Hi Gabriela,

We have the form page the you requested ready (attached), but there is a complication. Derek Graves, who was the Responsible Official (RO), has moved on to another position. The new General Manager, who will be the RO, does not assume that position until May 19th. My limited understanding is that we will need to get him set up as the RO in STEERS to make a "certified" submittal. With that in mind, we would like to request an extension for this submittal in STEERS until May 19th. We will also complete any other required actions for the change in RO. If there is a way to wrap this up quicker, we would be happy to do that.

Regards,
Pat

Good morning Anoop,

Thank you for reviewing the WDP update. Please also confirm the following:
It was noted that the public notice information may need updating. In our system, we have Howard County Library as the name of the public place to view application and draft permit and Stephen Seachman as the contact person. Is this correct? If not, please submit an updated **OP-1, pg.5, Section XI**. in STEERS by **Thursday May 15, 2025**.

I attached the page to this email.

Thank you,

Gaby

Good afternoon,

I noticed that for group GRP-TURBINE, the applicable requirements for NSPS GG for pollutant **SO2** were missing in the WDP I sent. The effective permit has these requirements. I highlighted the correction in yellow below. Please review and confirm the update by tomorrow **May 9, 2025**.

Hi Pat,

Apologies for the delay in response. I was in a training all day yesterday. Thank you for your response to my previous email. I want to add that for item 1, if you would like to request changes to the applicable citations for GRP-TURBINE for NSPS GG, you will need to provide justification for any changes to the citations and it will need to be reviewed and approved by my team leader. **Please confirm by Monday May 5, 2025** whether or not you would like to request manual citation changes. If yes, please also email your request for the changes with the justification(s) and I will pass it along to my team leader for their review.

In addition, I made the minor updates indicated in the Major NSR Summary Table. If citation 60.334(b) is still okay to use, please see the updated WDP attached and provide a response to the Major NSR Summary table updates by Monday May 5, 2025 even if you do not have additional comments.

Thank you,

Gaby

Gabriela,

In response to your two comments below:

1. We were looking directly at the text of the rule (40 CFR Part 60 Subpart GG) – I see that 60.334(c) is not specifically called out in the flowchart, but it is incorporated into the “flow”. The first part of 40 CFR 60.334(b) indicates that it only applies to turbines that use water or steam injection for NOx control, so it is not directly applicable to the units at Big Spring. On the other hand, 40 CFR 60.334(c) applies to turbines that do not use water or steam injection and either use CEMS or have an EPA approved alternate monitoring procedure. For units that use CEMS it refers back to the procedures in 60.334(b), so 60.334(b) does apply indirectly. You could possibly cite both paragraphs, but we think it is OK either way (i.e. citing 60.334(b), 60.334(c) or citing both).
2. The attached version of the form has the fuel monitoring box filled in (pipeline quality natural gas). This form will also be submitted in STEERS.

Please let us know if you have any questions.

Pat

Hi Pat,

Thanks for your review and comments.

Please reply to the following by **April 30, 2025**.

1. GRP-TURBINE has the Monitoring and Testing Requirement citation 60.334(b) because in OP-UA11, Table 1b, the NOX Monitoring Method was answered 'CEMS'. Citation 60.334(c) refers to a previously approved alternate (ALT) to a CEMS. Review the unit attributes for NSPS GG in the OP-UA11 submitted and refer to the [flowchart for NSPS GG](#) to confirm the applicable citations.
2. In the OP-UA11, Table 1c, 'Fuel Monitoring Schedule' was left blank. Resubmit in STEERS, the OP-UA11, Table 1c, with **all** applicable unit attributes. Please refer to the [OP-UA11 Form and Instructions](#) for form instructions.

Please let me know if you have any questions.

Thanks,

Gaby

Subject: Working Draft Permit -- FOP O91/Project 37482, BHER Power Resources Inc/C R Wing Cogeneration Plant

CAUTION: This email originated from outside of your organization.

