Dear Senator Creighton:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.933888,29.8175&level=13>.

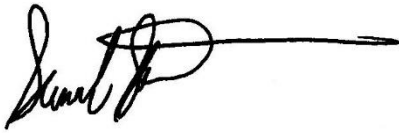

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Brandon Creighton

Unit ID No.	PBR No.	Version No./Date Or Registration No.	Monitoring Requirement
1799-15	106.371	9/4/2000	The cooling tower water is monitored at least monthly for VOC leakage from heat exchangers in accordance with the requirements of the TCEQ Sampling Procedures Manual, Appendix P (dated January 2003 or a later edition) or another air stripping method approved by the TCEQ Executive Director to ensure compliance with the limits in 106.4. The cooling water is sampled at least once per week for total dissolved solids (TDS). This data, along with design drift rate and daily maximum and average actual cooling water circulation rates are used to calculate PM emissions to ensure compliance with the limits in 106.4.
SMALLTK	106.472	9/4/2000	Engineering calculations using AP-42, Fifth Edition, Volume I Chapter 7 (June 2020) Section 7.1.3.1 equations for fixed roof tanks are kept on-site and show maximum possible emissions are below the limits in 106.4.
PROPE1799	106.263	11/1/2001	Keep records on-site of the type and reason for MSS activity, the processes and equipment involved; date, time, and duration of the activity or facility operation; and the air contaminants and amounts which are emitted as a result of the activity or facility operation per 106.263(g)(1)-(4). MSS emissions are recorded by the end of the month following the month during which the MSS activity occurred; these emissions are summed monthly, and the rolling 12-month emissions record is updated on a monthly basis to demonstrate compliance with the limits in 106.4 and 106.263(f). Calculated emissions are kept on-site.
1799-07	106.393	9/4/2000	Perform and record quarterly visible emissions observations to ensure no visible emissions.
TOTES	106.473	9/4/2000	Keep annual records on-site of the throughput, liquids loaded or unloaded, and true vapor pressure of liquids. Use this data and AP-42, Fifth Edition, Volume I Chapter 5.2 (July 2008) equations and emission factors to calculate emissions to demonstrate compliance with the limits in 106.473(1) and 106.4.
1799-25	106.261	118637	Emissions from fugitive component leaks are minimized through the 28VHP Leak Detection and Repair program as detailed in the Special Condition Nos. 5-6 of NSR Permit No. 46305 found in Attachment B of the TV permit. The LDAR requirements in the permit specify the parameter monitored and the frequency of monitoring. Fugitive components are also monitored according to the requirements found in Applicable Requirements Summary table in the Title V permit.
