polymer certifies NSR Authorization 172595 should be listed under section H on the OP-REQ1 form. The revised OP-REQ1 Version 09/24 lists section H on p. 89.

OP-SUM Preconstruction Authorization Date
An updated OP-SUM form is included in the submittal that provides the preconstruction authorization date of 09/04/2000 for Permit by Rule (PBR) 106.392.

OP-PBRSUP
An updated OP-PBRSUP form is included in the submittal. The following PBR's have been removed from Table B:

- PBR 106.474 associated with hydrochloric acid storage,
- PBR 106.373 associated with refrigerant systems, and
- PBR 106.231 manufacturing, refinishing and restoring wood products.

The OP-PBRSUP form, Table D has been updated to include Unit ID numbers rather than "site-wide", where relevant.

WDP FOP O4701, Initial Issuance (Red-Lined)
On draft page 7, CONVEY1, BIN1, BIN2 and BIN3 are added to the Unit Summary to reflect the forms OP-UA1 dated 9/30/2024 and OP-SUM, Table 1 (unchanged from original submission). On draft page 13, CONVEY1, BIN1, BIN2 and BIN3 are added to the New Source Review Authorization References by Emissions Unit table to correspond to the aforementioned forms and NSR permit 172595.

On draft page 12, the red-lined initial Federal Operating Permit No. O4701, please strike 30 TAC Chapter 106 PBR's 106.474, 106.373 and 106.231, as noted on the updated form OP-PBRSUP.

Good afternoon,

I have conducted a technical review of *initial issuance* application for *American Polymer Company/American Polymer Company*. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by ***February 10, 2025***

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction.

This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Subject: Technical Review -- FOP O4701/Project 37328, American Polymer Company/American Polymer Company

Good afternoon,

I have been assigned to the Federal Operating Permit (FOP) initial issuance application of Permit No. O4701 for American Polymer Company/American Polymer Company. This application has been assigned Project No. 37328. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

I have conducted a technical review and found the noted the following deficiencies during my review of the initial issuance application. **Please respond to the following by February 07, 2025**.

- I noted that OP-REQ1 page 83 is not up to date with the latest version 09/2024.
    - There is a new question for XI.J.5 that is different from the 11/2020 version which was submitted.
        - I want to confirm that the answer you submitted on this page for XI.J.5 is "NO" on the current version as well.
- Additionally, NSR Authorization 172595, on page 87 of form OP-REQ-1 requires clarification.
    - This Authorization number is listed in section G on page 87 of formOP-REQ-1.
        - I would like to certify with you that this authorization number should be listed under section H on page 87 of form OP-REQ-1.
- On form OP-SUM, the preconstruction authorization date is listed incorrectly for PBR 106.392.
    - The preconstruction authorization date should be 09/04/2000 for PBR 106.392.
        - Please submit a revised OP-SUM.
- Furthermore, on form OP-PBRSUP, Table A, Table B, and Table D were filled out incorrectly.
    - Table A on form OP-PBRSUP should have been left blank, and Table B should have been filled out with resemblance to how Table A was originally filled out.
    - Table D currently has all Unit ID numbers listed as "site-wide", when not all PBRs listed on Table D are supposed to be site-wide.
        - Please submit a revised OP-PBRSUP.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

1.0 SUMMARY

1.1 PURPOSE

American Polymer Company (APC) is applying for its initial Air Quality Federal Operating Permit (FOP) or Title V air permit. The facility is located at 167 Old Pearsall Rd in Atascosa County, Texas.

1.2 REGULATORY BACKGROUND

APC was issued New Source Review (NSR) Air Permit Number 172595 on March 22, 2024. The NSR permit expires on March 22, 2034.

APC potential emissions of individual hazardous air pollutants (HAPs) are greater than 10 tpy but the total facility HAPs are less than 25 tpy making it a major source of HAPs. Therefore, the facility is considered a major source of HAPs when looking at applicable National Emission Standards for Hazardous Air Pollutants (NESHAP) requirements.

APC operations will be subject to NESHAP WWWW National Emissions Standards for Hazardous Air Pollutants: Reinforced Plastic Composites Production with further discussion provided in Section 3.

