Permit Number: O4715

Regulated Entity Number: RN111997813

Dear Senator Springer:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.157815,33.667856&level=13>.

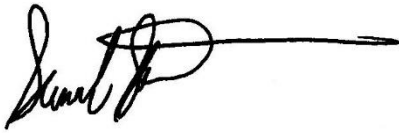

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Terra-Vaults, Inc. – Gainesville Facility  
TCEQ Customer Reference Number: (CN) 606108165  
TCEQ Regulated Entity Reference Number: (RN) 111997813*

Dear Air Permits Initial Review Team:

Terra-Vaults, Inc. (Terra-Vaults) is submitting the attached initial Title V Site Operating Permit (SOP) application to authorize operation of a polymer concrete and fiber-reinforced plastic (FRP) vault manufacturing facility in Gainesville, Cooke County, Texas (Gainesville Facility). Terra-Vaults has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 606108165 with the Gainesville Facility assigned TCEQ Regulated Entity Reference Number (RN) 111997813. Operations at the Gainesville Facility are authorized under New Source Review (NSR) Permit No. 176744.

The Gainesville Facility is located at 1304 Corporate Drive in Gainesville, Cooke County, Texas. Cooke County is currently designated as an attainment/unclassified area for all criteria pollutants.<sup>1</sup> The site will be a minor source with respect to the Prevention of Significant Deterioration (PSD) program. The site does not have any registered Permits by Rule (PBR). However, finishing operations, including grinding using hand-held equipment, are authorized under claimed non-registerable PBR 106.265 (Hand-held and Manually Operated Machines).

The site will be a major source for hazardous air pollutants (HAP) under the federal operating permits program (Title V) because the site will have a potential to emit (PTE) of a single HAP (styrene) of greater than 10 tons per year (tpy) and more than 25 tpy for any combination of HAP. Therefore, Terra-Vaults is submitting this Initial Title V Permit Application.

## 1. EXECUTIVE SUMMARY

---

Terra-Vaults, Inc. (Terra-Vaults) is submitting this initial Title V Site Operating Permit (SOP) application to authorize operation of a polymer concrete (polycrrete) and fiber-reinforced plastic (FRP) vault manufacturing facility in Gainesville, Cooke County, Texas (Gainesville Facility). Terra-Vaults has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 606108165 with the Gainesville Facility assigned TCEQ Regulated Entity Reference Number (RN) 111997813. Emissions sources at the Gainesville Facility are authorized under New Source Review (NSR) Permit No. 176744.

The Gainesville Facility is located at 1304 Corporate Drive in Gainesville, Cooke County, Texas. Cooke County is currently designated as an attainment/unclassified area for all criteria pollutants.<sup>1</sup> The site will be a minor source with respect to the Prevention of Significant Deterioration (PSD) program. The site does not have any registered Permits by Rule (PBR). However, finishing operations, including grinding using hand-held equipment, are authorized under claimed non-registerable PBR 106.265 (Hand-held and Manually Operated Machines).

The site will be a major source for hazardous air pollutants (HAP) under the federal operating permits program (Title V) because the site will have a potential to emit (PTE) of a single HAP (styrene) of greater than 10 tons per year (tpy) and more than 25 tpy for any combination of HAPs. Therefore, Terra-Vaults is submitting this initial Title V SOP application.

This permit application is submitted through the TCEQ's State of Texas Environmental Electronic Reporting System (STEERS) and has been prepared in accordance with applicable requirements of Title 30 of the Texas Administrative Code (30 TAC) Chapter 122, Federal Operating Permits Program. ## **2. PROCESS DESCRIPTION AND PROCESS FLOW DIAGRAMS**

---

Terra-Vaults is proposing to manufacture polycrete and FRP storage vaults using a styrene-based resin combined with dry aggregate materials at the Gainesville Facility. These activities will take place in an enclosed building with emissions from the process routed through six stacks, four identical stacks for the polycrete vault manufacturing process (Emission Point Numbers [EPNs] POLYSTACK1, POLYSTACK2, POLYSTACK3, and POLYSTACK4) and two identical stacks for the FRP vault manufacturing process (EPNs FRPSTACK1 and FRPSTACK2). Details on the processes are included below. Process flow diagrams are included at the end of this section.

### **2.1 Polymer Concrete (Polycrete) Vault Manufacturing**

To create the polycrete vaults, styrene-based resin and dry aggregate materials (i.e., calcium carbonate, sand, gravel, and titanium) are combined in a mixer to create a slurry that is then loaded into a hopper.

The resin is stored in totes and transferred into a valve that is directly above the mixing tank. Aggregate in hoppers is transferred into the mixing tank. Wet material is mixed using a fixed mixing blade inside the tank. Once the material is combined, it is transferred to a mobile hopper. Catalyst is added to the wet material and is mixed again to begin the curing process.

The catalyzed resin mixture is transferred to a waxed mold and left to cure and harden. Once cured, the product is removed from the mold to undergo final inspection and ancillary operations including superficial/aesthetic corrections. These corrections include grinding and sanding of the finished products (on-site PBR 106.265). Cleaning operations take place periodically and at the end of each batch using acetone.

