Dear Senator Middleton:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.089444,29.726111&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Mayes Middleton

Section 1 Introduction

TotalEnergies Petrochemicals & Refining USA, Inc. (TEPRI) operates a polypropylene manufacturing facility in La Porte, Harris County, Texas. Texas Commission on Environmental Quality (TCEQ) Title V Federal Air Operating Permit (FOP) No. O1293 currently authorizes the operation of this facility. Pursuant to Section 382.0543 of the Texas Health and Safety Code (THSC) and 30 TAC §122.241, all Title V Operating Permits must be renewed five years from initial issuance. Therefore, TEPRI is submitting the attached renewal application for TCEQ FOP No. O1293.

1.1 Facility Information

The La Porte facility is located at 1818 Independence Parkway, Deer Park, Harris County, TX. Harris County is classified as a moderate nonattainment area for ozone under the 8-hour ozone standard and an attainment area for all other criteria pollutants.

The La Porte facility consists of four major production units categorized by state NSR permit listed in Table 1-1, below.

Table 1-1 NSR Permit Authorizations

NSR Permit No.	Description
2269C	Polypropylene Trains 1 & 2
3098B	Polypropylene Trains 5 & 6
18153	Polypropylene Train 7
21538	Polypropylene Trains 8 & 9
83796	Miscellaneous MSS Activities

This Title V permit renewal application covers emission units from these NSR permits, as well as various Permits By Rule (PBRs). All current authorization mechanisms are listed on OP-REQ1, OP-SUMR, and OP-PBRSUP, as appropriate.

1.2 Application Overview

This application has been prepared as required by 30 TAC §112.132. This application contains all applicable forms necessary for the renewal process. Changes made have been indicated on each form with strikethrough text for removals and yellow highlighted text for additions. The following forms are included in this application:

- OP-1, Site Information Summary
- OP-2, Application for Permit Revision/Renewal
- OP-SUMR, Individual Unit Summary for Revisions
- OP-PBRSUP, Permit By Rule Supplemental Form
- OP-MON, Monitoring Requirements

- OP-ACPS, Application Compliance Plan and Schedule
- OP-UA2, Stationary Reciprocating Internal Combustion Engine Attributes
- OP-UA13, Cooling Tower Attributes
- OP-UA15, Emission Point/Stationary Vent/Distillation Operation Vent/Process Vent Attributes
- OP-UA28, Polymer Manufacturing Attributes
- OP-REQ1, Application Area-wide Applicability Determinations and General Information
- OP-REQ2, Negative Applicable/Superseded Requirements Determination
- OP-REQ3, Applicable Requirements Summary

TEPRI maintains the position stated in the May 2000 original submittal of the Title V permit and the January 2003 revision of the Title V permit in regard to the Incineration System and applicability to NSPS DDD. TEPRI contends that the Incineration System is only subject to the requirements of §60.562-1(a)(1)(i)(D) in NSPS DDD. TEPRI historically completed form OP-REQ4 to communicate this position. Form OP-REQ4 has not been included in the renewal, since the form has been removed. This applicability is consistent with what is listed in the current Title V permit.

Section 2 Process Description

The La Porte facility manufactures polypropylene and is comprised of three production areas that are referred to as Monument I, Monument II, and Monument III. Monument I previously consisted of four individual polypropylene units designated as Trains 1 – 4. Monument I presently consists of Trains 1 & 2. All emission units previously associated with Trains 3 & 4 are being removed. Emission from Trains 1 & 2 are represented in NSR Permit No. 2269C. Monument II consists of three polypropylene manufacturing units designated as Trains 5 – 7. Emissions from Trains 5 and 6 are represented in NSR Permit No. 3908B. Emissions from Train 7 are represented in NSR Permit No. 18153. Monument III consists of two polypropylene manufacturing units designated as Trains 8 and 9. Emissions from Monument III are represented in NSR Permit No. 21538.

Raw materials used by the LaPorte Plant are received by pipeline, railcar, tank truck, shipping containers and drums. Chemicals received by pipeline include propylene, ethylene, hydrogen, and nitrogen. Propylene is stored in pressurized storage tanks located in the Monument I Area. No on-site storage is provided for ethylene, hydrogen, or nitrogen.

