TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

December 3, 2024

THE HONORABLE MORGAN LAMANTIA
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 37413
Permit Number: O3343
KIEWIT OFFSHORE SERVICES LTD
Ingleside Offshore Platform Fabrication Facilities
Ingleside, San Patricio County
Regulated Entity Number: RN102905064
Customer Reference Number: CN604333369

Dear Senator Lamantia:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.23,27.851666&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Morgan Lamantia

1. EXECUTIVE SUMMARY

Kiewit Offshore Services, Ltd. (KOS) owns and operates an offshore platform fabrication facility located at 2440 Kiewit Road in Ingleside, San Patricio County, Texas (Ingleside Facility). KOS has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 604333369. The Ingleside Facility has been assigned TCEQ Regulated Entity Reference Number (RN) 102905064 and TCEQ Air Quality Account Number SD-0184-W. Operations at the Ingleside Facility are authorized under New Source Review (NSR) Permit Number (No.) 47227, various non-registered Permits by Rule (PBR) claimed by the Ingleside Facility, in addition to PBR Registration Nos. 105659, 109413, 152843, 167953, 105659, and 175559. The Ingleside Facility is a major source with respect to the federal operating permits (Title V) program and operates under Federal Operating Permit (FOP) O-3343.

With this application, KOS is requesting the following revisions in addition to the renewal, which collectively represent a minor revision to the existing TV SOP:

- ▶ Addition of PBRs 106.261 and 106.262 [Registration No. 167953] to the current permit's New Source Authorization References;
- ▶ Addition of PBR 106.433 [Registration No. 109413] to the current permit's New Source Authorization References;
- ▶ Addition of PBRs 106.261 and 106.262 [Registration No. 105659] to the current permit's New Source Authorization References;
- ▶ Addition of PBR 106.146 [Registration No. 175559] to the current permit's New Source Authorization References;
- ▶ Revision of permit representations based on amendments to the NSR permit No. 47227.

Additionally, this application will revise the referenced MACT MMMM requirements to reflect the actual operation of the Ingleside facility. The permit currently references the compliance option with add-on controls, but the Ingleside facility complies using the compliance option without add-on controls. This update is not due to any change at the site, but rather addresses an error in the current Title V permit.

This document was prepared in accordance with TCEQ's SOP Revision Application Guidance¹ and the requirements listed in 30 TAC §122.132, Application and Required Information for Initial Permit Issuance, Reopening, Renewal, or General Operating Permits.

The enclosed Title V SOP application for KOS consists of the required forms and information.

3. PROCESS DESCRIPTION

KOS is a fabricator of large structural steel components for subsea, drill rig, and onshore facilities for the oil and gas industry, as well as the nuclear fabrication markets. With access to the Gulf of Mexico through the La Quinta and Corpus Christi ship channels, the Ingleside Facility is designed specifically for deepwater projects. KOS builds a full range of offshore facilities from small platforms, modules, suction piles and tendons to large deepwater projects. Major projects include construction of offshore oil and gas structures, in addition to massive and complex steel construction and erection. KOS also fabricates structural steel components for bridges, girders, tubs, and foundations.

Facility operations consist of the receipt, storage, and distribution throughout the yard of structural steel components. These components include, but are not limited to, plate, tubular, and beam steel. The components are prepared by cutting, rolling, grinding, welding, blasting, priming, coating, applying thermal spray, and assembling.

The Ingleside Facility receives raw materials at its warehouse. The materials are primarily structural steel, components, coatings, thinners, welding supplies, thermal spray materials, and caulks, as well as incidental materials used in operations. The materials are disbursed from the warehouse on an “as needed” basis to the various project locations. Steel is worked into the appropriate shape via cutting, bending, rolling, grinding (to name a few), which will then be transferred throughout the yard for blasting, welding, coating, or thermal spray application. Bulk blast media receipt and distribution is controlled by the warehouse, but receipt and distribution occur at several fixed storage tanks.

Below are general descriptions of the various fabrication operations at the Ingleside Facility. Figures 3-1 and 3-2 provide general process flow diagrams for the site’s operations.

3.1 Blasting Operations

Steel and other parts are distributed throughout the facility to prepare for blasting and coating. The parts are initially blasted to remove residual scale. The parts are then wiped with a solvent to remove residual organic materials prior to the application of surface coatings. The most common blasted steel components are structural and piping such as w-beams, c-channel, plate, angle iron, piping, and square tubing. The bulk blast media is received in bulk storage hoppers and transferred into smaller blast pots that are then used in the blasting operations (EPNs BLSTRCV and BLSTPOT). On completion of blasting operations, used blast media is collected, transported, and stored in a pile (EPN BLSTCLNFUG). This pile will be sprinkled with water as a dust suppression management practice. Dust collectors are used to control particulate matter emissions. Blasting is performed outside in the yard in 11 zones (EPN BLSTOPFUG) or within the paint building in the paint booths described in further detail below.