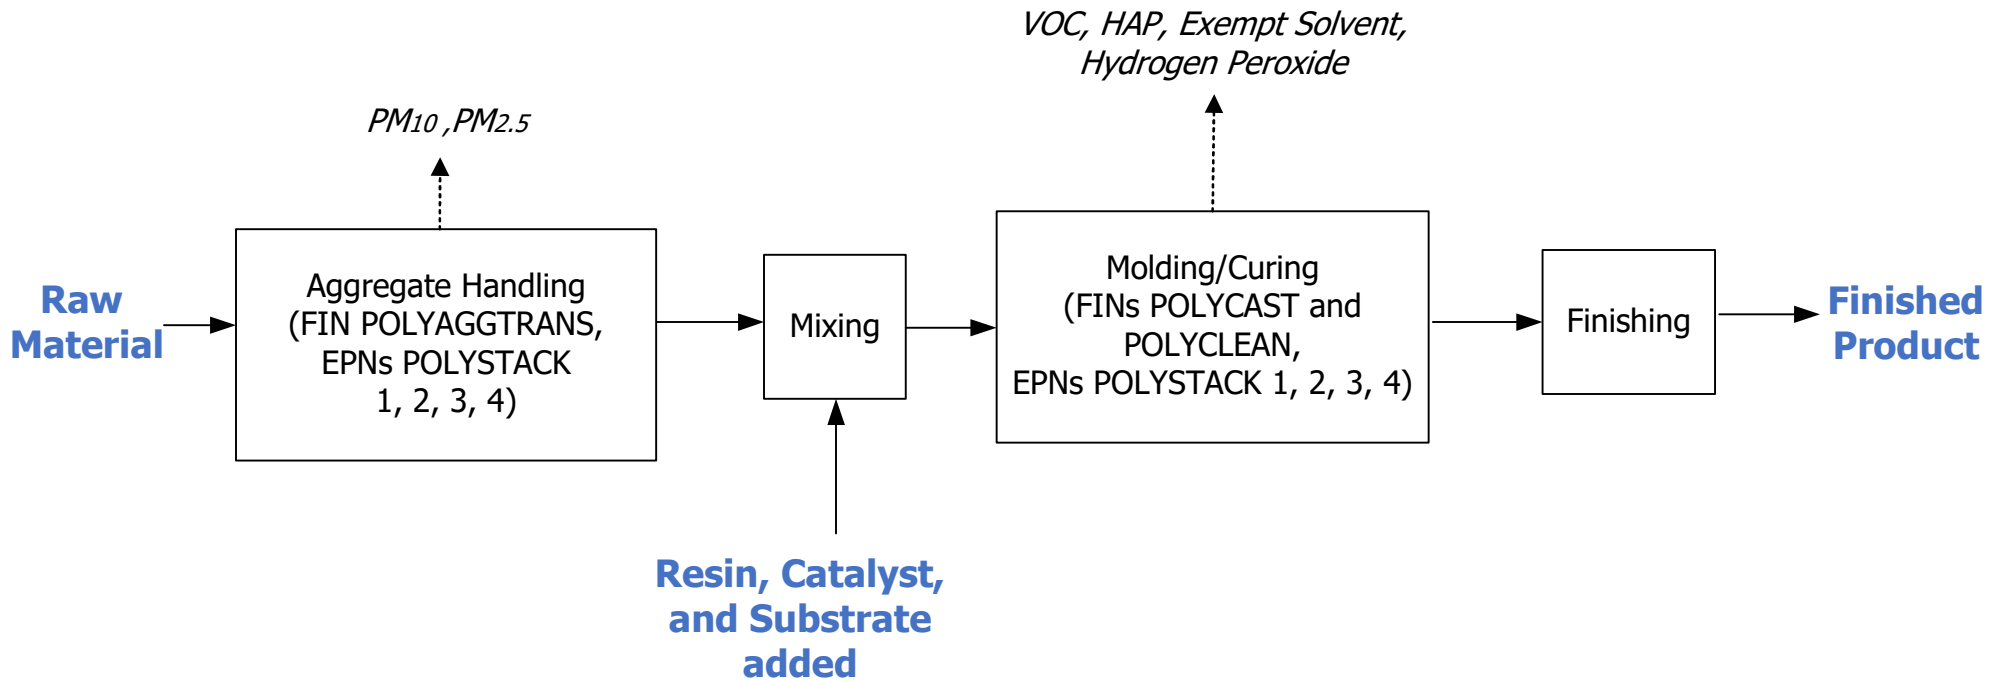

### **2.2 Fiber-Reinforced Plastic (FRP) Vault Manufacturing**

To create the FRP vaults, styrene-based resin and dry aggregate materials (i.e., titanium and calcium carbonate) are combined in a mixer to create a slurry that is then loaded into a hopper.

The resin is stored in totes and transferred into a valve that is directly above the mixing tank. Aggregate in hoppers is transferred into the mixing tank. Wet material is mixed using a fixed blade. Once the material is combined, it is transferred to a mobile hopper. The hopper is then attached by a hose to a chopper gun.

The chopper gun sprays material through several hoses: one each for resin, catalyst, fiberglass, and air pressure. As the chopper gun sprays, it mixes the resin mixture and catalyst before being applied to the waxed vault mold. Once the chopper gun has applied a layer of material, the FRP vault is rolled out to remove trapped air and smooth the vault; this process is typically repeated to achieve the desired thickness before the vault is left to cure and harden. A fifth hose is used for cleaning the gun parts with acetone to prevent the chopper gun from becoming clogged with resin residue. Due to the stickiness of the material and size of the globules formed by the application equipment, no particulate matter emissions are expected to be generated from this operation.

Once fully cured, the product is removed from the mold to undergo final inspection and ancillary operations including superficial or aesthetic corrections. These corrections include grinding and sanding of the finished products (On-Site PBR 106.265). Grinding/sanding will be performed in a grinding booth/room equipped with dry filters with a control efficiency of 99% or greater.
