## TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

*Protecting Texas by Reducing and Preventing Pollution*

January 24, 2025

THE HONORABLE ROBERT NICHOLS  
TEXAS SENATE  
PO BOX 12068  
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application  
Project Number: 37522  
Permit Number: 02458  
Atmos Energy Corporation  
Tri-cities Storage Compressor Station  
Athens, Henderson County  
Regulated Entity Number: RN100542505  
Customer Reference Number: CN602730319

Dear Senator Nichols:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.939594,32.131224&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Athens, Henderson County, Texas  
Air Account No. HM-0012-R**

To Whom it May Concern:

Atmos Energy Corporation (Atmos) is submitting the enclosed Title V Site Operating Permit (SOP) renewal/revision application to the Texas Commission on Environmental Quality (TCEQ). SOP No. O2458 authorizes operation of the Tri-Cities Storage Compressor Station (the Station) located near Athens, Texas, in Henderson County. The application is being submitted in accordance with the TCEQ requirements to submit a renewal application at least six (6) months prior to the SOP expiration date of July 24, 2025.

Concurrent with this renewal application, Atmos is requesting that the SOP be revised to reflect the changes made at the Station since the SOP was last renewed, as identified in multiple revisions to Standard Permit registration no. 141181 and in the Off-Permit/Operational Flexibility Action Notification (OP-Notify) submitted on March 17, 2023.

This application includes complete Unit Attributes forms, as applicable, for all the Station's existing, unchanged equipment (not including the off-permit sources), because the forms have been revised since the previous SOP renewal. Atmos is not making changes to the Station's existing compliance assurance monitoring (CAM) requirements; therefore, CAM is not addressed further in this application.

Atmos appreciates in advance the TCEQ's review and approval of this SOP renewal/revision application. If you have any questions regarding the information presented in this letter and enclosure, please contact me at (469) 841-9076 or via email at [chris.marlais@atmosenergy.com](mailto:chris.marlais@atmosenergy.com).

Sincerely,

A handwritten signature in black ink that reads "Chris Marlais". The signature is fluid and cursive, with the first name "Chris" and last name "Marlais" clearly distinguishable.

- Project/Process Description

## **PROJECT/PROCESS DESCRIPTION**

### **Project Description**

The Tri-Cities Storage Compressor Station (the Station) is located near Athens in Henderson County, Texas. Operation of the Station is permitted under Title V Site Operating Permit (SOP) number O2458, and the Station's equipment is authorized under Non-Rule Standard Permit (NRSP) registration no. 141181. This SOP renewal/revision application will incorporate the changes that were included in multiple revisions under the NRSP and in the Off-Permit/Operational Flexibility Action Notification (OP-Notify) submitted on March 17, 2023. The Station is comprised of gas compression equipment, dehydration units, 2-phase and 3-phase oil and water separators, and gas storage wells. Gas enters the Station and can be processed through these systems in many different ways. The following paragraphs briefly describe the Station's major processes and equipment.

### **Process Description**

#### **2-Phase and 3-Phase Oil and Water Separation**

The Station's storage field is comprised of two (2) formations (Bacon and Rodessa). The Station processes the gas from these wells through four (4) trains (Bacon High Pressure (HP) South, Bacon HP North, Bacon Low Pressure (LP), and Rodessa). Some of the equipment is common to multiple trains. Gas received from all storage wells is first processed through a 2-phase separator, which removes the oil (condensate) and water from the gas. The liquid stream is routed to lower pressure 3-phase separators, which separate the remaining gas, water, and oil (condensate) into three (3) separate streams. The Bacon well system oil (condensate) is collected separate from the Rodessa oil (condensate) in atmospheric tanks (Bacon has five (5) 500-barrel (bbl) oil tanks and one (1) produced water tank, Rodessa has four (4) 500 bbl oil tanks and one (1) produced water tank). All oil is trucked off-site when necessary. The 3-phase separators vent to the Station's flares.

