TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

February 17, 2025

THE HONORABLE MAYES MIDDLETON
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application

Permit Number: O4197

Pasadena, Harris County
Regulated Entity Number: RN103939427
Customer Reference Number: CN601690415

Dear Senator Middleton:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.105833,29.640555&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Mayes Middleton

Importance: High

Mr. Edward Albrecht

I am conducting the initial review of your application for the subject project. Mr. Jorge Flores is not authorized to certify the application as Duly Authorized Representative (DAR). Please see the attached STEERS Copy of Record. The following is currently the only designated representative for this permit other than the Responsible Official Mr. Bryce Ward.

Representative Information			
Rcvd Date	Representative/Title	Effective Date	Expiration Date
12/19/2019	EDWARD ALBRECHT	12/19/2019	

A completed and signed OP-DEL form is required to add Mr. Jorge Flores as a DAR to the subject permit before certification by that individual can be accomplished. If you or Mr. Ward should choose to certify this application instead, and since neither of you signed the STEERS submission, please provide me with a completed and signed OP-CRO1 form so I may certify the application. Please email the applicable completed and signed form directly to me as soon as possible so your application is complete and can be accepted.

Thank you.

INTRODUCTION

Techemet, LP (Techemet) is submitting this Federal Title V Site Operating Permit Number 4197 (SOP O4197) renewal and significant revision application, under Title V of the Federal Clean Air Act Amendments of 1990 (FCAA) and Title 30 Texas Administrative Code (30 TAC) Chapter 122, to the Texas Commission on Environmental Quality (TCEQ) for the Techemet Genoa Red Bluff Road Facility (TGRBRF). SOP O4197 was initially issued by the TCEQ on October 28, 2020. The TGRBRF is primarily a catalytic materials recycling facility (CMRF) that is located at 6025 Genoa Red Bluff Road in Pasadena, Harris County, Texas.

Most of the primary TGRBRF emission sources currently operate under New Source Review (NSR) Air Permit Number 55345 (Permit 55345), last authorized by the TCEQ on April 5, 2022. On August 15, 2024, Techemet submitted a Permit 55345 amendment application to the TCEQ for various modifications and additions to the CMRF and the TCEQ has issued a draft permit that Techemet and the TCEQ are currently reviewing. Emission sources to be authorized by amended Permit 55345 and specifically listed in this Title V SOP application include four Platinum Group Metals (PGM) Upgrading Facility Oxyfuel Burners (Unit ID Nos. PGMBURN1A, PGMBURN1B, PGMBURN2A, and PGMBURN2B) and three Silicon Carbide (SiC) Pre-Oxidation Facility Oxyfuel Burners (Unit ID Nos. SiCBURNA, SiCBURNB, and SiCBURNC).

Other potential TGRBRF emission sources, some of which are specifically listed in this Title V SOP application, that are authorized by Permit-by-Rule (PBR) include:

1. The Rotary Kiln (Unit ID No. RK1), which is formally authorized under PBR Registration Number 77285 (PBR 77285), last authorized by the TCEQ on April 27, 2016, using the November 1, 2003 versions of PBRs 30 TAC §106.261 and 30 TAC §106.262;
2. The Catalyst De-Baling Facility, which is formally authorized under PBR 78264, last authorized by the TCEQ on June 14, 2018, using the November 1, 2003 versions of PBRs 30 TAC §106.261 and 30 TAC §106.262;
3. The Baghouse Cartridge Recycling Unit, which includes the Incinerator (Unit ID No. CR1), that is formally authorized under PBR 87776, last authorized by the TCEQ on January 19, 2024, using the November 1, 2003 version of PBR 30 TAC §106.261;
4. The Laboratory Vent and Scrubber, which are formally authorized under PBR 93897, last authorized by the TCEQ on January 28, 2019, using the September 4, 2000 version of PBR 30 TAC §106.122 and the November 1, 2003 versions of PBRs 30 TAC §106.261 and 30 TAC §106.262;
5. Nine Mold Curing Burners (Unit ID Nos. MC1, MC2, MC3, MC4, MC5, MC6, MC7, MC8, and MC9), that are informally authorized under the September 4, 2000 version of PBR 30 TAC §106.183;
6. Three (Unit ID Nos. GR1, GR2, and GR3) Emergency Electric Generator reciprocating internal combustion engines (RICE), that are informally authorized under the September 4, 2000 version of PBR 30 TAC §106.511;
7. The Diesel Storage Tank (Unit ID No. TK1) and associated Loading/Unloading Facilities (Unit ID No. LD1), that are informally authorized under the September 4, 2000 version of PBR 30 TAC §106.472;

