Attn: APIRT

On behalf of Lhoist North America of Texas, LLC (LNA), I am submitting this significant revision application for the above-referenced permit. The primary purpose of this application is to incorporate two new lime kilns, Kilns 4 and 5. Construction of these kilns was recently authorized by Permit No. 4335A, GHGPSDTX235, and PSDTX31M2. The attached Form OP-2 details the revisions included with this application.

Enclosed are the required application forms. Please note the Major NSR Summary Table will also be revised and will be provided via electronic mail to the permit reviewer upon request, per TCEQ's guidance.

If you have any questions concerning this application, please contact me at Marilyn.Bruton@lhoist.com or Ms. Miranda Cheatham at Miranda.Cheatham@trinityconsultants.com.

EXECUTIVE SUMMARY

The Clifton Lime Plant is a lime production facility, and the primary emission sources currently in operation at the plant are three lime kilns. Kilns 1 and 2 are authorized by Permit No. 4335A, GHGPSDTX235, and PSDTX31M2 (hereafter referred to as Permit No. 4335A). Kiln 3 is authorized by Permit No. 8434 and PSDTX441M2 (hereafter referred to as Permit No. 8434).

On August 21, 2024, Permit No. 4335A was amended to authorize construction of two new lime kilns, Kilns 4 and 5. The primary purpose of this revision application is to incorporate the two new lime kilns and related facilities. The August 21, 2024 application stated:

The Clifton Lime Plant is currently an area source of HAPs. Upon startup of new Kilns 4 and/or 5, the site-wide potential emissions of HCl will exceed 10 tons/yr. The Clifton Lime Plant will therefore become a major source of HAPs and will become subject to MACT Subparts A and AAAAA (the Lime Manufacturing MACT).

LNA has subsequently conducted additional engineering testing of Clifton Kilns 1, 2, and 3, as well as kilns at their other lime manufacturing plants. This testing indicates current HCl emission limits for the Clifton kilns are conservatively high, and that actual site-wide HCl emissions will remain below 10 tons/yr, even after startup of Kilns 4 and 5.

Authorized HCl emissions for the kilns currently in operation (Kilns 1, 2 and 3) are below 10 tons/yr. Kilns 4 and 5 have not yet started operating. Therefore, site-wide potential to emit has not yet triggered major source status.

LNA also recently submitted an application to alter Permit No. 4335A to create emission caps for hydrogen chloride (HCl) and total hazardous air pollutants (HAPs) to establish the site as an area source of HAPs. This revision application reflects the site's status as an area source of HAPs.

Dear Senator Birdwell:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) significant revision application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.585555,31.712222&level=13>.

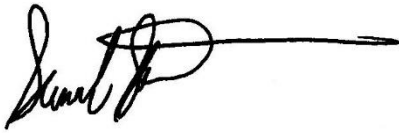

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

EXECUTIVE SUMMARY

The Clifton Lime Plant is a lime production facility, and the primary emission sources currently in operation at the plant are three lime kilns. Kilns 1 and 2 are authorized by Permit No. 4335A, GHGPSDTX235, and PSDTX31M2 (hereafter referred to as Permit No. 4335A). Kiln 3 is authorized by Permit No. 8434 and PSDTX441M2 (hereafter referred to as Permit No. 8434).

On August 21, 2024, Permit No. 4335A was amended to authorize construction of two new lime kilns, Kilns 4 and 5. The primary purpose of this revision application is to incorporate the two new lime kilns and related facilities. The August 21, 2024 application stated:

The Clifton Lime Plant is currently an area source of HAPs. Upon startup of new Kilns 4 and/or 5, the site-wide potential emissions of HCl will exceed 10 tons/yr. The Clifton Lime Plant will therefore become a major source of HAPs and will become subject to MACT Subparts A and AAAAA (the Lime Manufacturing MACT).

LNA has subsequently conducted additional engineering testing of Clifton Kilns 1, 2, and 3, as well as kilns at their other lime manufacturing plants. This testing indicates current HCl emission limits for the Clifton kilns are conservatively high, and that actual site-wide HCl emissions will remain below 10 tons/yr, even after startup of Kilns 4 and 5.

Authorized HCl emissions for the kilns currently in operation (Kilns 1, 2 and 3) are below 10 tons/yr. Kilns 4 and 5 have not yet started operating. Therefore, site-wide potential to emit has not yet triggered major source status.

LNA also recently submitted an application to alter Permit No. 4335A to create emission caps for hydrogen chloride (HCl) and total hazardous air pollutants (HAPs) to establish the site as an area source of HAPs. This revision application reflects the site's status as an area source of HAPs.