3.2 Organic and Inorganic Coating of Metal Parts

Coatings are received in buckets and pails and may consist of single or multiple component mixtures. The coatings are mixed with thinners or reducers according to manufacturer’s specifications to the proper viscosity to allow the coat into be sprayed. The coatings are applied using airless or air-assisted airless paint application equipment or other equipment that has demonstrated to reach the same or higher transfer efficiency. The most common coated steel components are structural and piping such as w-beams, c-channel, plate, angle iron, piping, and square tubing. Coating application occurs outside in the yard in 11 zones (EPN COATOPFUG) or in the paint booths which are described in further detail below.

3.3 Thermal Spray Application

Similar to the blasting and coating operation, the thermal spray application (TSA) begins with blasting operations. After blasting, the parts are wiped with a solvent to remove residual organics. The parts are then coated via a thermal spray application of molten aluminum wire (TSAOPFUG). The TSA Booth (EPN TSABTH) was installed, but it is not operated due to low demand for this type of coating. Thermal spraying activities inside the TSA/blast booth will start as soon as a project/client require components to be covered with a metalized coating. Currently, the booth runs in "Blast mode" and it is operational to switch to "TSA Mode" as soon as TSA projects become available. Outdoor thermal spray application is authorized under EPN TSAOPFUG.

3.4 Paint Booths

There are four (4) booths [one Panel Booth (Large Booth) [EPNs PANEL1-6], two Paint Booths (or Small Booths) [EPNs PAINTBTH1-2], and a TSA Booth (EPN TSABTH)] used to perform blasting and painting in a humidity controlled environment with fabric filter controls. The large booth has three (3) heaters and each of the small and TSA booths have one (1) heater. There are a total of six (6) heaters for the paint booths, and all are natural gas fired. The burners have air handling units, and the products of combustion will be co-mingled with the air in the booths.

3.5 Fireproofing Application

Fireproofing materials will be received in buckets and pails and will be applied using a two component heated plural airless spray equipment. Steel structures will be isolated from weather conditions. This enclosure provides protection to finished components to protect them from any fireproofing material splashes. Fireproofing usage limitation was removed during the signed permit alteration dated December 16, 2016 granted by the Commission's Air Permits Division based on recent understanding of the physical and chemical characteristics of the fireproofing material.

3.6 Aerosol Spray Painting and Aerosol Can Crushing:

Aerosol cans to spray paint for marking of equipment and on the ground are used throughout the facility. This surface coating activity is currently authorized under PBR 106.433 (PBR Registration No. 109413). Aerosol can puncturing stations are located on-site for spray paint and lubricant cans. Emissions from the paint can crushing and aerosol can puncturing is authorized under PBRs 106.261/106.262 (PBR Registration No. 105659). Emissions from these sources are included in the site-wide toxics modeling evaluation included as part of this NSR amendment application.

3.7 Equipment Cleanup

The coating application equipment is cleaned daily when the surface coating application is complete. The application equipment is cleaned by circulating a solvent through the equipment and capturing it in a container or applying the residual to another part. The spray gun tips are removed and soaked in a covered container of solvent. All waste coatings and solvents captured are stored, disposed of, or recycled in accordance with applicable rules. Equipment cleanup will be conducted outdoors in authorized coating zones and inside the paint building near operation areas.

3.8 Solvent Distillation Units

The facility recovers used solvent for distillation and re-use. The used solvents are collected in 55-gallon drums and moved to the paint still location for temporary storage. Two batch distillation units are used to recover solvent from equipment cleanup (EPNs PNTSTILL and FUGSTILL). The electric-fired units can recover up to 20 gallons combined. A solvent tank with a nominal capacity of 980 gallons will be used to store fresh solvent used to clean coating application equipment (EPN SLVTK). The contents of the drums are then pumped to the still. Recycled solvent is collected in drums for re-use throughout the facility. Residual sludge from the still units is shipped in closed drums is disposed of in accordance with applicable rules.