8. The Propane (liquified petroleum gas (LPG)) Storage Tank and associated Loading/Unloading Facilities (Unit ID No. LD2), that are informally authorized under the September 4, 2000 version of PBR 30 TAC §106.476. Note that, per the Form OP-UA3 instructions, the Propane (LPG) Storage Tank is an “Off-Permit Source” because it is a pressure vessel that is designed to operate in excess of 30 pounds per square inch absolute (psia) and without emissions to the atmosphere. Accordingly, other than being mentioned in the permit application text, with the associated PBR listed on the last page of the Form OP-REQ1, the Propane (LPG) Storage Tank is not included on the permit application forms; and
9. Nine Water Cooling Towers (Unit ID Nos. CT1, CT2, CT3, CT4, CT5, CT6, CT7, CT8, and CT9), that are informally authorized under the September 4, 2000 version of PBR 30 TAC §106.371.

Note that the Responsible Official (RO), Mr. Bryce Ward, is the President of Techemet, LP and also the President of Techemet Holding, Inc., where Techemet Holding, Inc. is the General Partner of Techemet, LP. Mr. Ward is an employee of Techemet Holding, Inc. and receives no compensation from Techemet, LP. Accordingly, this application represents that the Title of Mr. Ward is “President”, and that his employer is Techemet Holding, Inc.

APPLICABLE REGULATIONS SUMMARY

Since the potential annual emission of carbon monoxide (CO) is greater than 100 tons per year (TPY), each hazardous air pollutant (HAP) remains less than 10 TPY, and combined HAPs remain less than 25 TPY, the TGRBRF is a major emissions source under Title V and a non-major (a.k.a. area) emissions source under Title III of the FCAA.

Because the potential annual emission of CO is greater than 250 TPY and it is not one of the listed source types in the regulation, the TGRBRF is considered a major source under the Federal Prevention of Significant Deterioration (PSD) Regulation. However, because no subsequent permitting action has increased the potential CO annual emission greater than the 100 TPY PSD significant emissions increase threshold, a PSD permit has not yet been required.

The TGRBRF is located in Harris County, which is part of the Houston-Galveston-Brazoria (HGB) ozone nonattainment area, where volatile organic compounds (VOC) and oxides of nitrogen (NOx) are currently considered to be precursors of ozone formation. Since the potential annual emission of each of VOC and NOx from it remains less than 10 TPY, the TGRBRF remains a minor emissions source under the Federal Nonattainment regulation and also remains not subject to the requirements of the 30 TAC Chapter 101, Subchapter H, Division 3 Mass Emissions Cap and Trade Program.

Since the potential annual emission of carbon dioxide equivalent (CO₂e) from it remains less than 100,000 TPY, the TGRBRF remains a minor emissions source under the Federal Greenhouse Gas (GHG) regulations.

There are no known Title 40 Code of Federal Regulations (40 CFR) Part 61 National Emissions Standards for Hazardous Air Pollutants (NESHAP) Standard Subparts that apply to the emissions sources at the TGRBRF.

Since each (Unit ID Nos. GR1, GR2, & GR3) natural gas-fired, greater than 130 horsepower (HP), Emergency Electric Generator RICE “commenced construction” after January 1, 2009, they are subject to the applicable requirements of 40 CFR Part 60 New Source Performance Standard Subpart JJJJ (NSPS JJJJ). Compliance with the applicable requirements of NSPS JJJJ satisfies the applicable requirements of 40 CFR Part 63 Maximum Achievable Control Technology Standard Subpart ZZZZ (MACT ZZZZ). Since each of these emergency RICE will operate for no greater than 52 hours per year (hrs/yr) for testing or maintenance purposes, only the operating hour monitoring and recordkeeping requirements of 30 TAC §117.2045(b) apply to these RICE.