2.0 FACILITY DESCRIPTION

2.1 PROCESS DESCRIPTION

APC has purchased an 11-acre site to manufacture polymer concrete casted utility vaults. The location is northwest of Jourdanton, TX. APC polymer concrete products are manufactured using aggregate and a proprietary resin system. All vault enclosures manufactured are reinforced with fiberglass pieces for added strength and rigidity. Polymer concrete is the superior material choice for precast solutions, compared to traditional concrete because it is lighter in weight, higher in strength, and corrosion resistant. APC vault enclosures are used for pull-boxes, hand-holes, splice boxes and other equipment enclosures for many various applications. APC vault enclosure products offer easy access for underground services, including but not limited to electrical, communications, water, gas, and other industrial systems.

The process will be housed in the building as shown on the Facility Map (Appendix B). The roads for material deliveries, shipping outgoing product and employee access have existing paved surfaces. APC plans to pave the parking area.

2.2 APPLICABLE EMISSION UNITS

The planned emission sources are listed in Table 2.1.

Table 2.1 Summary of Emission Units

Emission Point Number	Emission Unit Description
EU1	Weigh Hopper, Filling the Mold and Polymer Casting
CONVEY1	Conveying to Mixer (four conveyors total)
BIN1	Rock (Aggregate) Bin Filling
BIN2	Sand Bin Filling
BIN3	Calcium Carbonate Bin Filling

2.3 CONVEYING TO MIXING

Rock (aggregate), sand and calcium carbonate are stored in bins and individually conveyed to the main conveyor which feeds the mixer. The rates for the solids additions are based on appropriate ratios for the resin usage.

2.4 MIXING SYSTEM

The Autocon Mixing System rate is determined by the resin usage for the polymer concrete casting of vaults.

2.5 POLYMER CASTING

The polymer concrete casting rate is based on a maximum polymer resin throughput of 3,737 tons/year.

2.6 BIN FILLING

Bin filling throughput is determined by the materials needed to match the resin usage.

3.0 REGULATORY REVIEW

3.1 NATIONAL EMISSIONS STANDARDS FOR HAZARDOUS AIR POLLUTANTS (NESHAP)

The National Emissions Standards for Hazardous Air Pollutants (NESHAP) that is applicable to the facility is described in the following section.

3.1.1 Subpart WWWW

APC will be subject to NESHAP Subpart A General Provisions and NESHAP WWWW for Reinforced Plastic Composites Production.

Polymer casting is exempted from WWWW according to 40 CFR 63.5790(b). However, mixing is subject to NESHAP WWWW according to 40 CFR 63.5805(c). APC will not be required to calculate or report emissions nor meet the organic HAP emissions limits in Table 3 for the subpart. Also, APC is not required to follow the work practice standards in Table 4 of the subpart. Footnote 1 to Table 4 mentions, "For polymer casting mixing operations, containers with a surface area of 500 square inches or less may be open while active mixing is taking place." The surface area of the mixing chamber is 177 square inches. Therefore, no work practice standards apply to the facility. However, APC is required to submit an initial startup notification (electronic filing on CEDR) showing the mixing process is subject to Subp. WWWW. This notification was submitted on September 9th, 2024 to the Air Section Manager, Region 13 – San Antonio. Therefore, although NESHAP WWWW applies to the facility, the facility has no additional compliance requirements under this standard.

Since the APC operations are included in a 40 CFR 63 source category, case-by-case review requirements under 40 CFR 63.42(c) are not applicable.

3.2 NEW SOURCE PERFORMANCE STANDARDS (NSPS)

3.2.1 Evaluation of Other Subparts

The following subpart was evaluated and determined to not be applicable to the facility:

- **Subpart Kb**: Volatile Organic Liquid (VOL) Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced After July 23, 1984 (60.110b). The polymer resin totes at the facility have a storage capacity of 330 gallons or 1.25 m^3. Subpart Kb does not apply to storage vessels with a capacity less than 75 m^3 (19,800 gallons). Therefore, Subpart Kb is not applicable to these VOL storage totes or containers.

3.3 PREVENTION OF SIGNIFICANT DETERIORATION (PSD)

APC has potential emissions less than 250 tons per year of all PSD pollutants and is therefore a minor source under Prevention of Significant Deterioration (PSD) requirements. Please see the potential emissions in the NSR Permit for a comparison of total facility emissions against the PSD threshold.