Various other chemicals are received via tank truck and stored in pressurized storage tanks. Triethylaluminum (TEAL) is used in all nine of the polypropylene trains. Trains 1 – 8 utilize TEAL that is diluted in a 85% n-hexane solution to prevent pyroforic reactions when exposed to air. The TEAL solution for Trains 1 – 8 is received by tank truck and stored in pressurized storage tanks located in the Monument I area. Train 9 requires the use of 100% “neat” TEAL and it is received and stored in pressurized storage tanks located in the Monument III Area.

Other chemicals used in the LaPorte Plant include catalyst, donor, anti-oxidant additives, water treatment chemicals, surfactants, and powder/liquid additives.

There are five utility boilers at the site that provide steam for the entire facility. Boilers M1-B-401 and M1-B-404 were previously associated with Monument I. These emission units have are being removed at this time. Boilers M2A-BO-1 and M2A-BO-4 fire process fuel gas. Boiler M3A-BO-2 is capable of firing both process fuel gas and natural gas.

The LaPorte Plant also operates an Incineration System, M2A-BO-3 and M2A-ES-202, that receives liquids and gases vented from the Material Recovery Section and combusts them as fuel to produce steam. These units do not typically operate at the same time; however, there are rare occurrences where the units operate in tandem.

The site also employs the use of flares and thermal oxidizers, as well as vapor combustors and a catalytic oxidizer as methods of emission control in the various trains. The South Flare System consists of the South Flare (M3A-ES-805) and the South Thermal Oxidizer (M3A-ES-815). The North Flare System consists of the North Flare (M2A-ES-205), the North Thermal Oxidizer (M2A-ES-215). The Mon 2 Enclosed Vapor Combustor (M2B-ES-276) controls vents

from the Train 7 area. Vents from Train 8 and 9 are routed to the Enclosed Vapor Combustor (M3A-ES-976) or to the backup vapor combustor (M3B-ES-976B).

Re: Cooling Tower Alternative Monitoring for Compliance (AMOC) #30
La Porte Polypropylene Plant
Regulated Entity Number: 100212109
Customer Reference Number: 604041020
Affected Permits: 2269C, 3908B, 18153, 21538 & O-1293

Dear Mr. Dickson:

This correspondence is in response to your request dated September 14, 2015 requesting to utilize an alternative monitoring system for cooling towers at the above-referenced site. The Texas Commission on Environmental Quality (TCEQ) Executive Director has made a final decision to approve your request as represented.

Specifically, an alternative monitoring system (Siemens Applied Automation AI 2- HRVOC Sparger) was requested in lieu of the El Paso Stripper Method from the Sampling Procedures Manual Appendix P under Title 30 Texas Administrative Code (30 TAC) §115.764 and to meet the requirements in state permits as follows:

Facility	EPN	Permit No.	Condition No.
Monument 1 Cooling Tower	ET-1A	2269C	9
Train 5&6 Cooling Tower	EF-206	3908B	21
Train 7 Cooling Tower	EV-274	18153	6
Train 8 Primary Cooling Tower	EF-806	21538	9
Train 9 Cooling Tower	EF-906	21538	9

This alternative monitoring system has been determined to be equivalent for purposes of demonstrating compliance with 30 TAC Chapter 115 and the New Source Review permits.

Mr. Dickson

AMOC #30

This action supersedes certain requirements in Permit(s) No. 2269C, 3908B, 18153, and 21538. To ensure effective and consistent enforceability, we request that TOTAL incorporate this action into the permits through alterations no later than 90 days after this approval.

This action changes applicable requirements for the site, including existing monitoring requirements identified in the Site Operating Permit (SOP), O-1293. The TCEQ recommends submittal of a complete SOP Administrative Revision as soon as possible. Changes meeting the criteria for an administrative revision can be operated before issuance of the revision if a complete revision application is submitted to the TCEQ and this information is maintained with the SOP records at the site.

This action is taken under authority delegated by the Executive Director of the TCEQ. If you have any questions, please call Anne Inman, P.E. at (512) 239-1276, or write to the Texas Commission on Environmental Quality, Office of Air, Air Permits Division, MC-163, P.O. Box 13087, Austin, Texas 78711-3087.