Good afternoon,

I have conducted a technical review of the significant revision application for BHER Power Resources Inc, C R Wing Cogeneration Plant. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **April 30, 2025**.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through **Title V STEERS**. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Gaby

Hi Pat,

Thanks for sending the Major NSR Summary Table with the updates to the Special Conditions. It is not necessary to submit the table through STEERS. That was a typo in my previous email.

Best,

Gaby

Gabriela,

In response to your questions below:

- As I noted earlier, we sent the copy to the email address given to us by the regional office, but that was not the correct email address. We faxed a copy to the number on page you provided a link to and will do that for all subsequent submittals, including this one.
- The attached version of the MAERT has updated references to the special conditions from the 5/21/25 version of the special conditions from Permit 17411. Please let us know if that is not what you were looking for.

We did not submit this edited table through STEERS; if we should, please let us know.

If you have any questions, please contact Anoop Sukurmaran at (515) 242-4300 or Anoop.Sukumaran@calenergy.com or myself at (612) 867-7990 or psheehy@barr.com.

Hi Pat,

Thank you for working on and submitting the requested items.

Please reply to the following at **your earliest convenience or by March 19, 2025:**

- Why are you sending the application materials to APS-APD? Please note that APS-APD is the same office that I am in and not where application materials are submitted to for the regional office, so you do not need to send application materials to APD-APS. Please refer to the regional office and EPA info here: [Where to Submit FOP Applications and Permit-Related Documents - Texas Commission on Environmental Quality - www.tceq.texas.gov](#). There is a link at the bottom of the page that will direct you to the regional office information.
- For clarification, confirm if the Major NSR Summary Table's Special Condition/Application Information on the right side of the table is accurate and correct. The NSR permit Special Conditions have changed since the last issuance date of 06/18/2015. See the attached current Special Conditions document issued on 05/23/2024. If the Special Condition information in the Major NSR Summary table needs updating, please submit to STEERS the **Major NSR Summary Table**(attached) with updates using track changes by March 19, 2025.

Please let me know if you have any questions.

Have a nice weekend,

Gaby

CAUTION: This email originated from outside of your organization.

Hi Pat,

I have conducted a technical review of the SOP significant revision application and found that additional information is needed. Please submit the following to STEERS by **Friday March 14, 2025**.

- Resubmit the **full** OP-PBRSUP form with the following updates:
 - Update the Version No./Date for PBRs 106.532, 106.473, 106.371, 105.265, and 106.227. The date of 9/5/2000 is not valid and appears to be a typo. **We had entered "9/04/2000", which for some reason displayed as 9/5/00, we corrected the problem in the attached form.**

- Complete Table D. Please ensure sufficient monitoring requirements are provided. Although the PBRs are unregistered, Table D is still required since the PBRs are claimed. **Table D has been completed in the attached form.**
- Attached is the updated Major NSR Summary Table. Please review and make updates using track changes since the MAERT and Permit Conditions have changed since the last issuance date. **The MAERT table you attached to your email is the current version. The facility has submitted a reissuance application for the NSR permit, but it does not seek to change the emission limits. We also attached a redline/strikeout version of the previous MAERT showing the changes made in the May 23, 2024 permit relative to the December 2021 MAERT.**
- For GRP-TURBINE, please confirm if the current SOP index number 60GG-2 and its unit attributes in OP-UA11 should be retained or removed from the permit. The OP-UA11 form submitted does not contain SOP index number, 60GG-2. **60 GG-2 was for liquid fuel firing of the turbines which is no longer done at the facility, so it should be removed.**

Application updates may now be submitted through **Title V STEERS**. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Thank you for your cooperation.

Subject: RE: Technical Review -- FOP 091/Project 37482, BHER Power Resources Inc/C R Wing Cogeneration Plant

Good morning Pat,

Process Description
C.R. Wing Cogeneration Plant
BHER Power Resources, Inc.