3.4 COMPLIANCE ASSURANCE MONITORING (CAM)

Under 40 CFR 64.2, a Compliance Assurance Monitoring (CAM) plan is required for any emissions unit in a facility that is required to have a Part 70 permit, where the emissions unit has uncontrolled emissions above a major source threshold (10 tpy for a HAPs) and relies upon air pollution control equipment to meet an applicable emission limit. The APC facility does not utilize any control equipment. The bins and material handling for aggregate, sand, and calcium carbonate are uncontrolled. Therefore, APC is not required to prepare and submit a CAM Plan.

American Polymer Company
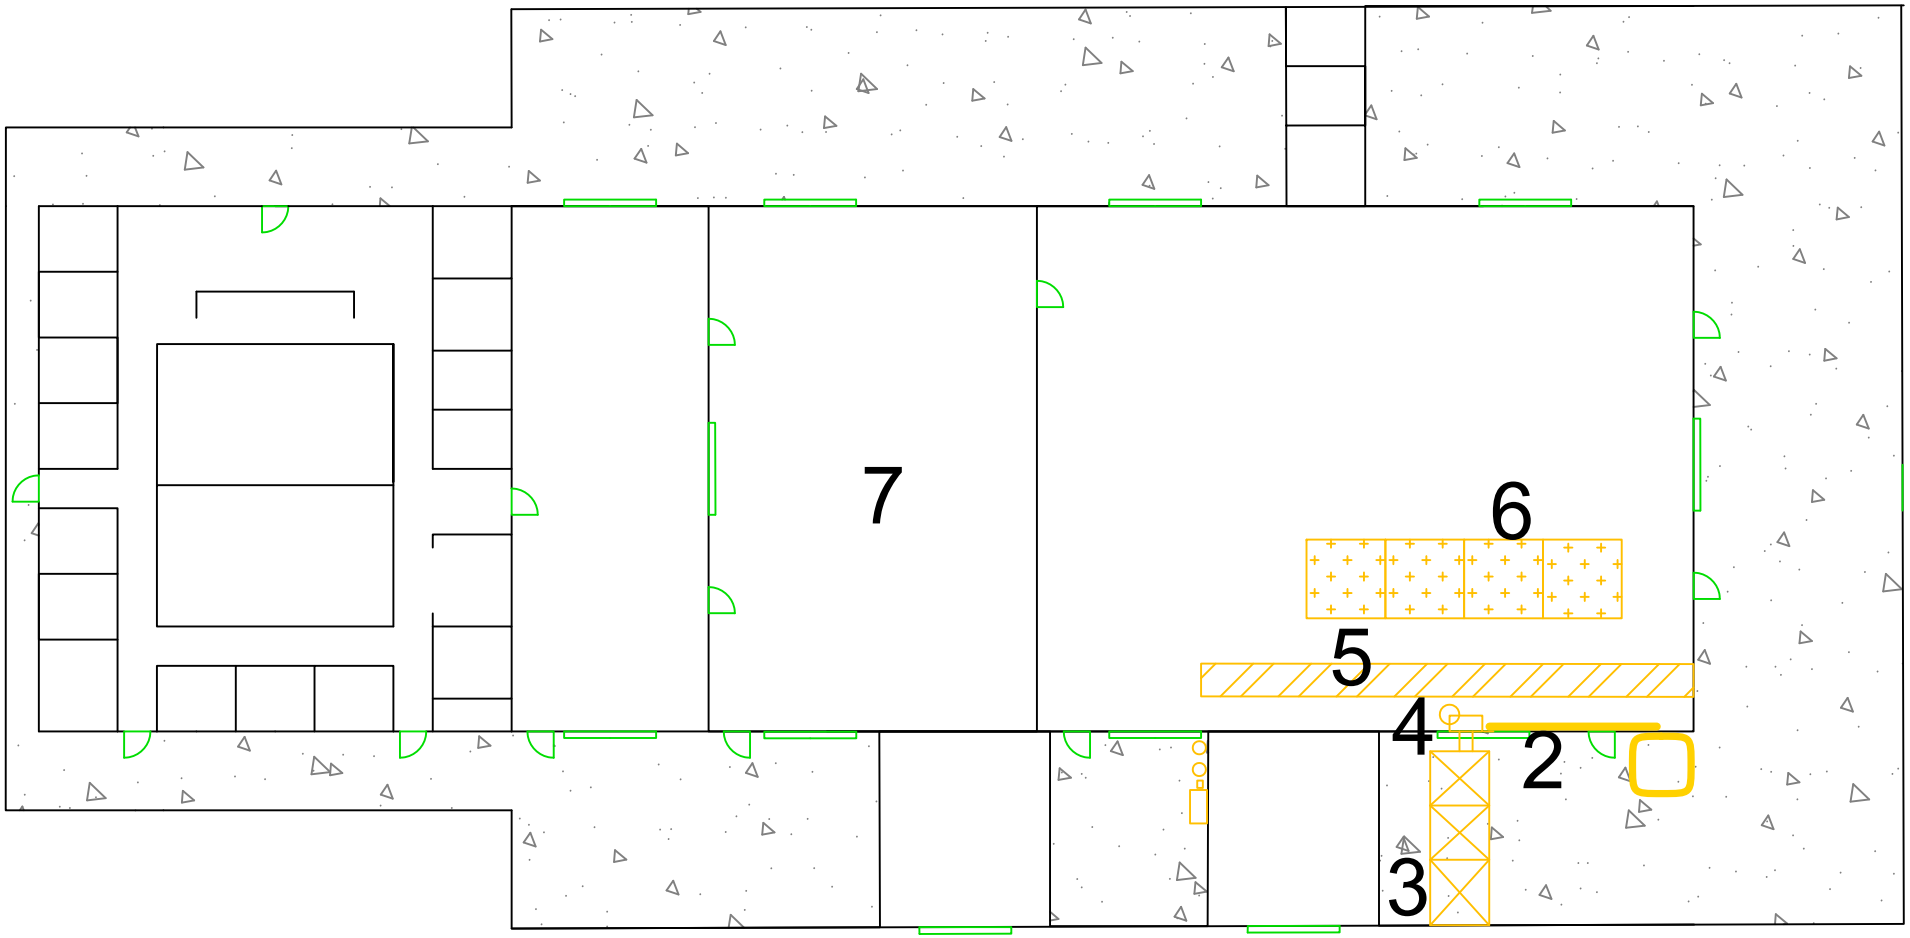
Process Plan Layout



