Subject: RE: Working Draft Permit -- FOP 04715/Project 37544, Terra-Vaults, Inc./Gainesville Facility

Good afternoon Jamie,

Thank you for your review of the WDP. To answer your question below regarding Unit ID FRPCAST and modifying the Index Number, this is fine, and I will make the update in the draft. Please send an updated Form OP-UA66. You can use the strikethrough feature in MS Word to mark out the old UA data and then include the new UA data in the cell below it. If there are no further comments, please proceed to the item below and resolve by **09/30/2025**.

1. **Form OP-CRO1:** At this time, I would like to ask for the form OP-CRO1 certifying the changes made to the application. Please fill out the Time Period from 01/17/2025 to 09/23/2025. Please send me an electronic copy and the original, signed hardcopy. Alternatively, in lieu of the OP-CRO1, you can submit this email thread and attachments as an update to the application through STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. STEERS does not accept the Outlook ".msg" file type, but it does take PDFs.

Please let me know if you have any questions.

Subject: Working Draft Permit -- FOP O4715/Project 37544, Terra-Vaults, Inc./Gainesville Facility

Good afternoon all,

I have conducted a technical review of *initial issuance* application for ***Terra-Vaults, Inc./Gainesville Facility***. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Notes:

-

- Unit IDs AGGTRANS and FINISH:
 - These two units have their applicable forms listed in Form OP-SUM as the OP-REQ1 and OP-PBRSUP. Normally, the applicable form is a Unit Attribute form (OP-UAXX) such as OP-UA66 that was listed for Unit IDs POLYCAST and FRPCAST. Do these two units have any Unit Attribute (UA) data? If they only appear on the OP-REQ1 and OP-PBRSUP, they will not need to appear in the permit as there are no applicable requirements. **These units do not have unit attribute data.**
- Unit ID POLYCAST

- Based on the UA data provided on Form OP-UA66 (Page 1), this unit shows non-applicability and therefore will not show up in the permit. **Understood. Since there are no requirements specified for Unit ID POLYCAST in the Applicable Requirements Summary, Terra-Vaults requests that the SOP Index number for the FRPCAST be modified from 63WWW-0002 to 63WWW-0001 (i.e., since there otherwise won't be a "0001"). Please let us know if any forms are required to address this administrative request.**

Please review the WDP and submit to me any comments you have by **September 11, 2025**.

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Good afternoon Jaime Bretzmann and Dennis Koerner,

My name is Emily Knodell and I have been assigned to the Federal Operating Permit (FOP) *initial issuance* application of Permit No. **04715** for *Terra-Vaults, Inc./Gainesville Facility*. This application has been assigned Project No. **37544**. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not

require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. Dear Senator Springer:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.157815,33.667856&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Terra-Vaults has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 606108165 with the Gainesville Facility assigned TCEQ Regulated Entity Reference Number (RN) 111997813. Operations at the Gainesville Facility are authorized under New Source Review (NSR) Permit No. 176744.

The Gainesville Facility is located at 1304 Corporate Drive in Gainesville, Cooke County, Texas. Cooke County is currently designated as an attainment/unclassified area for all criteria pollutants.¹ The site will be a minor source with respect to the Prevention of Significant Deterioration (PSD) program. The site does not have any registered Permits by Rule (PBR). However, finishing operations, including grinding using hand-held equipment, are authorized under claimed non-registerable PBR 106.265 (Hand-held and Manually Operated Machines).

The site will be a major source for hazardous air pollutants (HAP) under the federal operating permits program (Title V) because the site will have a potential to emit (PTE) of a single HAP (styrene) of greater than 10 tons per year (tpy) and more than 25 tpy for any combination of HAP. Therefore, Terra-Vaults is submitting this Initial Title V Permit Application.

1. EXECUTIVE SUMMARY

Terra-Vaults, Inc. (Terra-Vaults) is submitting this initial Title V Site Operating Permit (SOP) application to authorize operation of a polymer concrete (polycrrete) and fiber-reinforced plastic (FRP) vault manufacturing facility in Gainesville, Cooke County, Texas (Gainesville Facility). Terra-Vaults has been assigned Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 606108165 with the Gainesville Facility assigned TCEQ Regulated Entity Reference Number (RN) 111997813. Emissions sources at the Gainesville Facility are authorized under New Source Review (NSR) Permit No. 176744.