2.0 Introduction

On behalf of BHER Power Resources, Inc. (BHER), Barr Engineering Company (Barr) has prepared this document for a Site Operating Permit (SOP) amendment application.

2.1 Purpose

The purpose of this document is to provide supporting information for an SOP amendment application.

2.2 Location

This Facility is located in Big Spring, Howard County, Texas.

2.3 Process Description

BHER owns and operates the C.R. Wing Cogeneration Plant located in Big Spring, Texas. The Facility operates two GE Frame 7EA gas turbines for the production of electricity. The electricity is sold into the Electric Reliability Council of Texas (ERCOT) grid. The plant's gas turbines and a black start generator are currently permitted under Title V Permit 0-00091 and Prevention of Significant Deterioration (PSD) Permit No. 17411 and PSD-TX-720-M2. A maintenance generator at the plant is authorized under Permit by Rule and the Title V Permit.

Each gas turbine is coupled to an electrical generator. Since the turbines were installed, each generator has routinely exported between 45 to 80 megawatts (MW) (depending on the ambient conditions and dispatch schedule). The gas turbines operate with dry low NO_x (DLN) burners which are fired with natural gas.

In each of the two gas turbines, atmospheric air is drawn in, pressurized and forced into the turbine combustor chamber where it is mixed with fuel in a steady flow and combusted. The DLN burners control NO_x and CO emissions through lean premix and good combustion practice. The compressed and heated mixture of air and combustion products then flows through the turbine, decreasing the temperature and pressure of the gas as the heat energy is converted into mechanical work of rotation. The rotation of each turbine shaft drives an electric generator designed to produce approximately 75 MW of electricity. Total net electrical generation from the plant is approximately 150 MW under normal operating conditions.

The turbine exhaust gases are vented to the atmosphere through individual stacks - emissions point# E-1A and E-2A, for gas turbines No. 1 and 2 respectively. The exhaust gasses exit the stacks at approximately 160 - 230 ft/sec.

The turbines are permitted in the TCEQ Air Quality Permit No. 17411, PSD Permit No. PSDTX720M2 and Federal Operating Permit No. 0-00091. The turbines are also subject to New Source Performance Standards (NSPS) found in 40 CFR 60 Subpart GG of Part 60 of Title 40 of the Code of Federal Regulations (40 CFR 60 Subpart GG), titled "Standards of Performance for Stationary Gas Turbines".

2.3.1 Currently Permitted Turbine Reduced Load Operations

The turbines may operate at reduced load during periods of maintenance and testing and startup and shutdown (MSS). The updated Maximum Allowable Emission Rate Table (MAERT) includes alternative emission limits for these scenarios.

Process Description
C.R. Wing Cogeneration Plant
BHER Power Resources, Inc.

2.3.2 Auxiliary Generators

BHER also operates two emergency generator engines. The larger engine (1,500 kW), which is known as the black- start engine, is sometimes used during the startup of the two gas turbine units and is authorized under TCEQ Air Quality Permit No. 17411, PSD Permit No. PSD-TX-720M-2 and Federal Operating Permit No. 0-00091. The smaller engine (450 kW) is authorized by Permit by Rule (PBR) §106.511 under Title 30 of the Texas Administrative Code (TAC). Neither generator operates concurrently with the turbines, except during turbine start-up or for routine maintenance and testing. BHER utilizes a 150-barrel storage tank to supply fuel to both emergency generator engines. This tank is exempt from New Source Review (NSR) permitting requirements under PBR §106.472.