Jourdanton Layout and Process Plan

The numbers below correspond to the plan, process descriptions included:

1. Removed from plan (no resin tank).
2. Resin movement. Resin is moved from the tote directly into the mixer, only at the exact amount needed per part. This is the start of the batching and pouring process
3. Aggregate batch plant. Rock, Sand, and Calcium Carbonate are stored in hoppers outside. Like the resin the aggregates are moved directly from the hoppers into the mixer, only at the exact amount needed per part.
4. Mixer – Autocon OS-10. All material is moved into the mixing unit, which is classified as a continuous mixer. The mixer combines all the necessary materials and pours into the product molds in a single step. Specifications attached.
5. Part molds are moved along a conveyor, when they are moved under the mixer they are filled with mix, moved down the conveyor line to make space for the next mold to be poured.
6. Finished parts are moved to the station where they are removed from the molds. The finished product moves to finishing/packaging and the empty molds are set back up and placed back onto the conveyor lines.
7. Finishing and packaging area. Products are combined and/or assembled into finished goods and prepared for shipment.

To: sean@apcunderground.com <sean@apcunderground.com>

Good morning,

I have been assigned to the Federal Operating Permit (FOP) initial issuance/renewal/revision application of Permit No. O4701 for American Polymer Company/American Polymer Company. This application has been assigned Project No. 37328. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.

b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.

c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.

d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

Optional: *Request any information that may have been noted as deficient or out-of-date during a preliminary project review (e.g. OP-1 with current contact data, current OP-REQ1, etc.), and include a deadline.*

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Samantha Mendez

I have been assigned to the Federal Operating Permit (FOP) initial issuance/renewal/revision application of Permit No. O4701 for American Polymer Company/American Polymer Company. This application has been assigned Project No. 37328. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at Where to Submit FOP Applications and Permit-Related Documents.

