March 3, 2025

THE HONORABLE CAROL ALVARADO  
TEXAS SENATE  
PO BOX 12068  
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application  
Project Number: 37595

Exxonmobil North Houston Terminal  
Houston, Harris County  
Regulated Entity Number: RN100212745  
Customer Reference Number: CN600125710

Dear Senator Alvarado:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.410833,29.886388&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

---

The North Houston Terminal receives gasoline and diesel to the facility by pipeline. Gasoline includes several grades/formulations. Ethanol and product additives are received by truck. The site consists of various storage tanks for storage of gasoline, diesel, ethanol, transmix, and additives.

Gasoline, which may be blended with ethanol and/or additives, is distributed through the truck loading rack. The gasoline loading at the truck rack is vacuum-assisted. Gasoline vapors from loading operations are controlled by a carbon adsorption vapor recovery unit (VRU) or a vapor combustion unit (VCU). Diesel may be blended with additives and is distributed via the truck loading rack.