The Gainesville Facility is located at 1304 Corporate Drive in Gainesville, Cooke County, Texas. Cooke County is currently designated as an attainment/unclassified area for all criteria pollutants.¹ The site will be a minor source with respect to the Prevention of Significant Deterioration (PSD) program. The site does not have any registered Permits by Rule (PBR). However, finishing operations, including grinding using hand-held equipment, are authorized under claimed non-registerable PBR 106.265 (Hand-held and Manually Operated Machines).

The site will be a major source for hazardous air pollutants (HAP) under the federal operating permits program (Title V) because the site will have a potential to emit (PTE) of a single HAP (styrene) of greater than 10 tons per year (tpy) and more than 25 tpy for any combination of HAPs. Therefore, Terra-Vaults is submitting this initial Title V SOP application.

This permit application is submitted through the TCEQ's State of Texas Environmental Electronic Reporting System (STEERS) and has been prepared in accordance with applicable requirements of Title 30 of the Texas Administrative Code (30 TAC) Chapter 122, Federal Operating Permits Program. The enclosed SOP initial application for the Gainesville Facility includes the following forms and supplemental information:

2. PROCESS DESCRIPTION AND PROCESS FLOW DIAGRAMS

Terra-Vaults is proposing to manufacture polycrete and FRP storage vaults using a styrene-based resin combined with dry aggregate materials at the Gainesville Facility. These activities will take place in an enclosed building with emissions from the process routed through six stacks, four identical stacks for the polycrete vault manufacturing process (Emission Point Numbers [EPNs] POLYSTACK1, POLYSTACK2, POLYSTACK3, and POLYSTACK4) and two identical stacks for the FRP vault manufacturing process (EPNs FRPSTACK1 and FRPSTACK2). Details on the processes are included below. Process flow diagrams are included at the end of this section.

2.1 Polymer Concrete (Polycrete) Vault Manufacturing

To create the polycrete vaults, styrene-based resin and dry aggregate materials (i.e., calcium carbonate, sand, gravel, and titanium) are combined in a mixer to create a slurry that is then loaded into a hopper.

The resin is stored in totes and transferred into a valve that is directly above the mixing tank. Aggregate in hoppers is transferred into the mixing tank. Wet material is mixed using a fixed mixing blade inside the tank. Once the material is combined, it is transferred to a mobile hopper. Catalyst is added to the wet material and is mixed again to begin the curing process.

The catalyzed resin mixture is transferred to a waxed mold and left to cure and harden. Once cured, the product is removed from the mold to undergo final inspection and ancillary operations including superficial/aesthetic corrections. These corrections include grinding and sanding of the finished products (on-site PBR 106.265). Cleaning operations take place periodically and at the end of each batch using acetone.

2.2 Fiber-Reinforced Plastic (FRP) Vault Manufacturing

To create the FRP vaults, styrene-based resin and dry aggregate materials (i.e., titanium and calcium carbonate) are combined in a mixer to create a slurry that is then loaded into a hopper.

The resin is stored in totes and transferred into a valve that is directly above the mixing tank. Aggregate in hoppers is transferred into the mixing tank. Wet material is mixed using a fixed blade. Once the material is combined, it is transferred to a mobile hopper. The hopper is then attached by a hose to a chopper gun.

The chopper gun sprays material through several hoses: one each for resin, catalyst, fiberglass, and air pressure. As the chopper gun sprays, it mixes the resin mixture and catalyst before being applied to the waxed vault mold. Once the chopper gun has applied a layer of material, the FRP vault is rolled out to remove trapped air and smooth the vault; this process is typically repeated to achieve the desired thickness before the vault is left to cure and harden. A fifth hose is used for cleaning the gun parts with acetone to prevent the chopper gun from becoming clogged with resin residue. Due to the stickiness of the material and size of the globules formed by the application equipment, no particulate matter emissions are expected to be generated from this operation.

Once fully cured, the product is removed from the mold to undergo final inspection and ancillary operations including superficial or aesthetic corrections. These corrections include grinding and sanding of the finished products (On-Site PBR 106.265). Grinding/sanding will be performed in a grinding booth/room equipped with dry filters with a control efficiency of 99% or greater.