3.9 Miscellaneous Operations – Sawing, Grinding, Cutting, Rolling, Drilling, and Welding Operations

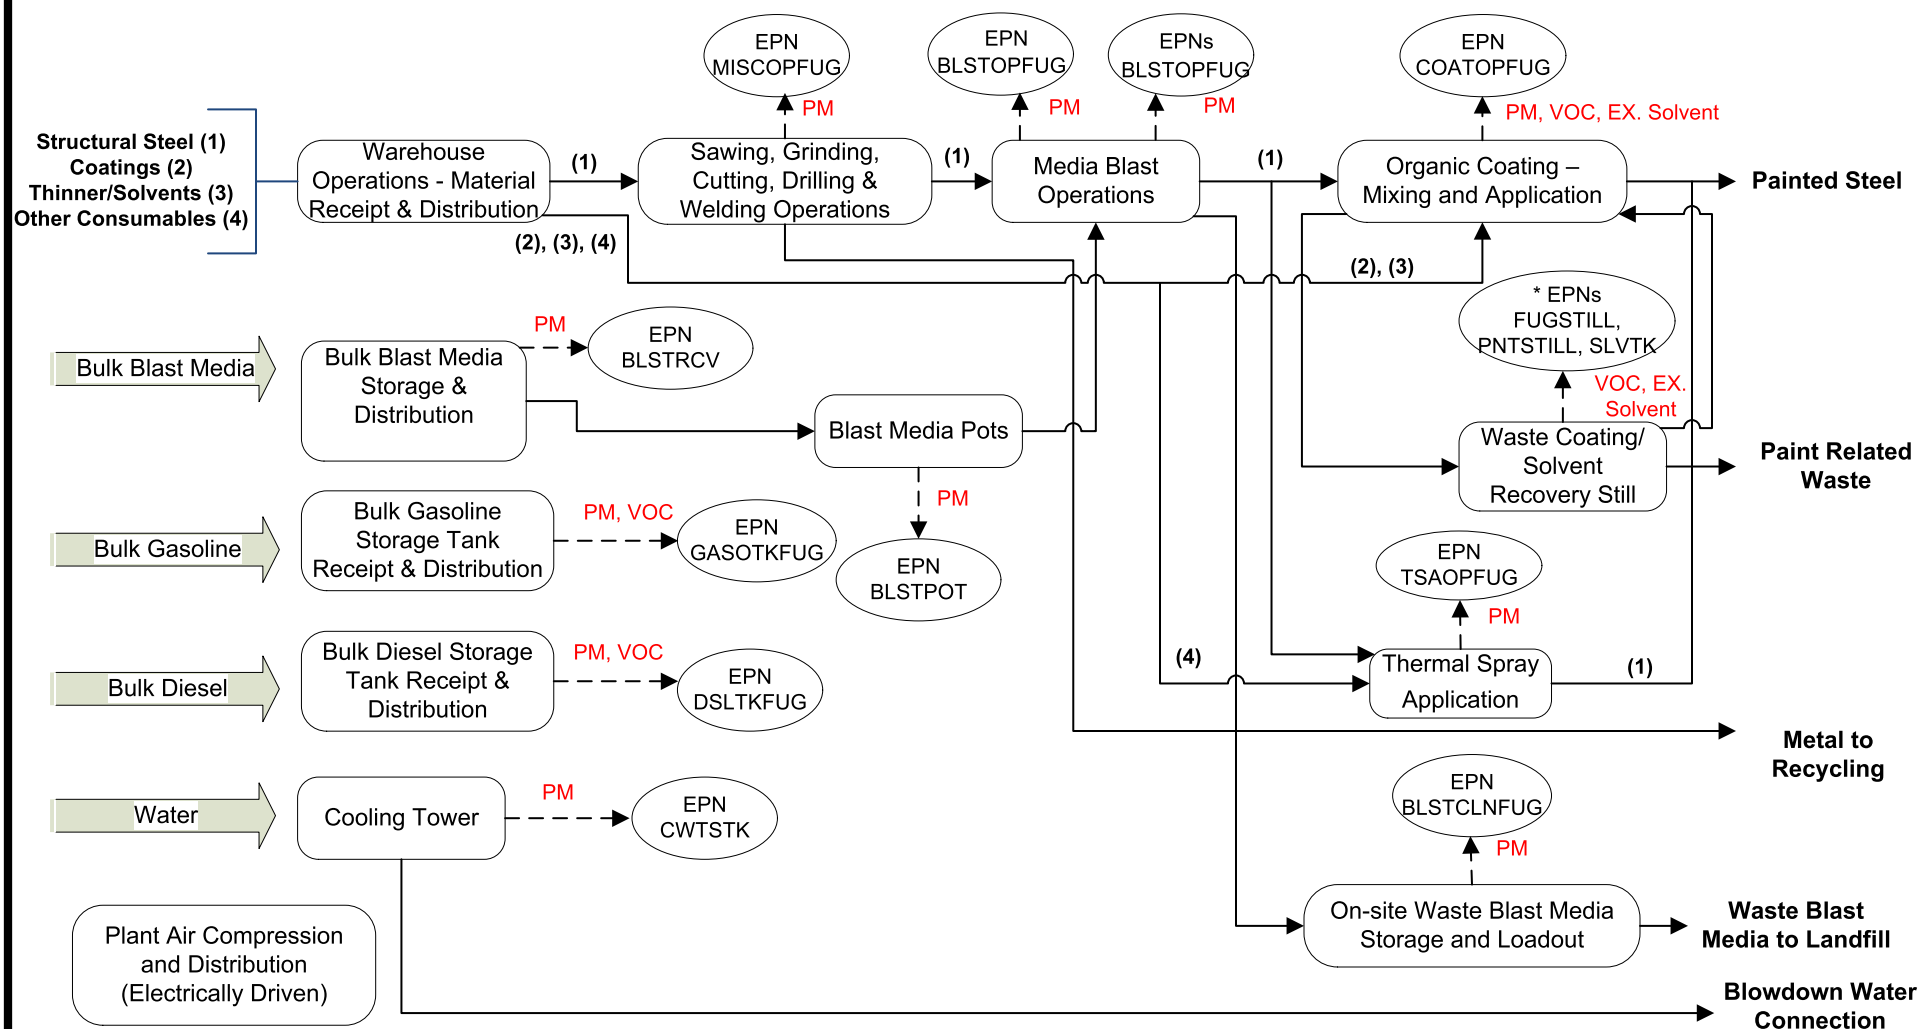

KOS receives structural steel angles, channel plates, I-beams, and other metal for fabrication into various shapes and structures. Automated fabrication equipment, used to shape the steel components includes:

- ▶ CNC plate-cutting facility (plasma or oxy/fuel gas);
- ▶ CNC beam-cutting/coping facility;
- ▶ CNC tubular coping machine; and
- ▶ Large-capacity plate-bending (rolling) machine.

Steel is transferred using forklifts to the cutting stations in the fabrication building. In the cutting area, the steel is cut to proper dimension using saws, cutting torches, and handheld grinders [30 TAC § 106.265 (Hand-Held and Manually Operated Machines)]. The plasma cutting table is authorized under PBRs 106.261/262 by contaminant. Once the parts are cut to size, they are clamped and welded together [30 TAC § 106.227 (Soldering, Brazing, Welding)].

Planned Maintenance, Startup, and Shutdown (MSS) activities that occur at the facility are authorized under PBR 106.263. Other miscellaneous activities, such as diesel and gasoline tanks with refueling activities, are authorized under PBR.

K. Cutback Asphalt	
1. Conventional cutback asphalt containing VOC solvents for the paving of roadways, driveways, or parking lots, is used or specified for use in the application area by a state, municipal, or county agency. <i>If the response to Question III.K.1 is "N/A," go to Section III.L.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO <input checked="" type="checkbox"/> N/A