#### **Glycol Gas Dehydration**

The Station has seven (7) triethylene glycol (TEG) contactors and currently operates five (5) of them (two (2) are in stand-by). The Station also has five (5) TEG reboiler/regenerator stills. There are three (3) dehydration systems: Bacon HP South, Bacon HP North, and the Bacon LP/Rodessa systems. The systems use identical processes to remove water from the gas, and the following paragraphs provide a generic description of the dehydration process.

Gas enters the glycol contactor where it contacts TEG, which absorbs water from the gas. Dry gas exits the top of the glycol contactor and flows through the glycol/gas separator, which removes separable TEG from the dry gas. Rich glycol, TEG with absorbed water, exits the bottom of the glycol contactor and enters a filter that removes much of the suspended solids from the solution before entering a flash tank. The flash gas is typically routed back into the fuel gas system but can also be routed to one (1) of the Station's flares if necessary. After the flash tank, the glycol stream is then routed through a heat exchanger before flowing into the glycol still. The still vent is then routed to one (1) of the Station's flares for combustion. Lean glycol exits the bottom of the glycol reboiler and enters a heat exchanger before flowing back into the glycol contactor in a continuous cycle.

#### **Odorizer Injection**

Odorizer can be injected into the gas pipelines at the Station. Odorant is trucked on-site and pressure

loaded into the tanks. When necessary, the odorant is pulled from the tanks and injected into the gas stream. Natural gas is naturally odorless, so the odorant is introduced to assist in leak detection.

### **Underground Gas Storage**

The Station contains underground reservoirs that are used for temporary natural gas storage. At one time, these underground reservoirs contained natural gas, but once the gas was harvested an empty reservoir remained. The storage wells are now injected with treated gas, the gas is then stored, and the gas can be removed when necessary, according to market demands.

### **Gas Compression**

The compressors are used to increase the pressure of the gas. As the gas travels through pipelines, the gas loses pressure or energy due to the friction on the pipe walls. Occasionally along these transmission lines, the gas needs to be recompressed (increase the pressure) to assist in moving the gas along the pipelines. Compressor engines are also used to facilitate injection and withdrawal gas from underground storage.

- Part 1 of this form must be submitted with all initial FOP applications and renewal applications.
- The Responsible Official must use Form OP-CRO1 (Certification by Responsible Official) to certify information contained in this form in accordance with 30 TAC § 122.132(d)(8).

**Part 1**

<b>A. Compliance Plan — Future Activity Committal Statement</b>	
<p>The <i>Responsible Official</i> commits, utilizing reasonable effort, to the following:  As the responsible official it is my intent that all emission units shall continue to be in compliance with all applicable requirements they are currently in compliance with, and all emission units shall be in compliance by the compliance dates with any applicable requirements that become effective during the permit term.</p>	
<b>B. Compliance Certification - Statement for Units in Compliance*</b> (Indicate response by entering an "X" in the appropriate column)	
1. With the exception of those emission units listed in the Compliance Schedule section of this form (Part 2, below), and based, at minimum, on the compliance method specified in the associated applicable requirements, are all emission units addressed in this application in compliance with all their respective applicable requirements as identified in this application?	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
2. Are there any non-compliance situations addressed in the Compliance Schedule Section of this form (Part 2)?	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO
3. If the response to Item B.2, above, is "Yes," indicate the total number of Part 2 attachments included in this submittal. <i>(For reference only)</i>	
<p>* For Site Operating Permits (SOPs), the complete application should be consulted for applicable requirements and their corresponding emission units when assessing compliance status. For General Operating Permits (GOPs), the application documentation, particularly Form OP-REQ1 should be consulted as well as the requirements contained in the appropriate General Permits portion of 30 TAC Chapter 122.</p> <p>Compliance should be assessed based, at a minimum, on the required monitoring, testing, record keeping, and/or reporting requirements, as appropriate, associated with the applicable requirement in question.</p>

**Federal Operating Permit Program**  
**Texas Commission on Environmental Quality**

All initial issuance, revision, renewal, and reopening permit application submittals requiring certification must be addressed using this form. Updates to site operating permit (SOP) and temporary operating permit (TOP) applications, other than public notice verification materials, must be certified prior to authorization of public notice or start of public announcement. Updates to general operating permit (GOP) applications must be certified prior to receiving an authorization to operate under a GOP.