Optional: *Request any information that may have been noted as deficient or out-of-date during a preliminary project review (e.g. OP-1 with current contact data, current OP-REQ1, etc.), and include a deadline.*

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

THE HONORABLE ROLAND GUTIERREZ
TEXAS SENATE

Re: Accepted Federal Operating Permit Initial Issuance Application

Dear Senator Gutierrez:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. https://gisweb.tceq.texas.gov/LocationMapper/?marker=-98.575353,28.96072&level=13.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

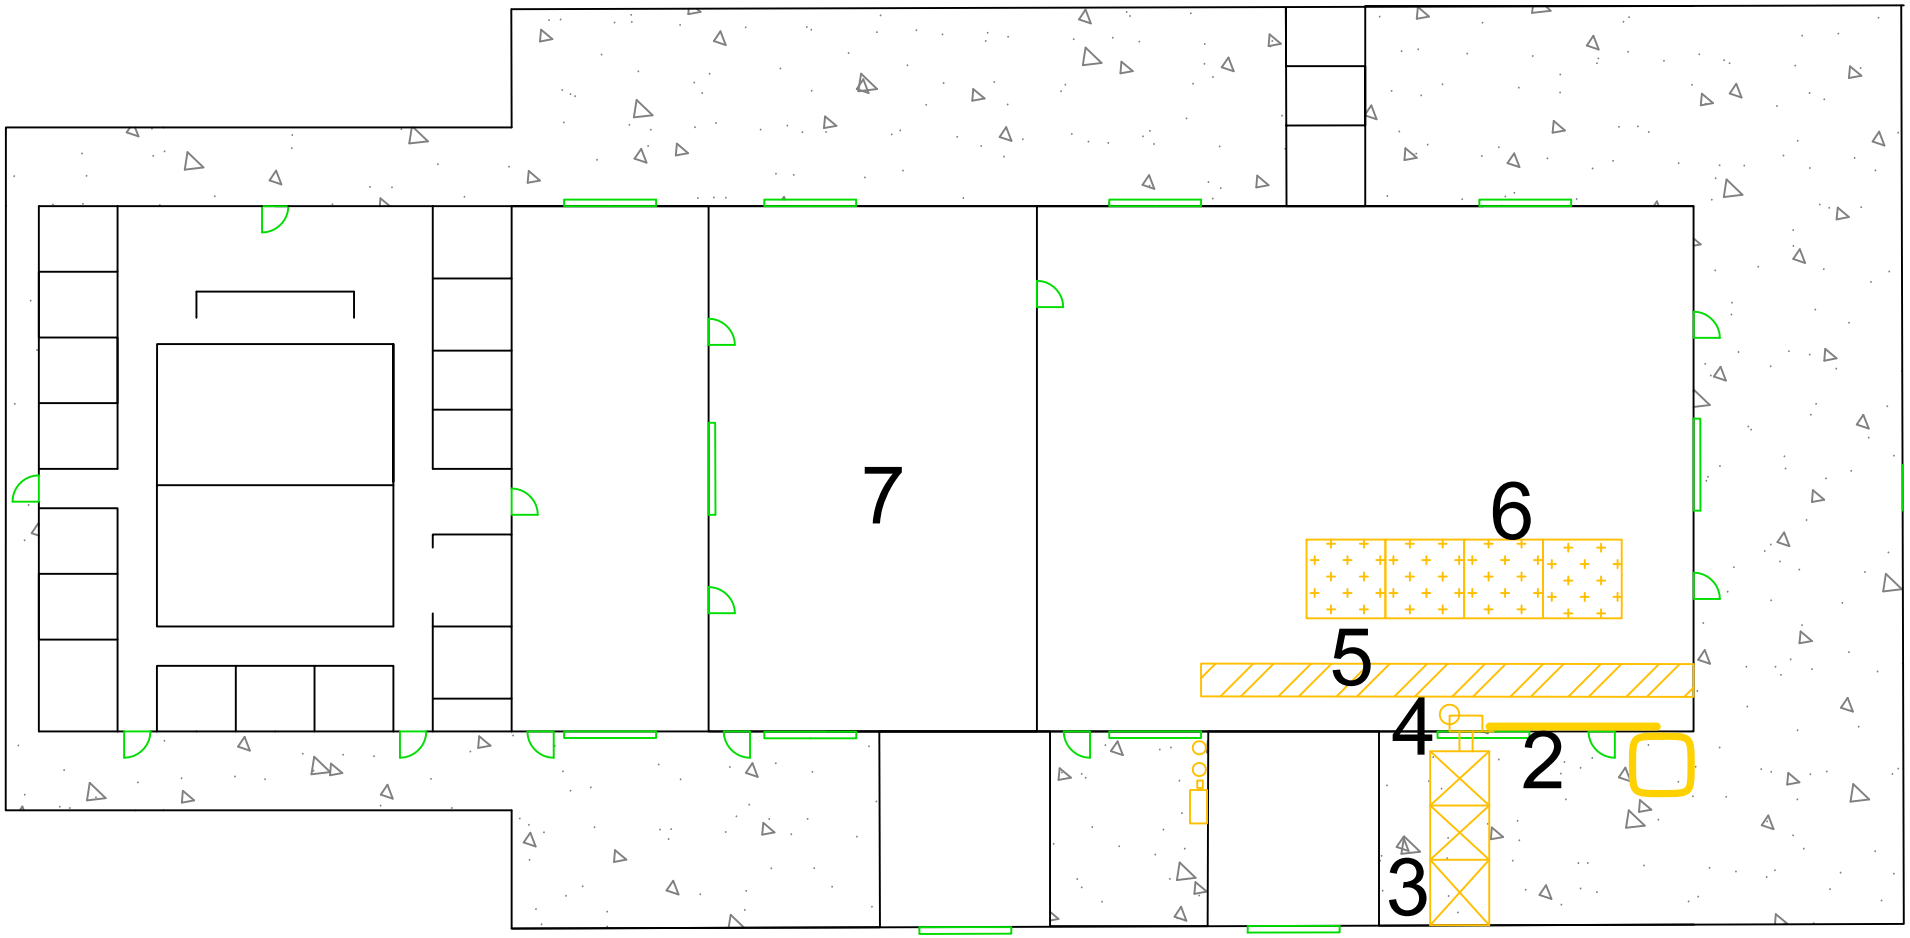
Process Plan Layout



Jourdanton Layout and Process Plan

The numbers below correspond to the plan, process descriptions included:

1. Removed from plan (no resin tank).
2. Resin movement. Resin is moved from the tank directly into the mixer, only at the exact amount needed per part. This is the start of the batching and pouring process
3. Aggregate batch plant. Rock, Sand, and Calcium Carbonate are stored in hoppers outside. Like the resin the aggregates are moved directly from the hoppers into the mixer, only at the exact amount needed per part.
4. Mixer – Autocon OS-10. All material is moved into the mixing unit, which is classified as a continuous mixer. The mixer combines all the necessary materials and pours into the product molds in a single step. Specifications attached.
5. Part molds are moved along a conveyor, when they are moved under the mixer they are filled with mix, moved down the conveyor line to make space for the next mold to be poured.
6. Finished parts are moved to the station where they are removed from the molds. The finished product moves to finishing/packaging and the empty molds are set back up and placed back onto the conveyor lines.