Since the Baghouse Cartridge Recycling Unit Incinerator (Unit ID No. CR1) has a charging rate of not greater than 45 metric tons per day (MTD) and combusts waste material in order to recover metals, it is respectively exempt from the requirements of NSPS E and NSPS CCCC. This Incinerator is subject to the applicable requirements of 30 TAC Chapter 111 for Single-, Dual-, and Multiple-Chamber Incinerators that burn 100 pounds per hour (lbs/hr) or less of industrial solid waste.

Since each (Unit ID Nos. PGMBURN1A, PGMBURN1B, PGMBURN2A, PGMBURN2B, SiCBURNA, SiCBURNB, SiCBURNC, MC1, MC2, MC3, MC4, MC5, MC6, MC7, MC8, MC9, and RK1) natural gas-fired Heater, Mold Curing Burner, or Rotary Kiln has a maximum rated capacity of 2 million British thermal units per hour (MMBtu/hr) or less, each of these is exempt from the requirements of 30 TAC Chapter 117, Subchapter D, Division 1.

Since the (Unit ID No. TK1) Diesel Storage Tank has a storage capacity of not greater than 1,000 gallons and the (Unit ID No. TK2) Propane (LPG) Storage Tank is a pressure vessel, they are exempt from the requirements of 30 TAC Chapter 115, Subchapter B, Division 1.

Since the (Unit ID No. TK1) Diesel Storage Tank has a storage capacity of less than 19,813 gallons and the (Unit ID No. TK2) Propane (LPG) Storage Tank is a pressure vessel, they are exempt from the requirements of NSPS Kb.

Since the (Unit ID No. LD1) Diesel Loading/Unloading Facilities handle a VOC liquid with a true vapor pressure (TVP) under actual storage conditions of less than 0.5 psia and the (Unit ID No. LD2) Propane (LPG) Loading/Unloading Facilities handle LPG, they are exempt from many of the requirements of 30 TAC Chapter 115, Subchapter C, Division 1, except for various applicable monitoring and recordkeeping requirements.

Since the (Unit ID Nos. CT1, CT2, CT3, CT4, CT5, CT6, CT7, CT8, and CT9) Water Cooling Towers do not use chromium-based water treatment chemicals and are not located at a major HAP emissions source, they are exempt from the requirements of MACT Q.

PROCESS DESCRIPTION

The TGRBRF is primarily a CMRF that focuses on the recovery of the precious metals Platinum, Palladium, and Rhodium from spent precious metal bearing catalyst.

Techemet's primary focus is the recovery of PGMs from automobile catalytic converters (converters) that are collected worldwide through a network of Techemet owned branch offices and joint venture companies.

Techemet also recovers PGMs from spent industrial and petrochemical catalysts containing precious metals.

All the converters that Techemet collect throughout the world are sent to the Pasadena, Texas TGRBRF for PGM recovery.

Please reference the Figure 1-1 simple process flow diagram (PFD).

The unit operations involved at Techemet for the recovery of the precious metals are as follows:

- 1) Counting and Grading. - Catalytic converters that arrive at Techemet as whole units are counted and graded into different categories.
- 2) Shearing. - The catalytic converter is sheared in half to remove the precious metal bearing ceramic catalyst portion of the catalytic converter. The steel shells from the sheared catalytic converters are recycled as scrap steel.
- 3) Sampling. - The ceramic precious metal bearing catalyst from the catalytic converters are sampled and analyzed in order to determine the precious metal content of the catalyst.
- 4) Smelting. - The ceramic catalyst is melted down such that the molten metal separates from the molten slag inside the furnace. The molten metal contains the precious metals, and this is removed (tapped) from the furnace and sent to the PGM Upgrading Facility at Techemet for converting.
- 5) Slag Cleaning. – Slag produced at Techemet, still has sufficient quantities of precious metals present, therefore the slag is re-melted for the further recovery of precious metals.
- 6) Slag drying. – Before the slag can be melted again, it needs to be dried, which is undertaken in a rotary kiln drier.
- 7) Converting. – The metal produced from the smelting operation still has a lot of other elements present; other than the PGM metals. Converting is a process that removes the majority of these other elements and creates an ingot that is very high in PGM concentration.
- 8) Purification. – The high PGM concentration ingots produced by the Converting process are further purified using several different processes into very high grade ingots, which are sold to various distributors.