2.3.3 Gas Turbine Emissions Measurement Equipment

In October 2003, the C.R. Wing cogeneration plant ceased routine delivery of steam to the Alon Refinery (now owned by Delek) due to the expiration of a long-term contract which provided for these deliveries. As a result, the Facility lost its status as a qualifying Facility and became subject to the requirements of 40 CFR 75. An extractive Continuous Emissions Monitoring System (CEMS) manufactured by Custom Instrumentation Services Corporation was installed for each gas turbine. The CEMS were originally located on the combined cycle stacks but were relocated to the turbine stacks and recertified when the combined cycle systems were shut down and the emissions were permanently rerouted to the turbine stacks for simple cycle operation. The CEMS are housed in metal shelters located at the base of each turbine stack. A common Data Acquisition and Handling System (DAHS) located in the power plant control room gathers data from each CEMS. The DAHS provide historical data storage with access for reviewing and editing, generating all required reports in the formats acceptable to the EPA and the State.

2.3.4 Plant Auxiliary Systems

Various plant systems support the generation of electricity including water supply and treatments systems, building heating and cooling systems, and wastewater systems. Activities such as cleaning, maintenance and vehicle operation also support the generation of electricity. These activities generate insignificant emissions some of which are covered by various permits-by-rule issued by TCEQ.

2.3.5 Regulatory Requirements & Permits

The Facility operates under the following permits:

- TCEQ Air Quality Permit No. 17411
- PSD Permit No. PSDTX720M2
- Permit: O91 Federal Operating Permit (Title V) and Acid Rain Permit (Title IV)

Regulatory requirements are incorporated in the above reference permits.

Good afternoon,

I have been assigned to the Federal Operating Permit (FOP) minor revision application of Permit No. O91 for BHER Power Resources Inc, C R Wing Cogeneration Plant. This application has been assigned Project No. 37482. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

Since the revision request is to incorporate an amended PSD permit (PSDTX-720-M2), the application does not qualify for a minor revision and must be processed as a significant revision.

To proceed with the technical review, please submit the following to STEERS by **February 14, 2025**:

- Submit an updated and complete **OP-2 form, Tables 1-3**, since this application will be processed as a significant revision application. Please refer to the OP-2 form instructions here: [Form OP-2 Instructions](#).
- An OP-PBR SUP form, listing all PBRs.

Attached is the current process description on file. Please review and submit an updated process description if needed.

- In our system and in the last OP-1 form submitted, we have Stephen Seachman as the technical contact for this facility. In the STEERS Copy of Record submitted with this application, it indicates Anoop Sukumaran as the technical contact. Please confirm the correct technical contact.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified submittals, including application updates supporting the WDP comments is required to be submitted with the WDP response. After final review of the WDP, additional changes, supported by application updates, may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that were not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through **Title V STEERS**. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Dear Sir/Madame,

BHER Power Resources, Inc. is submitting the enclosed application documents for a minor revision of the State Operating Permit (SOP) O-0091 which was issued under the Texas Commission of Environmental Quality's (TCEQ) Air Permit Division, reissued June 4, 2021. The Facility operates two GE Frame 7EA gas turbines for the production of electricity. The electricity is sold into the Electric Reliability Council of Texas (ERCOT) grid. This minor revision is being requested to update the SOP to include a reference to the amendment of the Prevention of Significant Deterioration (PSD) Permit 17411 and PSD-TX-720-M2 that was issued May 23, 2024.

The PSD permit amendment allowed for the installation of dry low-NO_x (DLN) burners on the gas turbines to reduce NO_x emissions and to retire the steam system at the facility. By retiring the steam system, the facility is no longer defined under PSD as a fossil fuel-fired steam electric plants (40 CFR 52.21(b)(1)(i)(a)) and, therefore, has a major stationary source threshold of 250 tons/year (40 CFR 52.21(b)(1)(i)(b)). The amendment also incorporates the two existing Lube Oil Vents (LOVs) at the facility. The combined potential emissions of the LOVs are very low, 0.53 tons per year of VOC and PM25, and no new requirements were added due to the inclusion of the existing LOVs.

If you have any questions or require additional information, please contact Erik Boleman of Barr Engineering Co. at ebileman@barr.com or (218) 529-8209.

Sincerely,

Derek Graves

Dear Senator Sparks:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) significant revision application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-101.422222,32.272222&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Kevin Sparks

As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site.