7. Finishing and packaging area. Products are combined and/or assembled into finished goods and prepared for shipment.

1.0 SUMMARY

1.1 PURPOSE

American Polymer Company (APC) is applying for its initial Air Quality Federal Operating Permit (FOP) or Title V air permit. The facility is located at 167 Old Pearsall Rd in Atascosa County, Texas.

1.2 REGULATORY BACKGROUND

APC was issued New Source Review (NSR) Air Permit Number 172595 on March 22, 2024. The NSR permit expires on March 22, 2034.

APC potential emissions of individual hazardous air pollutants (HAPs) are greater than 10 tpy but the total facility HAPs are less than 25 tpy making it a major source of HAPs. Therefore, the facility is considered a major source of HAPs when looking at applicable National Emission Standards for Hazardous Air Pollutants (NESHAP) requirements.

APC operations will be subject to NESHAP WWWW National Emissions Standards for Hazardous Air Pollutants: Reinforced Plastic Composites Production with further discussion provided in Section 3.

2.0 FACILITY DESCRIPTION

2.1 PROCESS DESCRIPTION

APC has purchased an 11-acre site to manufacture polymer concrete casted utility vaults. The location is northwest of Jourdanton, TX. APC polymer concrete products are manufactured using aggregate and a proprietary resin system. All vault enclosures manufactured are reinforced with fiberglass pieces for added strength and rigidity. Polymer concrete is the superior material choice for precast solutions, compared to traditional concrete because it is lighter in weight, higher in strength, and corrosion resistant. APC vault enclosures are used for pull-boxes, hand-holes, splice boxes and other equipment enclosures for many various applications. APC vault enclosure products offer easy access for underground services, including but not limited to electrical, communications, water, gas, and other industrial systems.