2. The use, application, sale, or offering for sale of conventional cutback asphalt containing VOC solvents for the paving of roadways, driveways, or parking lots occurs in the application area.	<input type="checkbox"/> YES <input type="checkbox"/> NO <input type="checkbox"/> N/A
3. Asphalt emulsion is used or produced within the application area.	<input type="checkbox"/> YES <input type="checkbox"/> NO
4. The application area is using an alternate control requirement as specified in 30 TAC § 115.513. <i>If the response to Question III.K.4 is "NO," go to Section III.L.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO
5. The application area uses, applies, sells, or offers for sale asphalt concrete, made with cutback asphalt, that meets the exemption specified in 30 TAC § 115.517(1).	<input type="checkbox"/> YES <input type="checkbox"/> NO
6. The application area uses, applies, sells, or offers for sale cutback asphalt that is used solely as a penetrating prime coat.	<input type="checkbox"/> YES <input type="checkbox"/> NO
7. The applicant using cutback asphalt is a state, municipal, or county agency.	<input type="checkbox"/> YES <input type="checkbox"/> NO
L. Degassing of Storage Tanks, Transport Vessels and Marine Vessels	
◆ 1. The application area includes degassing operations for stationary, marine, and/or transport vessels. <i>If the response to Question III.L.1 is "NO" or "N/A," go to Section III.M.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO <input checked="" type="checkbox"/> N/A
◆ 2. Degassing of only ocean-going, self-propelled VOC marine vessels is performed in the application area. <i>If the response to Question III.L.2 is "YES," go to Section III.M.</i>	<input type="checkbox"/> YES <input type="checkbox"/> NO <input type="checkbox"/> N/A