The process will be housed in the building as shown on the Facility Map (Appendix B). The roads for material deliveries, shipping outgoing product and employee access have existing paved surfaces. APC plans to pave the parking area.

2.2 APPLICABLE EMISSION UNITS

The planned emission sources are listed in Table 2.1.

Table 2.1 Summary of Emission Units

Emission Point Number	Emission Unit Description
EU1	Weigh Hopper, Filling the Mold and Polymer Casting
CONVEY1	Conveying to Mixer (four conveyors total)
BIN1	Rock (Aggregate) Bin Filling
BIN2	Sand Bin Filling
BIN3	Calcium Carbonate Bin Filling

2.3 CONVEYING TO MIXING

Rock (aggregate), sand and calcium carbonate are stored in bins and individually conveyed to the main conveyor which feeds the mixer. The rates for the solids additions are based on appropriate ratios for the resin usage.

2.4 MIXING SYSTEM

The Autocon Mixing System rate is determined by the resin usage for the polymer concrete casting of vaults.

2.5 POLYMER CASTING

The polymer concrete casting rate is based on a maximum polymer resin throughput of 3,737 tons/year.

2.6 BIN FILLING

Bin filling throughput is determined by the materials needed to match the resin usage.

3.0 REGULATORY REVIEW

3.1 NATIONAL EMISSIONS STANDARDS FOR HAZARDOUS AIR POLLUTANTS (NESHAP)

The National Emissions Standards for Hazardous Air Pollutants (NESHAP) that is applicable to the facility is described in the following section.

3.1.1 Subpart WWWW

APC will be subject to NESHAP Subpart A General Provisions and NESHAP WWWW for Reinforced Plastic Composites Production.

Polymer casting is exempted from WWWW according to 40 CFR 63.5790(b). However, mixing is subject to NESHAP WWWW according to 40 CFR 63.5805(c). APC will not be required to calculate or report emissions nor meet the organic HAP emissions limits in Table 3 for the subpart. Also, APC is not required to follow the work practice standards in Table 4 of the subpart. Footnote 1 to Table 4 mentions, "For polymer casting mixing operations, containers with a surface area of 500 square inches or less may be open while active mixing is taking place." The surface area of the mixing chamber is 177 square inches. Therefore, no work practice standards apply to the facility. However, APC is required to submit an initial startup notification (electronic filing on CEDR) showing the mixing process is subject to Subp. WWWW. This notification was submitted on September 9th, 2024 to the Air Section Manager, Region 13 – San Antonio. Therefore, although NESHAP WWWW applies to the facility, the facility has no additional compliance requirements under this standard.

Since the APC operations are included in a 40 CFR 63 source category, case-by-case review requirements under 40 CFR 63.42(c) are not applicable.

3.2 NEW SOURCE PERFORMANCE STANDARDS (NSPS)

3.2.1 Evaluation of Other Subparts

The following subpart was evaluated and determined to not be applicable to the facility:

- **Subpart Kb**: Volatile Organic Liquid (VOL) Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced After July 23, 1984 (60.110b). The polymer resin totes at the facility have a storage capacity of 330 gallons or 1.25 m^3. Subpart Kb does not apply to storage vessels with a capacity less than 75 m^3 (19,800 gallons). Therefore, Subpart Kb is not applicable to these VOL storage totes or containers.

3.3 PREVENTION OF SIGNIFICANT DETERIORATION (PSD)

APC has potential emissions less than 250 tons per year of all PSD pollutants and is therefore a minor source under Prevention of Significant Deterioration (PSD) requirements. Please see the potential emissions in the NSR Permit for a comparison of total facility emissions against the PSD threshold.

3.4 COMPLIANCE ASSURANCE MONITORING (CAM)

Under 40 CFR 64.2, a Compliance Assurance Monitoring (CAM) plan is required for any emissions unit in a facility that is required to have a Part 70 permit, where the emissions unit has uncontrolled emissions above a major source threshold (10 tpy for a HAPs) and relies upon air pollution control equipment to meet an applicable emission limit. The APC facility does not utilize any control equipment. The bins and material handling for aggregate, sand, and calcium carbonate are uncontrolled. Therefore, APC is not required to prepare and submit a CAM Plan.
